20 In those circumstances, even assuming that the contentious procedure was opened by a Commission application which took no account of any new matters of fact or law put forward by the Member State concerned in its reply to the reasoned opinion, that State's right to a fair hearing has not been infringed. It is fully open to the State to raise those matters in the contentious procedure, to begin with in its first pleading in defence. It will be for the Court to examine their relevance for the outcome of the action for failure to fulfil obligations.

21 The first plea of inadmissibility must therefore be rejected.

Nature of the obligation laid down in Article 4(1) of the Directive

22 The Netherlands Government submits, second, that the alleged infringement consists not of a single act or omission but rather of a group of infringements of an obligation to take individual classification decisions. In order to guarantee the right to a fair hearing, it is essential in law to establish infringements of Article 4(1) of the Directive territory by territory. The Government submits essentially that the Commission is complaining that it failed generally to fulfil its obligations under Article 4(1), without first having engaged in an exchange of views with it on the specific complaints on which the action is founded.

23 According to the Commission, the submission that infringements of Article 4(1) of the Directive can only be established territory by territory is incorrect. An infringement may equally well be established if it is apparent that a Member State has clearly classified as SPAs many fewer habitats than required by ornithological criteria.

24 As the Advocate General notes in point 14 of his Opinion, since this plea of inadmissibility concerns the proper interpretation of Article 4(1) of the Directive and goes to the substance of the Commission's complaints, it should be examined in connection with the merits of the present action.

New matters

25 The Netherlands Government submits, third, that it was at the stage of its application to the Court that the Commission raised for the first time the complaint concerning the insufficient total area and quality of the areas classified as SPAs, as well as the specific complaints concerning the failure to classify the Friesian IJsselmeer coast and the Hooge Platen on the Western Scheldt, so preventing the defendant State from reacting at the pre-litigation stage. The same is true as regards the complaint that freshwater lakes and marshes and moorland were classified as SPAs only to a very limited extent. Those complaints are therefore inadmissible.

26 The Netherlands Government further submits that the report listing important areas for birds in the Netherlands (*Review of Areas Important for Birds in the Netherlands*, December 1994, hereinafter 'IBA 94'), published after the reasoned opinion had been sent to it, is not to be taken into consideration in the present proceedings, as the Government was not able to comment on it in the pre-litigation procedure.

27 The Commission replies that the alleged new pleas are in fact merely examples or developments of the single plea which has been consistently relied on since the beginning of the procedure, namely that the Netherlands has not designated sufficient SPAs from the point of view of Article 4(1) of the Directive. In the Commission's contention, Article 4(1), by providing that Member States are to classify as SPAs the most suitable territories in number and size for the conservation of the

species mentioned in Annex I to the Directive, implies an obligation which is not only quantitative but also qualitative, in that the obligation of result under that provision means that each Member State must designate SPAs of sufficient number, area and variety to ensure the survival and reproduction of all the species of birds mentioned in Annex I which are on its territory.

28 The Commission also contends that it substantiated its allegations on the basis of an ornithological study published in 1989 (*Inventory of Important Bird Areas in the European Community*, July 1989, hereinafter 'IBA 89'), its reliance on IBA 94 being altogether redundant.

29 In so far as an application refers to complaints which were not the subject-matter of the pre-litigation procedure, it is inadmissible (see, to that effect, Case 298/86 *Commission* v *Belgium* [1988] ECR 4343, paragraph 10, and Case C-274/93 *Commission* v *Luxembourg* [1996] ECR I-2019, paragraph 11).

30 In the present case the Commission referred expressly, in both the letter of formal notice and the reasoned opinion, to the obligation of the Kingdom of the Netherlands to ensure that the number and size of classified areas in the Member States are in accordance with Article 4(1) of the Directive. The plea of inadmissibility must therefore be rejected, in so far as it concerns the complaint that the Kingdom of the Netherlands did not classify a sufficient total area of SPAs.

31 As to the Commission's complaint that the SPAs classified by the Kingdom of the Netherlands were qualitatively insufficient, and more specifically that freshwater lakes and marshes and moorland have been classified as SPAs only to a limited extent, it must be stated that while, in order to comply with Article 4(1), Member

States must classify as SPAs sufficient territories, in terms of quantity and quality, to ensure conservation of the species listed in Annex I, it does not follow that a complaint that a Member State has not classified sufficient SPAs from the point of view of that provision necessarily covers the qualitative aspect of the obligation in question.

32 It appears that in the course of the pre-litigation stage the Commission based its complaint against the Kingdom of the Netherlands on the alleged insufficient number and size of the territories classified as SPAs by that State, in other words a quantitative insufficiency. By contrast, the alleged qualitative insufficiency of the SPAs classified by that State was raised for the first time in the present case when the contentious procedure was initiated.

33 The action must therefore be declared inadmissible in this respect.

34 As to the references to the Friesian IJsselmeer coast and the Hooge Platen on the Western Scheldt, these do not constitute a separate new complaint inasmuch as they serve merely as examples to illustrate the alleged infringement and are taken from the list, annexed to the letter of formal notice and the reasoned opinion, of areas which the Commission considers suitable for classification as SPAs. Those references are therefore permissible, in that they do not require the Court to rule specifically on the question whether those two areas must be classified as SPAs.

35 As to the reference to IBA 94, it should be noted, first, that that report, which dates from December 1994, draws up a list of areas which must, according to the scientific criteria accepted by the Commission, be classified as SPAs in the Netherlands.

36 Second, the question whether a Member State has failed to fulfil its obligations must be determined by reference to the situation prevailing in that State at the end of the period laid down in the reasoned opinion, and the Court cannot take account of any subsequent changes (see, in particular, Case C-60/96 *Commission* v *France* [1997] ECR I-3827, paragraph 15).

37 There is nothing in the documents before the Court to show that IBA 94 relates to a period prior to the expiry of the time allowed to the defendant State to comply with the reasoned opinion of 14 June 1993. On any view, therefore, the present action is inadmissible in so far as it refers to IBA 94 in order to prove the existence of the alleged infringement of the Directive.

38 In those circumstances, the action must be declared admissible within the limits described above.

Substance

39 The Commission observes, to begin with, that it follows from Article 4(1) of the Directive that each Member State has a specific obligation to designate sufficient SPAs to ensure the survival and reproduction of all the species of birds mentioned in Annex I which are on its territory.

40 It states that, with respect to the Netherlands, IBA 89 identifies, on the basis of the ornithological criteria used and explained in that study, 70 territories with a total area of 797 920 hectares suitable for classification as SPAs.

41 The Commission points out that the Netherlands Ministry of Agriculture and Fisheries has drawn up its own list of potentially classifiable territories, which contains 53 sites with a total area of 398 180 hectares. Those 53 sites correspond in part to 57 sites mentioned in IBA 89. However, the Netherlands Government has given no explanation of the scientific criteria on which its list of territories potentially classifiable as SPAs is based.

42 In any event, the Commission submits that, by designating only 23 territories with a total area of 327 602 hectares as SPAs, the Kingdom of the Netherlands has manifestly exceeded the limits of the discretion conferred on Member States by Article 4 of the Directive.

43 On this point, the Commission maintains, first, that the sites classified by the Netherlands coincide, wholly or partly, with 33 sites mentioned in IBA 89, in other words less than half the total number of sites considered by that scientific report to be suitable for classification as SPAs, and that their number represents only slightly over half the 57 sites listed in IBA 89 which the Netherlands authorities themselves regarded as important areas for birds. Second, the total area of the 23 SPAs in the Netherlands is also quite insufficient: 327 602 hectares as against the 797 920 hectares covered by the 70 sites mentioned in IBA 89. Moreover, as one SPA, the Waddenzee, alone extends to 250 000 hectares, the remaining SPAs cover only 77 602 hectares, which is not sufficient to guarantee adequate protection for a large number of the species of birds listed in Annex I to the Directive.

44 According to the Commission, the obligation to classify is infringed if a Member State manifestly disregards the number and area of the territories listed in IBA 89. That is the case where a Member State designates as SPAs only less than half the sites listed by IBA 89, with respect to both the number of sites and their total area.

45 In the Commission's submission, another indication that the protection given by the Netherlands to the species of birds listed in Annex I to the Directive is insufficient is the fact that the population of nine of those species has declined by over 50%. Of particular significance in this respect is the fall in the population of sedentary species such as *Tetrao tetrix* and *Botaurus stellaris*.

46 The Netherlands Government contends that the designation of SPAs is only one of the measures by which a Member State may perform its obligation under Article 4(1) of the Directive to take special conservation measures. Member States may also have recourse to other conservation measures to comply with that obligation. There can therefore be an infringement of that provision only if a Member State has not taken any special conservation measures at all. The Netherlands Government contends that by taking other measures of relevance in this context, such as the Nature Conservation Law, the sale of sites to nature conservation organisations and bird conservation plans, it has complied with the Directive.

47 The Netherlands Government next observes that the Member States have a margin of discretion in implementing Article 4(1) of the Directive. With respect more particularly to the designation of SPAs, Article 4(1) merely requires designation of the most suitable territories. The scheme of the provision is thus based on an assessment in the specific case of the question whether a particular site is one of the most suitable territories.

48 On this point, the Netherlands Government observes that the previous cases before the Court all related to whether a Member State should have classified a particular site as an SPA. In the present case, however, the Commission has not shown, let alone proved, that in implementing Article 4(1) the Kingdom of the Netherlands exceeded the limits of its discretion in any specific cases.

49 The Netherlands Government further contends that, when adopting the special conservation measures provided for in Article 4(1), Member States must take account not only of the specific factors mentioned in that provision but also of economic and recreational requirements, in accordance with Article 2 of the Directive.

50 The German Government contends, on the basis of the Member States' margin of discretion, that Article 4(1) leaves the choice of SPAs to Member States and that the only decisive factor is that the areas must be suitable in number and area for conservation of the species concerned and capable, together with the areas classified by the other Member States, of constituting a coherent network of protection areas. In its contention, the provision does not require a particular number of areas to be classified, but rather requires Member States to ensure that the SPAs which are created are suitable for the conservation of endangered species of birds.

51 The Netherlands Government adds that it used three criteria, which also form the basis of IBA 89, to draw up its list of sites to be protected. However, because of the general character of those criteria, their application does not produce unequivocal results. That is why differences may appear between the territories which, according to IBA 89, satisfy the criteria of Article 4(1) of the Directive and those which are designated as SPAs by the Member State concerned.

52 The Netherlands Government observes, moreover, that the criterion applied by the Commission, namely that Member States must designate as SPAs at least half in number and area of the territories listed by IBA 89, does not appear in the Directive.

53 The German Government, for its part, states that IBA 89 contains only a list of sites which, according to scientific criteria, could potentially serve for the conservation of endangered species. However, the list is not included in the Directive and

is not legally binding. Moreover, there was no agreement at Community level either on the criteria on which the list is based or on the resulting list. The German Government adds that the fixing of a minimum of 50% of sites classified is arbitrary and has no scientific basis.

54 Finally, the Netherlands Government contends that to find that nine species have declined by over 50%, without taking account of the various factors which may be responsible, is not enough to establish that the Kingdom of the Netherlands has infringed Article 4(1) of the Directive. In particular, the fall in numbers of *Tetrao tetrix* is the consequence of a disastrous hatching season probably caused by an atmospheric deposit originating outside the territories in question. As to *Botaurus stellaris*, the Government observes that despite the fact that 10% of that species are in SPAs, its population is falling, as in all other European territories. That shows that the decline of that species is not due to the inadequacy of the special conservation measures adopted by the Kingdom of the Netherlands.

55 It must first be observed that, contrary to the contention of the Kingdom of the Netherlands, Article 4(1) of the Directive requires Member States to classify as SPAs the most suitable territories in number and size for the conservation of the species mentioned in Annex I, an obligation which it is not possible to avoid by adopting other special conservation methods.

56 It follows from that provision, as interpreted by the Court, that if such species occur on the territory of a Member State, it is obliged to define *inter alia* SPAs for them (see Case C-334/89 *Commission* v *Italy* [1991] ECR I-93, paragraph 10).

57 Such an interpretation of the obligation to classify SPAs is moreover consistent with the system of specifically targeted and reinforced protection laid down by Article 4 of the Directive in respect in particular of the species listed in Annex I (see Case C-44/95 *R* v *Secretary of State for the Environment, ex parte Royal Society for the Protection of Birds* [1996] ECR I-3805, paragraph 23), *a fortiori* since even Article 3 provides, for all the species of birds covered by the Directive, that the preservation, maintenance and re-establishment of biotopes and habitats is to include primarily measures such as the creation of protected areas.

58 Besides, as the Advocate General points out in point 33 of his Opinion, if Member States could escape the obligation to classify SPAs if they considered that other special conservation measures were sufficient to ensure survival and reproduction of the species mentioned in Annex I, the objective of creating a coherent network of SPAs, referred to in Article 4(3) of the Directive, might not be achieved.

59 Second, it must be pointed out that the economic requirements mentioned in Article 2 of the Directive may not be taken into account when selecting an SPA and defining its boundaries (see *Royal Society for the Protection of Birds*, paragraph 27).

60 Moreover, while the Member States have a certain margin of discretion in the choice of SPAs, the classification of those areas is nevertheless subject to certain ornithological criteria determined by the Directive (see Case C-355/90 *Commission* v *Spain* [1993] ECR I-4221, paragraph 26).

61 It follows that the Member States' margin of discretion in choosing the most suitable territories for classification as SPAs does not concern the appropriateness of classifying as SPAs the territories which appear the most suitable according to ornithological criteria, but only the application of those criteria for identifying the most suitable territories for conservation of the species listed in Annex I to the Directive.

62 Consequently, Member States are obliged to classify as SPAs all the sites which, applying ornithological criteria, appear to be the most suitable for conservation of the species in question.

63 Thus where it appears that a Member State has classified as SPAs sites the number and total area of which are manifestly less than the number and total area of the sites considered to be the most suitable for conservation of the species in question, it will be possible to find that that Member State has failed to fulfil its obligation under Article 4(1) of the Directive.

64 Consequently, the Netherlands Government's argument that the Commission must establish, territory by territory, specific infringements of that provision cannot be accepted.

65 Third, it should be observed, that the Netherlands Government, while not questioning the scientific reliability of IBA 89, contends that the application of the criteria on which that report is based cannot, in view of their general character, lead to unequivocal results as regards the classification of SPAs. It has maintained that, although it applied the same criteria as those on which IBA 89 is based, it arrived in its inventory of sites potentially classifiable as SPAs at a result which was very different from that indicated by that report. At the hearing, however, it admitted that its criteria differed from those used in IBA 89.

66 In that regard, it is significant that the Kingdom of the Netherlands has to this very day failed to produce a single document from the national procedure for classifying SPAs which indicates the criteria which governed the designation of SPAs in that Member State.

67 Moreover, throughout the pre-litigation procedure and also in its defence and rejoinder, it stressed that when designating SPAs it had, under Article 2 of the Directive, to take account of economic and recreational requirements. That approach is inconsistent with the Netherlands Government's assertion that it applied exclusively ornithological criteria when designating SPAs.

68 In this connection, it must be pointed out that IBA 89 draws up an inventory of areas which are of great importance for the conservation of wild birds in the Community. That inventory was prepared for the competent directorate-general of the Commission by the Eurogroup for the Conservation of Birds and Habitats in conjunction with the International Council of Bird Preservation and in cooperation with Commission experts.

69 In the circumstances, IBA 89 has proved to be the only document containing scientific evidence making it possible to assess whether the defendant State has fulfilled its obligation to classify as SPAs the most suitable territories in number and area for conservation of the protected species. The situation would be different if the Kingdom of the Netherlands had produced scientific evidence in particular to show that the obligation in question could be fulfilled by classifying as SPAs territories whose number and total area were less than those resulting from IBA 89.

70 It follows that that inventory, although not legally binding on the Member States concerned, can, by reason of its acknowledged scientific value in the present case, be used by the Court as a basis of reference for assessing the extent to which the Kingdom of the Netherlands has complied with its obligation to classify SPAs.

71 It should be added that, even supposing that the application of the ornithological criteria in IBA 89 could lead different entities to produce markedly different classifications of SPAs, the mere possibility of this, which has not been shown to have occurred in the present case, cannot as such be taken into consideration in order to undermine the probative value of IBA 89 in this instance.

72 Since it thus appears that the Netherlands has classified as SPAs territories whose number and total area are clearly smaller than the number and total area of the territories suitable, according to IBA 89, for classification as SPAs, the requirements of Article 4(1) of the Directive cannot be regarded as satisfied.

73 Consequently, without there being any need to consider the other arguments which have been put forward, it must be held that by classifying as SPAs territories whose number and total area are clearly smaller than the number and total area of the territories suitable for classification as SPAs within the meaning of Article 4(1) of the Directive, the Kingdom of the Netherlands has failed to fulfil its obligations under that directive.

Costs

74 Under Article 69(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs. Since the Kingdom of the Netherlands has been essentially unsuccessful, it must be ordered to pay the costs. Under Article 69(4) of the Rules of Procedure, Member States and institutions which intervene are to bear their own costs.

On those grounds,

THE COURT,

hereby:

1. **Declares that, by classifying as special protection areas territories whose number and total area are clearly smaller than the number and total area of the territories suitable for classification as special protection areas within the meaning of Article 4(1) of Council Directive 79/409/EEC of 2 April 1979 on the conservation of wild birds, the Kingdom of the Netherlands has failed to fulfil its obligations under that directive;**

2. **Orders the Kingdom of the Netherlands to pay the costs;**

3. **Orders the Federal Republic of Germany to bear its own costs.**

JUDGMENT OF THE COURT
11 July 1996 *

In Case C-44/95,

REFERENCE to the Court under Article 177 of the EC Treaty by the House of Lords (United Kingdom) for a preliminary ruling in the case, pending before that court, of

Regina

v

Secretary of State for the Environment

ex parte **Royal Society for the Protection of Birds,**

Intervener: **The Port of Sheerness Limited,**

on the interpretation of Articles 2 and 4 of Council Directive 79/409/EEC of 2 April 1979 on the conservation of wild birds (OJ 1979 L 103, p. 1),

* Language of the case: English.

THE COURT,

composed of: G. C. Rodríguez Iglesias, President, D. A. O. Edward, J.-P. Puissochet and G. Hirsch (Presidents of Chambers), G. F. Mancini, J. C. Moitinho de Almeida, P. J. G. Kapteyn, C. Gulmann (Rapporteur), J. L. Murray, P. Jann and M. Wathelet, Judges,

Advocate General: N. Fennelly,
Registrar: L. Hewlett, Administrator,

after considering the written observations submitted on behalf of:

— the Royal Society for the Protection of Birds, by R. Gordon QC and R. Buxton, Solicitor;

— the Port of Sheerness Limited, by S. Isaacs QC and C. Lewis, Barrister, instructed by C. Holme, Solicitor;

— the United Kingdom Government, by J. E. Collins, Assistant Treasury Solicitor, acting as Agent, assisted by S. Richards and A. Lindsay, Barristers;

— the French Government, by C. de Salins, Assistant Director, Directorate for Legal Affairs, Ministry of Foreign Affairs, and J.-L. Falconi, Secretary for Foreign Affairs in the same Directorate, acting as Agents;

— the Commission, by C. O'Reilly and M. van der Woude, of its Legal Service, acting as Agents,

having regard to the Report for the Hearing,

after hearing oral argument from the Royal Society for the Protection of Birds, represented by R. Gordon and R. Buxton, the Port of Sheerness Limited, represented by S. Isaacs, the United Kingdom Government, represented by J. E. Collins, S. Richards and A. Lindsay, the French Government, represented by R. Nadal, Deputy Secretary for Foreign Affairs, Directorate for Legal Matters, Ministry of Foreign Affairs, acting as Agent, and the Commission of the European Communities, represented by C. O'Reilly, at the hearing on 7 February 1996,

after hearing the Opinion of the Advocate General at the sitting on 21 March 1996,

gives the following

Judgment

1 By order of 9 February 1995, received at the Court on 24 February 1995, the House of Lords referred to the Court of Justice for a preliminary ruling under Article 177 of the EC Treaty two questions on the interpretation of Articles 2 and 4 of Council Directive 79/409/EEC of 2 April 1979 on the conservation of wild birds (OJ 1979 L 103 p. 1, hereinafter 'the Birds Directive').

2 Those questions were raised in proceedings between an association for the protection of birds, the Royal Society for the Protection of Birds (hereinafter 'the RSPB'), and the Secretary of State for the Environment (hereinafter 'the Secretary of State') concerning a decision designating a special protection area for the protection of wild birds.

3 The Birds Directive, which covers all species of birds naturally occurring in the wild in the European territory of the Member States to which the Treaty applies, provides, in Article 2, that the Member States are to take all necessary measures to maintain the population of all those species of birds at a level which corresponds in particular to ecological, scientific and cultural requirements, while taking account of economic and recreational requirements.

4 According to Article 3 of the Birds Directive, the Member States, having regard to the requirements mentioned in Article 2, are to take all necessary measures to preserve, maintain or re-establish a sufficient diversity and area of habitats for all the protected species.

5 Pursuant to Article 4(1) of that directive, the species mentioned in Annex I are to be the subject of special conservation measures concerning their habitat in order to ensure their survival and reproduction in their area of distribution. In particular, the Member States are to classify the most suitable territories in terms of number and size as special protection areas for the conservation of those species in the geographical sea and land area where the Directive applies.

6 According to Article 4(2), 'Member States shall take similar measures for regularly occurring migratory species not listed in Annex I, bearing in mind their need for protection in the geographical sea and land area where this directive applies, as regards their breeding, moulting and wintering areas and staging posts along their migration routes. To this end, Member States shall pay particular attention to the protection of wetlands and particularly to wetlands of international importance'.

7 Finally, according to Article 4(4), '[I] n respect of the areas referred to in paragraphs 1 and 2 above, Member States shall take appropriate steps to avoid pollu-

tion or deterioration of habitats or any disturbances affecting the birds, in so far as these would be significant having regard to the objectives of this article. Outside these protection areas, Member States shall also strive to avoid pollution or deterioration of habitats'.

8 Council Directive 92/43/EEC of 21 May 1992 on the conservation of the natural habitats of wild fauna and flora (OJ 1992 L 206, p. 7, hereinafter 'the Habitats Directive'), to be implemented in the United Kingdom by June 1994, provides in Article 7 that the obligations under Article 6(2), (3) and (4) are to replace any obligations arising under the first sentence of Article 4(4) of the Birds Directive in respect of areas classified pursuant to Article 4(1) or similarly recognized under Article 4(2) of that directive. Article 6(2), (3) and (4) of the Habitats Directive is worded as follows:

'2. Member States shall take appropriate steps to avoid, in the special areas of conservation, the deterioration of natural habitats and the habitats of species as well as disturbance of the species for which the areas have been designated, in so far as such disturbance could be significant in relation to the objectives of this Directive.

3. Any plan or project not directly connected with or necessary to the management of the site but likely to have a significant effect thereon, either individually or in combination with other plans or projects, shall be subject to appropriate assessment of its implications for the site in view of the site's conservation objectives. In the light of the conclusions of the assessment of the implications for the site and subject to the provisions of paragraph 4, the competent national authorities shall agree to the plan or project only after having ascertained that it will not adversely affect the integrity of the site concerned and, if appropriate, after having obtained the opinion of the general public.

4. If, in spite of a negative assessment of the implications for the site and in the absence of alternative solutions, a plan or project must nevertheless be carried out for imperative reasons of overriding public interest, including those of a social or economic nature, the Member State shall take all compensatory measures necessary to ensure that the overall coherence of Natura 2000 is protected. It shall inform the Commission of the compensatory measures adopted.

Where the site concerned hosts a priority natural habitat type and/or a priority species, the only considerations which may be raised are those relating to human health or public safety, to beneficial consequences of primary importance for the environment or, further to an opinion from the Commission, to other imperative reasons of overriding public interest.'

9 The United Kingdom did not transpose the Habitats Directive until October 1994.

10 On 15 December 1993, the Secretary of State decided to designate the Medway Estuary and Marshes as a Special Protection Area (hereinafter 'SPA'). At the same time, he decided to exclude from it an area of about 22 hectares known as Lappel Bank.

11 According to the order for reference, the Medway Estuary and Marshes are an area of wetland of international importance covering 4 681 hectares on the north coast of Kent and listed under the Ramsar Convention. They are used by a number of wildfowl and wader species as a breeding and wintering area and as a staging post during spring and autumn migration. The site also supports breeding populations of the avocet and the little tern, which are listed in Annex I to the Birds Directive.

12 Lappel Bank is an area of inter-tidal mudflat immediately adjoining, at its northern end, the Port of Sheerness and falling geographically within the bounds of the Medway Estuary and Marshes. Lappel Bank shares several of the important ornithological qualities of the area as a whole. Although it does not support any of the species referred to in Article 4(1) of the Birds Directive, some of the bird species of the area are represented in significantly greater numbers than elsewhere in the Medway SPA. Lappel Bank is an important component of the overall estuarine ecosystem and the loss of that inter-tidal area would probably result in a reduction in the wader and wildfowl populations of the Medway Estuary and Marshes.

13 The Port of Sheerness is at present the fifth largest in the United Kingdom for cargo and freight handling. It is a flourishing commercial undertaking, well located for sea traffic and access to its main domestic markets. The Port, which is also a significant employer in an area with a serious unemployment problem, plans extended facilities for car storage and value added activities on vehicles and in the fruit and paper product market, in order better to compete with continental ports offering similar facilities. Lappel Bank is the only area into which the Port of Sheerness can realistically envisage expanding.

14 Accordingly, taking the view that the need not to inhibit the viability of the port and the significant contribution that expansion into the area of Lappel Bank would make to the local and national economy outweighed its nature conservation value, the Secretary of State decided to exclude that area from the Medway SPA.

15 The RSPB applied to the Divisional Court of the Queen's Bench Division to have the Secretary of State's decision quashed on the ground that he was not entitled, by virtue of the Birds Directive, to have regard to economic considerations when classifying an SPA. The Divisional Court found against the RSPB. On appeal by the RSPB, the Court of Appeal upheld that judgment. The RSPB therefore appealed to the House of Lords.

16 Uncertain as to how the directive should be interpreted, the House of Lords stayed proceedings pending a preliminary ruling from the Court of Justice on the following questions:

'1. Is a Member State entitled to take account of the considerations mentioned in Article 2 of Directive 79/409/EEC of 2 April 1979 on the conservation of wild birds in classification of an area as a Special Protection Area and/or in defining the boundaries of such an area pursuant to Article 4(1) and/or 4(2) of that Directive?

2. If the answer to Question 1 is "no", may a Member State nevertheless take account of Article 2 considerations in the classification process in so far as:

(a) they amount to a general interest which is superior to the general interest which is represented by the ecological objective of the Directive (i. e. the test which the European Court has laid down in, for example, *Commission* v *Germany* ("Leybucht Dykes") Case 57/89, for derogation from the requirements of Article 4(4)); or

(b) they amount to imperative reasons of overriding public interest such as might be taken into account under Article 6(4) of Directive 92/43/EEC of 21 May 1992 on the conservation of natural habitats and of wild fauna and flora?'

The first question

17 The point of this question is whether Article 4(1) or (2) of the Birds Directive is to be interpreted as meaning that a Member State is authorized to take account of the economic requirements mentioned in Article 2 thereof when designating an SPA and defining its boundaries.

18 As a preliminary point, it must be borne in mind that, according to the ninth recital in the preamble to the Birds Directive, 'the preservation, maintenance or restoration of a sufficient diversity and area of habitats is essential to the conservation of all species of birds [covered by the directive]', that 'certain species of birds should be the subject of special conservation measures concerning their habitats in order to ensure their survival and reproduction in their area of distribution', and, finally, that 'such measures must also take account of migratory species'.

19 That recital is formally reflected in Articles 3 and 4 of the directive. In paragraph 23 of its judgment in Case C-355/90 *Commission* v *Spain* [1993] ECR I-4221 (hereinafter '*Santoña Marshes*') the Court pointed out that the first of those provisions imposes obligations of a general character, namely the obligation to ensure a sufficient diversity and area of habitats for all the birds referred to in the directive, while the second contains specific obligations with regard to the species of birds listed in Annex I and the migratory species not listed in that annex.

20 According to the United Kingdom Government and the Port of Sheerness Limited, Article 4 cannot be considered in isolation from Article 3. They state that Article 4 provides, in relation to certain species of particular interest, for the specific application of the general obligation imposed by Article 3. Since the latter provision allows account to be taken of economic requirements, the same should apply to Article 4(1) and (2).

21 The French Government reaches the same conclusion, observing that, when an SPA is created, the Member States take account of all the criteria mentioned in Article 2 of the Birds Directive, which is general in scope, and, therefore, *inter alia*, of economic requirements.

22 Those arguments cannot be upheld.

23 It must be noted first that Article 4 of the Birds Directive lays down a protection regime which is specifically targeted and reinforced both for the species listed in Annex I and for migratory species, an approach justified by the fact that they are, respectively, the most endangered species and the species constituting a common heritage of the Community (see Case C-169/89 *Van den Burg* [1990] ECR I-2143, paragraph 11).

24 Whilst Article 3 of the Birds Directive provides for account to be taken of the requirements mentioned in Article 2 for the implementation of general conservation measures, including the creation of protection areas, Article 4 makes no such reference for the implementation of special conservation measures, in particular the creation of SPAs.

25 Consequently, having regard to the aim of special protection pursued by Article 4 and the fact that, according to settled case-law (see in particular Case C-435/92 *APAS* v *Préfets de Maine-et-Loire and de la Loire Atlantique* [1994] ECR I-67, paragraph 20), Article 2 does not constitute an autonomous derogation from the general system of protection established by the directive, it must be held (see paragraphs 17 and 18 of *Santoña Marshes*) — that the ecological requirements laid down by the former provision do not have to be balanced against the interests listed in the latter, in particular economic requirements.

26 It is the criteria laid down in paragraphs (1) and (2) of Article 4 which are to guide the Member States in designating and defining the boundaries of SPAs. It is clear from paragraphs 26 and 27 of *Santoña Marshes* that, notwithstanding the divergences between the various language versions of the last subparagraph of Article 4(1), the criteria in question are ornithological criteria.

27 In view of the foregoing, the answer to the first question must be that Article 4(1) or (2) of the Birds Directive is to be interpreted as meaning that a Member State is not authorized to take account of the economic requirements mentioned in Article 2 thereof when designating an SPA and defining its boundaries.

The second question

The first part of the second question

28 By the first part of the second question, the national court seeks to ascertain whether Article 4(1) or (2) of the Birds Directive must be interpreted as allowing a Member State, when designating an SPA and defining its boundaries, to take account of economic requirements as constituting a general interest superior to that represented by the ecological objective of that directive.

29 In its judgment in Case C-57/89 *Commission* v *Germany* [1991] ECR I-883, paragraphs 21 and 22 (hereinafter '*Leybucht Dykes*'), the Court held that the Member States may, in the context of Article 4(4) of the Birds Directive, reduce the extent of a SPA only on exceptional grounds, being grounds corresponding to a general interest superior to the general interest represented by the ecological objective of the directive. It was held that economic requirements cannot be invoked in that context.

30 It is also clear from paragraph 19 of *Santoña Marshes* that, in the context of Article 4 of that directive, considered as a whole, economic requirements cannot on any view correspond to a general interest superior to that represented by the ecological objective of the directive.

31 Accordingly, without its being necessary to rule on the possible relevance of the grounds corresponding to a superior general interest for the purpose of classifying an SPA, the answer to the first part of the second question must be that Article 4(1) or (2) of the Birds Directive is to be interpreted as meaning that a Member State may not, when designating an SPA and defining its boundaries, take account of economic requirements as constituting a general interest superior to that represented by the ecological objective of that directive.

The second part of the second question

32 By the second part of the second question, the House of Lords asks essentially whether Article 4(1) or (2) of the Birds Directive is to be interpreted as meaning that a Member State may, when designating an SPA and defining its boundaries, take account of economic requirements to the extent that they reflect imperative reasons of overriding public interest of the kind referred to in Article 6(4) of the Habitats Directive.

33 The United Kingdom Government considers that that question is relevant only to cases of classification decisions made after the expiry of the period for transposition of the Habitats Directive. Since that is not the case in the main proceedings, it considers that it is unnecessary to answer the question.

34 It is well settled that it is for the national courts alone, before which the proceedings are pending and which will be responsible for the eventual judgment, to determine, having regard to the particular features of each case, both the need for a preliminary ruling to enable them to give judgment and the relevance of the questions which they refer to the Court. A request for a preliminary ruling from a national court may be rejected only if it is clear that the interpretation of Community law requested bears no relation to the true nature of the case or the subject-matter of the main action (see in particular Case C-129/94 *Ruiz Barnáldez* [1996] ECR I-1829, paragraph 7). That is, however, not the case in the main proceedings.

35 Consequently, it is necessary to examine the second part of the second question submitted by the national court.

36 It is important first to bear in mind that Article 7 of the Habitats Directive provides in particular that the obligations arising under Article 6(4) thereof are to apply, in place of any obligations arising under the first sentence of Article 4(4) of

the Birds Directive, to the areas classified under Article 4(1) or similarly recognized under Article 4(2) of that directive as from the date of implementation of the Habitats Directive or the date of classification or recognition by a Member State under the Birds Directive, whichever is the later.

37 As the Commission submits in its observations, Article 6(4) of the Habitats Directive, as inserted in the Birds Directive, has, following *Leybucht Dykes* where the point in issue was the reduction of an area already classified, widened the range of grounds justifying encroachment upon SPAs by expressly including therein reasons of a social or economic nature.

38 Thus, the imperative reasons of overriding public interest which may, pursuant to Article 6(4) of the Habitats Directive, justify a plan or project which would significantly affect an SPA in any event include grounds relating to a superior general interest of the kind identified in *Leybucht Dykes* and may where appropriate include grounds of a social or economic nature.

39 Next, although Article 6(3) and (4) of the Habitats Directive, in so far as it amended the first sentence of Article 4(4) of the Birds Directive, established a procedure enabling the Member States to adopt, for imperative reasons of overriding public interest and subject to certain conditions, a plan or a project adversely affecting an SPA and so made it possible to go back on a decision classifying such an area by reducing its extent, it nevertheless did not make any amendments regarding the initial stage of classification of an area as an SPA referred to in Article 4(1) and (2) of the Birds Directive.

40 It follows that, even under the Habitats Directive, the classification of sites as SPAs must in all circumstances be carried out in accordance with the criteria permitted under Article 4(1) and (2) of the Birds Directive.

41 Economic requirements, as an imperative reason of overriding public interest allowing a derogation from the obligation to classify a site according to its ecological value, cannot enter into consideration at that stage. But that does not, as the Commission has rightly pointed out, mean that they cannot be taken into account at a later stage under the procedure provided for by Article 6(3) and (4) of the Habitats Directive.

42 The answer to the second part of the second question must therefore be that Article 4(1) or (2) of the Birds Directive is to be interpreted as meaning that a Member State may not, when designating an SPA and defining its boundaries, take account of economic requirements which may constitute imperative reasons of overriding public interest of the kind referred to in Article 6(4) of the Habitats Directive.

Costs

43 The costs incurred by the Governments of the French Republic and the United Kingdom and by the Commission of the European Communities, which have submitted observations to the Court, are not recoverable. Since these proceedings are, for the parties to the main proceedings, a step in the actions pending before the national court, the decision on costs is a matter for that court.

On those grounds,

THE COURT

in answer to the questions submitted to it by the House of Lords, by order of 9 February 1995, hereby rules:

1. Article 4(1) or (2) of Council Directive 79/409/EEC of 2 April 1979 on the conservation of wild birds is to be interpreted as meaning that a Member

State is not authorized to take account of the economic requirements mentioned in Article 2 thereof when designating a Special Protection Area and defining its boundaries.

2. **Article 4(1) or (2) of Directive 79/409 is to be interpreted as meaning that a Member State may not, when designating a Special Protection Area and defining its boundaries, take account of economic requirements as constituting a general interest superior to that represented by the ecological objective of that directive.**

3. **Article 4(1) or (2) of Directive 79/409 is to be interpreted as meaning that a Member State may not, when designating a Special Protection Area and defining its boundaries, take account of economic requirements which may constitute imperative reasons of overriding public interest of the kind referred to in Article 6(4) of Directive 92/43/EEC of 21 May 1992 on the conservation of the natural habitats of wild fauna and flora.**

intervener,

APPLICATION for a declaration that by planning or undertaking works detrimental to the habitat of protected birds in special protection areas, contrary to Article 4 of Council Directive 79/409/EEC of 2 April 1979 on the conservation of

* Language of the case: German.

wild birds, the Federal Republic of Germany has failed to fulfil its obligations under the EEC Treaty,

THE COURT,

composed of: O. Due, President, G. F. Mancini, T. F. O'Higgins, G. C. Rodriguez Iglesias and M. Díez de Velasco (Presidents of Chambers), Sir Gordon Slynn, C. N. Kakouris, R. Joliet, F. A. Schockweiler, F. Grévisse and M. Zuleeg, Judges,

Advocate General: W. Van Gerven,
Registrar: H. A. Rühl, Principal Administrator,

having regard to the Report for the Hearing,

after hearing the oral argument of the parties at the hearing on 16 October 1990, at which the Federal Republic of Germany was represented by Albert Bleckmann and Mr Montag, and the United Kingdom by G. Barling, Barrister,

after hearing the Opinion of the Advocate General delivered at the sitting on 5 December 1990,

gives the following

Judgment

1 By application lodged at the Court Registry on 28 February 1989, the Commission of the European Communities brought an action under Article 169 of the EEC Treaty for a declaration that by planning or undertaking works detrimental to the habitat of protected birds in special protection areas, contrary to Article 4 of Council Directive 79/409/EEC of 2 April 1979 on the conservation of wild birds (Official Journal 1979 L 103, p. 1, hereinafter referred to as 'the directive'), the Federal Republic of Germany has failed to fulfil its obligations under the EEC Treaty.

2 Article 4 of the directive is worded as follows:

'1. The species mentioned in Annex I shall be the subject of special conservation measures concerning their habitat in order to ensure their survival and reproduction in their area of distribution.

(Omissis)

Member States shall classify in particular the most suitable territories in number and size as special protection areas for the conservation of these species, taking into account their protection requirements in the geographical sea and land area where this Directive applies.

2. Member States shall take similar measures for regularly occurring migratory species not listed in Annex I, bearing in mind their need for protection in the geographical sea and land area where this Directive applies, as regards their breeding, moulting and wintering areas and staging posts along their migration routes. To this end, Member States shall pay particular attention to the protection of wetlands and particularly to wetlands of international importance.

3. Member States shall send the Commission all relevant information so that it may take appropriate initiatives with a view to the coordination necessary to ensure that the areas provided for in paragraphs 1 and 2 above form a coherent whole which meets the protection requirements of these species in the geographical sea and land area where this Directive applies.

4. In respect of the protection areas referred to in paragraphs 1 and 2 above, Member States shall take appropriate steps to avoid pollution or deterioration of habitats or any disturbances affecting the birds, in so far as these would be significant having regard to the objectives of this Article. Outside these protection areas, Member States shall also strive to avoid pollution or deterioration of habitats.'

3 The application initially comprised two claims, the first concerning dredging and filling operations in the *Rysumer Nacken*, and the second concerning dyke-building operations carried out in the *Leybucht*.

4 With regard to the first claim, the Commission, at the hearing, formally acknowledged that the Rysumer Nacken is not covered by the regulation of the *Land* of Lower Saxony of 13 December 1985 creating the Niedersächisches Wattenmeer National Park and that, consequently, the Rysumer Nacken is not designated as a special protection area. However, the Commission argues that that is a new argument put forward by the defendant in its rejoinder, so that the defendant must bear the costs relating to that point.

5 The German Government replies that the Commission was aware, even before the commencement of proceedings before the Court, of all the information concerning the legal status of the Rysumer Nacken, in particular of maps showing the boundaries of the national park. It is clear from those maps that the Rysumer Nacken is not designated as a special protection area. According to the German Government, the details it provided in its rejoinder do not therefore constitute a new argument.

6 The information regarding the extent of the protected areas in the Wattenmeer was supplied by the German Government in its letter of 6 September 1988 sent pursuant to Article 4(3) of the directive. At the time it lodged its application, the Commission had at its disposal *inter alia* the maps appended to the abovementioned regulation, defining the boundaries of the protected area. It is evident from that information that the Rysumer Nacken is not one of the sites designated as a special protection area. Consequently, since the withdrawal of this part of the application is not the consequence of the conduct of the German Government, the Commission must bear the costs relating thereto.

7 With regard to the dyke-building operations in the Leybucht, the Commission claims that they disturb birds which enjoy special protection under the provisions of Article 4(1) of the directive, in conjunction with Annex I, and damage the

habitat of the birds, which is designated as a special protection area. The Commission emphasizes that the first sentence of Article 4(4) of the directive requires Member States to take positive steps to avoid any deterioration or pollution of habitats as part of the management of special protection areas.

8 The Commission states that coastal defence measures such as the strengthening of a dyke are acceptable in the case of a threat to human life, but only on condition that the necessary measures are restricted to those which cause only the minimum necessary deterioration of the special protection area in question.

9 According to the Commission, those conditions have not been fulfilled in the present case. It is of the opinion that both the construction work in the Leybucht and its results entail deterioration in the living conditions of protected birds and the loss of land areas of considerable ecological importance, thereby leading to lower population densities for some of the species of birds listed in Annex I to the directive, in particular the avocet.

10 The German Government observes that according to the information sent to the Commission pursuant to Article 4(3) of the directive, the new line of the dyke in the Leybucht and the areas located on the landward side of the dyke are excluded from the special protection area. It states that the boundaries of the area in question are defined in the regulation creating the national park in such a way that the protected area extends only to the foot of the dyke, in the form it will have once the construction work in question has been completed.

11 According to the German Government, the sole purpose of the operations is to secure the safety of the dyke. It emphasizes that during the planning stage of the project at issue the competent authorities took account of all bird conservation requirements and balanced them against the requirements of coastal protection.

The German Government states that the new line of the dyke and the temporary disturbances caused by the works constitute the smallest possible interference for bird life in the Leybucht. It adds that the Commission has not furnished any evidence at all that the measures at issue significantly impair the protection of those birds.

12 With regard to the interpretation of Article 4(4) of the directive, the German Government claims that that provision requires a balance to be struck between the various public interests likely to be affected by the management of a special protection area, so that the Member States must have a wide discretionary power in this field.

13 The United Kingdom considers that the Commission has not established that the project at issue has a significant effect within the meaning of the first sentence of Article 4(4) of the directive. It states that that condition must be interpreted as meaning that the deterioration of a special protection area must be such as to threaten the survival or reproduction of protected species within their area of distribution. In the United Kingdom's view, the material supplied by the Commission does not appear sufficient to support the conclusion that the operations in the Leybucht involve such deterioration.

14 The United Kingdom emphasizes the importance of the evidence supplied by the defendant which shows that the works at issue will significantly improve ecological conditions in the Leybucht. It considers that it is legitimate, when assessing whether a particular project will cause deterioration to a special protection area and whether any such deterioration will be significant, to consider whether the works will at the same time bring compensatory ecological improvements.

15 In the submission of the United Kingdom, within the context of Article 4(4) of the directive account can be taken of other important public interest considerations, including those referred to in Article 2 of the directive. It considers that the Member States must be able to take into account the interests of persons living in or around a special protection area.

16 Reference is made to the Report for the Hearing for a fuller account of the facts of the case, the course of the procedure and the submissions and arguments of the parties, which are mentioned or discussed hereinafter only in so far as is necessary for the reasoning of the Court.

17 With regard to the boundaries of the special protection area in question, it must be pointed out that the boundary of the Leybucht is defined by the regulation creating the national park and the maps appended thereto. Although the plan of the area does include a reference to the regional planning scheme, the legal measure designating the special protection area nevertheless sets out its precise territorial delimitation, constituted by the present line of the dyke. The displacement of the dyke towards the sea as part of the coastal defence project thus entails a reduction in the protected area.

18 Consequently, in order to resolve this dispute it is necessary to settle a number of questions of principle concerning the obligations of the Member States under Article 4(4) of the directive in relation to the management of the special protection areas. It must be determined whether — and if so, under what conditions — the Member States are authorized to reduce the size of a special protection area and to what extent other interests may be taken into account.

19 With regard to the powers of the Member States to review in that way a decision to classify an area as a special protection area, it must be stated that a reduction in the geographical extent of a protected area is not expressly envisaged by the terms of the directive.

20 Although the Member States do have a certain discretion with regard to the choice of the territories which are most suitable for classification as special protection areas pursuant to Article 4(1) of the directive, they do not have the same discretion under Article 4(4) of the directive in modifying or reducing the extent of the areas, since they have themselves acknowledged in their declarations that those areas contain the most suitable environments for the species listed in Annex I to the

directive. If that were not so, the Member States could unilaterally escape from the obligations imposed on them by Article 4(4) of the directive with regard to special protection areas.

21 That interpretation of Article 4(4) of the directive is borne out, moreover, by the ninth recital in the preamble, which underlines the special importance which the directive attaches to special conservation measures concerning the habitats of the birds listed in Annex I in order to ensure their survival and reproduction in their area of distribution. It follows that the power of the Member States to reduce the extent of a special protection area can be justified only on exceptional grounds.

22 Those grounds must correspond to a general interest which is superior to the general interest represented by the ecological objective of the directive. In that context the interests referred to in Article 2 of the directive, namely economic and recreational requirements, do not enter into consideration. As the Court pointed out in its judgments in Case 247/85 (*Commission* v *Belgium* [1987] ECR 3029) and Case 262/85 (*Commission* v *Italy* [1987] ECR 3073), that provision does not constitute an autonomous derogation from the general system of protection established by the directive.

23 With regard to the reason put forward in this case, it must be stated that the danger of flooding and the protection of the coast constitute sufficiently serious reasons to justify the dyke works and the strengthening of coastal structures as long as those measures are confined to a strict minimum and involve only the smallest possible reduction of the special protection area.

24 With regard to the part of the project concerning the Leyhörn area, the line of the dyke was influenced by considerations relating not only to coastal protection but also to the concern to ensure that fishing vessels from Greetsiel had access to the harbour. In the light of the principles for the interpretation of Article 4(4) of the directive set out above, to take account of such an interest is in principle incompatible with the requirements of the provision.

25 However, that part of the project has at the same time specific positive consequences for the habitat of birds. Once the works are completed it will be possible to close two navigation channels which cross the Leybucht, with the result that the Leybucht will be left in absolute peace. Moreover, the decision approving the proposed works envisages a strict protection scheme for the Leyhörn area. The dyke which previously protected the Hauener Hooge site will be opened, thus once more exposing an extensive area to tidal movements and allowing the formation of salt meadows of considerable ecological importance.

26 The desire to ensure the survival of the fishing port of Greetsiel could thus be taken into account in order to justify the decision on the line of the new dyke because there were the abovementioned offsetting ecological benefits, and solely for that reason.

27 Finally, the disturbance arising from the construction work itself does not exceed what is necessary to carry it out. The information concerning the number of avocets in that sector of the Wattenmeer shows, moreover, that during the period in question there was no significant change, within the meaning of Article 4(4) of the directive, in population trends for that species. Furthermore, the Commission has not supplied any other evidence relating to population trends for protected species.

28 It follows from the foregoing that the application must be dismissed.

Costs

29 Under Article 69(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs. Since the Commission has failed in its submissions, it must be ordered to pay the costs, including the costs of the intervener and those relating to the application for interim measures.

On those grounds,

THE COURT

hereby:

(1) Dismisses the application;

(2) Orders the Commission to pay the costs, including the costs of the intervener and those relating to the application for interim measures.

interveners,

* Language of the case: German.

on the interpretation of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40),

THE COURT,

composed of: O. Due, President, G. F. Mancini, J. C. Moitinho de Almeida, M. Diez de Velasco and D. A. O. Edward (Presidents of Chambers), C. N. Kakouris (Rapporteur), R. Joliet, F. A. Schockweiler, G. C. Rodríguez Iglesias, F. Grévisse, M. Zuleeg, P. J. G. Kapteyn and J. L. Murray, Judges,

Advocate General: C. Gulmann,
Registrar: H. A. Rühl, Principal Administrator,

after considering the written observations submitted on behalf of:

— Bund Naturschutz in Bayern eV, by U. Kaltenegger, Rechtsanwalt, Landshut,

— plaintiffs 5 to 41 in the main proceedings, J. Birnkammer and Others, by E. Schönefelder, Rechtsanwalt, Munich,

— Freistaat Bayern, by M. A. Dauses, Professor at the University of Bamberg,

— Stadt Vilsbiburg, by P. Barteit, Mayor,

— the Federal Republic of Germany, by E. Röder, Ministerialrat at the Federal Ministry of the Economy, and Claus-Dieter Quassowski, Regierungsdirektor at the same Ministry, acting as Agents,

— the Kingdom of the Netherlands, by A. Bos, Legal Adviser at the Ministry of Foreign Affairs, acting as Agent,

— the United Kingdom, by S. Cochrane, Treasury Solicitor, acting as Agent, and Derrick Wyatt, Barrister,

— the Commission of the European Communities, by R. Wägenbaur, Principal Legal Adviser, acting as Agent, and A. Böhlke, of the Brussels Bar,

having regard to the Report for the Hearing,

after hearing the oral observations of Bund Naturschutz in Bayern eV, J. Birnkammer and Others, Freistaat Bayern, Stadt Vilsbiburg, represented by P. Barteit and G. Nord, Deputy Mayor, the German Government and the United Kingdom, represented by S. L. Hudson, Assistant Treasury Solicitor, and D. Wyatt QC, and the Commission at the hearing on 22 March 1994,

after hearing the Opinion of the Advocate General at the sitting on 3 May 1994,

gives the following

Judgment

1 By order of 5 November 1992, received at the Court Registry on 18 November 1992, the Bayerischer Verwaltungsgerichtshof (Bavarian Higher Regional

Administrative Court) referred to the Court for a preliminary ruling under Article 177 of the EEC Treaty three questions on the interpretation of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40, hereinafter 'the directive').

2 The questions were raised in the course of proceedings between the Bund Naturschutz in Bayern eV, an ecological organization, with 41 other plaintiffs, mainly farmers, and Freistaat Bayern (Federal State of Bavaria) concerning the conformity with the requirements laid down in the directive of the consent procedure for construction plans for two sections of the new B 15 federal highway in Bavaria.

3 The directive was adopted on the basis of Articles 100 and 235 of the EEC Treaty. According to the first recital in its preamble, action programmes of the European Communities on the environment '... affirm the need to take effects on the environment into account at the earliest possible stage in all the technical planning and decision-making processes ...' and, according to the eighth recital, '... projects belonging to certain types have significant effects on the environment and ... must as a rule be subject to systematic assessment'.

4 Article 1 of the directive states:

'1. This Directive shall apply to the assessment of the environmental effects of those public and private projects which are likely to have significant effects on the environment.

2. For the purposes of this Directive: "project" means:

— the execution of construction works or of other installations or schemes,

— other interventions in the natural surroundings and landscape including those involving the extraction of mineral resources;

— ...'

5 Article 2(1) of the directive provides that 'Member States shall adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment by virtue *inter alia* of their nature, size or location are made subject to an assessment with regard to their effects. Those projects are defined in Article 4.'

6 Under Article 2(2), the 'environmental impact assessment may be integrated into the existing procedures for consent to projects in the Member States, or, failing this, into other procedures or into procedures to be established to comply with the aims of this Directive' and, pursuant to Article 2(3), 'Member States may, in exceptional cases, exempt a specific project in whole or in part from the provisions laid down in this Directive'. In such cases the Member States must, however, under the same article, consider whether another form of assessment would be appropriate and inform the Commission of the reasons justifying the exemption granted.

7 Article 4(1) of the directive provides: 'Subject to Article 2(3), projects of the classes listed in Annex I shall be made subject to an assessment in accordance with Arti-

cles 5 to 10'. Annex I refers in Point 7 *inter alia* to the construction of motorways and express roads.

8 Articles 5 to 10 concern in particular the necessary measures to be adopted by the Member States to ensure that the developer supplies certain information, that the national authorities and also other Member States likely to be concerned by the project in question are consulted and that the public is kept informed. In that last respect, Article 6(2) provides more particularly that the Member States are to ensure that any request for development consent and the information supplied by the developer are made available to the public, who must be given the possibility of expressing an opinion.

9 In accordance with Article 12(1) of the directive, the Member States are to take the measures necessary to comply therewith within three years of its notification. Since the directive was notified to the Member States on 3 July 1985, that time-limit expired on 3 July 1988.

10 The file shows that in the Federal Republic of Germany the directive was belatedly transposed by a Law of 12 February 1990, which came into force on 1 August 1990 (BGBl 1990 I, p. 205). Article 1 of that transposition law contains the Gesetz über die Umweltverträglichkeitsprüfung (Environmental Impact Assessment Law, the 'UVPG'). Paragraph 22(1) of the UVPG laid down transitional rules under which procedures already initiated were to be completed in accordance with the provisions of the UVPG where the project had not yet been notified to the public when the UVPG came into force.

11 Provision was thus made for exemptions from the requirements laid down in the directive for pending consent procedures for which the relevant project had already been notified to the public when the UVPG came into force on 1 August 1990.

12 The dispute in the main proceedings concerns the construction of two sections of the new B 15 federal highway in Bavaria, a road of some 130 km, the plans and routing for which were decided many years ago. The first section at issue is from Geisenhausen to Haarbach and is 6.9 km in length; the second, known as the 'Vilstal link' and approximately 3 km in length, is to join the new B 15 highway to the B 388 by-passing Vilsbiburg.

13 It appears from the order for reference that the Bavarian Highways Department, the developer of the road construction project, lodged consent applications for the plans of the two sections on 7 September 1988 and 9 November 1989, that is to say after 3 July 1988, the deadline for transposition of the directive, and prior to 1 August 1990, the date on which the transposition law came into force. The plans were made available to the public at the end of 1989. By two decisions of 16 December 1991 the Government of Lower Bavaria approved the projects. Pursuant to Paragraph 22(1) of the UVPG no environmental impact assessment was carried out as required by the directive.

14 The Bund Naturschutz in Bayern eV and 41 other plaintiffs brought actions for the annulment of the two consent decisions referred to above before the Bayerischer Verwaltungsgerichtshof. The plaintiffs maintained that the directive, which was transposed belatedly in the Federal Republic of Germany, did not permit the

adoption of national transitional rules such as those in Paragraph 22(1) of the UVPG.

15 Since it had doubts as to whether the transitional rules in question complied with the requirements of the directive, the national court suspended proceedings and referred the following questions to the Court for a preliminary ruling:

'1. Is Article 12 of the directive to be interpreted as meaning that

(a) the Member States were under an obligation to take by 3 July 1988 the measures necessary to ensure that all public projects which fell within the ambit of the directive and for which development consent was granted for the first time after that date were in accordance with the requirements of the directive,

or

(b) the Member States had to adopt the necessary measures by 3 July 1988 but were not prevented from enacting transitional provisions for development consent procedures already initiated?

2. If Question 1 is to be answered as indicated under (b) above:

Is Article 12 of the directive to be interpreted as meaning that

(a) the relevant date for transitional provisions must be 3 July 1988,

or

(b) the Member States may in the case of transitional provisions take as the relevant date that of the later entry into force of their national measures for the transposition of the directive?

3. If Question 2 is to be answered as indicated under 2(b) above:

Is the concept of "project" in Articles 1, 3 and 4 of and Annex I, point 7, to the directive to be understood as meaning, in its application to motorways and express roads, that the environmental impact

(a) is to be assessed solely for the section of a road link for which development consent has been sought,

or

(b) in addition to the area covered by that section, for the road link as a whole?'

Questions 1 and 2

16 As indicated in paragraph 13 above, it is clear from the order for reference that the procedure which resulted in the two consent decisions at issue in the main proceedings was initiated after 3 July 1988, the deadline for transposition of the directive. The first two questions must therefore be examined in the light of that fact.

17 The national court is asking essentially whether Article 12(1) of the directive should be interpreted as permitting a Member State which has transposed the directive into national law after 3 July 1988, the deadline for transposition, to waive, by a transitional provision, for projects in respect of which the consent procedure was initiated before the entry into force of the national law transposing the directive, but after 3 July 1988, the obligations concerning environmental impact assessment required under the directive.

18 It must be pointed out in this connection that there is nothing in the directive which could be construed as authorizing the Member States to exempt projects in respect of which the consent procedures were initiated after the deadline of 3 July 1988 from the obligation to carry out an environmental impact assessment. On the contrary, all the provisions in the directive were formulated on the basis that it was to be transposed into the legal systems of the Member States by 3 July 1988 at the latest.

19 Accordingly, regardless whether the directive permits a Member State to introduce transitional rules for consent procedures already initiated and in progress before the deadline of 3 July 1988, the directive in any case precludes the introduction in

respect of procedures initiated after that date of rules such as those at issue in the main proceedings by a national law which, in breach of the directive, transposes it belatedly into the domestic legal system. Such an interpretation would result in an extension of the deadline of 3 July 1988 and would be contrary to the obligations under the directive.

20 The reply to the first two questions referred to the Court must therefore be that Article 12(1) of the directive must be interpreted as not permitting a Member State which has transposed the directive into national law after 3 July 1988, the deadline for transposition, to waive, by a transitional provision, for projects in respect of which the consent procedure was already initiated before the entry into force of the national law transposing the directive, but after 3 July 1988, the obligations concerning the environmental impact assessment required by the directive.

Question 3

21 The third question was asked solely in case the reply to the first two questions was contrary to that given above. Since the Court did not so reply, there is no need to answer the third question.

Costs

22 The costs incurred by the United Kingdom, the Governments of the Federal Republic of Germany and the Netherlands and the Commission of the European Communities, which have submitted observations to the Court, are not recoverable. Since these proceedings are, for the parties to the main proceedings, a step in

the action pending before the national court, the decision on costs is a matter for that court.

On those grounds,

THE COURT,

in answer to the questions referred to it by the Bayerischer Verwaltungsgerichtshof, by order of 5 November 1992, hereby rules:

Article 12(1) of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment must be interpreted as not permitting a Member State which has transposed the directive into national law after 3 July 1988, the deadline for transposition, to waive, by a transitional provision, for projects in respect of which the consent procedure was already initiated before the entry into force of the national law transposing the directive, but after 3 July 1988, the obligations concerning the environmental impact assessment required by the directive.

Proposal for a

DIRECTIVE OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL

amending Directive 2011/92/EU on the assessment of the effects of certain public and private projects on the environment

(Text with EEA relevance)

{SWD(2012) 354 final}
{SWD(2012) 355 final}

EXPLANATORY MEMORANDUM

1. CONTEXT OF THE PROPOSAL

General context – Grounds for and objectives of the proposal

Directive 2011/92/EU[1] contains a legal requirement to carry out an environmental impact assessment (EIA) of public or private projects likely to have significant effects on the environment, prior to their authorisation. There is consensus that the main objective of the Directive has been achieved; the principles of environmental assessment have been harmonised throughout the EU by the introduction of minimum requirements concerning the type of projects subject to assessment, the main developer's obligations, the content of the assessment and the participation of the competent authorities and the public. In parallel, as part of the development consent process, the EIA is a tool to assess the environmental costs and benefits of specific projects with the aim of ensuring their sustainability. Hence, the Directive has become a key instrument of environmental integration and has also brought environmental and socio-economic benefits.

After 25 years of application, the EIA Directive has not significantly changed, while the policy, legal and technical context has evolved considerably. The experience with implementation, as reflected in the Commission reports on the application and effectiveness of the EIA Directive, including the latest one published in July 2009[2], has identified a number of shortcomings. In its mid-term review of the 6th Environment Action Programme[3], the Commission stressed the need for improving the assessment of environmental impacts at national level and announced a review of the EIA Directive. In the context of Better Regulation, the Directive has also been identified as a potential instrument for simplification[4]. The general objective of the proposal is to adjust the provisions of the codified EIA Directive, so as to correct shortcomings, reflect ongoing environmental and socio-economic changes and challenges, and align with the principles of smart regulation.

Consistency with other policies and objectives of the Union

As the revised EIA Directive can play a crucial role in achieving resource efficiency (e.g. by introducing new requirements for assessing issues such as biodiversity and climate change which are related to the use of natural resources), the proposal is part of the initiatives aiming to implement the Roadmap to a Resource-Efficient Europe[5]. Furthermore, the revision of the EIA Directive subscribes to the Europe 2020 strategy[6], in particular the priority of sustainable growth. The revised Directive can also contribute significantly to the duty of the Union to take cultural aspects into account in all its policies and actions.

---

1 Directive 2011/92/EU (OJ L 26, 28.1.2012, p.1) codifies Directive 85/337/EEC and its three subsequent amendments (Directives 97/11/EC, 2003/35/EC and 2009/31/EC).

4 COM(2009) 15.

5 COM(2011) 571.

6 COM(2010) 2020.

2. RESULTS OF CONSULTATIONS WITH THE INTERESTED PARTIES AND IMPACT ASSESSMENTS

Consultation of interested parties

The consultation took place in 2010, in line with the Commission's standards. From June to September 2010, a wide public consultation on the review of the EIA Directive was launched, using a web questionnaire available in all EU official languages. 1365 replies were received (684 from citizens, 479 from organisations, companies and NGOs, 202 from public authorities and administrations). In addition, the Institute of Environmental Management & Assessment (IEMA)[7] sent a contribution (1815 responses) in the form of a survey incorporating a number of the Commission's questions. The consultation phase was concluded with a Conference (on 18-19/11/2010, at Leuven, Belgium), which complemented the wide public consultation as it looked for input from specialised stakeholders. 200 representatives from the EU and international institutions, public authorities – at national, regional and local levels – industry, environmental organisations, and the academic community were present at the conference. The results of the public consultation[8] and the conclusions of the Conference[9] have provided useful input for the development of the Commission's proposal.

Result of the impact assessment

The Impact Assessment (IA), which is submitted with this proposal, identified shortcomings in the current EIA legislation that lead to unsatisfactory implementation (no provisions that ensure quality of information and quality standards for the EIA process and implementation gaps) and socio-economic costs in the implementation of the Directive. If these problems are not adequately addressed, the Directive would become less effective and efficient and would not be able to ensure the integration of environmental considerations in decision-making. In addition, the socio-economic costs are likely to negatively affect internal market harmonisation. The shortcomings of the Directive can be grouped into three specific problem areas: (1) the screening procedure, (2) the quality and analysis of the EIA and (3) the risks of inconsistencies within the EIA process itself and in relation to other legislation.

The IA assessed a number of policy options with the aim of identifying cost-effective measures to address these problems. The outcome has led the Commission to propose a number of amendments, of which the main ones are as follows:

It is proposed to clarify the **screening** procedure, by modifying the criteria of Annex III and specifying the content and justification of screening decisions. These amendments would ensure that EIAs are carried out only for projects that would have significant environmental effects, avoiding unnecessary administrative burden for small-scale projects.

---

7 The largest professional membership body for the environment with over 15,000 members working across all industry sectors.

8 http://ec.europa.eu/environment/consultations/eia.htm

9 http://ec.europa.eu/environment/eia/conference.htm

As regards the **quality and analysis of the EIA**, it is proposed to introduce amendments to reinforce the quality of the process (i.e. mandatory scoping and quality control of EIA information), specify the content of the EIA report (mandatory assessment of reasonable alternatives, justification of final decisions, mandatory post-EIA monitoring of significant adverse effects) and adapt the EIA to challenges (i.e. biodiversity, climate change, disaster risks, availability of natural resources).

As regards the risks **of inconsistencies**, it is proposed to specify the time-frames for the main stages required by the Directive (public consultation, screening decision, final EIA decision) and introduce a mechanism, a kind of EIA one-stop shop to ensure coordination or joint operation of the EIA with the environmental assessments required under other relevant EU legislation, e.g. Directives 2010/75/EU, 92/43/EEC, 2001/42/EC.

Nine of the twelve amendments analysed are expected to provide significant environmental and socio-economic benefits without additional administrative costs; moderate savings are also expected. Two amendments (assessment of alternatives and monitoring) are expected to provide high environmental and socio-economic benefits at moderate costs for developers and with limited or negligible costs for public authorities; one amendment (adaptation of the EIA to new challenges) is expected to provide high benefits at moderate to high costs for developers and public authorities. In the long term, the significant environmental and socio-economic benefits and the moderate savings associated with the proposed amendments are likely to exceed the administrative costs.

3. LEGAL ELEMENTS OF THE PROPOSAL

Summary of the proposed action

The proposal will strengthen the provisions concerning the quality of the EIA with the aim of achieving a high level of environmental protection. Indeed, the ability to make valid decisions on the environmental impact of a project depends – to a large extent – on the quality of the information used in the EIA documentation and the quality of the EIA process. Furthermore, the proposal will enhance policy coherence and synergies with other EU law instruments and simplify procedures, with a view to reducing unnecessary administrative burdens.

Specific information on the amended Articles and Annexes of the EIA Directive is provided below.

The changes to Articles 1(2), 1(3) and 1(4) aim to clarify the terms of the Directive, based on the implementation experience and the Court case-law. The definition of 'project' is amended to make it clear that demolition works are included, in accordance with the Court ruling in case C-50/09; relevant definitions are also inserted. The possibility of not applying the Directive is limited to projects with national defence as their sole purpose and is extended to cover civil emergencies, as it is already the case under Directive 2001/42/EC.

Article 2(3) is amended to introduce an EIA 'one-stop shop', allowing the coordination or integration of assessment procedures under the EIA Directive and other EU legislation.

The modifications to Article 3 aim to ensure consistency with Article 2(1), i.e. by referring to ‘significant’ effects, and adapt the EIA to environmental issues (biodiversity, climate change, disaster risks, use of natural resources).

The changes introduced in Article 4 streamline the screening procedure and enhance the consistency of Member States' approaches to ensure that EIAs are required only when it is clear that there are significant environmental impacts. As regards projects listed in Annex II, a new paragraph is inserted concerning the obligation of the developer to provide specific information to the competent authority (detailed in Annex II.A). This Article also allows for specification of the selection criteria listed in Annex III via delegated acts. The content of the screening decision is specified to acknowledge the successful practice of adapting projects under certain preconditions (on the basis of a consideration of the most relevant impacts and information generated under other Union environmental legislation), which can avoid having to conduct a full assessment, as the most relevant environment impacts are satisfactorily addressed by the adapted project. The likelihood of significant effects and the subsequent need for an EIA would take into account the account the nature, complexity, location and size of the proposed project and would be based on objective factors, such as the scale of the project, the use of valuable resources, the environmental sensitivity of the location, and the magnitude or irreversibility of the potential impact. Furthermore, the lessons drawn from the case-law, where the Court stressed the need for "sufficiently reasoned" (C-75/08) screening decisions, which contain or are accompanied by all the information that makes it possible to check that the decision is based on adequate screening (C-87/02), are taken on board. Finally, a time-frame is set for adoption of the screening decision.

Article 5 is comprehensively modified, with a view to reinforcing the quality of information and streamlining the EIA process. The core requirement for the developer to submit environmental information is maintained, but its form and content is streamlined and specified in Annex IV. The scoping process becomes obligatory and the content of the opinion delivered by the competent authority is specified. Mechanisms are introduced to guarantee the completeness and sufficient quality of the environmental reports.

Article 6(6), which refers to the time-frames for public consultation, is modified with a view to reinforcing the role of environmental authorities and defining concrete time-frames for the consultation phase on the environmental report.

Article 7(5) is amended in order to include the establishment of time-frames for consultations among the issues to be determined by Member States when defining the arrangements for the implementation of projects likely to have significant transboundary environmental effects.

Article 8 is substantially amended and includes several new provisions. Firstly, a time-frame is set for the conclusion of the environmental impact assessment procedure. Secondly, the competent authority is required to include in the development consent decision itself some items substantiating the decision; this reflects the case-law (e.g. C-50/09). Thirdly, mandatory ex-post monitoring is introduced only for projects that will have significant adverse environmental effects, according to the consultations carried out and the information gathered (including the environmental report), with the purpose of assessing the implementation and

effectiveness of mitigation and compensation measures. Some Member States already require such monitoring, which should not duplicate that which may be required by other Union legislation (e.g. on industrial emissions or water quality), and it is appropriate therefore to establish common minimum requirements. This new obligation is cost-effective, as it may help to avoid adverse impacts on the environment and public health and costs of reparation, and is relevant for addressing impacts related to new challenges such as climate change and disaster risks. Fourthly, the competent authority is required to verify that the information of the environmental report is up to date, before deciding to grant or refuse development consent.

The main modification to Article 9 is the inclusion of a description of the monitoring arrangements in the information provided to the public when development consent is granted.

Article 12 is amended in order to specify the information required to monitor the implementation of the Directive.

Two new Articles (12a and 12b) are inserted concerning the adaptation of Annexes II.A, III and IV to scientific and technical progress through delegated acts.

Annex II.A, which is a new Annex, sets out the information to be submitted by the developer as regards projects listed in Annex II, for which screening is carried out to determine whether an EIA is required. This amendment is intended to harmonise the screening process.

Annex III, which lays down the criteria used for screening Annex II projects, is amended to clarify the existing criteria (e.g. cumulative effects or links with other EU legislation) and to include additional ones (mainly those related to new environmental issues).

Annex IV contains the items to be considered in the environmental report required by Article 5. The main changes are additional information requirements concerning the assessment of reasonable alternatives, the description of monitoring measures and the description of aspects related to new environmental issues (e.g. climate change, biodiversity, disaster risks, use of natural resources).

The amended Directive contains transitional provisions, which draw on the case-law (e.g. case C-81/96). The EIA should apply to projects for which the request for development consent was introduced before the time-limit for transposition and for which the environmental impact assessment has not been concluded before that date.

Explanatory documents

The Commission considers that explanatory documents are necessary in order to improve the quality of information on the transposition of the Directive for the following reasons.

The complete and correct transposition of the Directive is essential to guarantee that its objectives (i.e. protecting human health and the environment and ensuring a level play field) are achieved. The EIA is part of the process for assessing and granting development consent to a wide range of private and public projects in the Member

States, as either a separate or integrated part of assessment procedures. In addition, the implementation of the Directive is often highly decentralised, as the regional and local authorities are responsible for its application and, in some Member States, even for its transposition. Finally, the codification of the EIA Directive is likely to result in changes to the national measures that transposing progressively the initial directive and its three subsequent amendments. In order to implement the provisions of the revised Directive, which amends the codified version, Member States may have to act in different policy fields and amend a wide variety of legislative acts at national, regional and local levels.

The above factors are likely to increase the risks of incorrect transposition and implementation of the Directive, and complicate the Commission's task of monitoring the application of EU law. Clear information with respect to the transposition of the revised EIA Directive is instrumental in ensuring the conformity of national legislation with its provisions.

The requirement to provide explanatory documents may create an additional administrative burden on those Member States which do not work on this basis in any case. However, explanatory documents are necessary to allow effective verification of complete and correct transposition, which is essential for the reasons mentioned above, and there are no less burdensome measures to allow efficient verification. Moreover, the explanatory documents can contribute significantly to reducing the administrative burden of compliance monitoring by the Commission; without them, considerable resources and numerous contacts with national authorities would be required to track the methods of transposition in all Member States. Hence, the possible additional administrative burden of providing explanatory documents is proportionate to the aim pursued, namely to ensure effective transposition and fully achieve the objectives of the Directive.

In view of the above it is appropriate to ask Member States to accompany the notification of their transposition measures with one or more documents explaining the relationship between the provisions of the Directive and the corresponding parts of national transposition instruments.

Legal basis

As the primary objective of the Directive is the protection of the environment, in accordance with Article 191 TFEU, the proposal is based on Article 192(1) TFEU.

Subsidiarity and proportionality principles and choice of instrument

The subsidiarity principle applies insofar as the proposal does not fall under the exclusive competence of the European Union.

The objectives of the proposal cannot be sufficiently achieved by the Member States. The existing legislation sets minimum requirements for the environmental assessment of projects throughout the EU and aims to comply with international conventions (e.g. Espoo, Aarhus, Convention on Biological Diversity). This principle is maintained in the proposal which further harmonises the principles of environmental assessment and addresses inconsistencies. All Member States must take measures to comply with the minimum requirements; individual national actions

could impair the functioning of the internal market, as varying national regulation might hamper transboundary economic activities.

EU action will better achieve the objectives of the proposal. Since the adoption of the Directive in 1985, the EU has enlarged, while the scope and seriousness of environmental issues to be tackled and the number of major EU-scale infrastructure projects have also increased (e.g. transboundary projects in the field of energy or transport). Because of the transboundary nature of environmental issues (e.g. climate change, disaster risks) and of some projects, action at EU level is necessary and brings added value compared to individual national actions. The EU's action will also address issues that are important to the EU as a whole, such as adaptation to climate change and disaster prevention, and has a role to play in the achievement of Europe's 2020 objectives for sustainable growth.

The proposal therefore respects the subsidiarity principle.

The chosen legal instrument is a directive, as the proposal aims to modify an existing directive. The proposal lays down general objectives and obligations, while leaving sufficient flexibility to the Member States as regards the choice of measures for compliance and their detailed implementation. The proposal therefore complies with the proportionality principle.

4. BUDGETARY IMPLICATIONS

The proposal has no implications for the EU budget.

5. OPTIONAL ELEMENTS

The proposal concerns a matter relevant to the European Economic Area and should therefore be applicable to it.

2012/0297 (COD)

Proposal for a

DIRECTIVE OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL

amending Directive 2011/92/EU on the assessment of the effects of certain public and private projects on the environment

(Text with EEA relevance)

THE EUROPEAN PARLIAMENT AND THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty on the Functioning of the European Union, and in particular Article 192(1) thereof,

Having regard to the proposal from the European Commission,

After transmission of the draft legislative act to the national Parliaments,

Having regard to the opinion of the European Economic and Social Committee[10],

Having regard to the opinion of the Committee of the Regions[11],

Acting in accordance with the ordinary legislative procedure,

Whereas:

(1) Directive 2011/92/EU has harmonised the principles for the environmental assessment of projects by introducing minimum requirements (with regard to the type of projects subject to assessment, the main obligations of developers, the content of the assessment and the participation of the competent authorities and the public), and contributes to a high level of protection of the environment and human health.

(2) The mid-term review of the sixth Environment Action Programme[12] and the latest Report from the Commission to the Council, the European Parliament, the European Economic and Social Committee and the Committee of the Regions on the application and effectiveness of the EIA Directive (Directive 85/337/EEC)[13], the predecessor to Directive 2011/92/EU, stressed the need to improve the principles of environmental assessment of projects and adapting the Directive to the policy, legal and technical context, which has evolved considerably.

---

10 OJ C , , p. .
11 OJ C , , p. .
12 COM(2007) 225.
13 COM(2009) 378.

(3) It is necessary to amend Directive 2011/92/EU in order to strengthen the quality of the environmental assessment procedure, streamline the various steps of the procedure and enhance coherence and synergies with other Union legislation and policies, as well as strategies and policies developed by Member States in areas of national competence.

(4) Over the last decade, environmental issues, such as resource efficiency, biodiversity, climate change, and disaster risks, have become more important in policy making and should therefore also constitute critical elements in assessment and decision-making processes, especially for infrastructure projects.

(5) In its Communication entitled 'Roadmap to a Resource Efficient Europe'[14], the Commission committed itself to including broader resource efficiency considerations in the context of the revision of Directive 2011/92/EU.

(6) The Soil Thematic Strategy[15] and the Roadmap to a Resource-Efficient Europe underline the importance of the sustainable use of soil and the need to address the unsustainable increase of settlement areas over time (land take). Furthermore, the final document of the United Nations Conference on Sustainable Development held in Rio de Janeiro on 20-22 June 2012 recognises the economic and social significance of good land management, including soil, and the need for urgent action to reverse land degradation. Public and private projects should therefore consider and limit their impact on land, particularly land take, and soil, including on organic matter, erosion, compaction and sealing, including through appropriate land use plans and policies at national, regional and local levels.

(7) The United Nations Convention on Biological Diversity ("the Convention"), to which the European Union is party, requires assessment, as far as possible and as appropriate, of the significant adverse effects of projects on biological diversity, which is defined in Article 2 of the Convention, with a view to avoiding or minimising such effects. This prior assessment of impacts should contribute to attaining the Union headline target adopted on 2010[16] of halting biodiversity loss and the degradation of ecosystem services by 2020 and restoring them where feasible.

(8) The measures taken to avoid, reduce and, if possible, offset significant adverse effects on the environment should contribute to avoiding any deterioration in the quality of the environment and any net loss of biodiversity, in accordance with the Union's commitments in the context of the Convention and the objectives and actions of the Union Biodiversity Strategy up to 2020[17].

(9) Climate change will continue to cause damage to the environment and compromise economic development. Accordingly, the environmental, social and economic resilience of the Union should be promoted so as to deal with climate change throughout the Union's territory in an efficient manner. Climate change adaptation and mitigation responses need to be addressed across many of the sectors of Union legislation.

---

14 COM(2011) 571.
15 COM(2006) 231.
16 European Council conclusions, March 2010.
17 COM(2011) 244.

(10) Following the Communication from the Commission to the Council, the European Parliament, the European Economic and Social Committee and the Committee of the Regions on a Community approach on the prevention of natural and man-made disasters[18], in its conclusions of 30 November 2009, the Council of the EU invited the Commission to ensure that the implementation review and further development of EU initiatives take into consideration disaster risk prevention and management concerns and the United Nations Hyogo Framework for Action Programme (2005-2015), which stresses the need to put in place procedures for assessment of the disaster risk implications of major infrastructure projects.

(11) Protection and promotion of cultural heritage and landscapes, which are an integral part of the cultural diversity that the Union is committed to respect and promote in accordance with Article 167(4) of the Treaty on the Functioning of the European Union, can usefully build on definitions and principles developed in relevant Council of Europe Conventions, in particular the Convention for the Protection of the Architectural Heritage of Europe, the European Landscape Convention and the Framework Convention on the Value of Cultural Heritage for Society.

(12) When applying Directive 2011/92/EU, it is necessary to ensure a competitive business environment, especially for small and medium enterprises, in order to generate smart, sustainable and inclusive growth, in line with the objectives set out in the Commission's Communication entitled 'Europe 2020 – A strategy for smart, sustainable and inclusive growth'[19].

(13) Experience has shown that in cases of civil emergency compliance with the provisions of Directive 2011/92/EU may have adverse effects, and provision should therefore be made to authorise Member States not to apply that Directive in appropriate cases.

(14) The information which the developer is required to supply in order to enable the competent authority to determine whether projects listed in Annex II of Directive 2011/92/EU should be subject to an environmental assessment (screening procedure), should be specified.

(15) The selection criteria laid down in Annex III of Directive 2011/92/EU, which are taken into account by the Member States in order to determine which projects should be subject to assessment on the basis of their significant environmental effects, should be adapted and clarified in order to ensure that an environmental assessment is only required for projects likely to have significant environmental effects, such as projects using or affecting valuable resources, projects proposed for environmentally sensitive locations, or projects with potentially hazardous or irreversible effects.

(16) When determining whether significant environmental effects are likely to be caused, the competent authorities should identify the most relevant criteria to be considered and use the additional information that may be available following other assessments required by Union legislation in order to apply the screening procedure effectively. In this regard, it is appropriate to specify the content of the screening decision, in particular where no environmental assessment is required.

---

18 COM(2009) 82.

19 COM(2010) 2020.

(17) The competent authorities should be required to determine the scope and level of detail of the environmental information to be submitted in the form of an environmental report (scoping). In order to improve the quality of the assessment and streamline the decision-making process, it is important to specify at Union level the categories of information on which the competent authorities should make that determination.

(18) The environmental report of a project to be provided by the developer should include an assessment of reasonable alternatives relevant to the proposed project, including the likely evolution of the existing state of the environment without implementation of the project (baseline scenario), as a means to improve quality of the assessment process and to allow integrating environmental considerations at an early stage in the project's design.

(19) Measures should be taken to ensure that the data and information included in the environmental reports, in accordance with Annex IV of Directive 2011/92/EU are complete and of sufficiently high quality. With a view to avoiding duplication of the assessment, Member States should take account of the fact that environmental assessments may be carried out at different levels or by different instruments.

(20) With a view to ensuring transparency and accountability, the competent authority should be required to substantiate its decision to grant development consent in respect of a project, indicating that it has taken into consideration the results of the consultations carried out and the relevant information gathered.

(21) It is appropriate to establish common minimum requirements for the monitoring of the significant adverse effects of the construction and operation of projects to ensure a common approach in all Member States and to ensure that, after the implementation of mitigation and compensation measures, no impacts exceed those initially predicted. Such monitoring should not duplicate or add to monitoring required pursuant to other Union legislation.

(22) Time-frames for the various steps of the environmental assessment of projects should be introduced, in order to stimulate more efficient decision-making and increase legal certainty, also taking into account the nature, complexity, location and size of the proposed project. Such time-frames should under no circumstances compromise the high standards for the protection of the environment, particularly those resulting from other Union environmental legislation, and effective public participation and access to justice.

(23) In order to avoid duplication of the assessment, reduce administrative complexity and increase economic efficiency, where the obligation to carry out environmental impact assessments arises simultaneously from this Directive and other Union legislation, such as Directives 2001/42/EC on the assessment of the effects of certain plans and programmes on the environment[20], 2009/147/EC on the conservation of wild birds[21], 2000/60/EC establishing a framework for Community action in the field of water policy[22], 2010/75/EU on industrial emissions[23] and Council Directive 92/43/EEC on

[20] OJ L 197, 21.7.2001, p.30.
[21] OJ L 20, 26.1.2010, p.7.
[22] OJ L 327, 22.12.2000, p.1.
[23] OJ L 334, 17.12.2010, p.17.

the conservation of natural habitats and of wild fauna and flora[24], Member States should provide for coordinated or joint procedures fulfilling the requirements of the relevant Union legislation.

(24) The new provisions should also apply to projects for which the request for development consent is introduced before the time-limit for transposition but for which the environmental impact assessment has not been concluded before that date.

(25) In accordance with the Joint Political Declaration of Member States and the Commission of 28 September 2011 on explanatory documents, Member States have undertaken to accompany, in justified cases, the notification of their transposition measures with one or more documents explaining the relationship between the components of a directive and the corresponding parts of national transposition instruments. With regard to this Directive, the legislator considers the transmission of such documents to be justified.

(26) In order to adjust the selection criteria and the information to be provided in the environmental report to the latest developments in technology and relevant practices, the power to adopt acts, in accordance with Article 290 of the Treaty on the Functioning of the European Union, should be delegated to the Commission in respect of Annexes II.A, III and IV of Directive 2011/92/EU. It is of particular importance that the Commission carry out appropriate consultations during its preparatory work, including at expert level.

(27) The Commission, when preparing and drawing up delegated acts, should ensure the simultaneous, timely and appropriate transmission of relevant documents to the European Parliament and Council.

(28) Since the objective of this Directive, namely to ensure a high level of protection of the environment and of human health, through the establishment of minimum requirements for the environmental assessment of projects, cannot be sufficiently achieved by the Member States and can therefore, by reason of the scope, seriousness and transboundary nature of the environmental issues to be addressed, be better achieved at Union level, the Union may adopt measures, in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty on the European Union. In accordance with the principle of proportionality, as set out in that Article, this Directive does not go beyond what is necessary in order to achieve that objective.

(29) Directive 2011/92/EU should therefore be amended accordingly,

HAVE ADOPTED THIS DIRECTIVE:

Article 1

Directive 2011/92/EU is amended as follows:

(1) Article 1 is amended as follows:

[24] OJ L 206, 22.7.1992, p.7.

(a) in point (a) of paragraph 2, the first indent is replaced by the following:

"— the execution of construction or demolition works, or of other installations or schemes,"

(b) in paragraph 2, the following definition is added:

"(g) "environmental impact assessment" shall mean the process of preparing an environmental report, carrying out consultations (including with the public concerned and the environmental authorities), the assessment by the competent authority, taking into account the environmental report and the results of the consultations in the development consent procedure as well as the provision of information on the decision in accordance with Articles 5 to 10."

(c) paragraphs 3 and 4 are replaced by the following:

"3. Member States may decide, on a case-by-case basis and if so provided under national law, not to apply this Directive to projects having as their sole purpose national defence or the response to civil emergencies, if they deem that such application would have an adverse effect on those purposes."

4. This Directive shall not apply to projects the details of which are adopted by a specific act of national legislation, provided that the objectives of this Directive, including that of supplying information, are achieved through the legislative process. Every two years from the date specified in Article 2(1) of Directive XXX [OPOCE please introduce the n° of this Directive], Member States shall inform the Commission of any application which they have made of this provision."

(2) In Article 2, paragraph 3 is replaced by the following:

"3. Projects for which the obligation to carry out assessments of the effects on the environment arises simultaneously from this Directive and other Union legislation shall be subject to coordinated or joint procedures fulfilling the requirements of the relevant Union legislation.

Under the coordinated procedure, the competent authority shall coordinate the various individual assessments required by the Union legislation concerned and issued by several authorities, without prejudice to any provisions to the contrary contained in other relevant Union legislation.

Under the joint procedure, the competent authority shall issue one environmental impact assessment, integrating the assessments of one or more authorities, without prejudice to any provisions to the contrary contained in other relevant Union legislation.

Member States shall appoint one authority, which shall be responsible for facilitating the development consent procedure for each project."

(3) Article 3 is replaced by the following:

"Article 3

The environmental impact assessment shall identify, describe and assess in an appropriate manner, in the light of each individual case and in accordance with Articles 4 to 11, the direct and indirect significant effects of a project on the following factors:

(a) population, human health, and biodiversity, with particular attention to species and habitats protected under Council Directive 92/43/EEC(*) and Directive 2009/147/EC of the European Parliament and of the Council(**);

(b) land, soil, water, air and climate change;

(c) material assets, cultural heritage and the landscape;

(d) the interaction between the factors referred to in points (a), (b) and (c);

(e) exposure, vulnerability and resilience of the factors referred to in points (a), (b) and (c), to natural and man-made disaster risks."

_____

(*) OJ L 206, 22.7.1992, p.7.

(**) OJ L 20, 26.1.2010, p.7."

(4) Article 4 is amended as follows:

(a) paragraphs 3 and 4 are replaced by the following:

"3. For projects listed in Annex II, the developer shall provide information on the characteristics of the project, its potential impact on the environment and the measures envisaged in order to avoid and reduce significant effects. The detailed list of information to be provided is specified in Annex II.A."

4. When a case-by-case examination is carried out or thresholds or criteria are set for the purpose of paragraph 2, the competent authority shall take account of selection criteria related to the characteristics and location of the project and its potential impact on the environment. The detailed list of selection criteria to be used is specified in Annex III."

(b) The following paragraphs 5 and 6 are added:

"5. The competent authority shall make its decision pursuant to paragraph 2, on the basis of the information provided by the developer and taking into account, where relevant, the results of studies, preliminary verifications or assessments of the effects on the environment arising from other Union legislation. The decision pursuant to paragraph 2 shall:

(a) state how the criteria in Annex III have been taken into account;

(b) include the reasons for requiring or not requiring an environmental impact assessment pursuant to Articles 5 to 10;

(c) include a description of the measures envisaged to avoid, prevent and reduce any significant effects on the environment, where it is decided that no environmental impact assessment needs to be carried out pursuant to Articles 5 to 10;

(d) be made available to the public.

6. The competent authority shall make its decision pursuant to paragraph 2 within three months from the request for development consent and provided that the developer has submitted all the requisite information. Depending on the nature, complexity, location and size of the proposed project, the competent authority may extend that deadline by a further 3 months; in that case, the competent authority shall inform the developer of the reasons justifying the extension and of the date when its determination is expected.

Where the project is made subject to an environmental impact assessment in accordance with Articles 5 to 10, the decision pursuant to paragraph 2 of this Article shall include the information set out in Article 5(2)."

(5) In Article 5, paragraphs 1, 2 and 3 are replaced by the following:

"1. Where an environmental impact assessment must be carried out in accordance with Articles 5 to 10, the developer shall prepare an environmental report. The environmental report shall be based on the determination pursuant to paragraph 2 of this Article and include the information that may reasonably be required for making informed decisions on the environmental impacts of the proposed project, taking into account current knowledge and methods of assessment, the characteristics, technical capacity and location of the project, the characteristics of the potential impact, alternatives to the proposed project and the extent to which certain matters (including the evaluation of alternatives) are more appropriately assessed at different levels including the planning level, or on the basis of other assessment requirements. The detailed list of information to be provided in the environmental report is specified in Annex IV.

2. The competent authority, after having consulted the authorities referred to in Article 6(1) and the developer, shall determine the scope and level of detail of the information to be included by the developer in the environmental report, in accordance with paragraph 1 of this Article. In particular, it shall determine:

(a) the decisions and opinions to be obtained;

(b) the authorities and the public likely to be concerned;

(c) the individual stages of the procedure and their duration;

(d) reasonable alternatives relevant to the proposed project and its specific characteristics;

(e) the environmental features referred to in Article 3 likely to be significantly affected;

(f) the information to be submitted relevant to the specific characteristics of a particular project or type of project;

(g) the information and knowledge available and obtained at other levels of decision-making or through other Union legislation, and the methods of assessment to be used.

The competent authority may also seek assistance from accredited and technically competent experts referred to in paragraph 3 of this Article. Subsequent requests to the developer for additional information may only be made if these are justified by new circumstances and duly explained by the competent authority.

3. To guarantee the completeness and sufficient quality of the environmental reports referred to in Article 5(1):

(a) the developer shall ensure that the environmental report is prepared by accredited and technically competent experts or

(b) the competent authority shall ensure that the environmental report is verified by accredited and technically competent experts and/or committees of national experts.

Where accredited and technically competent experts assisted the competent authority to prepare the determination referred to in Article 5(2), the same experts shall not be used by the developer for the preparation of the environmental report.

The detailed arrangements for the use and selection of accredited and technically competent experts (for example qualifications required, assignment of evaluation, licensing, and disqualification), shall be determined by the Member States."

(6) Article 6 is amended as follows:

(a) paragraph 6 is replaced by the following:

"6. Reasonable time-frames for the different phases shall be provided, allowing sufficient time:

(a) for informing the authorities referred to in Article 6(1) and the public and

(b) for the authorities referred to in Article 6(1) and the public concerned to prepare and participate effectively in the environmental decision-making subject to the provisions of this Article."

(b) the following paragraph 7 is added:

"7. The time-frames for consulting the public concerned on the environmental report referred to in Article 5(1) shall not be shorter than 30 days or longer than 60 days. In exceptional cases, where the nature, complexity, location or size of the proposed project so require, the competent authority may extend this time-frame by a further 30 days; in that case, the competent authority shall inform the developer of the reasons justifying the extension."

(7) In Article 7, paragraph 5 is replaced by the following:

"5. The detailed arrangements for implementing paragraphs 1 to 4 of this Article, including the establishment of time-frames for consultations, shall be determined by the Member States concerned, on the basis of the arrangements and time-frames referred to in Article 6(5) and (6), and shall be such as to enable the public concerned in the territory of the affected Member State to participate effectively in the environmental decision-making procedures referred to in Article 2(2) for the project."

(8) Article 8 is replaced by the following:

"Article 8

1. The results of consultations and the information gathered pursuant to Articles 5, 6 and 7 shall be taken into consideration in the development consent procedure. To this end, the decision to grant development consent shall contain the following information:

(a) the environmental assessment of the competent authority referred to in Article 3 and the environmental conditions attached to the decision, including a description of the main measures to avoid, reduce and, if possible, offset significant adverse effects;

(b) the main reasons for choosing the project as adopted, in the light of the other alternatives considered, including the likely evolution of the existing state of the environment without implementation of the project (baseline scenario);

(c) a summary of the comments received pursuant to Articles 6 and 7;

(d) a statement summarising how environmental considerations have been integrated into the development consent and how the results of the consultations and the information gathered pursuant to Articles 5, 6 and 7 have been incorporated or otherwise addressed.

For projects likely to have significant adverse transboundary effects, the competent authority shall provide information for not having taken into account comments received by the affected Member State during the consultations carried out pursuant to Article 7.

2. If the consultations and the information gathered pursuant to Articles 5, 6 and 7 conclude that a project will have significant adverse environmental effects, the competent authority, as early as possible and in close cooperation with the authorities referred to in Article 6(1) and the developer, shall consider whether the environmental report referred to in Article 5(1) should be revised and the project modified to avoid or reduce these adverse effects and whether additional mitigation or compensation measures are needed.

If the competent authority decides to grant development consent, it shall ensure that the development consent includes measures to monitor the significant adverse environmental effects, in order to assess the implementation and the expected effectiveness of mitigation and compensation measures, and to identify any unforeseeable adverse effects.

The type of parameters to be monitored and the duration of the monitoring shall be proportionate to the nature, location and size of the proposed project and the significance of its environmental effects.

Existing monitoring arrangements resulting from other Union legislation may be used if appropriate.

3. When all necessary information gathered pursuant to Articles 5, 6 and 7 has been provided to the competent authority, including, where relevant, specific assessments required under other Union legislation, and the consultations referred to in Articles 6 and 7 have been completed, the competent authority shall conclude its environmental impact assessment of the project within three months.

Depending on the nature, complexity, location and size of the proposed project, the competent authority may extend that deadline by a further 3 months; in that case, the competent authority shall inform the developer of the reasons justifying the extension and of the date when its decision is expected.

4. Before a decision to grant or refuse development consent is taken, the competent authority shall verify whether the information in the environmental report referred to in Article 5(1) is up to date, in particular concerning the measures envisaged to prevent, reduce and, where possible, offset any significant adverse effects."

(9) Article 9 is amended as follows:

(a) paragraph 1 is replaced by the following:

"1. When a decision to grant or refuse development consent has been taken, the competent authority or authorities shall inform the public and the authorities referred to in Article 6(1) thereof, in accordance with the appropriate procedures, and shall make available to the public the following information:

(a) the content of the decision and any conditions attached thereto;

(b) having examined the environmental report and the concerns and opinions expressed by the public concerned, the main reasons and considerations on which the decision is based, including information about the public participation process;

(c) a description of the main measures to avoid, reduce and, if possible, offset the significant adverse effects;

(d) a description, where appropriate, of the monitoring measures referred to in Article 8(2)."

(b) the following paragraph 3 is added:

"3. Member States may also decide to make available to the public the information referred to in paragraph 1, when the competent authority concludes its environmental impact assessment of the project."

(10) In Article 12, paragraph 2 is replaced by the following:

"2. In particular, every six years from the date specified in Article 2(1) of Directive XXX [OPOCE please introduce the n° of this Directive] Member States shall inform the Commission of:

(a) the number of projects referred to in Annexes I and II made subject to an assessment in accordance with Articles 5 to 10;

(b) the breakdown of assessments according to the project categories set out in Annexes I and II;

(c) the breakdown of assessments undertaken by type of developer;

(d) the number of projects referred to in Annex II made subject to a determination in accordance with Article 4(2);

(e) the average duration of the environmental impact assessment process;

(f) the average cost of the environmental impact assessments."

(11) The following Articles 12a and12b are inserted:

"Article 12a

The Commission shall be empowered to adopt delegated acts, in accordance with Article 12b, concerning the selection criteria listed in Annex III and the information referred to in Annexes II.A and IV, in order to adapt them to scientific and technical progress.

Article 12b

1. The power to adopt delegated acts is conferred on the Commission subject to the condition laid down in this Article.

2. The delegation of power referred to in Article 12a shall be conferred on the Commission for an indeterminate period of time from the [OPOCE please introduce date of the entry into force of this Directive].

3. The delegation of power referred to in Article 12a may be revoked at any time by the European Parliament or by the Council. A revocation decision shall put an end to the delegation of the power specified in that decision. It shall take effect the day following the publication of the decision in the Official Journal of the European Union or at a date specified therein. It shall not affect the validity of any delegated acts already in force.

4. As soon as it adopts a delegated act, the Commission shall notify it simultaneously to the European Parliament and to the Council.

5. A delegated act adopted pursuant to Article 12a shall enter into force only if no objection has been expressed either by the European Parliament or by the Council within a period of two months of the notification of that act to the European Parliament and the Council or if, before the expiry of that period, the European Parliament and the Council have both informed the Commission that they will not

object. That period shall be extended by two months at the initiative of the European Parliament or the Council."

(12) The Annexes to Directive 2011/92/EU are amended as provided in the Annex to this Directive.

Article 2

1. Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with this Directive by [DATE] at the latest. They shall forthwith communicate to the Commission the text of those provisions and a document explaining the relationship between them and this Directive.

   When Member States adopt those provisions, they shall contain a reference to this Directive or be accompanied by such a reference on the occasion of their official publication. Member States shall determine how such reference is to be made.

2. Member States shall communicate to the Commission the text of the main provisions of national law which they adopt in the field covered by this Directive.

Article 3

Projects for which the request for development consent was introduced before the date referred to in the first subparagraph of Article 2(1) and for which the environmental impact assessment has not been concluded before that date shall be subject to the obligations referred to in Articles 3 to 11 of Directive 2011/92/EU as amended by this Directive.

Article 4

This Directive shall enter into force on the twentieth day following that of its publication in the *Official Journal of the European Union.*

Article 5

This Directive is addressed to the Member States.

Done at Brussels,

For the European Parliament	*For the Council*
The President	*The President*

ANNEX

(1) The following Annex II.A is inserted:

"ANNEX II.A – INFORMATION REFERRED TO IN ARTICLE 4(3)

1. A description of the project, including in particular:

(a) a description of the physical characteristics of the whole project, including, where relevant, its subsurface, during the construction and operational phases;

(b) a description of the location of the project, with particular regard to the environmental sensitivity of geographical areas likely to be affected.

2. A description of the aspects of the environment likely to be significantly affected by the proposed project.

3. A description of the likely significant effects of the proposed project on the environment resulting from:

(a) the expected residues and emissions and the production of waste;

(b) the use of natural resources, in particular soil, land, water, and biodiversity, including hydromorphological changes.

4. A description of the measures envisaged to avoid, prevent or reduce any significant adverse effects on the environment."

(2) Annexes III and IV are replaced by the following:

"ANNEX III – SELECTION CRITERIA REFERRED TO IN ARTICLE 4(4)

1. CHARACTERISTICS OF PROJECTS

The characteristics of projects must be considered with particular regard to:

(a) the size of the project, including, where relevant, its subsurface;

(b) cumulation with other projects and activities;

(c) the use of natural resources, in particular land, soil, water, and biodiversity, including hydromorphological changes;

(d) the production of waste;

(e) pollution and nuisances;

(f) the natural and man-made disaster risks and risk of accidents, with particular regard to hydromorphological changes, substances, or technologies or living organisms used, to specific surface and subsurface conditions or alternative use, and to the probability of accidents or disasters and the vulnerability of the project to these risks;

(g) impacts of the project on climate change (in terms of greenhouse gas emissions including from land use, land-use change and forestry), contribution of the project to an improved resilience, and the impacts of climate change on the project (e.g. if the project is coherent with a changing climate);

(h) impacts of the project on the environment, in particular on land (increase of settlement areas over time – land take), soil (organic matter, erosion, compaction, sealing), water (quantity and quality), air and biodiversity (population quality and quantity and ecosystem degradation and fragmentation);

(i) the risks to human health (e.g. due to water contamination or air pollution);

(j) impact of the project on cultural heritage and landscape.

2. LOCATION OF PROJECTS

The environmental sensitivity of geographical areas likely to be affected by projects must be considered, with particular regard to:

(a) the existing and planned land use, including land take and fragmentation;

(b) the relative abundance, availability, quality and regenerative capacity of natural resources (including soil, land, water, and biodiversity) in the area;

(c) the absorption capacity of the natural environment, paying particular attention to the following areas:

(i) wetlands, riparian areas, river mouths;

(ii) coastal zones;

(iii) mountain and forest areas;

(iv) nature reserves and parks, permanent pastures, agriculture areas with a high nature value;

(v) areas classified or protected under Member States' legislation; Natura 2000 areas designated by Member States pursuant to Directive 2009/147/EEC of the European Parliament or of the Council and Council Directive 92/43/EEC; areas protected by international conventions;

(vi) areas in which there has already been a failure to meet the environmental quality standards, laid down in Union legislation and relevant to the project, or is likely to be such a failure;

(vii) densely populated areas;

(viii) landscapes and sites of historical, cultural or archaeological significance.

3. CHARACTERISTICS OF THE POTENTIAL IMPACT

The potential significant effects of projects must be considered in relation to criteria set out under 1 and 2 above, with particular regard to:

(a) the magnitude and spatial extent of the impact (geographical area and size of the population likely to be affected);

(b) the nature of the impact;

(c) the transboundary nature of the impact;

(d) the intensity and complexity of the impact;

(e) the probability of the impact;

(f) the duration, frequency and reversibility of the impact;

(g) the speed of onset of the impact;

(h) the cumulation of impacts with the impacts of other projects (in particular existing and/or approved) by the same or different developers;

(i) the aspects of the environment likely to be significantly affected;

(k) the information and findings on environmental effects obtained from assessments required under other EU legislation.

(l) the possibility of reducing impacts effectively.

ANNEX IV – INFORMATION REFERRED TO IN ARTICLE 5(1)

1. Description of the project, including in particular:

(a) a description of the physical characteristics of the whole project, including, where relevant, its subsurface, and the water use and land-use requirements during the construction and operational phases;

(b) a description of the main characteristics of the production processes, for instance, nature and quantity of the materials, energy and natural resources (including water, land, soil and biodiversity) used;

(c) an estimate, by type and quantity, of expected residues and emissions (water, air, soil and subsoil pollution, noise, vibration, light, heat, radiation, etc.) resulting from the operation of the proposed project.

2. A description, of the technical, locational or other aspects (e.g. in terms of project design, technical capacity, size and scale) of the alternatives considered, including the identification of the least environmentally impacting one, and an indication of the main reasons for the choice made, taking into account the environmental effects.

3. A description of the relevant aspects of the existing state of the environment and the likely evolution thereof without implementation of the project (baseline scenario). This description should cover any existing environmental problems relevant to the project, including, in particular, those relating to any areas of a particular environmental importance and the use of natural resources.

4. A description of the aspects of the environment likely to be significantly affected by the proposed project, including, in particular, population, human health, fauna, flora, biodiversity and the ecosystem services it provides, land (land take), soil (organic matter, erosion, compaction, sealing), water (quantity and quality), air, climatic factors, climate change (greenhouse gas emissions, including from land use, land use change and forestry, mitigation potential, impacts relevant to adaptation, if the project takes into account risks associated with climate change), material assets, cultural heritage, including architectural and archaeological ones, landscape; such a description should include the inter-relationship between the above factors, as well as the exposure, vulnerability and resilience of the above factors to natural and man-made disaster risks.

5. A description of the likely significant effects of the proposed project on the environment resulting from, inter alia:

(a) the existence of the project;

(b) the use of natural resources, in particular land, soil, water, biodiversity and the ecosystem services it provides, considering as far possible the availability of these resources also in the light of changing climatic conditions;

(c) the emission of pollutants, noise, vibration, light, heat and radiation, the creation of nuisances, and the elimination of waste;

(d) the risks to human health, cultural heritage or the environment (e.g. due to accidents or disasters);

(e) the cumulation of effects with other projects and activities;

(f) the greenhouse gas emissions, including from land use, land use change and forestry;

(g) the technologies and the substances used;

(h) hydromorphological changes.

The description of the likely significant effects should cover the direct effects and any indirect, secondary, cumulative, transboundary, short-, medium- and long-term, permanent and temporary, positive and negative effects of the project. This description should take into account the environmental protection objectives established at EU or Member State level which are relevant to the project.

6. The description of the forecasting methods used to assess the effects on the environment referred to in point 5, as well as an account of the main uncertainties involved and their influence on the effect estimates and selection of the preferred alternative.

7. A description of the measures envisaged to prevent, reduce and, where possible, offset any significant adverse effects on the environment referred to in point 5 and, where appropriate, of any proposed monitoring arrangements, including the preparation of a post-project analysis of the adverse effects on the environment. This

description should explain the extent to which significant adverse effects are reduced or offset and should cover both the construction and operational phases.

8. An assessment of the natural and man-made disaster risks and risk of accidents to which the project could be vulnerable and, where appropriate, a description of the measures envisaged to prevent such risks, as well as measures regarding preparedness for and response to emergencies (e.g. measures required under Directive 96/82/EC as amended).

9. A non-technical summary of the information provided under the above headings.

10. An indication of any difficulties (technical deficiencies or lack of knowhow) encountered by the developer in compiling the required information and of the sources used for the descriptions and assessments made, as well as an account of the main uncertainties involved and their influence on the effect estimates and selection of the preferred alternative."

I

(Legislative acts)

DIRECTIVES

DIRECTIVE 2011/92/EU OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL

of 13 December 2011

on the assessment of the effects of certain public and private projects on the environment

(codification)

(Text with EEA relevance)

THE EUROPEAN PARLIAMENT AND THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty on the Functioning of the European Union, and in particular Article 192(1) thereof,

Having regard to the proposal from the European Commission,

After transmission of the draft legislative act to the national parliaments,

Having regard to the opinion of the European Economic and Social Committee [1],

After consulting the Committee of the Regions,

Acting in accordance with the ordinary legislative procedure [2],

Whereas:

(1) Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment [3] has been substantially amended several times [4]. In the interests of clarity and rationality the said Directive should be codified.

(2) Pursuant to Article 191 of the Treaty on the Functioning of the European Union, Union policy on the environment is based on the precautionary principle and on the principles that preventive action should be taken, that environmental damage should, as a priority, be rectified at source and that the polluter should pay. Effects on the environment should be taken into account at the earliest possible stage in all the technical planning and decision-making processes.

(3) The principles of the assessment of environmental effects should be harmonised, in particular with reference to the projects which should be subject to assessment, the main obligations of the developers and the content of the assessment. The Member States may lay down stricter rules to protect the environment.

(4) In addition, it is necessary to achieve one of the objectives of the Union in the sphere of the protection of the environment and the quality of life.

(5) The environmental legislation of the Union includes provisions enabling public authorities and other bodies to take decisions which may have a significant effect on the environment as well as on personal health and well-being.

(6) General principles for the assessment of environmental effects should be laid down with a view to supplementing and coordinating development consent procedures governing public and private projects likely to have a major effect on the environment.

(7) Development consent for public and private projects which are likely to have significant effects on the environment should be granted only after an assessment of the likely significant environmental effects of those projects has been carried out. That assessment should be conducted on the basis of the appropriate information supplied by the developer, which may be supplemented by the authorities and by the public likely to be concerned by the project in question.

---

[1] OJ C 248, 25.8.2011, p. 154.

[2] Position of the European Parliament of 13 September 2011 (not yet published in the Official Journal) and decision of the Council of 15 November 2011.

[3] OJ L 175, 5.7.1985, p. 40.

[4] See Annex VI, Part A.

(8) Projects belonging to certain types have significant effects on the environment and those projects should, as a rule, be subject to a systematic assessment.

(9) Projects of other types may not have significant effects on the environment in every case and those projects should be assessed where the Member States consider that they are likely to have significant effects on the environment.

(10) Member States may set thresholds or criteria for the purpose of determining which of such projects should be subject to assessment on the basis of the significance of their environmental effects. Member States should not be required to examine projects below those thresholds or outside those criteria on a case-by-case basis.

(11) When setting such thresholds or criteria or examining projects on a case-by-case basis, for the purpose of determining which projects should be subject to assessment on the basis of their significant environmental effects, Member States should take account of the relevant selection criteria set out in this Directive. In accordance with the subsidiarity principle, the Member States are in the best position to apply those criteria in specific instances.

(12) For projects which are subject to assessment, a certain minimal amount of information should be supplied, concerning the project and its effects.

(13) It is appropriate to lay down a procedure in order to enable the developer to obtain an opinion from the competent authorities on the content and extent of the information to be elaborated and supplied for the assessment. Member States, in the framework of this procedure, may require the developer to provide, inter alia, alternatives for the projects for which it intends to submit an application.

(14) The effects of a project on the environment should be assessed in order to take account of concerns to protect human health, to contribute by means of a better environment to the quality of life, to ensure maintenance of the diversity of species and to maintain the reproductive capacity of the ecosystem as a basic resource for life.

(15) It is desirable to lay down strengthened provisions concerning environmental impact assessment in a transboundary context to take account of developments at international level. The European Community signed the Convention on Environmental Impact Assessment in a Transboundary Context on 25 February 1991, and ratified it on 24 June 1997.

(16) Effective public participation in the taking of decisions enables the public to express, and the decision-maker to take account of, opinions and concerns which may be relevant to those decisions, thereby increasing the accountability and transparency of the decision-making process and contributing to public awareness of environmental issues and support for the decisions taken.

(17) Participation, including participation by associations, organisations and groups, in particular non-governmental organisations promoting environmental protection, should accordingly be fostered, including, inter alia, by promoting environmental education of the public.

(18) The European Community signed the UN/ECE Convention on Access to Information, Public Participation in Decision-Making and Access to Justice in Environmental Matters (the Aarhus Convention) on 25 June 1998 and ratified it on 17 February 2005.

(19) Among the objectives of the Aarhus Convention is the desire to guarantee rights of public participation in decision-making in environmental matters in order to contribute to the protection of the right to live in an environment which is adequate for personal health and well-being.

(20) Article 6 of the Aarhus Convention provides for public participation in decisions on the specific activities listed in Annex I thereto and on activities not so listed which may have a significant effect on the environment.

(21) Article 9(2) and (4) of the Aarhus Convention provides for access to judicial or other procedures for challenging the substantive or procedural legality of decisions, acts or omissions subject to the public participation provisions of Article 6 of that Convention.

(22) However, this Directive should not be applied to projects the details of which are adopted by a specific act of national legislation, since the objectives of this Directive, including that of supplying information, are achieved through the legislative process.

(23) Furthermore, it may be appropriate in exceptional cases to exempt a specific project from the assessment procedures laid down by this Directive, subject to appropriate information being supplied to the Commission and to the public concerned.

(24) Since the objectives of this Directive cannot be sufficiently achieved by the Member States and can therefore, by reason of the scale and effects of the action, be better achieved at Union level, the Union may adopt measures in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty on European Union. In accordance with the principle of proportionality, as set out in that Article, this Directive does not go beyond what is necessary in order to achieve those objectives.

(25) This Directive should be without prejudice to the obligations of the Member States relating to the time limits for transposition into national law of the Directives set out in Annex V, Part B,

HAVE ADOPTED THIS DIRECTIVE:

Article 1

1. This Directive shall apply to the assessment of the environmental effects of those public and private projects which are likely to have significant effects on the environment.

2. For the purposes of this Directive, the following definitions shall apply:

(a) 'project' means:

— the execution of construction works or of other installations or schemes,

— other interventions in the natural surroundings and landscape including those involving the extraction of mineral resources;

(b) 'developer' means the applicant for authorisation for a private project or the public authority which initiates a project;

(c) 'development consent' means the decision of the competent authority or authorities which entitles the developer to proceed with the project;

(d) 'public' means one or more natural or legal persons and, in accordance with national legislation or practice, their associations, organisations or groups;

(e) 'public concerned' means the public affected or likely to be affected by, or having an interest in, the environmental decision-making procedures referred to in Article 2(2). For the purposes of this definition, non-governmental organisations promoting environmental protection and meeting any requirements under national law shall be deemed to have an interest;

(f) 'competent authority or authorities' means that authority or those authorities which the Member States designate as responsible for performing the duties arising from this Directive.

3. Member States may decide, on a case-by-case basis if so provided under national law, not to apply this Directive to projects serving national defence purposes, if they deem that such application would have an adverse effect on those purposes.

4. This Directive shall not apply to projects the details of which are adopted by a specific act of national legislation, since the objectives of this Directive, including that of supplying information, are achieved through the legislative process.

Article 2

1. Member States shall adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment by virtue, inter alia, of their nature, size or location are made subject to a requirement for development consent and an assessment with regard to their effects. Those projects are defined in Article 4.

2. The environmental impact assessment may be integrated into the existing procedures for consent to projects in the Member States, or, failing this, into other procedures or into procedures to be established to comply with the aims of this Directive.

3. Member States may provide for a single procedure in order to fulfil the requirements of this Directive and the requirements of Directive 2008/1/EC of the European Parliament and of the Council of 15 January 2008 concerning integrated pollution prevention and control [1].

4. Without prejudice to Article 7, Member States may, in exceptional cases, exempt a specific project in whole or in part from the provisions laid down in this Directive.

In that event, the Member States shall:

(a) consider whether another form of assessment would be appropriate;

(b) make available to the public concerned the information obtained under other forms of assessment referred to in point (a), the information relating to the decision granting exemption and the reasons for granting it;

(c) inform the Commission, prior to granting consent, of the reasons justifying the exemption granted, and provide it with the information made available, where applicable, to their own nationals.

The Commission shall immediately forward the documents received to the other Member States.

The Commission shall report annually to the European Parliament and to the Council on the application of this paragraph.

[1] OJ L 24, 29.1.2008, p. 8.

Article 3

The environmental impact assessment shall identify, describe and assess in an appropriate manner, in the light of each individual case and in accordance with Articles 4 to 12, the direct and indirect effects of a project on the following factors:

(a) human beings, fauna and flora;

(b) soil, water, air, climate and the landscape;

(c) material assets and the cultural heritage;

(d) the interaction between the factors referred to in points (a), (b) and (c).

Article 4

1. Subject to Article 2(4), projects listed in Annex I shall be made subject to an assessment in accordance with Articles 5 to 10.

2. Subject to Article 2(4), for projects listed in Annex II, Member States shall determine whether the project shall be made subject to an assessment in accordance with Articles 5 to 10. Member States shall make that determination through:

(a) a case-by-case examination;

or

(b) thresholds or criteria set by the Member State.

Member States may decide to apply both procedures referred to in points (a) and (b).

3. When a case-by-case examination is carried out or thresholds or criteria are set for the purpose of paragraph 2, the relevant selection criteria set out in Annex III shall be taken into account.

4. Member States shall ensure that the determination made by the competent authorities under paragraph 2 is made available to the public.

Article 5

1. In the case of projects which, pursuant to Article 4, are to be made subject to an environmental impact assessment in accordance with this Article and Articles 6 to 10, Member States shall adopt the necessary measures to ensure that the developer supplies in an appropriate form the information specified in Annex IV inasmuch as:

(a) the Member States consider that the information is relevant to a given stage of the consent procedure and to the specific characteristics of a particular project or type of project and of the environmental features likely to be affected;

(b) the Member States consider that a developer may reasonably be required to compile this information having regard, inter alia, to current knowledge and methods of assessment.

2. Member States shall take the necessary measures to ensure that, if the developer so requests before submitting an application for development consent, the competent authority shall give an opinion on the information to be supplied by the developer in accordance with paragraph 1. The competent authority shall consult the developer and authorities referred to in Article 6(1) before it gives its opinion. The fact that the authority has given an opinion under this paragraph shall not preclude it from subsequently requiring the developer to submit further information.

Member States may require the competent authorities to give such an opinion, irrespective of whether the developer so requests.

3. The information to be provided by the developer in accordance with paragraph 1 shall include at least:

(a) a description of the project comprising information on the site, design and size of the project;

(b) a description of the measures envisaged in order to avoid, reduce and, if possible, remedy significant adverse effects;

(c) the data required to identify and assess the main effects which the project is likely to have on the environment;

(d) an outline of the main alternatives studied by the developer and an indication of the main reasons for his choice, taking into account the environmental effects;

(e) a non-technical summary of the information referred to in points (a) to (d).

4. Member States shall, if necessary, ensure that any authorities holding relevant information, with particular reference to Article 3, make this information available to the developer.

Article 6

1. Member States shall take the measures necessary to ensure that the authorities likely to be concerned by the project by reason of their specific environmental responsibilities are given an opportunity to express their opinion on the information supplied by the developer and on the request for development consent. To that end, Member States shall designate the authorities to be consulted, either in general terms or on a case-by-case basis. The information gathered pursuant to Article 5 shall be forwarded to those authorities. Detailed arrangements for consultation shall be laid down by the Member States.

2. The public shall be informed, whether by public notices or by other appropriate means such as electronic media where available, of the following matters early in the environmental decision-making procedures referred to in Article 2(2) and, at the latest, as soon as information can reasonably be provided:

(a) the request for development consent;

(b) the fact that the project is subject to an environmental impact assessment procedure and, where relevant, the fact that Article 7 applies;

(c) details of the competent authorities responsible for taking the decision, those from which relevant information can be obtained, those to which comments or questions can be submitted, and details of the time schedule for transmitting comments or questions;

(d) the nature of possible decisions or, where there is one, the draft decision;

(e) an indication of the availability of the information gathered pursuant to Article 5;

(f) an indication of the times and places at which, and the means by which, the relevant information will be made available;

(g) details of the arrangements for public participation made pursuant to paragraph 5 of this Article.

3. Member States shall ensure that, within reasonable time-frames, the following is made available to the public concerned:

(a) any information gathered pursuant to Article 5;

(b) in accordance with national legislation, the main reports and advice issued to the competent authority or authorities at the time when the public concerned is informed in accordance with paragraph 2 of this Article;

(c) in accordance with the provisions of Directive 2003/4/EC of the European Parliament and of the Council of 28 January 2003 on public access to environmental information [1], information other than that referred to in paragraph 2 of this Article which is relevant for the decision in accordance with Article 8 of this Directive and which only becomes available after the time the public concerned was informed in accordance with paragraph 2 of this Article.

4. The public concerned shall be given early and effective opportunities to participate in the environmental decision-making procedures referred to in Article 2(2) and shall, for that purpose, be entitled to express comments and opinions when all options are open to the competent authority or authorities before the decision on the request for development consent is taken.

5. The detailed arrangements for informing the public (for example by bill posting within a certain radius or publication in local newspapers) and for consulting the public concerned (for example by written submissions or by way of a public inquiry) shall be determined by the Member States.

6. Reasonable time-frames for the different phases shall be provided, allowing sufficient time for informing the public and for the public concerned to prepare and participate effectively in environmental decision-making subject to the provisions of this Article.

Article 7

1. Where a Member State is aware that a project is likely to have significant effects on the environment in another Member State or where a Member State likely to be significantly affected so requests, the Member State in whose territory the project is intended to be carried out shall send to the affected Member State as soon as possible and no later than when informing its own public, inter alia:

(a) a description of the project, together with any available information on its possible transboundary impact;

(b) information on the nature of the decision which may be taken.

The Member State in whose territory the project is intended to be carried out shall give the other Member State a reasonable time in which to indicate whether it wishes to participate in the environmental decision-making procedures referred to in Article 2(2), and may include the information referred to in paragraph 2 of this Article.

2. If a Member State which receives information pursuant to paragraph 1 indicates that it intends to participate in the environmental decision-making procedures referred to in Article 2(2), the Member State in whose territory the project is intended to be carried out shall, if it has not already done so, send to the affected Member State the information required to be given pursuant to Article 6(2) and made available pursuant to points (a) and (b) of Article 6(3).

3. The Member States concerned, each insofar as it is concerned, shall also:

(a) arrange for the information referred to in paragraphs 1 and 2 to be made available, within a reasonable time, to the authorities referred to in Article 6(1) and the public concerned in the territory of the Member State likely to be significantly affected; and

[1] OJ L 41, 14.2.2003, p. 26.

(b) ensure that the authorities referred to in Article 6(1) and the public concerned are given an opportunity, before development consent for the project is granted, to forward their opinion within a reasonable time on the information supplied to the competent authority in the Member State in whose territory the project is intended to be carried out.

4. The Member States concerned shall enter into consultations regarding, inter alia, the potential transboundary effects of the project and the measures envisaged to reduce or eliminate such effects and shall agree on a reasonable timeframe for the duration of the consultation period.

5. The detailed arrangements for implementing this Article may be determined by the Member States concerned and shall be such as to enable the public concerned in the territory of the affected Member State to participate effectively in the environmental decision-making procedures referred to in Article 2(2) for the project.

Article 8

The results of consultations and the information gathered pursuant to Articles 5, 6 and 7 shall be taken into consideration in the development consent procedure.

Article 9

1. When a decision to grant or refuse development consent has been taken, the competent authority or authorities shall inform the public thereof in accordance with the appropriate procedures and shall make available to the public the following information:

(a) the content of the decision and any conditions attached thereto;

(b) having examined the concerns and opinions expressed by the public concerned, the main reasons and considerations on which the decision is based, including information about the public participation process;

(c) a description, where necessary, of the main measures to avoid, reduce and, if possible, offset the major adverse effects.

2. The competent authority or authorities shall inform any Member State which has been consulted pursuant to Article 7, forwarding to it the information referred to in paragraph 1 of this Article.

The consulted Member States shall ensure that that information is made available in an appropriate manner to the public concerned in their own territory.

Article 10

The provisions of this Directive shall not affect the obligation on the competent authorities to respect the limitations imposed by national laws, regulations and administrative provisions and accepted legal practices with regard to commercial and industrial confidentiality, including intellectual property, and the safeguarding of the public interest.

Where Article 7 applies, the transmission of information to another Member State and the receipt of information by another Member State shall be subject to the limitations in force in the Member State in which the project is proposed.

Article 11

1. Member States shall ensure that, in accordance with the relevant national legal system, members of the public concerned:

(a) having a sufficient interest, or alternatively;

(b) maintaining the impairment of a right, where administrative procedural law of a Member State requires this as a precondition;

have access to a review procedure before a court of law or another independent and impartial body established by law to challenge the substantive or procedural legality of decisions, acts or omissions subject to the public participation provisions of this Directive.

2. Member States shall determine at what stage the decisions, acts or omissions may be challenged.

3. What constitutes a sufficient interest and impairment of a right shall be determined by the Member States, consistently with the objective of giving the public concerned wide access to justice. To that end, the interest of any non-governmental organisation meeting the requirements referred to in Article 1(2) shall be deemed sufficient for the purpose of point (a) of paragraph 1 of this Article. Such organisations shall also be deemed to have rights capable of being impaired for the purpose of point (b) of paragraph 1 of this Article.

4. The provisions of this Article shall not exclude the possibility of a preliminary review procedure before an administrative authority and shall not affect the requirement of exhaustion of administrative review procedures prior to recourse to judicial review procedures, where such a requirement exists under national law.

Any such procedure shall be fair, equitable, timely and not prohibitively expensive.

5. In order to further the effectiveness of the provisions of this Article, Member States shall ensure that practical information is made available to the public on access to administrative and judicial review procedures.

Article 12

1. The Member States and the Commission shall exchange information on the experience gained in applying this Directive.

2. In particular, Member States shall inform the Commission of any criteria and/or thresholds adopted for the selection of the projects in question, in accordance with Article 4(2).

3. On the basis of that exchange of information, the Commission shall if necessary submit additional proposals to the European Parliament and to the Council, with a view to ensuring that this Directive is applied in a sufficiently coordinated manner.

Article 13

Member States shall communicate to the Commission the texts of the provisions of national law which they adopt in the field covered by this Directive.

Article 14

Directive 85/337/EEC, as amended by the Directives listed in Annex V, Part A, is repealed, without prejudice to the obligations of the Member States relating to the time limits for transposition into national law of the Directives set out in Annex V, Part B.

References to the repealed Directive shall be construed as references to this Directive and shall be read in accordance with the correlation table in Annex VI.

Article 15

This Directive shall enter into force on the 20th day following its publication in the *Official Journal of the European Union*.

Article 16

This Directive is addressed to the Member States.

Done at Strasbourg, 13 December 2011.

ANNEX I

PROJECTS REFERRED TO IN ARTICLE 4(1)

1. Crude-oil refineries (excluding undertakings manufacturing only lubricants from crude oil) and installations for the gasification and liquefaction of 500 tonnes or more of coal or bituminous shale per day.

2. (a) Thermal power stations and other combustion installations with a heat output of 300 megawatts or more;

   (b) Nuclear power stations and other nuclear reactors including the dismantling or decommissioning of such power stations or reactors [1] (except research installations for the production and conversion of fissionable and fertile materials, whose maximum power does not exceed 1 kilowatt continuous thermal load).

3. (a) Installations for the reprocessing of irradiated nuclear fuel;

   (b) Installations designed:

      (i) for the production or enrichment of nuclear fuel;

      (ii) for the processing of irradiated nuclear fuel or high-level radioactive waste;

      (iii) for the final disposal of irradiated nuclear fuel;

      (iv) solely for the final disposal of radioactive waste;

      (v) solely for the storage (planned for more than 10 years) of irradiated nuclear fuels or radioactive waste in a different site than the production site.

4. (a) Integrated works for the initial smelting of cast iron and steel;

   (b) Installations for the production of non-ferrous crude metals from ore, concentrates or secondary raw materials by metallurgical, chemical or electrolytic processes.

5. Installations for the extraction of asbestos and for the processing and transformation of asbestos and products containing asbestos: for asbestos-cement products, with an annual production of more than 20 000 tonnes of finished products, for friction material, with an annual production of more than 50 tonnes of finished products, and for other uses of asbestos, utilisation of more than 200 tonnes per year.

6. Integrated chemical installations, i.e. those installations for the manufacture on an industrial scale of substances using chemical conversion processes, in which several units are juxtaposed and are functionally linked to one another and which are:

   (a) for the production of basic organic chemicals;

   (b) for the production of basic inorganic chemicals;

   (c) for the production of phosphorous-, nitrogen- or potassium-based fertilisers (simple or compound fertilisers);

   (d) for the production of basic plant health products and of biocides;

   (e) for the production of basic pharmaceutical products using a chemical or biological process;

   (f) for the production of explosives.

[1] Nuclear power stations and other nuclear reactors cease to be such an installation when all nuclear fuel and other radioactively contaminated elements have been removed permanently from the installation site.

7. (a) Construction of lines for long-distance railway traffic and of airports [1] with a basic runway length of 2 100 m or more;

   (b) Construction of motorways and express roads [2];

   (c) Construction of a new road of four or more lanes, or realignment and/or widening of an existing road of two lanes or less so as to provide four or more lanes, where such new road or realigned and/or widened section of road would be 10 km or more in a continuous length.

8. (a) Inland waterways and ports for inland-waterway traffic which permit the passage of vessels of over 1 350 tonnes;

   (b) Trading ports, piers for loading and unloading connected to land and outside ports (excluding ferry piers) which can take vessels of over 1 350 tonnes.

9. Waste disposal installations for the incineration, chemical treatment as defined in Annex I to Directive 2008/98/EC of the European Parliament and of the Council of 19 November 2008 on waste [3] under heading D9, or landfill of hazardous waste, as defined in point 2 of Article 3 of that Directive.

10. Waste disposal installations for the incineration or chemical treatment as defined in Annex I to Directive 2008/98/EC under heading D9 of non-hazardous waste with a capacity exceeding 100 tonnes per day.

11. Groundwater abstraction or artificial groundwater recharge schemes where the annual volume of water abstracted or recharged is equivalent to or exceeds 10 million cubic metres.

12. (a) Works for the transfer of water resources between river basins where that transfer aims at preventing possible shortages of water and where the amount of water transferred exceeds 100 million cubic metres/year;

    (b) In all other cases, works for the transfer of water resources between river basins where the multi-annual average flow of the basin of abstraction exceeds 2 000 million cubic metres/year and where the amount of water transferred exceeds 5 % of that flow.

    In both cases transfers of piped drinking water are excluded.

13. Waste water treatment plants with a capacity exceeding 150 000 population equivalent as defined in point 6 of Article 2 of Council Directive 91/271/EEC of 21 May 1991 concerning urban waste-water treatment [4].

14. Extraction of petroleum and natural gas for commercial purposes where the amount extracted exceeds 500 tonnes/day in the case of petroleum and 500 000 cubic metres/day in the case of gas.

15. Dams and other installations designed for the holding back or permanent storage of water, where a new or additional amount of water held back or stored exceeds 10 million cubic metres.

16. Pipelines with a diameter of more than 800 mm and a length of more than 40 km:

    (a) for the transport of gas, oil, chemicals;

    (b) for the transport of carbon dioxide (CO_2) streams for the purposes of geological storage, including associated booster stations.

17. Installations for the intensive rearing of poultry or pigs with more than:

    (a) 85 000 places for broilers, 60 000 places for hens;

    (b) 3 000 places for production pigs (over 30 kg); or

    (c) 900 places for sows.

---

[1] For the purposes of this Directive, 'airport' means an airport which complies with the definition in the 1944 Chicago Convention setting up the International Civil Aviation Organisation (Annex 14).

[2] For the purposes of this Directive, 'express road' means a road which complies with the definition in the European Agreement on Main International Traffic Arteries of 15 November 1975.

[3] OJ L 312, 22.11.2008, p. 3.

[4] OJ L 135, 30.5.1991, p. 40.

18. Industrial plants for the production of:

    (a) pulp from timber or similar fibrous materials;

    (b) paper and board with a production capacity exceeding 200 tonnes per day.

19. Quarries and open-cast mining where the surface of the site exceeds 25 hectares, or peat extraction, where the surface of the site exceeds 150 hectares.

20. Construction of overhead electrical power lines with a voltage of 220 kV or more and a length of more than 15 km.

21. Installations for storage of petroleum, petrochemical, or chemical products with a capacity of 200 000 tonnes or more.

22. Storage sites pursuant to Directive 2009/31/EC of the European Parliament and of the Council of 23 April 2009 on the geological storage of carbon dioxide [1].

23. Installations for the capture of CO_2 streams for the purposes of geological storage pursuant to Directive 2009/31/EC from installations covered by this Annex, or where the total yearly capture of CO_2 is 1,5 megatonnes or more.

24. Any change to or extension of projects listed in this Annex where such a change or extension in itself meets the thresholds, if any, set out in this Annex.

[1] OJ L 140, 5.6.2009, p. 114.

ANNEX II

PROJECTS REFERRED TO IN ARTICLE 4(2)

1. AGRICULTURE, SILVICULTURE AND AQUACULTURE

   (a) Projects for the restructuring of rural land holdings;

   (b) Projects for the use of uncultivated land or semi-natural areas for intensive agricultural purposes;

   (c) Water management projects for agriculture, including irrigation and land drainage projects;

   (d) Initial afforestation and deforestation for the purposes of conversion to another type of land use;

   (e) Intensive livestock installations (projects not included in Annex I);

   (f) Intensive fish farming;

   (g) Reclamation of land from the sea.

2. EXTRACTIVE INDUSTRY

   (a) Quarries, open-cast mining and peat extraction (projects not included in Annex I);

   (b) Underground mining;

   (c) Extraction of minerals by marine or fluvial dredging;

   (d) Deep drillings, in particular:

      (i) geothermal drilling;

      (ii) drilling for the storage of nuclear waste material;

      (iii) drilling for water supplies;

      with the exception of drillings for investigating the stability of the soil;

   (e) Surface industrial installations for the extraction of coal, petroleum, natural gas and ores, as well as bituminous shale.

3. ENERGY INDUSTRY

   (a) Industrial installations for the production of electricity, steam and hot water (projects not included in Annex I);

   (b) Industrial installations for carrying gas, steam and hot water; transmission of electrical energy by overhead cables (projects not included in Annex I);

   (c) Surface storage of natural gas;

   (d) Underground storage of combustible gases;

   (e) Surface storage of fossil fuels;

   (f) Industrial briquetting of coal and lignite;

   (g) Installations for the processing and storage of radioactive waste (unless included in Annex I);

   (h) Installations for hydroelectric energy production;

   (i) Installations for the harnessing of wind power for energy production (wind farms);

(j) Installations for the capture of CO_2 streams for the purposes of geological storage pursuant to Directive 2009/31/EC from installations not covered by Annex I to this Directive.

4. PRODUCTION AND PROCESSING OF METALS

(a) Installations for the production of pig iron or steel (primary or secondary fusion) including continuous casting;

(b) Installations for the processing of ferrous metals:

(i) hot-rolling mills;

(ii) smitheries with hammers;

(iii) application of protective fused metal coats;

(c) Ferrous metal foundries;

(d) Installations for the smelting, including the alloyage, of non-ferrous metals, excluding precious metals, including recovered products (refining, foundry casting, etc.);

(e) Installations for surface treatment of metals and plastic materials using an electrolytic or chemical process;

(f) Manufacture and assembly of motor vehicles and manufacture of motor-vehicle engines;

(g) Shipyards;

(h) Installations for the construction and repair of aircraft;

(i) Manufacture of railway equipment;

(j) Swaging by explosives;

(k) Installations for the roasting and sintering of metallic ores.

5. MINERAL INDUSTRY

(a) Coke ovens (dry coal distillation);

(b) Installations for the manufacture of cement;

(c) Installations for the production of asbestos and the manufacture of asbestos products (projects not included in Annex I);

(d) Installations for the manufacture of glass including glass fibre;

(e) Installations for smelting mineral substances including the production of mineral fibres;

(f) Manufacture of ceramic products by burning, in particular roofing tiles, bricks, refractory bricks, tiles, stoneware or porcelain.

6. CHEMICAL INDUSTRY (PROJECTS NOT INCLUDED IN ANNEX I)

(a) Treatment of intermediate products and production of chemicals;

(b) Production of pesticides and pharmaceutical products, paint and varnishes, elastomers and peroxides;

(c) Storage facilities for petroleum, petrochemical and chemical products.

7. FOOD INDUSTRY

(a) Manufacture of vegetable and animal oils and fats;

(b) Packing and canning of animal and vegetable products;

(c) Manufacture of dairy products;

(d) Brewing and malting;

(e) Confectionery and syrup manufacture;

(f) Installations for the slaughter of animals;

(g) Industrial starch manufacturing installations;

(h) Fish-meal and fish-oil factories;

(i) Sugar factories.

8. TEXTILE, LEATHER, WOOD AND PAPER INDUSTRIES

(a) Industrial plants for the production of paper and board (projects not included in Annex I);

(b) Plants for the pre-treatment (operations such as washing, bleaching, mercerisation) or dyeing of fibres or textiles;

(c) Plants for the tanning of hides and skins;

(d) Cellulose-processing and production installations.

9. RUBBER INDUSTRY

Manufacture and treatment of elastomer-based products.

10. INFRASTRUCTURE PROJECTS

(a) Industrial estate development projects;

(b) Urban development projects, including the construction of shopping centres and car parks;

(c) Construction of railways and intermodal transhipment facilities, and of intermodal terminals (projects not included in Annex I);

(d) Construction of airfields (projects not included in Annex I);

(e) Construction of roads, harbours and port installations, including fishing harbours (projects not included in Annex I);

(f) Inland-waterway construction not included in Annex I, canalisation and flood-relief works;

(g) Dams and other installations designed to hold water or store it on a long-term basis (projects not included in Annex I);

(h) Tramways, elevated and underground railways, suspended lines or similar lines of a particular type, used exclusively or mainly for passenger transport;

(i) Oil and gas pipeline installations and pipelines for the transport of CO_2 streams for the purposes of geological storage (projects not included in Annex I);

(j) Installations of long-distance aqueducts;

(k) Coastal work to combat erosion and maritime works capable of altering the coast through the construction, for example, of dykes, moles, jetties and other sea defence works, excluding the maintenance and reconstruction of such works;

(l) Groundwater abstraction and artificial groundwater recharge schemes not included in Annex I;

(m) Works for the transfer of water resources between river basins not included in Annex I.

11. OTHER PROJECTS

(a) Permanent racing and test tracks for motorised vehicles;

(b) Installations for the disposal of waste (projects not included in Annex I);

(c) Waste-water treatment plants (projects not included in Annex I);

(d) Sludge-deposition sites;

(e) Storage of scrap iron, including scrap vehicles;

(f) Test benches for engines, turbines or reactors;

(g) Installations for the manufacture of artificial mineral fibres;

(h) Installations for the recovery or destruction of explosive substances;

(i) Knackers' yards.

12. TOURISM AND LEISURE

(a) Ski runs, ski lifts and cable cars and associated developments;

(b) Marinas;

(c) Holiday villages and hotel complexes outside urban areas and associated developments;

(d) Permanent campsites and caravan sites;

(e) Theme parks.

13. (a) Any change or extension of projects listed in Annex I or this Annex, already authorised, executed or in the process of being executed, which may have significant adverse effects on the environment (change or extension not included in Annex I);

(b) Projects in Annex I, undertaken exclusively or mainly for the development and testing of new methods or products and not used for more than two years.

ANNEX III

SELECTION CRITERIA REFERRED TO IN ARTICLE 4(3)

1. CHARACTERISTICS OF PROJECTS

The characteristics of projects must be considered having regard, in particular, to:

(a) the size of the project;

(b) the cumulation with other projects;

(c) the use of natural resources;

(d) the production of waste;

(e) pollution and nuisances;

(f) the risk of accidents, having regard in particular to substances or technologies used.

2. LOCATION OF PROJECTS

The environmental sensitivity of geographical areas likely to be affected by projects must be considered, having regard, in particular, to:

(a) the existing land use;

(b) the relative abundance, quality and regenerative capacity of natural resources in the area;

(c) the absorption capacity of the natural environment, paying particular attention to the following areas:

(i) wetlands;

(ii) coastal zones;

(iii) mountain and forest areas;

(iv) nature reserves and parks;

(v) areas classified or protected under Member States' legislation; special protection areas designated by Member States pursuant to Directive 2009/147/EC of the European Parliament and of the Council of 30 November 2009 on the conservation of wild birds [1] and to Council Directive 92/43/EEC of 21 May 1992 on the conservation of natural habitats and of wild fauna and flora [2];

(vi) areas in which the environmental quality standards laid down in Union legislation have already been exceeded;

(vii) densely populated areas;

(viii) landscapes of historical, cultural or archaeological significance.

3. CHARACTERISTICS OF THE POTENTIAL IMPACT

The potential significant effects of projects must be considered in relation to criteria set out in points 1 and 2, and having regard in particular to:

(a) the extent of the impact (geographical area and size of the affected population);

(b) the transfrontier nature of the impact;

(c) the magnitude and complexity of the impact;

(d) the probability of the impact;

(e) the duration, frequency and reversibility of the impact.

[1] OJ L 20, 26.1.2010, p. 7.
[2] OJ L 206, 22.7.1992, p. 7.

ANNEX IV

INFORMATION REFERRED TO IN ARTICLE 5(1)

1. A description of the project, including in particular:

   (a) a description of the physical characteristics of the whole project and the land-use requirements during the construction and operational phases;

   (b) a description of the main characteristics of the production processes, for instance, the nature and quantity of the materials used;

   (c) an estimate, by type and quantity, of expected residues and emissions (water, air and soil pollution, noise, vibration, light, heat, radiation, etc.) resulting from the operation of the proposed project.

2. An outline of the main alternatives studied by the developer and an indication of the main reasons for this choice, taking into account the environmental effects.

3. A description of the aspects of the environment likely to be significantly affected by the proposed project, including, in particular, population, fauna, flora, soil, water, air, climatic factors, material assets, including the architectural and archaeological heritage, landscape and the interrelationship between the above factors.

4. A description [1] of the likely significant effects of the proposed project on the environment resulting from:

   (a) the existence of the project;

   (b) the use of natural resources;

   (c) the emission of pollutants, the creation of nuisances and the elimination of waste.

5. The description by the developer of the forecasting methods used to assess the effects on the environment referred to in point 4.

6. A description of the measures envisaged to prevent, reduce and where possible offset any significant adverse effects on the environment.

7. A non-technical summary of the information provided under headings 1 to 6.

8. An indication of any difficulties (technical deficiencies or lack of know-how) encountered by the developer in compiling the required information.

[1] This description should cover the direct effects and any indirect, secondary, cumulative, short, medium and long-term, permanent and temporary, positive and negative effects of the project.

DIRECTIVE 2003/35/EC OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL

of 26 May 2003

providing for public participation in respect of the drawing up of certain plans and programmes relating to the environment and amending with regard to public participation and access to justice Council Directives 85/337/EEC and 96/61/EC

THE EUROPEAN PARLIAMENT AND THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty establishing the European Community, and in particular Article 175 thereof,

Having regard to the proposal from the Commission ([1]),

Having regard to the opinion of the European Economic and Social Committee ([2]),

Having regard to the opinion of the Committee of the Regions ([3]),

Acting in accordance with the procedure laid down in Article 251 of the Treaty ([4]), in the light of the joint text approved by the Conciliation Committee on 15 January 2003,

Whereas:

(1) Community legislation in the field of the environment aims to contribute to preserving, protecting and improving the quality of the environment and protecting human health.

(2) Community environmental legislation includes provisions for public authorities and other bodies to take decisions which may have a significant effect on the environment as well as on personal health and well-being.

(3) Effective public participation in the taking of decisions enables the public to express, and the decision-maker to take account of, opinions and concerns which may be relevant to those decisions, thereby increasing the accountability and transparency of the decision-making process and contributing to public awareness of environmental issues and support for the decisions taken.

([1]) OJ C 154 E, 29.5.2001, p. 123.
([2]) OJ C 221, 7.8.2001, p. 65.
([3]) OJ C 357, 14.12.2001, p. 58.
([4]) Opinion of the European Parliament of 23 October 2001 (OJ C 112, 9.5.2002, p. 125 (E)), Council Common Position of 25 April 2002 (OJ C 170 E, 16.7.2002, p. 22) and Decision of the European Parliament of 5 September 2002 (not yet published in the Official Journal). Decision of the European Parliament of 30 January 2003 and Decision of the Council of 4 March 2003.

▼B

(4) Participation, including participation by associations, organisations and groups, in particular non-governmental organisations promoting environmental protection, should accordingly be fostered, including *inter alia* by promoting environmental education of the public.

(5) On 25 June 1998 the Community signed the UN/ECE Convention on Access to Information, Public Participation in Decision-Making and Access to Justice in Environmental Matters (the Århus Convention). Community law should be properly aligned with that Convention with a view to its ratification by the Community.

(6) Among the objectives of the Århus Convention is the desire to guarantee rights of public participation in decision-making in environmental matters in order to contribute to the protection of the right to live in an environment which is adequate for personal health and well-being.

(7) Article 6 of the Århus Convention provides for public participation in decisions on the specific activities listed in Annex I thereto and on activities not so listed which may have a significant effect on the environment.

(8) Article 7 of the Århus Convention provides for public participation concerning plans and programmes relating to the environment.

(9) Article 9(2) and (4) of the Århus Convention provides for access to judicial or other procedures for challenging the substantive or procedural legality of decisions, acts or omissions subject to the public participation provisions of Article 6 of the Convention.

(10) Provision should be made in respect of certain Directives in the environmental area which require Member States to produce plans and programmes relating to the environment but which do not contain sufficient provisions on public participation, so as to ensure public participation consistent with the provisions of the Århus Convention, in particular Article 7 thereof. Other relevant Community legislation already provides for public participation in the preparation of plans and programmes and, for the future, public participation requirements in line with the Århus Convention will be incorporated into the relevant legislation from the outset.

(11) Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment [1], and Council Directive 96/61/EC of 24 September 1996 concerning integrated pollution prevention and control [2] should be amended to ensure that they are fully compatible with the provisions of the Århus Convention, in particular Article 6 and Article 9(2) and (4) thereof.

---

[1] OJ L 175, 5.7.1985, p. 40. Directive as amended by Directive 97/11/EC (OJ L 73, 14.3.1997, p. 5).

[2] OJ L 257, 10.10.1996, p. 26.

▼B

(12) Since the objective of the proposed action, namely to contribute to the implementation of the obligations arising under the Århus Convention, cannot be sufficiently achieved by the Member States and can therefore, by reason of the scale and effects of the action, be better achieved at Community level, the Community may adopt measures in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty. In accordance with the principle of proportionality, as set out in that Article, this Directive does not go beyond what is necessary in order to achieve that objective,

HAVE ADOPTED THIS DIRECTIVE:

Article 1

Objective

The objective of this Directive is to contribute to the implementation of the obligations arising under the Århus Convention, in particular by:

(a) providing for public participation in respect of the drawing up of certain plans and programmes relating to the environment;

(b) improving the public participation and providing for provisions on access to justice within Council Directives 85/337/EEC and 96/61/EC.

Article 2

Public participation concerning plans and programmes

1. For the purposes of this Article, 'the public' shall mean one or more natural or legal persons and, in accordance with national legislation or practice, their associations, organisations or groups.

2. Member States shall ensure that the public is given early and effective opportunities to participate in the preparation and modification or review of the plans or programmes required to be drawn up under the provisions listed in Annex I.

To that end, Member States shall ensure that:

(a) the public is informed, whether by public notices or other appropriate means such as electronic media where available, about any proposals for such plans or programmes or for their modification or review and that relevant information about such proposals is made available to the public including *inter alia* information about the right to participate in decision-making and about the competent authority to which comments or questions may be submitted;

(b) the public is entitled to express comments and opinions when all options are open before decisions on the plans and programmes are made;

(c) in making those decisions, due account shall be taken of the results of the public participation;

▼B

(d) having examined the comments and opinions expressed by the public, the competent authority makes reasonable efforts to inform the public about the decisions taken and the reasons and considerations upon which those decisions are based, including information about the public participation process.

3. Member States shall identify the public entitled to participate for the purposes of paragraph 2, including relevant non-governmental organisations meeting any requirements imposed under national law, such as those promoting environmental protection.

The detailed arrangements for public participation under this Article shall be determined by the Member States so as to enable the public to prepare and participate effectively.

Reasonable time-frames shall be provided allowing sufficient time for each of the different stages of public participation required by this Article.

4. This Article shall not apply to plans and programmes designed for the sole purpose of serving national defence or taken in case of civil emergencies.

5. This Article shall not apply to plans and programmes set out in Annex I for which a public participation procedure is carried out under Directive 2001/42/EC of the European Parliament and of the Council of 27 June 2001 on the assessment of the effects of certain plans and programmes on the environment ([1]) or under Directive 2000/60/EC of the European Parliament and of the Council of 23 October 2000 establishing a framework for Community action in the field of water policy ([2]).

▼B

Article 4

Amendment of Directive 96/61/EC

Directive 96/61/EC is hereby amended as follows:

1. Article 2 shall be amended as follows:

(a) the following sentence shall be added to point 10(b):

‘For the purposes of this definition, any change to or extension of an operation shall be deemed to be substantial if the change or extension in itself meets the thresholds, if any, set out in Annex I.’;

(b) the following points shall be added:

‘13. “the public” shall mean one or more natural or legal persons and, in accordance with national legislation or practice, their associations, organisations or groups;

([1]) OJ L 197, 21.7.2001, p. 30.
([2]) OJ L 327, 22.12.2000, p. 1. Directive as amended by Decision No 2455/2001/EC (OJ L 331, 15.12.2001, p. 1).

▼B

14. “the public concerned” shall mean the public affected or likely to be affected by, or having an interest in, the taking of a decision on the issuing or the updating of a permit or of permit conditions; for the purposes of this definition, non-governmental organisations promoting environmental protection and meeting any requirements under national law shall be deemed to have an interest;’

2. in Article 6(1), first subparagraph, the following indent shall be added:

‘— the main alternatives, if any, studied by the applicant in outline.’

3. Article 15 shall be amended as follows:

(a) paragraph 1 shall be replaced by the following:

‘1. Member States shall ensure that the public concerned are given early and effective opportunities to participate in the procedure for:

— issuing a permit for new installations,

— issuing a permit for any substantial change in the operation of an installation,

— updating of a permit or permit conditions for an installation in accordance with Article 13, paragraph 2, first indent.

The procedure set out in Annex V shall apply for the purposes of such participation.’;

(b) the following paragraph shall be added:

‘5. When a decision has been taken, the competent authority shall inform the public in accordance with the appropriate procedures and shall make available to the public the following information:

(a) the content of the decision, including a copy of the permit and of any conditions and any subsequent updates; and

(b) having examined the concerns and opinions expressed by the public concerned, the reasons and considerations on which the decision is based, including information on the public participation process.’;

4. the following Article shall be inserted:

‘Article 15a

Access to justice

Member States shall ensure that, in accordance with the relevant national legal system, members of the public concerned:

(a) having a sufficient interest, or alternatively,

(b) maintaining the impairment of a right, where administrative procedural law of a Member State requires this as a precondition;

▼B

have access to a review procedure before a court of law or another independent and impartial body established by law to challenge the substantive or procedural legality of decisions, acts or omissions subject to the public participation provisions of this Directive.

Member States shall determine at what stage the decisions, acts or omissions may be challenged.

What constitutes a sufficient interest and impairment of a right shall be determined by the Member States, consistently with the objective of giving the public concerned wide access to justice. To this end, the interest of any non-governmental organisation meeting the requirements referred to in Article 2(14) shall be deemed sufficient for the purpose of subparagraph (a) of this Article. Such organisations shall also be deemed to have rights capable of being impaired for the purpose of subparagraph (b) of this Article.

The provisions of this Article shall not exclude the possibility of a preliminary review procedure before an administrative authority and shall not affect the requirement of exhaustion of administrative review procedures prior to recourse to judicial review procedures, where such a requirement exists under national law.

Any such procedure shall be fair, equitable, timely and not prohibitively expensive.

In order to further the effectiveness of the provisions of this Article, Member States shall ensure that practical information is made available to the public on access to administrative and judicial review procedures.';

5. Article 17 shall be amended as follows:

(a) paragraph 1 shall be replaced by the following:

'1. Where a Member State is aware that the operation of an installation is likely to have significant negative effects on the environment of another Member State, or where a Member State likely to be significantly affected so requests, the Member State in whose territory the application for a permit pursuant to Article 4 or Article 12(2) was submitted shall forward to the other Member State any information required to be given or made available pursuant to Annex V at the same time as it makes it available to its own nationals. Such information shall serve as a basis for any consultations necessary in the framework of the bilateral relations between the two Member States on a reciprocal and equivalent basis.';

(b) the following paragraphs shall be added:

'3. The results of any consultations pursuant to paragraphs 1 and 2 must be taken into consideration when the competent authority reaches a decision on the application.

4. The competent authority shall inform any Member State, which has been consulted pursuant to paragraph 1, of the decision reached on the application and shall forward to it the information referred to in Article 15(5). That Member State shall take the measures necessary to ensure that that information is made available in an appropriate manner to the public concerned in its own territory.';

▼B

6. an Annex V shall be added, as set out in Annex II to this Directive.

Article 5

Reporting and review

By 25 June 2009, the Commission shall send a report on the application and effectiveness of this Directive to the European Parliament and to the Council. With a view to further integrating environmental protection requirements, in accordance with Article 6 of the Treaty, and taking into account the experience acquired in the application of this Directive in the Member States, such a report will be accompanied by proposals for amendment of this Directive, if appropriate. In particular, the Commission will consider the possibility of extending the scope of this Directive to other plans and programmes relating to the environment.

Article 6

Implementation

Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with this Directive by 25 June 2005 at the latest. They shall forthwith inform the Commission thereof.

When Member States adopt these measures, they shall contain a reference to this Directive or shall be accompanied by such a reference on the occasion of their official publication. The methods of making such reference shall be laid down by Member States.

Article 7

Entry into force

This Directive shall enter into force on the day of its publication in the *Official Journal of the European Union*.

Article 8

Addressees

This Directive is addressed to the Member States.

ANNEX II

In Directive 96/61/EC, the following Annex shall be added:

'ANNEX V

Public participation in decision-making

1. The public shall be informed (by public notices or other appropriate means such as electronic media where available) of the following matters early in the procedure for the taking of a decision or, at the latest, as soon as the information can reasonably be provided:

   (a) the application for a permit or, as the case may be, the proposal for the updating of a permit or of permit conditions in accordance with Article 15(1), including the description of the elements listed in Article 6(1);

   (b) where applicable, the fact that a decision is subject to a national or transboundary environmental impact assessment or to consultations between Member States in accordance with Article 17;

   (c) details of the competent authorities responsible for taking the decision, those from which relevant information can be obtained, those to which comments or questions can be submitted, and details of the time schedule for transmitting comments or questions;

   (d) the nature of possible decisions or, where there is one, the draft decision;

   (e) where applicable, the details relating to a proposal for the updating of a permit or of permit conditions;

   (f) an indication of the times and places where, or means by which, the relevant information will be made available;

   (g) details of the arrangements for public participation and consultation made pursuant to point 5.

2. Member States shall ensure that, within appropriate time-frames, the following is made available to the public concerned:

   (a) in accordance with national legislation, the main reports and advice issued to the competent authority or authorities at the time when the public concerned were informed in accordance with point 1;

   (b) in accordance with the provisions of Directive 2003/4/EC of the European Parliament and of the Council of 28 January 2003 on public access to environmental information (*), information other than that referred to in point 1 which is relevant for the decision in accordance with Article 8 and which only becomes available after the time the public concerned was informed in accordance with point 1.

3. The public concerned shall be entitled to express comments and opinions to the competent authority before a decision is taken.

4. The results of the consultations held pursuant to this Annex must be taken into due account in the taking of a decision.

5. The detailed arrangements for informing the public (for example by bill posting within a certain radius or publication in local newspapers) and consulting the public concerned (for example by written submissions or by way of a public inquiry) shall be determined by the Member States. Reasonable time-frames for the different phases shall be provided, allowing sufficient time for informing the public and for the public concerned to prepare and participate effectively in environmental decision-making subject to the provisions of this Annex.

(*) OJ L 41, 14.2.2003, p. 26.'

DIRECTIVE 2001/42/EC OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL
of 27 June 2001
on the assessment of the effects of certain plans and programmes on the environment

THE EUROPEAN PARLIAMENT AND THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty establishing the European Community, and in particular Article 175(1) thereof,

Having regard to the proposal from the Commission [1],

Having regard to the opinion of the Economic and Social Committee [2],

Having regard to the opinion of the Committee of the Regions [3],

Acting in accordance with the procedure laid down in Article 251 of the Treaty [4], in the light of the joint text approved by the Conciliation Committee on 21 March 2001,

Whereas:

(1) Article 174 of the Treaty provides that Community policy on the environment is to contribute to, *inter alia*, the preservation, protection and improvement of the quality of the environment, the protection of human health and the prudent and rational utilisation of natural resources and that it is to be based on the precautionary principle. Article 6 of the Treaty provides that environmental protection requirements are to be integrated into the definition of Community policies and activities, in particular with a view to promoting sustainable development.

(2) The Fifth Environment Action Programme: Towards sustainability — A European Community programme of policy and action in relation to the environment and sustainable development [5], supplemented by Council Decision No 2179/98/EC [6] on its review, affirms the importance of assessing the likely environmental effects of plans and programmes.

(3) The Convention on Biological Diversity requires Parties to integrate as far as possible and as appropriate the conservation and sustainable use of biological diversity into relevant sectoral or cross-sectoral plans and programmes.

(4) Environmental assessment is an important tool for integrating environmental considerations into the preparation and adoption of certain plans and programmes which are likely to have significant effects on the environment in the Member States, because it ensures that such effects of implementing plans and programmes are taken into account during their preparation and before their adoption.

(5) The adoption of environmental assessment procedures at the planning and programming level should benefit undertakings by providing a more consistent framework in which to operate by the inclusion of the relevant environmental information into decision making. The inclusion of a wider set of factors in decision making should contribute to more sustainable and effective solutions.

(6) The different environmental assessment systems operating within Member States should contain a set of common procedural requirements necessary to contribute to a high level of protection of the environment.

(7) The United Nations/Economic Commission for Europe Convention on Environmental Impact Assessment in a Transboundary Context of 25 February 1991, which applies to both Member States and other States, encourages the parties to the Convention to apply its principles to plans and programmes as well; at the second meeting of the Parties to the Convention in Sofia on 26 and 27 February 2001, it was decided to prepare a legally binding protocol on strategic environmental assessment which would supplement the existing provisions on environmental impact assessment in a transboundary context, with a view to its possible adoption on the occasion of the 5th Ministerial Conference 'Environment for Europe' at an extraordinary meeting of the Parties to the Convention, scheduled for May 2003 in Kiev, Ukraine. The systems operating within the Community for environmental assessment of plans and programmes should ensure that there are adequate transboundary consultations where the implementation of a plan or programme being prepared in one Member State is likely to have significant effects on the environment of another Member State. The information on plans and programmes having significant effects on the environment of other States should be forwarded on a reciprocal and equivalent basis within an appropriate legal framework between Member States and these other States.

[2] OJ C 287, 22.9.1997, p. 101.
[3] OJ C 64, 27.2.1998, p. 63 and OJ C 374, 23.12.1999, p. 9.
[4] Opinion of the European Parliament of 20 October 1998 (OJ C 341, 9.11.1998, p. 18), confirmed on 16 September 1999 (OJ C 54, 25.2.2000, p. 76), Council Common Position of 30 March 2000 (OJ C 137, 16.5.2000, p. 11) and Decision of the European Parliament of 6 September 2000 (OJ C 135, 7.5.2001, p. 155). Decision of the European Parliament of 31 May 2001 and Decision of the Council of 5 June 2001.
[5] OJ C 138, 17.5.1993, p. 5.
[6] OJ L 275, 10.10.1998, p. 1.

(8) Action is therefore required at Community level to lay down a minimum environmental assessment framework, which would set out the broad principles of the environmental assessment system and leave the details to the Member States, having regard to the principle of subsidiarity. Action by the Community should not go beyond what is necessary to achieve the objectives set out in the Treaty.

(9) This Directive is of a procedural nature, and its requirements should either be integrated into existing procedures in Member States or incorporated in specifically established procedures. With a view to avoiding duplication of the assessment, Member States should take account, where appropriate, of the fact that assessments will be carried out at different levels of a hierarchy of plans and programmes.

(10) All plans and programmes which are prepared for a number of sectors and which set a framework for future development consent of projects listed in Annexes I and II to Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment [1], and all plans and programmes which have been determined to require assessment pursuant to Council Directive 92/43/EEC of 21 May 1992 on the conservation of natural habitats and of wild flora and fauna [2], are likely to have significant effects on the environment, and should as a rule be made subject to systematic environmental assessment. When they determine the use of small areas at local level or are minor modifications to the above plans or programmes, they should be assessed only where Member States determine that they are likely to have significant effects on the environment.

(11) Other plans and programmes which set the framework for future development consent of projects may not have significant effects on the environment in all cases and should be assessed only where Member States determine that they are likely to have such effects.

(12) When Member States make such determinations, they should take into account the relevant criteria set out in this Directive.

(13) Some plans or programmes are not subject to this Directive because of their particular characteristics.

(14) Where an assessment is required by this Directive, an environmental report should be prepared containing relevant information as set out in this Directive, identifying, describing and evaluating the likely significant environmental effects of implementing the plan or programme, and reasonable alternatives taking into account the objectives and the geographical scope of the plan or programme; Member States should communicate to the Commission any measures they take concerning the quality of environmental reports.

(15) In order to contribute to more transparent decision making and with the aim of ensuring that the information supplied for the assessment is comprehensive and reliable, it is necessary to provide that authorities with relevant environmental responsibilities and the public are to be consulted during the assessment of plans and programmes, and that appropriate time frames are set, allowing sufficient time for consultations, including the expression of opinion.

(16) Where the implementation of a plan or programme prepared in one Member State is likely to have a significant effect on the environment of other Member States, provision should be made for the Member States concerned to enter into consultations and for the relevant authorities and the public to be informed and enabled to express their opinion.

(17) The environmental report and the opinions expressed by the relevant authorities and the public, as well as the results of any transboundary consultation, should be taken into account during the preparation of the plan or programme and before its adoption or submission to the legislative procedure.

(18) Member States should ensure that, when a plan or programme is adopted, the relevant authorities and the public are informed and relevant information is made available to them.

(19) Where the obligation to carry out assessments of the effects on the environment arises simultaneously from this Directive and other Community legislation, such as Council Directive 79/409/EEC of 2 April 1979 on the conservation of wild birds [3], Directive 92/43/EEC, or Directive 2000/60/EC of the European Parliament and the Council of 23 October 2000 establishing a framework for Community action in the field of water policy [4], in order to avoid duplication of the assessment, Member States may provide for coordinated or joint procedures fulfilling the requirements of the relevant Community legislation.

(20) A first report on the application and effectiveness of this Directive should be carried out by the Commission five years after its entry into force, and at seven-year intervals thereafter. With a view to further integrating environmental protection requirements, and taking into account the experience acquired, the first report should, if appropriate, be accompanied by proposals for amendment of this Directive, in particular as regards the possibility of extending its scope to other areas/sectors and other types of plans and programmes,

[1] OJ L 175, 5.7.1985, p. 40. Directive as amended by Directive 97/11/EC (OJ L 73, 14.3.1997, p. 5).
[2] OJ L 206, 22.7.1992, p. 7. Directive as last amended by Directive 97/62/EC (OJ L 305, 8.11.1997, p. 42).
[3] OJ L 103, 25.4.1979, p. 1. Directive as last amended by Directive 97/49/EC (OJ L 223, 13.8.1997, p. 9).
[4] OJ L 327, 22.12.2000, p. 1.

HAVE ADOPTED THIS DIRECTIVE:

Article 1

Objectives

The objective of this Directive is to provide for a high level of protection of the environment and to contribute to the integration of environmental considerations into the preparation and adoption of plans and programmes with a view to promoting sustainable development, by ensuring that, in accordance with this Directive, an environmental assessment is carried out of certain plans and programmes which are likely to have significant effects on the environment.

Article 2

Definitions

For the purposes of this Directive:

(a) 'plans and programmes' shall mean plans and programmes, including those co-financed by the European Community, as well as any modifications to them:

— which are subject to preparation and/or adoption by an authority at national, regional or local level or which are prepared by an authority for adoption, through a legislative procedure by Parliament or Government, and

— which are required by legislative, regulatory or administrative provisions;

(b) 'environmental assessment' shall mean the preparation of an environmental report, the carrying out of consultations, the taking into account of the environmental report and the results of the consultations in decision-making and the provision of information on the decision in accordance with Articles 4 to 9;

(c) 'environmental report' shall mean the part of the plan or programme documentation containing the information required in Article 5 and Annex I;

(d) 'The public' shall mean one or more natural or legal persons and, in accordance with national legislation or practice, their associations, organisations or groups.

Article 3

Scope

1. An environmental assessment, in accordance with Articles 4 to 9, shall be carried out for plans and programmes referred to in paragraphs 2 to 4 which are likely to have significant environmental effects.

2. Subject to paragraph 3, an environmental assessment shall be carried out for all plans and programmes,

(a) which are prepared for agriculture, forestry, fisheries, energy, industry, transport, waste management, water management, telecommunications, tourism, town and country planning or land use and which set the framework for future development consent of projects listed in Annexes I and II to Directive 85/337/EEC, or

(b) which, in view of the likely effect on sites, have been determined to require an assessment pursuant to Article 6 or 7 of Directive 92/43/EEC.

3. Plans and programmes referred to in paragraph 2 which determine the use of small areas at local level and minor modifications to plans and programmes referred to in paragraph 2 shall require an environmental assessment only where the Member States determine that they are likely to have significant environmental effects.

4. Member States shall determine whether plans and programmes, other than those referred to in paragraph 2, which set the framework for future development consent of projects, are likely to have significant environmental effects.

5. Member States shall determine whether plans or programmes referred to in paragraphs 3 and 4 are likely to have significant environmental effects either through case-by-case examination or by specifying types of plans and programmes or by combining both approaches. For this purpose Member States shall in all cases take into account relevant criteria set out in Annex II, in order to ensure that plans and programmes with likely significant effects on the environment are covered by this Directive.

6. In the case-by-case examination and in specifying types of plans and programmes in accordance with paragraph 5, the authorities referred to in Article 6(3) shall be consulted.

7. Member States shall ensure that their conclusions pursuant to paragraph 5, including the reasons for not requiring an environmental assessment pursuant to Articles 4 to 9, are made available to the public.

8. The following plans and programmes are not subject to this Directive:

— plans and programmes the sole purpose of which is to serve national defence or civil emergency,

— financial or budget plans and programmes.

9. This Directive does not apply to plans and programmes co-financed under the current respective programming periods [1] for Council Regulations (EC) No 1260/1999 [2] and (EC) No 1257/1999 [3].

[1] The 2000-2006 programming period for Council Regulation (EC) No 1260/1999 and the 2000-2006 and 2000-2007 programming periods for Council Regulation (EC) No 1257/1999.

[2] Council Regulation (EC) No 1260/1999 of 21 June 1999 laying down general provisions on the Structural Funds (OJ L 161, 26.6.1999, p. 1).

[3] Council Regulation (EC) No 1257/1999 of 17 May 1999 on support for rural development from the European Agricultural Guidance and Guarantee Fund (EAGGF) and amending and repealing certain regulations (OJ L 160, 26.6.1999, p. 80).

Article 4

General obligations

1. The environmental assessment referred to in Article 3 shall be carried out during the preparation of a plan or programme and before its adoption or submission to the legislative procedure.

2. The requirements of this Directive shall either be integrated into existing procedures in Member States for the adoption of plans and programmes or incorporated in procedures established to comply with this Directive.

3. Where plans and programmes form part of a hierarchy, Member States shall, with a view to avoiding duplication of the assessment, take into account the fact that the assessment will be carried out, in accordance with this Directive, at different levels of the hierarchy. For the purpose of, *inter alia*, avoiding duplication of assessment, Member States shall apply Article 5(2) and (3).

Article 5

Environmental report

1. Where an environmental assessment is required under Article 3(1), an environmental report shall be prepared in which the likely significant effects on the environment of implementing the plan or programme, and reasonable alternatives taking into account the objectives and the geographical scope of the plan or programme, are identified, described and evaluated. The information to be given for this purpose is referred to in Annex I.

2. The environmental report prepared pursuant to paragraph 1 shall include the information that may reasonably be required taking into account current knowledge and methods of assessment, the contents and level of detail in the plan or programme, its stage in the decision-making process and the extent to which certain matters are more appropriately assessed at different levels in that process in order to avoid duplication of the assessment.

3. Relevant information available on environmental effects of the plans and programmes and obtained at other levels of decision-making or through other Community legislation may be used for providing the information referred to in Annex I.

4. The authorities referred to in Article 6(3) shall be consulted when deciding on the scope and level of detail of the information which must be included in the environmental report.

Article 6

Consultations

1. The draft plan or programme and the environmental report prepared in accordance with Article 5 shall be made available to the authorities referred to in paragraph 3 of this Article and the public.

2. The authorities referred to in paragraph 3 and the public referred to in paragraph 4 shall be given an early and effective opportunity within appropriate time frames to express their opinion on the draft plan or programme and the accompanying environmental report before the adoption of the plan or programme or its submission to the legislative procedure.

3. Member States shall designate the authorities to be consulted which, by reason of their specific environmental responsibilities, are likely to be concerned by the environmental effects of implementing plans and programmes.

4. Member States shall identify the public for the purposes of paragraph 2, including the public affected or likely to be affected by, or having an interest in, the decision-making subject to this Directive, including relevant non-governmental organisations, such as those promoting environmental protection and other organisations concerned.

5. The detailed arrangements for the information and consultation of the authorities and the public shall be determined by the Member States.

Article 7

Transboundary consultations

1. Where a Member State considers that the implementation of a plan or programme being prepared in relation to its territory is likely to have significant effects on the environment in another Member State, or where a Member State likely to be significantly affected so requests, the Member State in whose territory the plan or programme is being prepared shall, before its adoption or submission to the legislative procedure, forward a copy of the draft plan or programme and the relevant environmental report to the other Member State.

2. Where a Member State is sent a copy of a draft plan or programme and an environmental report under paragraph 1, it shall indicate to the other Member State whether it wishes to enter into consultations before the adoption of the plan or programme or its submission to the legislative procedure and, if it so indicates, the Member States concerned shall enter into consultations concerning the likely transboundary environmental effects of implementing the plan or programme and the measures envisaged to reduce or eliminate such effects.

Where such consultations take place, the Member States concerned shall agree on detailed arrangements to ensure that the authorities referred to in Article 6(3) and the public referred to in Article 6(4) in the Member State likely to be significantly affected are informed and given an opportunity to forward their opinion within a reasonable time-frame.

3. Where Member States are required under this Article to enter into consultations, they shall agree, at the beginning of such consultations, on a reasonable timeframe for the duration of the consultations.

Article 8

Decision making

The environmental report prepared pursuant to Article 5, the opinions expressed pursuant to Article 6 and the results of any transboundary consultations entered into pursuant to Article 7 shall be taken into account during the preparation of the plan or programme and before its adoption or submission to the legislative procedure.

Article 9

Information on the decision

1. Member States shall ensure that, when a plan or programme is adopted, the authorities referred to in Article 6(3), the public and any Member State consulted under Article 7 are informed and the following items are made available to those so informed:

(a) the plan or programme as adopted;

(b) a statement summarising how environmental considerations have been integrated into the plan or programme and how the environmental report prepared pursuant to Article 5, the opinions expressed pursuant to Article 6 and the results of consultations entered into pursuant to Article 7 have been taken into account in accordance with Article 8 and the reasons for choosing the plan or programme as adopted, in the light of the other reasonable alternatives dealt with, and

(c) the measures decided concerning monitoring in accordance with Article 10.

2. The detailed arrangements concerning the information referred to in paragraph 1 shall be determined by the Member States.

Article 10

Monitoring

1. Member States shall monitor the significant environmental effects of the implementation of plans and programmes in order, *inter alia*, to identify at an early stage unforeseen adverse effects, and to be able to undertake appropriate remedial action.

2. In order to comply with paragraph 1, existing monitoring arrangements may be used if appropriate, with a view to avoiding duplication of monitoring.

Article 11

Relationship with other Community legislation

1. An environmental assessment carried out under this Directive shall be without prejudice to any requirements under Directive 85/337/EEC and to any other Community law requirements.

2. For plans and programmes for which the obligation to carry out assessments of the effects on the environment arises simultaneously from this Directive and other Community legislation, Member States may provide for coordinated or joint procedures fulfilling the requirements of the relevant Community legislation in order, *inter alia*, to avoid duplication of assessment.

3. For plans and programmes co-financed by the European Community, the environmental assessment in accordance with this Directive shall be carried out in conformity with the specific provisions in relevant Community legislation.

Article 12

Information, reporting and review

1. Member States and the Commission shall exchange information on the experience gained in applying this Directive.

2. Member States shall ensure that environmental reports are of a sufficient quality to meet the requirements of this Directive and shall communicate to the Commission any measures they take concerning the quality of these reports.

3. Before 21 July 2006 the Commission shall send a first report on the application and effectiveness of this Directive to the European Parliament and to the Council.

With a view further to integrating environmental protection requirements, in accordance with Article 6 of the Treaty, and taking into account the experience acquired in the application of this Directive in the Member States, such a report will be accompanied by proposals for amendment of this Directive, if appropriate. In particular, the Commission will consider the possibility of extending the scope of this Directive to other areas/sectors and other types of plans and programmes.

A new evaluation report shall follow at seven-year intervals.

4. The Commission shall report on the relationship between this Directive and Regulations (EC) No 1260/1999 and (EC) No 1257/1999 well ahead of the expiry of the programming periods provided for in those Regulations, with a view to ensuring a coherent approach with regard to this Directive and subsequent Community Regulations.

Article 13

Implementation of the Directive

1. Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with this Directive before 21 July 2004. They shall forthwith inform the Commission thereof.

2. When Member States adopt the measures, they shall contain a reference to this Directive or shall be accompanied by such reference on the occasion of their official publication. The methods of making such reference shall be laid down by Member States.

3. The obligation referred to in Article 4(1) shall apply to the plans and programmes of which the first formal preparatory act is subsequent to the date referred to in paragraph 1. Plans and programmes of which the first formal preparatory act is before that date and which are adopted or submitted to the legislative procedure more than 24 months thereafter, shall be made subject to the obligation referred to in Article 4(1) unless Member States decide on a case by case basis that this is not feasible and inform the public of their decision.

4. Before 21 July 2004, Member States shall communicate to the Commission, in addition to the measures referred to in paragraph 1, separate information on the types of plans and programmes which, in accordance with Article 3, would be subject to an environmental assessment pursuant to this Directive. The Commission shall make this information available to the Member States. The information will be updated on a regular basis.

Article 14

Entry into force

This Directive shall enter into force on the day of its publication in the *Official Journal of the European Communities*.

Article 15

Addressees

This Directive is addressed to the Member States.

ANNEX I

Information referred to in Article 5(1)

The information to be provided under Article 5(1), subject to Article 5(2) and (3), is the following:

(a) an outline of the contents, main objectives of the plan or programme and relationship with other relevant plans and programmes;

(b) the relevant aspects of the current state of the environment and the likely evolution thereof without implementation of the plan or programme;

(c) the environmental characteristics of areas likely to be significantly affected;

(d) any existing environmental problems which are relevant to the plan or programme including, in particular, those relating to any areas of a particular environmental importance, such as areas designated pursuant to Directives 79/409/EEC and 92/43/EEC;

(e) the environmental protection objectives, established at international, Community or Member State level, which are relevant to the plan or programme and the way those objectives and any environmental considerations have been taken into account during its preparation;

(f) the likely significant effects [1] on the environment, including on issues such as biodiversity, population, human health, fauna, flora, soil, water, air, climatic factors, material assets, cultural heritage including architectural and archaeological heritage, landscape and the interrelationship between the above factors;

(g) the measures envisaged to prevent, reduce and as fully as possible offset any significant adverse effects on the environment of implementing the plan or programme;

(h) an outline of the reasons for selecting the alternatives dealt with, and a description of how the assessment was undertaken including any difficulties (such as technical deficiencies or lack of know-how) encountered in compiling the required information;

(i) a description of the measures envisaged concerning monitoring in accordance with Article 10;

(j) a non-technical summary of the information provided under the above headings.

[1] These effects should include secondary, cumulative, synergistic, short, medium and long-term permanent and temporary, positive and negative effects.

ANNEX II

Criteria for determining the likely significance of effects referred to in Article 3(5)

1. The characteristics of plans and programmes, having regard, in particular, to
   - the degree to which the plan or programme sets a framework for projects and other activities, either with regard to the location, nature, size and operating conditions or by allocating resources,
   - the degree to which the plan or programme influences other plans and programmes including those in a hierarchy,
   - the relevance of the plan or programme for the integration of environmental considerations in particular with a view to promoting sustainable development,
   - environmental problems relevant to the plan or programme,
   - the relevance of the plan or programme for the implementation of Community legislation on the environment (e.g. plans and programmes linked to waste-management or water protection).
2. Characteristics of the effects and of the area likely to be affected, having regard, in particular, to
   - the probability, duration, frequency and reversibility of the effects,
   - the cumulative nature of the effects,
   - the transboundary nature of the effects,
   - the risks to human health or the environment (e.g. due to accidents),
   - the magnitude and spatial extent of the effects (geographical area and size of the population likely to be affected),
   - the value and vulnerability of the area likely to be affected due to:
     - special natural characteristics or cultural heritage,
     - exceeded environmental quality standards or limit values,
     - intensive land-use,
   - the effects on areas or landscapes which have a recognised national, Community or international protection status.

JUDGMENT OF THE COURT (Grand Chamber)

18 October 2011 (*)

(Assessment of the effects of projects on the environment – Directive 85/337/EEC – Scope – Concept of 'specific act of national legislation' – Aarhus Convention – Access to justice in environmental matters – Extent of the right to a review procedure in respect of a legislative act)

In Joined Cases C-128/09 to C-131/09, C-134/09 and C-135/09,

REFERENCES for a preliminary ruling under Article 234 EC from the Conseil d'État (Belgium), made by decisions of 27 and 31 March 2009, received at the Court on 6, 9 and 10 April 2009, in the proceedings

Antoine Boxus,

Willy Roua (C-128/09),

Guido Durlet and Others (C-129/09),

Paul Fastrez,

Henriette Fastrez (C-130/09),

Philippe Daras (C-131/09),

Association des riverains et habitants des communes proches de l'aéroport BSCA (Brussels South Charleroi Airport) (ARACh) (C-134/09 and C-135/09),

Bernard Page (C-134/09),

Léon L'Hoir,

Nadine Dartois (C-135/09)

v

Région wallonne,

interveners:

Société régionale wallonne du transport (SRWT) (C-128/09 and C-129/09),

Infrabel SA (C-130/09 and C-131/09),

Société wallonne des aéroports (SOWEAR) (C-135/09),

THE COURT (Grand Chamber),

composed of V. Skouris, President, A. Tizzano, J.N. Cunha Rodrigues, K. Lenaerts, J.-C. Bonichot (Rapporteur), Presidents of Chambers, K. Schiemann, E. Juhász, G. Arestis, A. Borg Barthet, M. Ilešič, A. Arabadjiev, C. Toader and J.-J. Kasel, Judges,

Advocate General: E. Sharpston,

Registrar: R. Şereş, Administrator,

having regard to the written procedure and further to the hearing on 8 June 2010,

after considering the observations submitted on behalf of:

– Mr Boxus, Mr Roua and Mr Durlet and Others, by A. Kettels, Rechtsanwältin,

– Mr and Mrs Fastrez, by T. Vandenput, avocat,

– Association des riverains et habitants des communes proches de l'aéroport BSCA (Brussels South Charleroi Airport) (ARACh), Mr Page, Mr L'Hoir and Ms Dartois, by A. Lebrun, avocat,

– the Belgian Government, by T. Materne, acting as Agent, and F. Haumont, avocat,

– the Greek Government, by G. Karipsiadis, acting as Agent,

– the Italian Government, by G. Palmieri, acting as Agent, and G. Fiengo, avvocato dello Stato,

– the European Commission, by O. Beynet and J.-B. Laignelot, acting as Agents,

after hearing the Opinion of the Advocate General at the sitting on 19 May 2011,

gives the following

Judgment

1 These references for a preliminary ruling concern the interpretation of Articles 6 and 9 of the Convention on access to information, public participation in decision-making and access to justice in environmental matters, concluded on 25 June 1998 and approved on behalf of the European Community by Council Decision 2005/370/EC of 17 February 2005 (OJ 2005 L 124, p. 1) ('the Aarhus Convention'), and of Articles 1, 5 to 8 and 10a of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40), as amended by Directive 2003/35/EC of the European Parliament and of the Council of 26 May 2003 (OJ 2003 L 156, p. 17) ('Directive 85/337').

2 The references have been made in the course of proceedings brought by persons living near Liège-Bierset and Brussels South Charleroi airports and the Brussels to Charleroi railway line against the Région wallonne (Walloon Region) concerning consents for works granted in respect of those installations.

Legal context

International law

3 Pursuant to Article 2(2) of the Aarhus Convention, 'public authority' as defined 'does not include bodies or institutions acting in a … legislative capacity'.

4 Article 6 of the Aarhus Convention states:

'1. Each Party:

(a) shall apply the provisions of this article with respect to decisions on whether to permit proposed activities listed in annex I;

(b) shall, in accordance with its national law, also apply the provisions of this article to decisions on proposed activities not listed in Annex I which may have a significant effect on the environment. To this end, Parties shall determine whether such a proposed activity is subject to these provisions; and

(c) may decide, on a case-by-case basis if so provided under national law, not to apply the provisions of this article to proposed activities serving national defence purposes, if that Party deems that such application would have an adverse effect on these purposes.

2. The public concerned shall be informed, either by public notice or individually as appropriate, early in an environmental decision-making procedure, and in an adequate, timely and effective manner, inter alia, of:

(a) the proposed activity and the application on which a decision will be taken;

(b) the nature of possible decisions or the draft decision;

(c) the public authority responsible for making the decision;

(d) the envisaged procedure, including, as and when this information can be provided:

(i) the commencement of the procedure;

(ii) the opportunities for the public to participate;

(iii) the time and venue of any envisaged public hearing;

(iv) an indication of the public authority from which relevant information can be obtained and where the relevant information has been deposited for examination by the public;

(v) an indication of the relevant public authority or any other official body to which comments or questions can be submitted and of the time schedule for transmittal of comments or questions; and

(vi) an indication of what environmental information relevant to the proposed activity is available; and

(e) the fact that the activity is subject to a national or transboundary environmental impact assessment procedure.

3. The public participation procedures shall include reasonable time-frames for the different phases, allowing sufficient time for informing the public in accordance with paragraph 2 above and for the public to prepare and participate effectively during the environmental decision-making.

4. Each Party shall provide for early public participation, when all options are open and effective public participation can take place.

…'

5 Article 9(2) of the Aarhus Convention states:

'Each Party shall, within the framework of its national legislation, ensure that members of the public concerned:

(a) having a sufficient interest or, alternatively,

(b) maintaining impairment of a right, where the administrative procedural law of a Party requires this as a precondition, have access to a review procedure before a court of law and/or another independent and impartial body established by law, to challenge the substantive and procedural legality of any decision, act or omission subject to the provisions of Article 6 and, where so provided for under national law and without prejudice to paragraph 3 below, of other relevant provisions of this Convention.

What constitutes a sufficient interest and impairment of a right shall be determined in accordance with the requirements of national law and consistently with the objective of giving the public concerned wide access to justice within the scope of this Convention. To this end, the interest of any non-governmental organisation meeting the requirements referred to in Article 2(5) shall be deemed sufficient for the purpose of subparagraph (a) above. Such organisations shall also be deemed to have rights capable of being impaired for the purpose of subparagraph (b) above.

The provisions of this paragraph 2 shall not exclude the possibility of a preliminary review procedure before an administrative authority and shall not affect the requirement of exhaustion of administrative review procedures prior to recourse to judicial review procedures, where such a requirement exists under national law.'

European Union law

6 Article 1(2) of Directive 85/337 defines 'project' as 'the execution of construction works or of other installations or schemes' or 'other interventions in the natural surroundings and landscape including those involving the extraction of mineral resources'. '[D]evelopment consent' is defined as 'the decision of the competent authority or authorities which entitles the developer to proceed with the project'.

7 Article 1(5) of Directive 85/337 provides:

‘This Directive shall not apply to projects the details of which are adopted by a specific act of national legislation, since the objectives of this Directive, including that of supplying information, are achieved through the legislative process.’

8 Article 2(1) of Directive 85/337 provides:

‘Member States shall adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment by virtue, inter alia, of their nature, size or location are made subject to a requirement for development consent and an assessment with regard to their effects. …’

9 Article 5(4) of Directive 85/337 provides:

‘Member States shall, if necessary, ensure that any authorities holding relevant information … shall make this information available to the developer.’

10 Under Article 10a of Directive 85/337:

‘Member States shall ensure that, in accordance with the relevant national legal system, members of the public concerned:

(a) having a sufficient interest, or alternatively,

(b) maintaining the impairment of a right, where administrative procedural law of a Member State requires this as a precondition,

have access to a review procedure before a court of law or another independent and impartial body established by law to challenge the substantive or procedural legality of decisions, acts or omissions subject to the public participation provisions of this Directive.

Member States shall determine at what stage the decisions, acts or omissions may be challenged.

What constitutes a sufficient interest and impairment of a right shall be determined by the Member States, consistently with the objective of giving the public concerned wide access to justice. To this end, the interest of any non-governmental organisation meeting the requirements referred to in Article 1(2), shall be deemed sufficient for the purpose of subparagraph (a) of this Article. Such organisations shall also be deemed to have rights capable of being impaired for the purpose of subparagraph (b) of this Article.

The provisions of this Article shall not exclude the possibility of a preliminary review procedure before an administrative authority and shall not affect the requirement of exhaustion of administrative review procedures prior to recourse to judicial review procedures, where such a requirement exists under national law.

Any such procedure shall be fair, equitable, timely and not prohibitively expensive.

In order to further the effectiveness of the provisions of this Article, Member States shall ensure that practical information is made available to the public on access to administrative and judicial review procedures.’

National law

11 Articles 6, 7, 9 and 14 of the Decree of the Walloon Parliament of 17 July 2008 on certain consents for which there are overriding reasons in the general interest (decrét du Parlement wallon du 17 juillet 2008 relatif à quelques permis pour lesquels il existe des motifs impérieux d'intérêt général) (*Moniteur belge* of 25 July 2008, p. 38900) provide:

'Article 6. The following consent, for which overriding reasons in the general interest have been established, is hereby ratified:

– as regards the acts and development works relating to the infrastructure and reception buildings of regional airports, the Ministerial Order of 13 September 2006 granting planning consent to Société régionale wallonne des Transports for extension of the runway of Liège-Bierset Airport.

Article 7. The following consent, for which overriding reasons in the general interest have been established, is hereby ratified:

– as regards the acts and development works relating to the infrastructure and reception buildings of regional airports, the planning consent of 16 September 2003 issued by the designated official of the Charleroi Directorate General for Town and Country Planning, Housing and Heritage to SOWAER SA for the implementation of works to vault the Tintia stream and alteration of the ground relief in the north-eastern part of the airport area.

…

Article 9. The following consent, for which overriding reasons in the general interest have been established, is hereby ratified:

– as regards the acts and development works relating to the infrastructure and reception buildings of regional airports, the Ministerial Order of 27 July 2005 relating to the environmental consent issued to SOWAER SA to operate Brussels South Charleroi Airport.

…

Article 14. The following consent, for which overriding reasons in the general interest have been established, is hereby ratified:

– as regards the regional express network and the associated structures, access ways and service ways, the Ministerial Order of 9 February 2006 relating to the combined consent issued to SNCB (Belgian National Railways) for the construction and operation of the third and fourth tracks on Infrabel line 124 from Brussels to Charleroi in the municipalities of Waterloo, Braine-l'Alleud and Nivelles.'

12 It is clear, in essence, from the file that the Conseil d'État (Council of State) has jurisdiction to rule on actions for annulment brought against administrative acts and regulations of the administrative authorities and against the administrative acts of the legislative assemblies or their organs.

13 On the other hand, it does not have jurisdiction to hear actions brought against acts of a legislative nature.

14 The ratification by decree of the Walloon Parliament of building consents and authorisations to carry out works gives such acts legislative status. Consequently, the Conseil d'État ceases to have jurisdiction to hear actions for annulment brought against the acts which have been ratified; they can henceforth be challenged only before the Cour constitutionnelle (Constitutional Court), before which, however, only certain grounds may be pleaded.

The dispute in the main proceedings and the questions referred for a preliminary ruling

15 The Conseil d'État has before it six actions by which persons living near Liège-Bierset and Brussels South Charleroi airports and near the Brussels to Charleroi railway line have challenged a series of consents and authorisations adopted by the competent administrative authorities concerning the carrying out of works or the operation of installations in connection with those airports and transport links to them.

16 While those actions were pending before the Conseil d'État, the Decree of the Walloon Parliament of 17 July 2008, which is a legislative act adopted by the Walloon Parliament and approved by the government of the Walloon Region, 'ratified' those consents and authorisations, that is to say, it validated them on the basis of 'overriding reasons in the general interest'.

17 Several actions for annulment of that decree were brought before the Cour constitutionnelle.

18 In the proceedings before the referring court, the applicants argued that, since an act of a legislative nature has replaced the contested administrative acts and that legislative act can be challenged only before the Cour constitutionnelle, the effect of the adoption of the abovementioned decree of 17 July 2008 is to deprive the Conseil d'État of jurisdiction and to deprive them of their interest in the annulment of the administrative acts. In addition, the action for annulment before the Cour constitutionnelle does not, in the applicants' submission, comply with Article 9 of the Aarhus Convention and with Article 10a of Directive 85/337 inasmuch as the Cour constitutionnelle has only a limited power of review, in respect of the constitutionality of legislative acts and therefore the infringement of fundamental rights, and not a full power of review of the substance, with regard to compliance with all the provisions of national environmental law, and of the applicable procedural rules.

19 It was in that context that the Conseil d'État decided to stay the proceedings, to refer various questions to the Cour constitutionnelle for a preliminary ruling on the constitutionality of the Decree of the Walloon Parliament of 17 July 2008 and to refer to the Court of Justice for a preliminary ruling the following questions, which partly overlap with the questions referred to the Cour constitutionnelle and are identical in each of the cases before the referring court:

'(1) Can Article 1(5) of Directive 85/337 … be interpreted as excluding from its application legislation – such as the Decree of the Walloon [Parliament] … of 17 July 2008 – which merely states that "overriding reasons in the general interest have been established" for the grant of planning consents, environmental consents and combined planning and environmental consents relating to the acts and works listed therein and which "ratifies"

consents in respect of which it is stated that "overriding reasons in the general interest have been established"?

(2) Do Articles 1, 5, 6, 7, 8 and 10a of Directive 85/337 … preclude a legal regime in which the right to implement a project subject to an environmental impact assessment is conferred by a legislative act against which no review procedure is available before a court of law or another independent and impartial body established by law which makes it possible to challenge, both in terms of the substance and the procedure followed, the decision granting the right to implement the project?

(3) Must Article 9 of the Aarhus Convention … be interpreted as requiring the Member States to provide for the possibility of seeking a review before a court of law or another independent and impartial body established by law in order to be able to challenge the legality, in relation to any issue of substance or procedure relating to the substantive or procedural rules governing the authorisation of projects subject to an impact assessment, of decisions, acts or omissions subject to the provisions of Article 6?

(4) In the light of the Aarhus Convention …, must Article 10a of Directive 85/337 … be interpreted as requiring the Member States to provide for the possibility of seeking a review before a court of law or another independent and impartial body established by law in order to be able to challenge the legality of decisions, acts or omissions in relation to any issue of substance or procedure relating to the substantive or procedural rules governing the authorisation of projects subject to an impact assessment?'

20 By order of the President of the Court of 19 May 2009, Cases C-128/09 to C-131/09, C-134/09 and C-135/09 were joined for the purposes of the written and oral procedure and of the judgment.

Consideration of the questions referred

Admissibility

21 The Belgian Government claims that the references for a preliminary ruling are inadmissible. It asserts that those references do not set out sufficiently the factual and legislative context and the grounds which led the referring court to submit questions to the Court and, in addition, that the questions referred are hypothetical.

22 In that regard, it must be recalled that it is for the national court before which the dispute has been brought, which alone has direct knowledge of the facts giving rise to the dispute and must assume responsibility for the subsequent judicial decision, to determine in the light of the particular circumstances of the case both the need for a preliminary ruling in order to enable it to deliver judgment and the relevance of the questions which it submits to the Court. Consequently, where the questions submitted concern the interpretation of European Union law, the Court of Justice is bound, in principle, to give a ruling (see, inter alia, Case C-415/93 *Bosman* [1995] ECR I-4921, paragraph 59).

23 However, it is clear from the settled case-law of the Court that the need to provide an interpretation of European Union law which will be of use to the national court makes it necessary for the national court to define the factual and legislative context of the questions it is asking or, at the very least, explain the factual circumstances on which those questions are

based (see, inter alia, Joined Cases C-320/90 to C-322/90 *Telemarsicabruzzo and Others* [1993] ECR I-393, paragraph 6).

24 The information provided in orders for reference serves not only to enable the Court to give helpful answers but also to enable the governments of the Member States and the other interested parties to submit observations in accordance with Article 23 of the Statute of the Court of Justice of the European Union. It is the Court's duty to ensure that the opportunity to submit observations is safeguarded, having regard to the fact that, by virtue of that provision, only the orders for reference are notified to the interested parties, accompanied by a translation in the official language or languages of each Member State (See Joined Cases 141/81 to 143/81 *Holdijk and Others* [1982] ECR 1299, paragraph 6).

25 In the present instance, contrary to what the Belgian Government asserts, the factual and legislative context, as set out in the orders for reference, provides the grounds which led the referring court to submit questions to the Court and also the details enabling the governments of the Member States and the other interested parties to submit observations pursuant to Article 23 of the Statute of the Court of Justice and allowing the Court to give a helpful answer to the referring court.

26 That legal and factual context is sufficient to clarify the questions asked by the referring court, which concern the compatibility with the right of access to justice, guaranteed both by the Aarhus Convention and by Directive 85/337, of an act with legislative status whose adoption has the consequence that the referring court can no longer hear cases already brought before it.

27 The content of the observations submitted to the Court in the present cases shows, in any event, that the information on the factual and legal context was sufficient to enable the parties to the main proceedings and the other interested parties to state their views effectively on the questions referred.

28 Furthermore, the fact that adoption of the Decree of the Walloon Parliament of 17 July 2008 has the effect, under national law, of depriving the referring court of its jurisdiction to rule on the administrative acts at issue in the main proceedings does not, contrary to the Belgian Government's submissions, render the questions referred hypothetical. Those questions are intended to determine in advance whether, in the light of the relevant provisions of the Aarhus Convention and European Union law, that decree was capable of depriving the Conseil d'État of its jurisdiction to decide the cases in the main proceedings.

29 Finally, as regards the argument alleging that the Conseil d'État does not explain the reasons why it did not wait, before referring question to the Court, until the Cour constitutionnelle had ruled on other questions which it had referred to that court in the same cases, it is sufficient to recall that, as has been stated in paragraph 25 of the present judgment, the orders for reference provide the grounds which led the Conseil d'État to submit questions to the Court.

30 The Belgian Government puts forward, in the alternative, other objections of inadmissibility alleging that the meaning and scope of the provisions whose interpretation is sought are entirely unambiguous, that certain questions are irrelevant and, finally, that the Court has already ruled on the scope of Article 1(5) of Directive 85/337.

31 It must be recalled in that regard that a court or tribunal against whose decisions there is no judicial remedy under national law is required, where a question of European Union law is raised before it, to comply with its obligation to bring the matter before the Court of Justice, unless it has established that the question raised is irrelevant or that the provision of European Union law in question has already been interpreted by the Court or that the correct application of European Union law is so obvious as to leave no scope for any reasonable doubt (see, in particular, Case 283/81 *Cilfit and Others* [1982] ECR 3415, paragraph 21).

32 However, it follows from settled case-law that national courts and tribunals remain, in any event, entirely at liberty to bring a matter before the Court of Justice if they consider it appropriate to do so (see, in particular, *Cilfit and Others*, paragraph 15) and the fact that the provisions whose interpretation is sought have already been interpreted by the Court or can be regarded as leaving no scope for any reasonable doubt does not deprive the Court of jurisdiction to give a ruling (see, to that effect, in particular, Case C-260/07 *Pedro IV Servicios* [2009] ECR I-2437, paragraph 31).

33 Finally, it does not appear, in the light of the orders for reference, that the questions referred are irrelevant to the resolution of the disputes pending before the Conseil d'État. As has been stated in paragraph 28 of the present judgment, those questions are intended to determine in advance whether, in the light of the relevant provisions of the Aarhus Convention and European Union law, the Decree of the Walloon Parliament of 17 July 2008 was capable of depriving the Conseil d'État of its jurisdiction to decide the cases in the main proceedings.

34 It follows that the references for a preliminary ruling are admissible.

The first question

35 By its first question the referring court asks, in essence, whether Article 1(5) of Directive 85/337 must be interpreted as meaning that an act, such as the Decree of the Walloon Parliament of 17 July 2008, which 'ratifies', by giving them legislative status, planning, environmental or works consents previously granted by the administrative authorities, in respect of which it is declared that 'overriding reasons in the general interest have been established', is excluded from the scope of the directive.

36 It follows from that provision that, where the objectives of Directive 85/337, including that of supplying information, are achieved through a legislative process, the directive does not apply to the project in question (see Case C-287/98 *Linster* [2000] ECR I-6917, paragraph 51).

37 The provision lays down two conditions for the exclusion of a project from the scope of Directive 85/337. The first requires the details of the project to be adopted by a specific legislative act. Under the second, the objectives of the directive, including that of supplying information, must be achieved through the legislative process (see Case C-435/97 *WWF and Others* [1999] ECR I-5613, paragraph 57).

38 The first condition entails, first of all, adoption of the project by a specific legislative act. It should be pointed out in this regard that the terms 'project' and 'consent' are defined in Article 1(2) of Directive 85/337. Thus, a legislative act adopting a project must, if it is to come within the scope of Article 1(5) of the directive, be specific and display the same

characteristics as a consent of that kind. It must in particular grant the developer the right to carry out the project (see *WWF and Others*, paragraph 58).

39 The project must also be adopted in detail, that is to say, in a sufficiently precise and definitive manner, so that the legislative act adopting the project must include, like a development consent, following their consideration by the legislature, all the elements of the project relevant to the environmental impact assessment (see *WWF and Others*, paragraph 59). The legislative act must therefore demonstrate that the objectives of Directive 85/337 have been achieved as regards the project in question (see *Linster*, paragraph 56).

40 It follows that the details of a project cannot be considered to be adopted by a legislative act, for the purposes of Article 1(5) of Directive 85/337, if that act does not include the elements necessary to assess the environmental impact of the project or if the adoption of other measures is needed in order for the developer to be entitled to proceed with the project (see *WWF and Others*, paragraph 62, and *Linster*, paragraph 57).

41 As regards the second condition, it is clear from Article 2(1) of Directive 85/337 that the fundamental objective of the directive is to ensure that projects likely to have significant effects on the environment by virtue, inter alia, of their nature, size or location are made subject to an assessment with regard to their environmental effects before consent is given (see *Linster*, paragraph 52).

42 In addition, the sixth recital in the preamble to Directive 85/337 states that the assessment must be conducted on the basis of the appropriate information supplied by the developer, which may be supplemented by the authorities and by the people who may be concerned by the project in question (see *WWF and Others*, paragraph 61, and *Linster*, paragraph 53).

43 Consequently, the legislature must have sufficient information at its disposal at the time when the project is adopted. It is apparent from Article 5(3) of Directive 85/337 and Annex IV thereto that the minimum information to be supplied by the developer is to include a description of the project comprising information on the site, design and size of the project, a description of the measures envisaged in order to avoid, reduce and, if possible, remedy significant adverse effects, and the data required to identify and assess the main effects which the project is likely to have on the environment (see *Linster*, paragraph 55).

44 Having regard to the characteristics of procedures for the approval of a plan in more than one phase, Directive 85/337 does not preclude a single project from being approved by two acts of national law which are considered, as a whole, to be a development consent within the meaning of Article 1(2) thereof (see, to that effect, Case C-508/03 *Commission* v *United Kingdom* [2006] ECR I-3969, paragraph 102). Consequently, the legislature can, when adopting the final act authorising a project, take advantage of the information gathered during a prior administrative procedure.

45 However, the existence of such an administrative procedure cannot have the effect of enabling a project to be regarded as a project the details of which are adopted by a specific legislative act in accordance with Article 1(5) of Directive 85/337 if that legislative act does not fulfil the two conditions set out in paragraph 37 of the present judgment. Thus, a legislative act which does no more than simply 'ratify' a pre-existing administrative act, by merely referring to overriding reasons in the general interest without a substantive legislative

process which enabling those conditions to be fulfilled having first been commenced, cannot be regarded as a specific legislative act for the purposes of that provision and is therefore not sufficient to exclude a project from the scope of Directive 85/337.

46 In particular, a legislative act adopted without the members of the legislative body having had available to them the information mentioned in paragraph 43 of the present judgment cannot fall within the scope of Article 1(5) of Directive 85/337.

47 It is for the national court to determine whether those conditions have been satisfied. For that purpose, it must take account both of the content of the legislative act adopted and of the entire legislative process which led to its adoption, in particular the preparatory documents and parliamentary debates.

48 The answer to the first question therefore is that Article 1(5) of Directive 85/337 must be interpreted as meaning that only projects the details of which have been adopted by a specific legislative act, in such a way that the objectives of that directive have been achieved by the legislative process, are excluded from the directive's scope. It is for the national court to verify that those two conditions have been satisfied, taking account both of the content of the legislative act adopted and of the entire legislative process which led to its adoption, in particular the preparatory documents and parliamentary debates. In that regard, a legislative act which does no more than simply 'ratify' a pre-existing administrative act, by merely referring to overriding reasons in the general interest without a substantive legislative process enabling those conditions to be fulfilled having first been commenced, cannot be regarded as a specific legislative act for the purposes of that provision and is therefore not sufficient to exclude a project from the scope of Directive 85/337.

The second, third and fourth questions

49 By its second, third and fourth questions, which it is appropriate to examine together, the referring court asks, in essence, whether Article 9 of the Aarhus Convention and Article 10a of Directive 85/337 must be interpreted as precluding the right to implement a project which falls within their scope from being granted by a legislative act against which, under national law, no review procedure is available before a court of law or another independent and impartial body established by law that enables that act to be challenged as to the substance and the procedure.

50 It follows from Article 2(2) of the Aarhus Convention, read together with Articles 6 and 9 thereof, and from Article 1(5) of Directive 85/337 that neither the Convention nor the directive applies to projects adopted by a legislative act satisfying the conditions set out in paragraph 37 of the present judgment.

51 For other projects, that is to say, those adopted either by an act which is not legislative in nature or by a legislative act which does not fulfil those conditions, it follows from the very terms of Article 9(2) of the Aarhus Convention and Article 10a of Directive 85/337 that the Member States must provide for a review procedure before a court of law or another independent and impartial body established by law for challenging the substantive or procedural legality of decisions, acts or omissions subject, respectively, to Article 6 of the Aarhus Convention or Directive 85/337.

52 By virtue of their procedural autonomy, the Member States have a discretion in implementing Article 9(2) of the Aarhus Convention and Article 10a of Directive 85/337, subject to compliance with the principles of equivalence and effectiveness. It is for them, in particular, to determine, in so far as the abovementioned provisions are complied with, which court of law or which independent and impartial body established by law is to have jurisdiction in respect of the review procedure referred to in those provisions and what procedural rules are applicable.

53 However, Article 9 of the Aarhus Convention and Article 10a of Directive 85/337 would lose all effectiveness if the mere fact that a project is adopted by a legislative act which does not fulfil the conditions set out in paragraph 37 of the present judgment were to make it immune to any review procedure for challenging its substantive or procedural legality within the meaning of those provisions.

54 The requirements flowing from Article 9 of the Aarhus Convention and Article 10a of Directive 85/337 presuppose in this regard that, when a project falling within the scope of Article 6 of the Aarhus Convention or of Directive 85/337 is adopted by a legislative act, the question whether that legislative act satisfies the conditions laid down in Article 1(5) of that directive and set out in paragraph 37 of the present judgment must be amenable to review, under the national procedural rules, by a court of law or an independent and impartial body established by law.

55 If no review procedure of the nature and scope set out above were available in respect of such an act, any national court before which an action falling within its jurisdiction is brought would have the task of carrying out the review described in the previous paragraph and, as the case may be, drawing the necessary conclusions by disapplying that legislative act.

56 In the present instance, if the referring court finds that the Decree of the Walloon Parliament of 17 July 2008 does not satisfy the conditions laid down in Article 1(5) of Directive 85/337 and recalled in paragraph 37 of the present judgment, and if it turns out that, under the applicable national rules, no court of law or independent and impartial body established by law has jurisdiction to review the substantive or procedural validity of that decree, the decree must then be regarded as incompatible with the requirements flowing from Article 9 of the Aarhus Convention and Article 10a of Directive 85/337. The referring court must then disapply it.

57 The answer to the second, third and fourth questions therefore is that Article 9(2) of the Aarhus Convention and Article 10a of Directive 85/337 must be interpreted as meaning that:

– when a project falling within the scope of those provisions is adopted by a legislative act, the question whether that legislative act satisfies the conditions laid down in Article 1(5) of that directive must be capable of being submitted, under the national procedural rules, to a court of law or an independent and impartial body established by law;

– if no review procedure of the nature and scope set out above were available in respect of such an act, any national court before which an action falling within its jurisdiction is brought would have the task of carrying out the review described in the previous indent and, as the case may be, drawing the necessary conclusions by disapplying that legislative act.

Costs

58 Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the referring court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Grand Chamber) hereby rules:

1. **Article 1(5) of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment, as amended by Directive 2003/35/EC of the European Parliament and of the Council of 26 May 2003, must be interpreted as meaning that only projects the details of which have been adopted by a specific legislative act, in such a way that the objectives of that directive have been achieved by the legislative process, are excluded from the directive's scope. It is for the national court to verify that those two conditions have been satisfied, taking account both of the content of the legislative act adopted and of the entire legislative process which led to its adoption, in particular the preparatory documents and parliamentary debates. In that regard, a legislative act which does no more than simply 'ratify' a pre-existing administrative act, by merely referring to overriding reasons in the general interest without a substantive legislative process enabling those conditions to be fulfilled having first been commenced, cannot be regarded as a specific legislative act for the purposes of that provision and is therefore not sufficient to exclude a project from the scope of Directive 85/337, as amended by Directive 2003/35.**

2. **Article 9(2) of the Convention on access to information, public participation in decision making and access to justice in environmental matters, concluded on 25 June 1998 and approved on behalf of the European Community by Council Decision 2005/370/EC of 17 February 2005, and Article 10a of Directive 85/337, as amended by Directive 2003/35, must be interpreted as meaning that:**

– **when a project falling within the scope of those provisions is adopted by a legislative act, the question whether that legislative act satisfies the conditions laid down in Article 1(5) of that directive must be capable of being submitted, under the national procedural rules, to a court of law or an independent and impartial body established by law;**

– **if no review procedure of the nature and scope set out above were available in respect of such an act, any national court before which an action falling within its jurisdiction is brought would have the task of carrying out the review described in the previous indent and, as the case may be, drawing the necessary conclusions by disapplying that legislative act.**

JUDGMENT OF THE COURT (Second Chamber)

30 April 2009 (*)

(Directive 85/337/EEC – Assessment of the effects of projects on the environment – Obligation to make public the reasons for a determination not to make a project subject to an assessment)

In Case C-75/08,

REFERENCE for a preliminary ruling under Article 234 EC from the Court of Appeal (England & Wales) (Civil Division) (United Kingdom), made by decision of 8 February 2008, received at the Court on 21 February 2008, in the proceedings

The Queen, on the application of

Christopher Mellor

v

Secretary of State for Communities and Local Government,

THE COURT (Second Chamber),

composed of C.W.A. Timmermans, President of the Chamber, J.-C. Bonichot (Rapporteur), K. Schiemann, P. Kūris and L. Bay Larsen, Judges,

Advocate General: J. Kokott,

Registrar: R. Grass,

having regard to the written procedure,

after considering the observations submitted on behalf of:

– Mr C. Mellor, by R. Harwood, Barrister and R. Buxton, Solicitor,

– the United Kingdom Government, by L. Seeboruth, acting as Agent,

– the Commission of the European Communities, by P. Oliver and J.-B. Laignelot, acting as Agents,

after hearing the Opinion of the Advocate General at the sitting on 22 January 2009,

gives the following

Judgment

1 This reference for a preliminary ruling concerns the interpretation of Article 4 of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain

public and private projects on the environment (OJ 1985 L 175, p. 40), as amended by Directive 2003/35/EC of the European Parliament and of the Council of 26 May 2003 (OJ 2003 L 156, p. 17) ('Directive 85/337').

2 The reference has been made in the course of proceedings between Mr Mellor and the Secretary of State for Communities and Local Government ('the Secretary of State'), relating to whether or not it is necessary to give reasons for the determination made by the competent national authority not to proceed to an environmental impact assessment ('EIA') when evaluating a request for development consent to build a hospital, a project falling within Annex II to Directive 85/337.

Legal context

Community legislation

3 Article 2(1) of Directive 85/337 provides:

'Member States shall adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment by virtue inter alia, of their nature, size or location are made subject to an assessment with regard to their effects.

These projects are defined in Article 4.'

4 Article 4 of Directive 85/337 states:

'1. Subject to Article 2(3), projects listed in Annex I shall be made subject to an assessment in accordance with Articles 5 to 10.

2. Subject to Article 2(3), for projects listed in Annex II, the Member States shall determine through:

(a) a case-by-case examination,

or

(b) thresholds or criteria set by the Member State,

whether the project shall be made subject to an assessment in accordance with Articles 5 to 10.

Member States may decide to apply both procedures referred to in (a) and (b).

3. When a case-by-case examination is carried out or thresholds or criteria are set for the purpose of paragraph 2, the relevant selection criteria set out in Annex III shall be taken into account.

4. Member States shall ensure that the determination made by the competent authorities under paragraph 2 is made available to the public.'

5 Article 6 of Directive 85/337 provides:

‘1. Member States shall take the measures necessary to ensure that the authorities likely to be concerned by the project by reason of their specific environmental responsibilities are given an opportunity to express their opinion on the request for development consent. Member States shall designate the authorities to be consulted for this purpose in general terms or on a case-by-case basis. The information gathered pursuant to Article 5 shall be forwarded to these authorities. Detailed arrangements for consultation shall be laid down by the Member States.

2. The public shall be informed, whether by public notices or other appropriate means such as electronic media where available, of the following matters early in the environmental decision-making procedures referred to in Article 2(2) and, at the latest, as soon as information can reasonably be provided:

(a) the request for development consent;

(b) the fact that the project is subject to an environmental impact assessment procedure …;

…

(d) the nature of possible decisions or, where there is one, the draft decision;

…

(f) an indication of the times and places where and means by which the relevant information will be made available;

(g) details of the arrangements for public participation made pursuant to paragraph 5 of this Article.

3. Member States shall ensure that, within reasonable time-frames, the following is made available to the public concerned:

(a) any information gathered pursuant to Article 5;

(b) in accordance with national legislation, the main reports and advice issued to the competent authority or authorities at the time when the public concerned is informed in accordance with paragraph 2 of this Article;

(c) in accordance with the provisions of Directive 2003/4/EC of the European Parliament and of the Council of 28 January 2003 on public access to environmental information …, information other than that referred to in paragraph 2 of this Article which is relevant for the decision in accordance with Article 8 and which only becomes available after the time the public concerned was informed in accordance with paragraph 2 of this Article.

4. The public concerned shall be given early and effective opportunities to participate in the environmental decision-making procedures referred to in Article 2(2) and shall, for that purpose, be entitled to express comments and opinions when all options are open to the competent authority or authorities before the decision on the request for development consent is taken.

5. The detailed arrangements for informing the public (for example by bill posting within a certain radius or publication in local newspapers) and for consulting the public concerned (for example by written submissions or by way of a public inquiry) shall be determined by the Member States.

6. Reasonable time-frames for the different phases shall be provided, allowing sufficient time for informing the public and for the public concerned to prepare and participate effectively in environmental decision-making subject to the provisions of this Article.'

6 Article 9 of Directive 85/337 states:

'1. When a decision to grant or refuse development consent has been taken, the competent authority or authorities shall inform the public thereof in accordance with the appropriate procedures and shall make available to the public the following information:

– the content of the decision and any conditions attached thereto,

– having examined the concerns and opinions expressed by the public concerned, the main reasons and considerations on which the decision is based, including information about the public participation process,

– a description, where necessary, of the main measures to avoid, reduce and, if possible, offset the major adverse effects.

2. The competent authority or authorities shall inform any Member State which has been consulted pursuant to Article 7, forwarding to it the information referred to in paragraph 1 of this Article.

The consulted Member States shall ensure that that information is made available in an appropriate manner to the public concerned in their own territory.'

7 Article 10a of Directive 85/337 provides:

'Member States shall ensure that, in accordance with the relevant national legal system, members of the public concerned:

(a) having a sufficient interest, or alternatively,

(b) maintaining the impairment of a right, where administrative procedural law of a Member State requires this as a precondition,

have access to a review procedure before a court of law or another independent and impartial body established by law to challenge the substantive or procedural legality of decisions, acts or omissions subject to the public participation provisions of this Directive.

Member States shall determine at what stage the decisions, acts or omissions may be challenged.

…’

National legislation

8 The rules governing EIA, laid down by Directive 85/337, were originally implemented by The Town and Country Planning (Assessment of Environmental Effects) Regulations 1988 (S.I. 1988/1199).

9 Following the amendments to Directive 85/337 made by Council Directive 97/11/EC of 3 March 1997 (OJ 1997 L 73, p. 5), those regulations were replaced by The Town and Country Planning (Environmental Impact Assessment) (England and Wales) Regulations 1999 (S.I. 1999/293), as amended by The Town and Country Planning (Environmental Impact Assessment) (England and Wales) Regulations 2006 (S.I. 2006/3295), (‘the EIA Regulations’).

10 Schedules 1 to 3 to the EIA Regulations correspond to Annexes I to III to Directive 85/337.

11 Regulation 2(1) of the EIA Regulations provides that an ‘“EIA application” means an application for planning permission for EIA development’, that is to say a development for which an EIA is necessary.

12 Under that same provision, ‘EIA development’ means:

‘(a) Schedule 1 development;

or

(b) Schedule 2 development likely to have significant effects on the environment by virtue of factors such as its nature, size or location.’

13 It is apparent from Regulation 2(1) of the EIA Regulations that a development is a ‘Schedule 2 Development’ when it is a:

‘… development, other than exempt development, of a description mentioned in Column 1 of the table in Schedule 2 where –

(a) any part of that development is to be carried out in a sensitive area; or

(b) any applicable threshold or criterion in the corresponding part of Column 2 of that table is respectively exceeded or met in relation to that development’.

14 Section 10(b) of Schedule 2 to the EIA Regulations concerns ‘urban development projects’ (column one) the area of which exceeds 0.5 hectares (column two).

15 Under Regulation 2(1)(h) of the EIA Regulations, areas of outstanding natural beauty are ‘sensitive areas’.

16 It is apparent from Regulation 4(2) of the EIA Regulations that a Schedule 2 development is regarded as EIA development, that is to say, a development for which an EIA

is necessary, where the applicant voluntarily submits an 'environmental statement' for the purposes of the EIA Regulations, or upon the adoption by the relevant planning authority, on an application or of its own motion, of a screening opinion to the effect that the development is EIA development.

17 Where a request for Schedule 2 Development consent is not accompanied by an environmental statement, determinations concerning the need for an EIA are made by the relevant planning authority in the form of screening opinion and by the Secretary of State in the form of a screening direction.

18 Under Regulation 2(1) of the EIA Regulations:

– a 'screening opinion' means 'a written statement of the opinion of the relevant planning authority as to whether development is EIA development'; and

– a 'screening direction' means 'a direction made by the Secretary of State as to whether development is EIA development'.

19 Under Regulation 4(3) of the EIA Regulations, a screening direction issued by the Secretary of State overrides environmental statements and screening opinions adopted by the local planning authority.

20 In accordance with Regulation 5(4) of the EIA Regulations, a screening opinion must be adopted within three weeks, or such longer period as may be agreed in writing with the person making the request.

21 Pursuant to Regulation 5(6) of the EIA Regulations, where an authority fails to adopt a screening opinion within the relevant period, or adopts an opinion to the effect that the development is EIA development, the person who requested the opinion may request the Secretary of State to make a screening direction.

22 According to Regulation 4(6) of the EIA Regulations, where a screening opinion or a screening direction to the effect that development is EIA development is adopted, 'that opinion or direction shall be accompanied by a written statement giving clearly and precisely the full reasons for that conclusion'.

23 In accordance with Regulation 4(5) of the EIA Regulations, a screening opinion or screening direction must take into account the criteria set out in Schedule 3 to the EIA Regulations.

24 Among the criteria set out in Schedule 3 to the EIA Regulations are:

– 'Characteristics of development';

– 'Location of development', and

– 'Characteristics of the potential impact'.

25 The EIA Regulations do not, however, provide for communication of the reasons for a screening opinion or screening direction which does not classify the development in question as EIA development.

The dispute in the main proceedings and the questions referred for a preliminary ruling

26 It is apparent from the order for reference that, in October 2004, Partnerships in Care ('PiC') lodged an application with the competent local planning authority, Harrogate Borough Council ('the Council'), for planning permission to construct a medium secure hospital unit at HMS Forest Moor on a site in the open countryside of the Nidderdale Area of Outstanding Natural Beauty ('Nidderdale AONB') on which a former naval base had been located. Planning permission was granted in August 2005.

27 Following proceedings brought by a local resident, the planning permission was quashed by the High Court of Justice (England & Wales), Queen's Bench Division, on 5 April 2006, on the ground, inter alia, that the Council had failed to adopt an EIA screening opinion.

28 On 7 July 2006, PiC's planning consultants applied to the Council for a screening opinion under Regulation 5 of the EIA Regulations.

29 On 24 July 2006, Residents for the Protection of Nidderdale then wrote to the Council arguing that an EIA was required for the project.

30 On 25 August 2006, the Council issued its screening opinion which concluded that the proposed development would not have a significant effect on the environment such as to warrant an EIA.

31 On 4 September 2006, Mr Mellor wrote to the Council on behalf of the Residents for the Protection of Nidderdale arguing that the screening opinion ought to have insisted on an EIA.

32 On 3 October 2006, PiC, relying on the Council's opinion of 25 August 2006, submitted the planning application at issue in the main proceedings.

33 On 20 October 2006, PiC's planning consultants, having been informed that the Council was changing its position on the need for an EIA, wrote to the Government Office for Yorkshire and the Humber to ask the Secretary of State for a screening direction.

34 On 23 October 2006, the Council did in fact alter its position in a fresh screening opinion and, on the basis of information provided by Mr Mellor and having sought further advice, decided that an EIA was required.

35 On 4 December 2006, the Secretary of State, to whom the matter had been referred by the PiC, issued a screening direction which was contrary to the latest opinion issued by the Council.

36 Considering that the development at issue was a 'Schedule 2 Development' within the meaning of the EIA Regulations, the Secretary of State decided as follows:

'… in the opinion of the Secretary of State and having taken into account the selection criteria in Schedule 3 to the 1999 Regulations and the representations made by Mr C. Mellor on behalf of Residents for the Protection of Nidderdale, the proposal would not be likely to have significant effects on the environment by virtue of factors such as its nature, size or location.

Accordingly, in exercise of the powers conferred on him by regulation 6(4) of the 1999 Regulations the Secretary of State hereby directs that the proposed development described in your request and the documents submitted with it, is not "EIA development" within the meaning of the 1999 Regulations. Any permitted development rights which your proposal may enjoy under the Town and Country Planning (General Permitted Development) Order 1995 are therefore unaffected.

Having regard to the above direction the planning application mentioned may proceed without submission of an environmental statement.'

37 On 20 February 2007, Mr Mellor applied to the High Court of Justice (England & Wales), Queen's Bench Division, for judicial review of the Secretary of State's decision, seeking to have that screening direction quashed.

38 The High Court refused leave to apply for judicial review on the basis that the Court of Appeal (England & Wales) (Civil Division) had decided in *R v Secretary of State for The Environment, Transport and The Regions ex p Marson* (*1998),* ENV LR 761, that, first, reasons did not have to be given for refusing to direct that an EIA was required and, second, if reasons were required, then the reasons normally provided by the Secretary of State were adequate.

39 In those circumstances, the Court of Appeal (England & Wales) (Civil Division), hearing the appeal, decided to stay proceedings and to refer the following questions to the Court for a preliminary ruling:

'1. Whether under Article 4 of [Directive 85/337] Member States must make available to the public reasons for a determination that in respect of an Annex II [to that directive] project there is no requirement to subject the project to assessment in accordance with Articles 5 to 10 of [that] directive?

2. If the answer to Question 1 is in the affirmative whether that requirement was satisfied by the content of the letter dated 4 December 2006 from the Secretary of State?

3. If the answer to Question 2 is in the negative, what is the extent of the requirement to give reasons in this context?'

The questions referred for a preliminary ruling

The first question

40 By its first question, the referring court seeks to ascertain whether Article 4 of Directive 85/337 must be interpreted as meaning that Member States are obliged to communicate to the public the reasons for a determination not to subject an Annex II project to an EIA.

Observations submitted to the Court

41 The appellant in the main proceedings takes the view that a determination that an EIA is not required must be sufficiently reasoned in order to guarantee effective judicial protection of the environment and the rights of citizens.

42 He points out that that issue has already been considered by the Court in Case C-87/02 *Commission* v *Italy* [2004] ECR I-5975, paragraph 49, in which the Court found that the Italian Republic had failed to fulfil its obligations on account of its failure to provide reasons for a decree deciding that the project at issue in that case did not require to be subjected to an EIA.

43 He claims, in addition, that the merits of his view are underlined by the amendments made to Directive 85/337 in 1997. Since those amendments, that directive requires the competent authority, as is apparent from Article 4(3), to take account of the relevant selection criteria set out in Annex III to that directive when deciding whether a project falling under Annex II to that directive must be subject to an EIA and requires, pursuant to Article 4(4), that the determination on whether or not to have recourse to an EIA be made available to the public. The public cannot, however, assess the lawfulness of such a determination if the reasons for that determination are not given.

44 The United Kingdom Government contends, first, that, in contrast to other provisions of secondary Community law on the environment, Article 4 of Directive 85/337 does not require reasons to be given for a determination as to whether an EIA must be carried out. It concludes that the Community legislature chose not to impose a duty to state reasons in respect of that determination.

45 The United Kingdom of Great Britain and Northern Ireland contends, secondly, that the line of reasoning based on the Court's decision in *Commission* v *Italy*, cited above, cannot be applied in the dispute in the main proceedings since, in the case that gave rise to that judgment, the failure to fulfil obligations was based on the failure to indicate that the competent authority had carried out any screening at all of the need to subject the project at issue to an EIA or not, such screening being provided for under national law in accordance with Article 4(2) of Directive 85/337. The failure to fulfil obligations complained of did not concern the failure to give reasons for the determination not to subject the project to such an assessment.

46 The Commission of the European Communities disputes the United Kingdom's interpretation of the *Commission* v *Italy* judgment, cited above, pointing out, inter alia, that despite the absence of the word 'reasoning' in paragraph 49 of that judgment, it is obvious from that paragraph that the competent authority must make reference, in one way or the other, to all the information showing that it applied the correct criteria and took the relevant factors into account. That requirement is equivalent to a duty to state reasons.

47 The Commission submits, furthermore, that the amendments made by Directive 97/11, in particular the obligation on Member States to make public their determinations on whether or not to carry out an EIA under Article 4(4) of Directive 85/337, make the duty to state reasons for such determinations all the more necessary. In the Commission's view, that obligation would be devoid of purpose if there were no adequate statement of reasons for the determinations in question.

The Court's reply

48 An objective of Directive 85/337 is – as recital 5 in its preamble states – inter alia, to introduce general principles for EIAs governing public and private projects likely to have a major effect on the environment, with a view to supplementing and coordinating development consent procedures.

49 Directive 85/337 provides that certain projects listed in Annex I are required to be made subject to such assessment.

50 On the other hand, projects which appear in Annex II must only be subject to such an assessment if they are likely to have significant effects on the environment and, in that regard, Directive 85/337 allows the Member States some discretion. Nevertheless, the limits of that discretion are to be found in the obligation on the Member States, set out in Article 2(1) of Directive 85/337, to make projects likely, by virtue inter alia of their nature, size or location, to have significant effects on the environment subject to an assessment (see, to that effect, Case C-72/95 *Kraaijeveld and Others* [1996] ECR I-5403, paragraph 50, and Case C-486/04 *Commission* v *Italy* [2006] ECR I-11025, paragraph 53).

51 It is thus clear from the objectives of Directive 85/337 that the competent national authorities, when they receive a request for development consent for an Annex II project, must carry out a specific evaluation as to whether, taking account of the criteria set out in Annex III to that directive, an EIA should be carried out.

52 Thus the Court, in its judgment of 10 June 2004 in *Commission* v *Italy*, cited above, found that the Italian Republic had failed to fulfil its obligations under Directive 85/337, since it was clear from all the evidence which had been submitted to the Court that the competent authorities had not carried out 'screening' of the need for an assessment, provided for in Italian legislation to ensure application of Article 4(2) and (3) of Directive 85/337.

53 In that judgment, the obligation arising from Article 4(2) of Directive 85/337 to ensure that a project does not require an assessment before deciding to dispense with such an assessment was at issue.

54 As there was nothing in the evidence in the case-file submitted to the Court to indicate that such an evaluation had taken place in the course of the administrative consent procedure for a bypass project, the Court held that a failure to fulfil obligations resulting from Directive 85/337, as alleged by the Commission, was established.

55 The Court pointed out, moreover, in paragraph 49 of that judgment, that the determination by which the competent authority takes the view that a project's characteristics do not require it to be subjected to an EIA must contain or be accompanied by all the information that makes it possible to check that it is based on adequate screening, carried out in accordance with the requirements of Directive 85/337.

56 It does not follow, however, from Directive 85/337, or from the case-law of the Court, in particular, from that judgment, that a determination not to subject a project to an EIA must, itself, contain the reasons for which the competent authority determined that an assessment was unnecessary.

57 It is apparent, however, that third parties, as well as the administrative authorities concerned, must be able to satisfy themselves that the competent authority has actually

determined, in accordance with the rules laid down by national law, that an EIA was or was not necessary.

58 Furthermore, interested parties, as well as other national authorities concerned, must be able to ensure, if necessary through legal action, compliance with the competent authority's screening obligation. That requirement may be met, as in the main proceedings, by the possibility of bringing an action directly against the determination not to carry out an EIA.

59 In that regard, effective judicial review, which must be able to cover the legality of the reasons for the contested decision, presupposes in general, that the court to which the matter is referred may require the competent authority to notify its reasons. However where it is more particularly a question of securing the effective protection of a right conferred by Community law, interested parties must also be able to defend that right under the best possible conditions and have the possibility of deciding, with a full knowledge of the relevant facts, whether there is any point in applying to the courts. Consequently, in such circumstances, the competent national authority is under a duty to inform them of the reasons on which its refusal is based, either in the decision itself or in a subsequent communication made at their request (see Case 222/86 *Heylens and Others* [1987] ECR 4097, paragraph 15).

60 That subsequent communication may take the form, not only of an express statement of the reasons, but also of information and relevant documents being made available in response to the request made.

61 In the light of the foregoing, the answer to the first question is that Article 4 of Directive 85/337 must be interpreted as not requiring that a determination, that it is unnecessary to subject a project falling within Annex II to that directive to an EIA, should itself contain the reasons for the competent authority's decision that the latter was unnecessary. However, if an interested party so requests, the competent administrative authority is obliged to communicate to him the reasons for the determination or the relevant information and documents in response to the request made.

Second and third questions

62 By its second and third questions, the referring court asks the Court of Justice on the one hand whether, in the event of an affirmative reply to Question 1, the content of a determination such as that at issue in the main proceedings will satisfy the duty to state reasons incumbent on the competent authorities and, on the other hand, if need be, to define the form that the statement of reasons should take.

63 While, as is clear from the reply to the first question, the reasons need not necessarily be contained in the determination not to carry out an EIA itself, the competent administrative authority can, under the applicable national legislation or of its own motion, indicate in the determination the reasons on which it is based.

64 In that case, the determination must be such as to enable interested parties to decide whether to appeal against the determination in question, taking into account any factors which might subsequently be brought to their attention.

65 It cannot, in those circumstances, be ruled out that in the case in the main proceedings the Secretary of State's reasons might be considered sufficient, taking into account, in

particular, factors which have already been brought to the attention of interested parties, provided that the latter can ask for and obtain from the competent authorities, subject to judicial review, the necessary supplementary information to fill any gaps in that reasoning.

66 The answer to the second and third questions is therefore that, if a determination of a Member State not to subject a project falling within Annex II to Directive 85/337 to an EIA in accordance with Articles 5 to 10 of that directive states the reasons on which it is based, that determination is sufficiently reasoned where the reasons which it contains, added to factors which have already been brought to the attention of interested parties, and supplemented by any necessary additional information that the competent national administration is required to provide to those interested parties at their request, can enable them to decide whether to appeal against that decision.

Costs

67 Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the national court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Second Chamber) hereby rules:

1. **Article 4 of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment, as amended by Directive 2003/35/EC of the European Parliament and of the Council of 26 May 2003, must be interpreted as not requiring that a determination, that it is unnecessary to subject a project falling within Annex II to that directive to an environmental impact assessment, should itself contain the reasons for the competent authority's decision that the latter was unnecessary. However, if an interested party so requests, the competent administrative authority is obliged to communicate to him the reasons for the determination or the relevant information and documents in response to the request made.**

2. **If a determination of a Member State not to subject a project, falling within Annex II to Directive 85/337 as amended by Directive 2003/35, to an environmental impact assessment in accordance with Articles 5 to 10 of that directive, states the reasons on which it is based, that determination is sufficiently reasoned where the reasons which it contains, added to factors which have already been brought to the attention of interested parties, and supplemented by any necessary additional information which the competent national administration is required to provide to those interested parties at their request, can enable them to decide whether to appeal against that decision.**

[Signatures]

JUDGMENT OF THE COURT (Third Chamber)

25 July 2008 (*)

(Directives 85/337/EEC and 97/11/EC – Assessment of the effects of projects on the environment – Refurbishment and improvement works on urban roads – Whether subject to assessment)

In Case C-142/07,

REFERENCE for a preliminary ruling under Article 234 EC from the Juzgado de lo Contencioso-Administrativo No 22 de Madrid (Spain), made by decision of 23 January 2007, received at the Court on 12 March 2007, in the proceedings

Ecologistas en Acción-CODA

v

Ayuntamiento de Madrid,

THE COURT (Third Chamber),

composed of A. Rosas, President of the Chamber, U. Lõhmus (Rapporteur), J. Klučka, P. Lindh and A. Arabadjiev, Judges,

Advocate General: J. Kokott,

Registrar: M. Ferreira, Principal Administrator,

having regard to the written procedure and further to the hearing on 2 April 2008,

after considering the observations submitted on behalf of:

– Ecologistas en Acción-CODA, by J. Doreste Hernández, abogado,

– the Ayuntamiento de Madrid, by I. Madroñero Peloche, acting as Agent, and A. Sánchez Cordero, abogada,

– the Italian Government, by I.M. Braguglia, acting as Agent, and G. Fiengo, avvocato dello Stato,

– the Commission of the European Communities, by A. Alcover San Pedro and J.-B. Laignelot, acting as Agents,

after hearing the Opinion of the Advocate General at the sitting on 30 April 2008,

gives the following

Judgment

1 This reference for a preliminary ruling concerns the interpretation of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40), as amended by Council Directive 97/11/EC of 3 March 1997 (OJ 1997 L 73, p. 5) ('the amended directive').

2 The reference was made in the course of proceedings between Ecologistas en Acción-CODA ('CODA') and the Ayuntamiento de Madrid (Municipality of Madrid) concerning an administrative act approving various projects forming part of the refurbishment and improvement of virtually the whole of the Madrid urban ring road.

Legal background

Community legislation

3 Directive 85/337 was adopted with the aim of harmonising the principles for the assessment of the environmental effects of certain private and public projects, the main obligations of the developers and the content of the assessment of those effects. Annex I to the directive sets out the projects subject to such an assessment, while Annex II sets out the projects that, in accordance with Article 4(2) of the directive, the Member States could make subject to that assessment where they considered that the characteristics of the projects concerned so required.

4 The amendments that Directive 97/11 made to Directive 85/337 principally concern making projects likely to have effects on the environment subject to a requirement for development consent and an assessment of those effects, and the harmonisation of the criteria that the Member States must use in order to determine whether or not a project falling into one of the categories covered by Annex II must be made subject to such an assessment. Those criteria are henceforth listed in Annex III to the amended directive.

5 Article 1(2) of the amended directive contains the following definitions:

'"project" means:

– the execution of construction works or of other installations or schemes,

– other interventions in the natural surroundings and landscape …

"developer" means:

the applicant for authorisation for a private project or the public authority which initiates a project;

"development consent" means:

the decision of the competent authority or authorities which entitles the developer to proceed with the project.'

6 Article 2(1) of the amended directive provides:

‘Member States shall adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment by virtue, inter alia, of their nature, size or location are made subject to a requirement for development consent and an assessment with regard to their effects. …’

7 Article 3 of the amended directive provides:

‘The environmental impact assessment shall identify, describe and assess in an appropriate manner, in the light of each individual case and in accordance with Articles 4 to 11, the direct and indirect effects of a project on the following factors:

– human beings, fauna and flora;

– soil, water, air, climate and the landscape;

– material assets and the cultural heritage;

– the interaction between the factors mentioned in the first, second and third indents.’

8 Under Article 4(1) of the amended directive, projects listed in Annex I thereto are to be made subject to an assessment, subject to the exceptional cases exempted under Article 2(3) of that directive.

9 In accordance with Article 4(2) and (3) of the amended directive, each Member State is to determine, through a case-by-case examination or on the basis of thresholds or criteria which it sets, by taking account of the selection criteria set out in Annex III to the directive, whether the projects referred to in Annex II are to be made subject to an assessment.

10 Point 7 of Annex I to the amended directive mentions, under heading (b), projects for ‘[c]onstruction of motorways and express roads’ and, under heading (c), projects for ‘construction of a new road of four or more lanes, or realignment and/or widening of an existing road of two lanes or less so as to provide four or more lanes, where such new road, or realigned and/or widened section of road would be 10 km or more in a continuous length’.

11 Point 7(b) refers, for the definition of ‘express roads’, to that in the European Agreement on Main International Traffic Arteries of 15 November 1975 (‘the agreement’).

12 In point 10 of Annex II to the amended directive, entitled ‘Infrastructure projects’, subheading (b) mentions ‘[u]rban development projects’ and subheading (e) projects for ‘[c]onstruction of roads … (projects not included in Annex I)’.

13 The first indent of point 13 of Annex II covers ‘[a]ny change or extension of projects listed in Annex I or Annex II, already authorised, executed or in the process of being executed, which may have significant adverse effects on the environment’.

The agreement

14 The agreement was ratified by all the Member States except seven. The Kingdom of Spain did not ratify it.

15 Under Title II thereof, entitled 'Classification of International Roads', Annex II to the agreement contains inter alia the following definitions:

'II.2 Motorways

"Motorway" means a road specially designed and built for motor traffic, which does not serve properties bordering on it, and which:

(i) Is provided, except at special points or temporarily, with separate carriageways for the two directions of traffic, separated from each other by a dividing strip not intended for traffic or, exceptionally, by other means;

(ii) Does not cross at level with any road, railway or tramway track, or footpath; and

(iii) Is specially sign-posted as a motorway.

II.3 Express roads

An express road is a road reserved for motor traffic accessible only from interchanges or controlled junctions and on which, in particular, stopping and parking are prohibited on the running carriageway(s).'

The dispute in the main proceedings and the questions referred for a preliminary ruling

16 By decision of 17 January 2005, the Concejala del Área de Gobierno de Urbanismo, Vivienda e Infraestructuras del Ayuntamiento de Madrid (Councillor for Planning, Housing and Infrastructure of the Municipality of Madrid) approved various projects for refurbishment and improvement of the Madrid urban ring road, identified under number M-30.

17 Those projects concern specifically the re-routing underground, first, of the M-30 between Marquès de Monistrol and Puente de Segovia, between Puente de Segovia and Puente de San Isidro, between Puente de San Isidro and Puente de Praga and between Puente de Praga and Nudo Sur and, second, of the Avenida de Portugal as far as the San Vicente roundabout. According to CODA's observations, which are not contradicted in that respect, the M-30 is a road intended exclusively for motor traffic, without traffic lights, pavements or verges for pedestrians and without bus stops or taxi ranks.

18 The projects are part of a complex civil engineering scheme which consists in improving and refurbishing virtually the whole of the Madrid urban ring road. That scheme, also called 'Madrid calle 30', aims, according to the observations of the Ayuntamiento de Madrid, to reduce congestion on the roads and the risk of accidents, and not to increase the traffic capacity on that road.

19 After its administrative appeal against the abovementioned decision of 17 January 2005 had been rejected by decision of 23 May 2005, CODA brought an action before the referring court for annulment of the latter decision. Like the administrative appeal, the action for annulment is based, inter alia, on a plea alleging infringement of the national rules on environmental impact assessment applicable to such projects and which derive in part from the amended directive.

20 It is apparent from the order for reference that the Madrid City Council has split the larger 'Madrid calle 30' project into 15 independent sub-projects, treated separately, only one of which concerns alteration or rehabilitation work on any existing road on a section exceeding five kilometres, the threshold at which the regional rules applicable make a project subject to an environmental impact assessment, while the larger project taken as a whole substantially exceeds that threshold. It is also clear from the referring court's explanations that, according to certain estimates, the execution of the overall scheme will lead to an increase in traffic of nearly 25% and will involve different kinds of works in the urban area surrounding the M-30.

21 Having regard to the scale and the implications of the scheme, the referring court wonders whether, in accordance with the amended directive, it should not be made subject to an environmental impact assessment.

22 Before the referring court, the Ayuntamiento de Madrid, while asserting that it had never had the intention of preventing the application of the amended directive, pointed out that the dispute arose from an interpretation common to all the national authorities which have reviewed the legality of the relevant projects. It also submitted that to extend, in this case, the judgment in Case C-332/04 *Commission* v *Spain* of 16 March 2006 to situations other than that at issue in the case which gave rise to that judgment would require detailed reasoning by the Court of Justice.

23 The referring court also set out the observations submitted by the Communidad autónoma de Madrid (Autonomous Community of Madrid), according to which there is confusion between preliminary ruling proceedings and actions for failure to fulfil obligations, because the hearing mainly concerned possible infringements of Community law.

24 In those circumstances the national court decided to stay its proceedings and to refer the following questions to the Court for a preliminary ruling:

'(1) Are the procedural requirements relating to environmental impact assessments arising from [the amended directive] applicable to urban road projects, having regard to their nature, size and effect on densely populated areas or on landscapes of historical, cultural or archaeological significance?

(2) Are the procedural requirements relating to environmental impact assessments arising from [the amended directive] applicable to the projects which form the subject-matter of these administrative appeal proceedings, having regard to their nature, the nature of the road on which they are to be carried out, their characteristics, size, effect on the surrounding area, density of population, budget and the possible splitting up of a larger project which contemplates similar works on the same road?

(3) Are the criteria set out in [*Commission* v *Spain*, paragraphs 69 to 88] applicable to the projects which are the subject-matter of these proceedings, having regard to their nature, the nature of the road on which they are to be carried out, their characteristics, size, effect on the surrounding area, budget and the possible splitting up of a larger project which contemplates similar works on the same road, such that there was a requirement to submit them to the prescribed environmental impact assessment procedure?

(4) Do the relevant administrative records and, specifically, the studies and reports contained therein, demonstrate that the Spanish authorities have, in practice, complied with the obligations arising from [the amended directive] relating to the environmental assessment of the projects which are the subject-matter of these proceedings, even if the project was not formally made subject to the prescribed environmental assessment procedure set out in the directive?'

The questions referred for a preliminary ruling

The first three questions

25 By the first three questions, which it is appropriate to examine together, the referring court asks essentially whether the amended directive must be interpreted as meaning that projects for the refurbishment and improvement of virtually the whole of an urban ring road must be made subject to an environmental impact assessment taking account, inter alia, of the nature of those projects, the type of road in question, the characteristics and size of the projects, their effect on densely populated areas or landscapes having a historical, cultural or archaeological significance, and the fact that they are the result of the splitting up of a larger project concerning the execution of a series of similar works on the same road.

26 Under Article 4(1) of the amended directive, projects listed in Annex I thereto are to be made subject to an environmental impact assessment. According to Article 4(2), the Member States are to determine, by taking account of the conditions set out in that provision, which projects listed in Annex II to the directive must be made subject to such an assessment.

27 According to the Ayuntamiento de Madrid, the ring road concerned in the main proceedings is an urban road. The amended directive does not refer to that type of road in Annexes I and II, which mention only motorways, express roads and roads. Furthermore, those terms are not defined, except, with respect to the notion of express road, by reference to the definition given by the agreement. According to the defendant in the main proceedings, in the absence of clarification as to those terms, the Spanish law transposing the amended directive repeated its exact words. Since urban roads are not mentioned there, it was entitled to take the view that projects for the alteration of such a road were not covered by the amended directive and, consequently, did not have to be made subject to an environmental impact assessment.

28 That argument cannot be accepted. The Court has stated on numerous occasions that the scope of Directive 85/337 and that of the amended directive is very wide (see, to that effect, Case C-72/95 *Kraaijeveld and Others* [1996] ECR I-5403, paragraph 31; Case C-435/97 *WWF and Others* [1999] ECR I-5613, paragraph 40; and Case C-2/07 *Abraham and Others* [2008] ECR I-0000, paragraph 32). It would, therefore, be contrary to the very purpose of the amended directive to allow any urban road project to fall outside its scope solely on the ground that the directive does not expressly mention among the projects listed in Annexes I and II those concerning that kind of road.

29 Point 7(b) and (c) of Annex I to the amended directive mentions among the projects which must be made subject to an environmental impact assessment 'motorways', 'express roads' and '[c]onstruction of a new road of four or more lanes, or realignment and/or widening of an existing road of two lanes or less so as to provide four or more lanes, where such new road, or realigned and/or widened section of road would be 10 km or more in a

continuous length'. As to Annex II, it mentions in point 10(e) and the first indent of point 13 respectively '[c]onstruction of roads' and '[a]ny change or extension of projects listed in Annex I or Annex II, already authorised, executed or in the process of being executed, which may have significant adverse effects on the environment' among the projects for which the Member States may require an environmental impact assessment to be carried out in accordance with Article 4(2) of that directive. In that regard it must be stated, first, as the Commission of the European Communities rightly submits, that the concepts in those annexes are Community law concepts which must be interpreted independently and, second, that it is conceivable that the types of road which are mentioned therein are sited both in and outside built-up areas.

30 The amended directive does not define the concepts mentioned above with the exception of 'express roads', for which it refers to the agreement thereby including the definition of 'express road' contained therein. Since not all the Member States are parties to that agreement, this reference concerns the version of the agreement in force when Directive 85/337 was adopted, that is the agreement of 15 November 1975

31 According to Annex II to the agreement, an express road is a road reserved for motor traffic accessible only from interchanges or controlled junctions and on which stopping and parking are prohibited on the running carriageway(s). It does not follow from that definition that roads sited in urban areas would a priori be excluded. On the contrary, unless roads in built-up areas are expressly excluded, the words 'express roads' cover urban roads which have the characteristics set out in that annex.

32 The same agreement defines the concept of 'motorway' as inter alia a road specially designed and built for motor traffic, which does not serve properties bordering on it, does not cross at level with any road, railway or tramway track, or footpath, and is specially sign-posted as a motorway. Even though the amended directive does not make express reference to that definition, the agreement may be a useful tool for understanding the similar concept in Annex I to the directive.

33 It follows from case-law which is now well established that the Member States must implement the amended directive, in the same way as Directive 85/337, in a manner which fully corresponds to its requirements, having regard to its fundamental objective which, as is clear from Article 2(1), is that, before consent is given, projects likely to have significant effects on the environment by virtue, inter alia, of their nature, size or location should be made subject to an assessment with regard to their effects (see, to that effect, Case C-287/98 *Linster* [2000] ECR I-6917, paragraph 52, and Case C-486/04 *Commission* v *Italy* [2006] ECR I-11025, paragraph 36).

34 Accordingly, urban road projects must be regarded as falling within the scope of the amended directive.

35 As is clear from CODA's observations, which are not contradicted in that respect, the projects at issue in the main proceedings concern a road intended exclusively for motor traffic, without traffic lights, pavements or verges for pedestrians and without bus stops or taxi ranks. It is for the referring court to make the findings of fact from which it may verify those aspects in order to determine, taking account of the guidance set out in paragraphs 30 to 33 of this judgment, whether those projects are covered by one of the concepts in Annex I to

the amended directive and must therefore be made subject to an environmental impact assessment.

36 For that purpose, the fact that point 7(b) and (c) of Annex I to the amended directive refers to projects for the 'construction' of the types of road mentioned, whereas the case in the main proceedings concerns projects for refurbishment and improvement of an existing road, does not mean that the latter are excluded from the scope of the amended directive. A project for refurbishment of a road which would be equivalent, by its size and the manner in which it is carried out, to construction may be regarded as a construction project for the purposes of that annex (see, to that effect, Case C-227/01 *Commission* v *Spain* [2004] ECR I-8253, paragraph 46, and *Abraham and Others*, paragraph 32).

37 If it appeared that the projects at issue in the main proceedings do not concern motorways or express roads within the meaning of point 7(b) of Annex I to the amended directive or projects referred to in point 7(c) thereof, the referring court would still be required to examine whether the projects at issue in the main proceedings are covered by Annex II to the amended directive, either under point 10(e), inasmuch as they concern construction of a road, or under the first indent of point 13 read together with point 10(e) of Annex II, in so far as they concern a change to a road construction project.

38 In that respect, it must be recalled that if, like Article 4(2) of Directive 85/337, the same provision of the amended directive confers on Member States a measure of discretion in order to determine whether a project falling in the categories listed in Annex II thereto must be made subject to an environmental impact assessment, the limits of that discretion are to be found in the obligation set out in Article 2(1) of the amended directive that projects likely, by virtue inter alia of their nature, size or location, to have significant effects on the environment are to be subject to an impact assessment (see, regarding Directive 85/337, *Kraaijeveld and Others*, paragraph 50, and *Abraham and Others*, paragraph 37). In applying their discretion, the Member States must take account of each of those criteria in order to determine whether projects are likely to have an effect on the environment (Case C-332/04 *Commission* v *Spain*, paragraph 77).

39 In that regard, in the same way as Directive 85/337, the amended directive adopts an overall assessment of the effects of projects or the alteration thereof on the environment. It would be simplistic and contrary to that approach to take account, when assessing the environmental impact of a project or of its modification, only of the direct effects of the works envisaged themselves, and not of the environmental impact liable to result from the use and exploitation of the end product of those works (see, as regards Directive 85/337, *Abraham and Others*, paragraphs 42 and 43).

40 As far as concerns the location of projects, point 2(g) and (h) of Annex III to the amended directive mentions densely populated areas and landscapes of historical, cultural or archaeological significance as selection criteria which the Member States must take into account, in accordance with Article 4(3) of the directive, for the case-by-case examination or the setting of the thresholds or criteria provided for in Article 4(2), in order to determine whether a project must be made subject to an assessment. Those selection criteria may also concern urban road projects (see, to that effect, Case C-332/04 *Commission* v *Spain*, paragraph 79).

41 However, the fact relied on by the Ayuntamiento de Madrid that the projects at issue in the main proceedings should have beneficial effects on the environment is not relevant in determining whether it is necessary to make those projects subject to an assessment of their environmental impact.

42 Moreover, like that in Article 3 of Directive 85/337, the list in Article 3 of the amended directive of the factors to be taken into consideration, such as the effects of a project on, inter alia, human beings, fauna and flora, soil, water, air or cultural heritage, shows, in itself, that the environmental impact whose assessment the amended directive is designed to enable is not only the impact of the works envisaged but also, and above all, the impact of the project to be carried out (see, to that effect, *Abraham and Others*, paragraph 44).

43 As the Advocate General rightly stated, in point 28 of her Opinion, projects concerning roads may have many environmental effects both within and outside urban areas, since those areas are particularly sensitive because of population density, existing pollution, but also given the presence of any places of historical, cultural or archaeological importance (see, to that effect, Case C-332/04 *Commission* v *Spain*, paragraph 81).

44 Lastly, as the Court has already noted with regard to Directive 85/337, the purpose of the amended directive cannot be circumvented by the splitting of projects and the failure to take account of the cumulative effect of several projects must not mean in practice that they all escape the obligation to carry out an assessment when, taken together, they are likely to have significant effects on the environment within the meaning of Article 2(1) of the amended directive (see, as regards Directive 85/337, Case C-392/96 *Commission* v *Ireland* [1999] ECR I-5901, paragraph 76, and *Abraham and Others*, paragraph 27).

45 As regards the projects at issue in the main proceedings, it is clear from the order for reference that they are all part of the larger project 'Madrid calle 30'. It is for the referring court to verify whether they must be dealt with together by virtue, in particular, of their geographical proximity, their similarities and their interactions.

46 Therefore, the answer to the first three questions must be that the amended directive must be interpreted as meaning that it provides for environmental impact assessment of refurbishment and improvement projects for urban roads, either where they are projects covered by point 7(b) or (c) of Annex I to the directive, or where they are projects covered by point 10(e) of Annex II or the first indent of point 13 thereof, which are likely, by virtue of their nature, size or location and, if appropriate, having regard to their interaction with other projects, to have significant effects on the environment.

The fourth question

47 By its fourth question, the referring court asks essentially whether the studies undertaken and reports compiled on the projects at issue in the main proceedings satisfy the requirement of an environmental impact assessment as prescribed by the amended directive.

48 Under the procedure envisaged in Article 234 EC, which is based on a clear separation of functions between the national courts and the Court of Justice, any assessment of the facts in the case is a matter for the national court. The Court of Justice is thus empowered only to rule on the interpretation or validity of Community provisions on the basis of the facts which the national court puts before it (see, in particular, Case C-235/95 *Dumon and Froment* [1998]

ECR I-4531, paragraph 25, and Case C-467/04 *Gasparini and Others* [2006] ECR I-9199, paragraph 41).

49 This question invites the Court to express a view on certain factual elements on which the dispute in the main proceedings is based, that is to determine whether the inquiries, hearings and analyses carried out by the national authorities constitute, with respect to the projects concerned, an environmental impact assessment within the meaning of the amended directive.

50 It is for the national court to undertake such an examination, in the knowledge that a formal assessment may be replaced by equivalent measures where they satisfy the minimum requirements set out in Article 3 and Articles 5 to 10 of the amended directive.

51 Therefore there is no need to answer the fourth question.

Costs

52 Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the national court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Third Chamber) hereby rules:

Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment, as amended by Council Directive 97/11/EC of 3 March 1997, must be interpreted as meaning that it provides for environmental impact assessment of refurbishment and improvement projects for urban roads, either where they are projects covered by point 7(b) or (c) of Annex I to the directive, or where they are projects covered by point 10(e) of Annex II or the first indent of point 13 thereof, which are likely, by virtue of their nature, size or location and, if appropriate, having regard to their interaction with other projects, to have significant effects on the environment.

ORDER OF THE COURT (Sixth Chamber)

10 July 2008 (*)

(Preliminary ruling – Directive 85/337/EEC – Assessment of the impact of certain public and private projects on the environment – Construction of a road in Milan)

In Case C-156/07,

REFERENCE for a preliminary ruling under Article 234 EC from the Consiglio di Stato (Italy), made by decision of 24 October 2006, received at the Court on 21 March 2007, in the proceedings

Salvatore Aiello and Others

v

Comune di Milano and Others,

intervening parties:

Euromilano SpA,

Metropolitana milanese SpA,

THE COURT (Sixth Chamber),

composed of L. Bay Larsen, President of the Chamber, J.-C. Bonichot, (Rapporteur) and C. Toader, Judges,

Advocate General: J. Mazák,

Registrar: R. Grass,

having informed the referring court that the Court proposes to give its decision by reasoned order in accordance with the second subparagraph of Article 104(3) of its Rules of Procedure,

after hearing the Advocate General,

makes the following

Order

1 This reference for a preliminary ruling concerns the interpretation of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the impact of certain public and private projects on the environment (OJ 1985 L 175, p. 40), as amended by Council Directive 97/11/EC of 3 March 1997 (OJ 1997 L 73, p. 5; 'Directive 85/337').

2 The reference was made in the course of proceedings between Salvatore Aiello and Others and the Comune di Milano (Municipality of Milan) and Others concerning the construction of a road linking certain districts in the north of Milan.

Legal context

3 Article 1(2) of Directive 85/337 states:

'For the purposes of this Directive:

…

"development consent" means:

the decision of the competent authority or authorities which entitles the developer to proceed with the project.'

4 Article 1(4) of Directive 85/337 provides:

'Projects serving national defence purposes are not covered by this Directive.'

5 Article 1(5) of Directive 85/337 states:

'This Directive shall not apply to projects the details of which are adopted by a specific act of national legislation, since the objectives of this Directive, including that of supplying information, are achieved through the legislative process.'

6 Article 2(1) of Directive 85/337 provides:

'Member States shall adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment by virtue, inter alia, of their nature, size or location are made subject to a requirement for development consent and an assessment with regard to their effects. These projects are defined in Article 4.'

7 Article 2(3) of Directive 85/337 provides:

'Without prejudice to Article 7, Member States may, in exceptional cases, exempt a specific project in whole or in part from the provisions laid down in this Directive.'

8 Article 4 of Directive 85/337 provides:

'1. Subject to Article 2(3), projects listed in Annex I shall be made subject to an assessment in accordance with Articles 5 to 10.

2. Subject to Article 2(3), for projects listed in Annex II, the Member States shall determine through:

(a) a case-by-case examination,

or

(b) thresholds or criteria set by the Member State,

whether the project shall be made subject to an assessment in accordance with Articles 5 to 10.

Member States may decide to apply both procedures referred to in (a) and (b).

3. When a case-by-case examination is carried out or thresholds or criteria are set for the purpose of paragraph 2, the relevant selection criteria set out in Annex III shall be taken into account.

4. Member States shall ensure that the determination made by the competent authorities under paragraph 2 is made available to the public.'

9 Paragraph 7(c) of Annex I to Directive 85/337 refers to:

'Construction of a new road of four or more lanes, or realignment and/or widening of an existing road of two lanes or less so as to provide four or more lanes, where such new road, or realigned and/or widened section of road would be 10 km or more in a continuous length.'

10 Paragraph 10(e) of Annex II to Directive 85/337 refers to:

'Construction of roads, ...'

11 Annex III to Directive 85/337 states:

'1. Characteristics of projects

The characteristics of projects must be considered having regard, in particular, to:

– ...

– the cumulation with other projects,

...'

The dispute in the main proceedings and the questions referred for a preliminary ruling

12 By a decree of 15 November 2001, the Prime Minister of the Italian Republic declared a state of emergency in the city of Milan on account of the pollution resulting from car traffic and the inadequacy of the existing road network. By order of 28 December 2001, the Minister of the Interior appointed the Mayor of Milan as the Commissioner responsible for the implementation of the necessary measures to deal with that situation.

13 In his capacity as Commissioner for traffic and mobility issues in Milan, the Mayor of that city approved a programme of works, which included the construction project for a road linking certain districts in the north of Milan, of a length of 1 600m. On 29 October 2002, he approved the final project for that road.

14 Mr Aiello and other residents in the area affected challenged that decision before the Tribunale amministrativo regionale per la Lombardia (Lombardy Regional Administrative Court). They claimed, inter alia, that the procedure followed did not comply with Community law because no environmental impact assessment of the project had been carried out.

15 That court dismissed the action as unfounded, and Mr Aiello and Others lodged an appeal against that judgment before the Consiglio di Stato (Council of State).

16 The Consiglio di Stato ordered measures of inquiry from which it is apparent that, although the 1953 General Regulatory Plan for the municipality of Milan envisaged the construction of a road permitting a rapid connection between districts of the city more than 10 kilometres apart, that objective had finally been abandoned in favour of a different project, concerning the construction of a number of separate roads. Two roads are planned, the first of which is at the origin of the main proceedings and the second of which is a different road of a length of 1 300m.

17 The Consiglio di Stato considers, therefore, that the project at issue in the main proceedings does not fall within the context of the construction of a single road of more than 10 kilometres for the purposes of Annex I to Directive 85/337, which lists the projects for which an environmental impact assessment is obligatory, but within that of Annex II to that legislation, which refers merely to the construction of roads.

18 However, the Consiglio di Stato enquires whether the project being challenged should not be subject to such an assessment in accordance with, inter alia, Article 4 of Annex II read in conjunction with Annex III to Directive 85/337, on the ground that that project forms part of a larger operation for the restructuring of all the roads of the districts concerned, so that the competent authority should have taken into consideration the 'cumulation' of the separate projects, a factor expressly set out by Annex III. Accordingly, it decided to stay the proceedings and refer the following questions to the Court for a preliminary ruling:

'1. Must Article 2 of Council Directive [85/337], in so far as it states that projects likely to have significant effects on the environment are to be made subject to an environmental impact assessment, and that such projects are defined in Article 4 [thereof], be interpreted as meaning:

– that any project with a significant effect on the environment must, even if it is not listed in Annexes I or II to the Directive, be made subject to an environmental impact assessment;

– or, conversely, that only projects of a kind listed in Annexes I and II to the Directive must be made subject to an environmental impact assessment?

2. Does Article 4 of Council Directive [85/337], in so far as it gives Member States the possibility of providing for environmental impact assessments to be carried out for projects in the classes listed in Annex II [thereto] on the basis of case-by-case assessments or predetermined criteria – account also being taken of the criteria set out in Annex III [thereto] – create a specific obligation or merely an option for the Member States to take account of all the criteria listed in Annex III ?

3. Does Article 1 of the Presidential Decree of 12 April 1996 constitute due transposition into national law of Article 4 of Directive [85/337] and Annex III thereto by the Italian

legislature, given that it does not provide, as a criterion for making projects in the classes listed in Annex II to the Directive subject to an environmental impact assessment, for the criterion of cumulation with other projects, as referred to in Annex III to the Directive?'

The questions referred

19 Under Article 104(3) of the Rules of Procedure, inter alia, where the answer to a question referred may be clearly deduced from its existing case-law or where the answer to that question leaves no scope for any reasonable doubt, the Court may, after hearing the Advocate General, give its decision by reasoned order.

Admissibility

20 The Comune di Milano (Municipality of Milan) submits that the questions raised by the Consiglio di Stato are inadmissible because the two projects for the construction of roads to which the latter refers in the order for reference are distinct projects and are not, moreover, such as to have a cumulative impact on the environment.

21 In accordance with settled case-law, in the context of the cooperation between the Court of Justice and the national courts under Article 234 EC, it is solely for the national court, before which the dispute has been brought and which must assume responsibility for the subsequent judicial decision, to determine in the light of the particular circumstances of the case both the need for a preliminary ruling in order to enable it to deliver judgment and the relevance of the questions which it submits to the Court. Consequently, where the questions submitted for a preliminary ruling concern the interpretation of Community law, the Court is, in principle, bound to give a ruling (see, inter alia, Joined Cases C-223/99 and C-260/99 *AgoràandExcelsior* [2001] ECR I-3605, paragraph 18).

22 In the present case, the referring court has clearly stated that it requires the interpretation of several of the provisions of Directive 85/337 in order to ascertain whether the road construction project at issue in the main proceedings should be subject to an environmental impact assessment.

23 In addition, the Court may not decline to give a ruling on a question referred to it by a national court unless it is quite obvious that the interpretation of Community law sought by that court bears no relation to the actual facts of the main action or its purpose or where the problem is hypothetical, or where the Court does not have before it the factual or legal material necessary to give a useful answer to the questions submitted to it (see, inter alia, *Agorà and Excelsior*, paragraph 20).

24 In the present case, none of those conditions are met.

25 Accordingly, the reference for a preliminary ruling is admissible.

Substance

26 Taking the view that the answer to the three questions referred leaves no scope for any reasonable doubt, the Court, pursuant to the second paragraph of Article 104(3) of its Rules of Procedure, informed the referring court that it proposed to give its decision by reasoned order

and called on the interested parties referred to in Article 23 of the Statute of the Court of Justice to submit any observations they might have in that regard.

27 Aeillo and Others and the Commission of the European Communities replied to the Court's request. The Commission in its reply stated that it had no objection to the Court giving its decision by way of reasoned order. Aiello and Others submitted arguments similar to those raised in their written observations and requested that a hearing be held. However, those factors have not persuaded the Court to depart from the procedural approach envisaged.

– The first question

28 By its first question, the referring court is essentially asking whether Article 2(1) of Directive 85/337 must be interpreted as meaning that projects likely to have significant effects on the environment, but which are not referred to in Annexes I and II to that directive, must nevertheless be subject to an environmental impact assessment which complies with the assessment set out in that directive.

29 Article 2(1) of Directive 85/337 provides that projects likely to have significant effects on the environment by virtue, inter alia, of their nature, size or location and which must, therefore, be subject to an assessment with regard to those effects, are defined in Article 4 of that directive.

30 Article 4 provides, in paragraph 1 thereof, that the projects listed in Annex I shall be made subject to an environmental impact assessment and, in paragraph 2 thereof, that, with regard to projects listed in Annex II to that directive, it is for the Member States to determine whether they should be subject to such an assessment on the basis of certain thresholds or certain criteria.

31 It must also be noted that that article renders both situations referred to in the preceding paragraph subject to the application of Article 2(3) of Directive 85/337, which allows Member States, in exceptional cases, to exempt a specific project in whole or in part from the requirement to make an assessment.

32 Furthermore, Article 1 of Directive 85/337 provides, in paragraph 4 thereof, that the directive does not cover projects serving national defence purposes and, in paragraph 5 thereof, that it does not apply to projects the details of which are adopted by a specific act of national legislation, since the objectives of that directive are deemed to be achieved through the legislative process.

33 In any event, it must also be pointed out that the scope of Directive 85/337 is wide and its purpose very broad (see Case C-72/95 *Kraaijeveld and Others* [1996] ECR I-5403, paragraph 31, and Case C-227/01 *Commission* v *Spain* [2004] ECR I-8253, paragraph 46), and it must be implemented in that spirit.

34 Consequently, having regard to paragraphs 29 to 32 of this order, the answer to the first question referred must be that Article 2(1) of Directive 85/337 must be interpreted as not requiring that any project likely to have a significant effect on the environment be made subject to the environmental impact assessment provided for in that directive, but only those referred to in Annexes I and II to that directive, under the conditions set out in Article 4 thereof and subject to Articles 1(4) and (5) and 2(3) thereof.

– The second question

35 By its second question, the referring court essentially asks whether Member States are required to take account of the selection criteria listed in Annex III to Directive 85/337 when they determine, pursuant to Article 4(2) of that directive, in respect of the projects in the classes listed in Annex II thereto and on the basis of case-by-case assessments, or thresholds or criteria fixed by the Member State, whether those projects must be subject to the environmental impact assessment procedure.

36 In this connection, the Court has already held that, although Member States may establish the criteria and/or thresholds necessary to determine which of the projects in the classes listed in Annex II to Directive 85/337, in its original version, are to be subject to an assessment, their discretion is limited by the obligation, set out in Article 2(1) of that directive, to subject projects likely to have significant effects on the environment, particularly by virtue of their nature, size or location, to an assessment with regard to their impact (see, inter alia, Case C-486/04 *Commission* v *Italy* [2006] ECR I-11025, paragraph 53).

37 Under Article 4(2) of Directive 85/337, it is for the Member States to determine themselves in which cases the projects in the classes listed in Annex II to that directive must be made subject to an environmental impact assessment, whereas the projects in Annex I thereto must always be subject to such a procedure.

38 That provision leaves the Member States two options. The first is to decide on a case-by-case basis whether a project covered by Annex II must be made subject to the assessment. The second is to determine, in a general and abstract manner and according to thresholds or criteria, the projects in that annex which must be made subject to the assessment.

39 It stems from the actual wording of Article 4(3) of Directive 85/337 that that Directive requires Member States, in both cases, to take into account the relevant selection criteria set out in Annex III to that directive, that is to say, those of the criteria which must be applied in the light of the characteristics of the project concerned.

40 Therefore, the answer to the second question referred is that Directive 85/337 does require the Member States to take account of the relevant selection criteria listed in Annex III to Directive 85/337 when they determine, in respect of the projects in the classes listed in Annex II thereto, either on the basis of case-by-case assessments, or on the basis of thresholds or criteria fixed by the Member State, whether the projects concerned must be subject to the environmental impact assessment procedure.

– The third question

41 By its third question, the referring court is essentially requesting the Court to specify whether the Italian legislation at issue in the main proceedings constitutes due transposition into national law of Article 4 of Directive 85/337, given that that secondary legislation does not set out the criterion of cumulation with other projects, which is none the less referred to in Annex III to that directive, as a selection criterion to be taken into account when the competent national authority determines whether projects in the classes listed in Annex II to that directive must be made subject to an environmental impact assessment.

42 It is settled case-law that the Court has no jurisdiction, in proceedings brought on the basis of Article 234 EC, to rule on the compatibility of national rules with Community law. On the other hand, the Court does have jurisdiction to provide the national court with all the guidance as to the interpretation of Community law necessary to enable that court to rule on the compatibility of those national rules with Community law (see Joined Cases C-338/04, C-359/04 and C-360/04 *Placanica and Others* [2007] ECR I-1891, paragraph 36 and the case-law cited).

43 In the present case, it is apparent from the order for reference that the national court wishes to establish whether the Member States, in the transposition of the Directive into their domestic legal order, are required to adopt a provision drawing attention to the obligation to apply the criteria of the cumulation of the project concerned with other projects, referred to in Annex III to that directive, when an assessment is made of whether a project in the classes listed in Annex II thereto must be made subject to the environmental impact assessment provided for in that directive.

44 First of all, it should be observed that each of the Member States to which a directive is addressed is obliged to adopt, within the framework of its national legal system, all the measures necessary to ensure that the directive is fully effective, in accordance with the objective it pursues (Case C-32/05 *Commission* v *Luxembourg* [2006] ECR I-11323, paragraph 32).

45 The Court has also held that the provisions of a directive must be implemented with unquestionable binding force and with the specificity, precision and clarity necessary to satisfy the need for legal certainty, which requires that, in the case of a directive intended to confer rights on individuals, the persons concerned must be enabled to ascertain the full extent of their rights (Case C-207/96 *Commission* v *Italy* [1997] ECR I-6869, paragraph 26).

46 In the present case, Article 4 of Directive 85/337 must be interpreted as requiring the competent authority to take into account the relevant selection criteria set out in Annex III to that directive when an assessment is made of whether a project in the classes listed in Annex II thereto must be subject to an environmental impact assessment, both when that assessment is made on the basis of a case-by-case examination and when the Member State concerned has opted for general rules.

47 Where a Member State chooses to determine in a general and abstract manner, as it is permitted to do by Directive 85/337, the projects in the classes listed in Annex II to that directive which must be made subject to an environmental impact assessment, it bears responsibility for drawing up the list of those projects by applying one or more of the relevant criteria in Annex III, as appropriate. The criterion of cumulation can therefore, where relevant, be used to make one type of project subject to such an assessment, having regard to the completion of that project with other projects and if necessary taking into consideration the completion of all those projects during a specific period of time.

48 Where a Member State opts, on the contrary, wholly or partially, to determine on a case-by-case basis the projects in the classes listed in Annex II to Directive 85/337 which must be made subject to an environmental impact assessment, it bears responsibility for ensuring that the competent national authorities have regard to the various criteria listed in Annex III to that directive in so far as those criteria are relevant having regard to the characteristics of the project concerned.

49 For that purpose, the Member State may refer, in its national legislation, to the criteria in Annex III. It can also integrate those criteria into its legislation, by expressly providing that the competent authorities must refer to them for the purpose of determining, on a case-by-case basis, whether a project in the classes listed in Annex II to Directive 85/337 must be made subject to an environmental impact assessment.

50 In any event, where a Member State chooses to proceed by that route it cannot, without failing to fulfil its Community obligations, exclude expressly or impliedly one or more of the criteria in Annex III to Directive 85/337, in so far as any of those criteria may, depending on which project in the classes listed in Annex II is concerned, be relevant for the purposes of ascertaining whether an environmental impact procedure must be organised. Depending on the characteristics of the national legal order in question, such an exclusion might dissuade or even prevent the competent national authority from taking into account the criterion or criteria in question.

51 The answer to the third question referred is therefore that, where a Member State opts for determining on a case-by-case basis those of the projects in the classes listed in Annex II to Directive 85/337 which must be made subject to an environmental impact assessment, it must, either by referring in its national rules to Annex III to that directive or by reproducing in its national rules the criteria listed there, ensure that all of those criteria can in fact be taken into account where one or more of them is relevant for the purposes of the project concerned, and cannot expressly or impliedly exclude them.

Costs

52 Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the national court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Sixth Chamber) hereby rules:

1. **Article 2(1) of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment, as amended by Council Directive 97/11/EC of 3 March 1997, must be interpreted as not requiring that any project likely to have a significant effect on the environment be made subject to the environmental impact assessment provided for in that directive, but only those referred to in Annexes I and II to that directive, under the conditions set out in Article 4 thereof and subject to Articles 1(4) and (5) and 2(3) of that directive.**

2. **Member States are required to take into account the relevant selection criteria listed in Annex III to Directive 85/337, as amended by Directive 97/11, when they determine, in respect of the projects in the classes listed in Annex II thereto, either on the basis of case-by-case assessments or on the basis of thresholds or criteria fixed by the Member State, whether those projects must be subject to the environmental impact assessment procedure.**

3. **Where a Member State opts for determining on a case-by-case basis those of the projects in the classes listed in Annex II to Directive 85/337, as amended by Directive 97/11, which must be made subject to an environmental impact assessment, it must,**

either by referring in its national rules to Annex III to that directive or by reproducing in its national rules the criteria listed there, ensure that all of those criteria can in fact be taken into account where one or more of them is relevant for the purposes of the project concerned, and cannot expressly or impliedly exclude them.

[Signatures]

JUDGMENT OF THE COURT (Second Chamber)

3 July 2008 (*)

(Failure of a Member State to fulfil obligations – No assessment of the environmental effects of projects within the scope of Directive 85/337/EEC – Regularisation after the event)

In Case C-215/06,

ACTION under Article 226 EC for failure to fulfil obligations, brought on 11 May 2006,

Commission of the European Communities, represented by D. Recchia and D. Lawunmi, acting as Agents, with an address for service in Luxembourg,

applicant,

v

Ireland, represented by D. O'Hagan, acting as Agent, J. Connolly SC and G. Simons BL, with an address for service in Luxembourg,

defendant,

THE COURT (Second Chamber),

composed of C.W.A. Timmermans, President of the Chamber, L. Bay Larsen, J. Makarczyk (Rapporteur), P. Kūris and J.-C. Bonichot, Judges,

Advocate General: J. Mazák,

Registrar: B. Fülöp, Administrator,

having regard to the written procedure and further to the hearing on 14 February 2008,

having decided, after hearing the Advocate General, to proceed to judgment without an Opinion,

gives the following

Judgment

1 By its action the Commission of the European Communities seeks a declaration from the Court that:

– by failing to adopt all measures necessary to ensure that projects which are within the scope of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40) either before or after amendment by Council Directive 97/11/EC of 3 March 1997 (OJ 1997 L 73, p. 5) are, before they are executed in whole or in part, first, considered with regard to the need for an environmental impact assessment and, secondly, where those projects are likely to have

significant effects on the environment by virtue of their nature, size or location, that they are made subject to an assessment with regard to their effects in accordance with Articles 5 to 10 of Directive 85/337, and

– by failing to adopt all measures necessary to ensure that the development consents given for, and the execution of, wind farm developments and associated works at Derrybrien, County Galway, were preceded by an assessment with regard to their environmental effects in accordance with Articles 5 to 10 of Directive 85/337,

Ireland has failed to fulfil its obligations under Articles 2, 4 and 5 to 10 of that directive.

Legal context

Community legislation

2 By its action the Commission seeks a declaration that Ireland has failed to fulfil its obligations under Directive 85/337 both in its original version and in the version as amended by Directive 97/11.

Directive 85/337

3 The wording of Article 1(2) and (3) of Directive 85/337 is as follows:

‘2. For the purposes of this Directive:

“project” means

– the execution of construction works or of other installations or schemes,

– other interventions in the natural surroundings and landscape including those involving the extraction of mineral resources;

“developer” means:

the applicant for authorisation for a private project or the public authority which initiates a project;

“development consent” means:

the decision of the competent authority or authorities which entitles the developer to proceed with the project.

3. The competent authority or authorities shall be that or those which the Member States designate as responsible for performing the duties arising from this Directive.’

4 Article 2(1) and (2) and the first subparagraph of Article 2(3) of Directive 85/337 provide:

‘1. Member States shall adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment by virtue, inter alia, of their nature, size or location are made subject to an assessment with regard to their effects.

These projects are defined in Article 4.

2. The environmental impact assessment may be integrated into the existing procedures for consent to projects in the Member States, or, failing this, into other procedures or into procedures to be established to comply with the aims of this Directive.

3. Member States may, in exceptional cases, exempt a specific project in whole or in part from the provisions laid down in this Directive.’

5 Article 3 of Directive 85/337 provides:

‘The environmental impact assessment will identify, describe and assess in an appropriate manner, in the light of each individual case and in accordance with Articles 4 to 11, the direct and indirect effects of a project on the following factors:

– human beings, fauna and flora,

– soil, water, air, climate and the landscape,

– the inter-action between the factors mentioned in the first and second indents,

– material assets and the cultural heritage.’

6 Article 4 of that directive is worded as follows:

‘1. Subject to Article 2(3), projects of the classes listed in Annex I shall be made subject to an assessment in accordance with Articles 5 to 10.

2. Projects of the classes listed in Annex II shall be made subject to an assessment, in accordance with Articles 5 to 10, where Member States consider that their characteristics so require.

To this end Member States may inter alia specify certain types of projects as being subject to an assessment or may establish the criteria and/or thresholds necessary to determine which of the projects of the classes listed in Annex II are to be subject to an assessment in accordance with Articles 5 to 10.’

7 Article 5 of Directive 85/337 states:

‘1. In the case of projects which, pursuant to Article 4, must be subjected to an environmental impact assessment in accordance with Articles 5 to 10, Member States shall adopt the necessary measures to ensure that the developer supplies in an appropriate form the information specified in Annex III inasmuch as:

(a) the Member States consider that the information is relevant to a given stage of the consent procedure and to the specific characteristics of a particular project or type of project and of the environmental features likely to be affected;

(b) the Member States consider that a developer may reasonably be required to compile this information having regard inter alia to current knowledge and methods of assessment.

2. The information to be provided by the developer in accordance with paragraph 1 shall include at least:

– a description of the project comprising information on the site, design and size of the project,

– a description of the measures envisaged in order to avoid, reduce and, if possible, remedy significant adverse effects,

– the data required to identify and assess the main effects which the project is likely to have on the environment,

– a non-technical summary of the information mentioned in indents 1 to 3.

3. Where they consider it necessary, Member States shall ensure that any authorities with relevant information in their possession make this information available to the developer.'

8 Article 6 of Directive 85/337 is worded as follows:

'1. Member States shall take the measures necessary to ensure that the authorities likely to be concerned by the project by reason of their specific environmental responsibilities are given an opportunity to express their opinion on the request for development consent. Member States shall designate the authorities to be consulted for this purpose in general terms or in each case when the request for consent is made. The information gathered pursuant to Article 5 shall be forwarded to these authorities. Detailed arrangements for consultation shall be laid down by the Member States.

2. Member States shall ensure that:

– any request for development consent and any information gathered pursuant to Article 5 are made available to the public,

– the public concerned is given the opportunity to express an opinion before the project is initiated.

…'

9 Article 7 of Directive 85/337 provides:

'Where a Member State is aware that a project is likely to have significant effects on the environment in another Member State or where a Member State likely to be significantly affected so requests, the Member State in whose territory the project is intended to be carried out shall forward the information gathered pursuant to Article 5 to the other Member State at

the same time as it makes it available to its own nationals. Such information shall serve as a basis for any consultations necessary in the framework of the bilateral relations between two Member States on a reciprocal and equivalent basis.'

10 Article 8 of Directive 85/337 states:

'Information gathered pursuant to Articles 5, 6 and 7 must be taken into consideration in the development consent procedure.'

11 Article 9 of that directive is worded as follows:

'When a decision has been taken, the competent authority or authorities shall inform the public concerned of:

– the content of the decision and any conditions attached thereto,

– the reasons and considerations on which the decision is based where the Member States' legislation so provides.

The detailed arrangements for such information shall be determined by the Member States.

If another Member State has been informed pursuant to Article 7, it will also be informed of the decision in question.'

12 Article 10 of that directive provides:

'The provisions of this Directive shall not affect the obligation on the competent authorities to respect the limitations imposed by national regulations and administrative provisions and accepted legal practices with regard to industrial and commercial secrecy and the safeguarding of the public interest.

Where Article 7 applies, the transmission of information to another Member State and the reception of information by another Member State shall be subject to the limitations in force in the Member State in which the project is proposed.'

13 Annex II to Directive 85/337 lists projects subject to Article 4(2) of that directive, namely those for which an environmental impact assessment is necessary only where the Member States consider that their characteristics so require. Projects referred to in that annex include, in point 2(a), extraction of peat, and in point 2(c), extraction of minerals other than metalliferous and energy-producing minerals, such as marble, sand, gravel, shale, salt, phosphates and potash.

14 Projects listed in point 10(d) of Annex II include the construction of roads.

Directive 97/11

15 Article 3 of Directive 97/11 is worded as follows:

‘1. Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with this Directive by 14 March 1999 at the latest. They shall forthwith inform the Commission thereof.

…

2. If a request for development consent is submitted to a competent authority before the end of the time-limit laid down in paragraph 1, the provisions of Directive 85/337/EEC prior to these amendments shall continue to apply.’

Directive 85/337 as amended by Directive 97/11 (‘Directive 85/337 as amended’)

16 In the interests of clarity, reference will be made only to the amendments to Directive 85/337 which have direct relevance to the alleged failure by Ireland to fulfil its obligations. Accordingly, reference will not be made to amendments introduced by Directive 97/11 to Articles 5 to 10 of Directive 85/337, since those have no bearing on the determination of this action which the Court is called upon to make.

17 Under Article 2(1) and (2) and the first subparagraph of Article 2(3) of Directive 85/337 as amended:

‘1. Member States shall adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment by virtue, inter alia, of their nature, size or location are made subject to a requirement for development consent and an assessment with regard to their effects. These projects are defined in Article 4.

2. The environmental impact assessment may be integrated into the existing procedures for consent to projects in the Member States, or, failing this, into other procedures or into procedures to be established to comply with the aims of this Directive.

…

3. Without prejudice to Article 7, Member States may, in exceptional cases, exempt a specific project in whole or in part from the provisions laid down in this Directive.’

18 Article 3 of Directive 85/337 as amended provides:

‘The environmental impact assessment shall identify, describe and assess in an appropriate manner, in the light of each individual case and in accordance with Articles 4 to 11, the direct and indirect effects of a project on the following factors:

– human beings, fauna and flora;

– soil, water, air, climate and the landscape;

– material assets and the cultural heritage;

– the interaction between the factors mentioned in the first, second and third indents.’

19 Article 4 of Directive 85/337 as amended provides:

‘1. Subject to Article 2(3), projects listed in Annex I shall be made subject to an assessment in accordance with Articles 5 to 10.

2. Subject to Article 2(3), for projects listed in Annex II, the Member States shall determine through:

(a) a case-by-case examination,

or

(b) thresholds or criteria set by the Member State,

whether the project shall be made subject to an assessment in accordance with Articles 5 to 10.

Member States may decide to apply both procedures referred to in (a) and (b).

3. When a case-by-case examination is carried out or thresholds or criteria are set for the purpose of paragraph 2, the relevant selection criteria set out in Annex III shall be taken into account.

4. Member States shall ensure that the determination made by the competent authorities under paragraph 2 is made available to the public.’

20 Point 3(i) of Annex II to Directive 85/337 as amended specifies installations for the harnessing of wind power for energy production (wind farms).

21 By virtue of point 13 of Annex II, any change or extension of projects listed in Annex I or Annex II, already authorised, executed or in the process of being executed, which may have significant adverse effects on the environment (being a change or extension not listed in Annex I) must be regarded as a project within the scope of Article 4(2) of Directive 85/337 as amended.

22 Annex III to Directive 85/337 as amended, relating to the selection criteria referred to in Article 4(3) of that directive, provides that the characteristics of projects must be considered in relation, inter alia, to pollution and nuisances, and to the risk of accidents having regard in particular to technologies used. That annex also indicates that the environmental sensitivity of geographical areas likely to be affected by projects must be considered having regard, inter alia, to the absorption capacity of the natural environment, paying particular attention to certain areas, including mountain and forest areas.

National legislation

23 The requirements of Directive 85/337 as amended have been transposed into national law by, in particular, the Planning and Development Act, 2000, as amended (‘the PDA’), and the Planning and Development Regulations, 2001.

24 Section 32(1)(a) of the PDA lays down a general obligation to obtain consent for all development projects within the scope of Annexes I and II to Directive 85/337 as amended; the application for permission must be lodged and the permission obtained before the

commencement of works. In addition, section 32(1)(b) of the PDA provides that permission can be obtained to regularise unauthorised development (retention permission).

25 On receipt of an application for permission, the planning authority must decide whether the proposed development should be subject to an environmental impact assessment.

26 Section 151 of the PDA provides that any person who has carried out or is carrying out unauthorised development is guilty of an offence.

27 It is clear from sections 152 and 153 of the PDA that, on receipt of a complaint, planning authorities are, as a general rule, under an obligation to issue a warning letter, and must then decide whether or not it is appropriate to issue an enforcement notice. Failure to comply with the requirements of an enforcement notice constitutes an offence.

28 Under section 160 of the PDA:

'(1) Where an unauthorised development has been, is being or is likely to be carried out or continued, the High Court or the Circuit Court may, on the application of a planning authority or any other person, whether or not the person has an interest in the land, by order require any person to do or not to do, or to cease to do, as the case may be, anything that the Court considers necessary and specifies in the order to ensure, as appropriate, the following:

(a) that the unauthorised development is not carried out or continued;

(b) in so far as practicable, that any land is restored to its condition prior to the commencement of any unauthorised development;

(c) that any development is carried out in conformity with the permission pertaining to that development or any condition to which the permission is subject.

(2) In making an order under subsection (1), where appropriate, the Court may order the carrying out of any works, including the restoration, reconstruction, removal, demolition or alteration of any structure or other feature.'

29 Section 162 of the PDA makes clear that an application for retention permission does not entail any ongoing enforcement action being stayed or withdrawn.

Pre-litigation procedure

30 After sending a letter of formal notice on 5 April 2001, the Commission sent to Ireland a reasoned opinion dated 21 December 2001.

31 On 7 July 2004, the Commission sent an additional letter of formal notice to Ireland.

32 On 5 January 2005, after the receipt of Ireland's observations as set out in a letter dated 6 December 2004, an additional reasoned opinion was sent to Ireland.

33 Since the Commission considered that Ireland's response to that reasoned opinion, in letters of 8 March, 17 June and 1 December 2005, was unsatisfactory, it brought this action under the second paragraph of Article 226 EC.

The action

The first complaint

34 The Commission's complaint is that Ireland has not taken all the measures necessary to comply with Articles 2, 4 and 5 to 10 of Directive 85/337 either in its original version or as amended by Directive 97/11. This complaint will be examined, first, in relation to Directive 85/337 as amended.

35 The first complaint, that transposition of Directive 85/337 as amended is incomplete and that, as a result, the directive is not properly implemented is based on three pleas in law.

36 First, the Commission claims that Ireland has not taken the measures necessary in order to ensure that checks are made to ascertain, in accordance with Article 2(1) of Directive 85/337 as amended, whether proposed works are likely to have significant effects on the environment, and, if that is the case, in order to render it obligatory that an environmental impact assessment be carried out, as laid down by that provision, before the grant of development consent.

37 Secondly, the Commission considers that the Irish legislation which allows an application for retention permission to be made after a development has been executed in whole or in part without consent undermines the preventive objectives of Directive 85/337 as amended.

38 Thirdly, the Commission claims that the enforcement regime established by Ireland does not guarantee the effective application of the directive, and that Ireland has thereby failed to fulfil its general obligation under Article 249 EC.

39 In support of the third plea in law, the Commission reports a number of examples which, in its opinion, illustrate the deficiencies in the application of the system of enforcement.

The first two pleas in law

– Arguments of the parties

40 The Commission claims that since it is possible, under the national legislation, to comply with the obligations imposed by Directive 85/337 as amended during or after execution of a development, there is no clear obligation to subject developments to an assessment of their effects on the environment before they are carried out.

41 In accepting that projects can be scrutinised, in an environmental impact assessment, after their execution, when the principal objective pursued by Directive 85/337 as amended is that effects on the environment should be taken into account at the earliest possible stage in all planning and decision-making processes, the national legislation in question recognises a possibility of regularisation which results in the undermining of that directive's effectiveness.

42 The Commission adds that the rules relating to retention permission are incorporated within the general provisions applicable to normal planning permission, and that there is

nothing to indicate that applications for retention permission and the grant of such permission are limited to exceptional cases.

43 Ireland contends that the Commission's analysis of the Irish legislation which transposes Directive 85/337 as amended is not accurate. Ireland states that Irish law expressly requires that permission be obtained for any new development before the commencement of works and that, as regards development which must be subject to an environmental impact assessment, the assessment must be carried out before the works. Failure to comply with those obligations is, moreover, a criminal offence and may result in enforcement action.

44 Ireland contends, in addition, that retention permission, established by the PDA and the Planning and Development Regulations, 2001, is an exception to the general rule which requires permission to be obtained before the commencement of a development, and best meets the objectives of Directive 85/337 as amended, in particular the general objective of protection of the environment, since the removal of an unauthorised development may not be the most appropriate measure to achieve that protection.

45 According to that Member State, the requirements of Directive 85/337 as amended are wholly procedural and are silent as to whether there may or may not be an exception by virtue of which an environmental impact assessment might, in certain cases, be carried out after commencement of works. Ireland adds that nowhere in the directive is it expressly stated that an assessment can solely be carried out before the execution of a project, and refers to the definition of the term 'development consent' given by Directive 85/337 as amended to argue that the use of 'proceed' is significant, that term not being confined to the commencement of works but also applying to the continuation of a development project.

46 Ireland contends, in addition, that retention permission is a reasonable fall-back mechanism to be resorted to in exceptional circumstances, designed to take account of the fact that some projects will inevitably, for various reasons, commence before the grant of development consent within the meaning of Directive 85/337 as amended.

47 On that point, Ireland relies on Case C-201/02 *Wells* [2004] ECR I-723 to argue that a remedial assessment may be carried out at a later stage, by way of exception to the general rule that the assessment must be carried out at the earliest possible stage in the decision-making process.

48 That Member State considers also that it would be disproportionate to order the removal of some structures in circumstances where, after consideration of an application for retention permission, retention is held to be compatible with proper planning and sustainable development.

– Findings of the Court

49 Member States must implement Directive 85/337 as amended in a manner which fully corresponds to its requirements, having regard to its fundamental objective which, as is clear from Article 2(1), is that, before development consent is given, projects likely to have significant effects on the environment by virtue, inter alia, of their nature, size or location should be made subject to a requirement for development consent and an assessment with regard to their effects (see, to that effect, Case C-287/98 *Linster* [2004] ECR I-723, paragraph 52, and Case C-486/04 *Commission* v *Italy* [2006] ECR I-11025, paragraph 36).

50 Further, development consent, under Article 1(2) of Directive 85/337 as amended, is the decision of the competent authority or authorities which entitles the developer to proceed with the project.

51 Given that this wording regarding the acquisition of entitlement is entirely unambiguous, Article 2(1) of that directive must necessarily be understood as meaning that, unless the applicant has applied for and obtained the required development consent and has first carried out the environmental impact assessment when it is required, he cannot commence the works relating to the project in question, if the requirements of the directive are not to be disregarded.

52 That analysis is valid for all projects within the scope of Directive 85/337 as amended, whether they fall under Annex I and must therefore systematically be subject to an assessment pursuant to Articles 2(1) and 4(1), or whether they fall under Annex II and, as such, and in accordance with Article 4(2), are subject to an impact assessment only if, in the light of thresholds or criteria set by the Member State and/or on the basis of a case-by-case examination, they are likely to have significant effects on the environment.

53 A literal analysis of that kind of Article 2(1) is moreover consonant with the objective pursued by Directive 85/337 as amended, set out in particular in recital 5 of the preamble to Directive 97/11, according to which 'projects for which an assessment is required should be subject to a requirement for development consent [and] the assessment should be carried out before such consent is granted'.

54 As the Irish legislation stands, it is undisputed that environmental impact assessments and planning permissions must, as a general rule, be respectively carried out and obtained, when required, prior to the execution of works. Failure to comply with those obligations constitutes under Irish law a contravention of the planning rules.

55 However, it is also undisputed that the Irish legislation establishes retention permission and equates its effects to those of the ordinary planning permission which precedes the carrying out of works and development. The former can be granted even though the project to which it relates and for which an environmental impact assessment is required pursuant to Articles 2 and 4 of Directive 85/337 as amended has been executed.

56 In addition, the grant of such a retention permission, use of which Ireland recognises to be common in planning matters lacking any exceptional circumstances, has the result, under Irish law, that the obligations imposed by Directive 85/337 as amended are considered to have in fact been satisfied.

57 While Community law cannot preclude the applicable national rules from allowing, in certain cases, the regularisation of operations or measures which are unlawful in the light of Community law, such a possibility should be subject to the conditions that it does not offer the persons concerned the opportunity to circumvent the Community rules or to dispense with applying them, and that it should remain the exception.

58 A system of regularisation, such as that in force in Ireland, may have the effect of encouraging developers to forgo ascertaining whether intended projects satisfy the criteria of Article 2(1) of Directive 85/337 as amended, and consequently, not to undertake the action required for identification of the effects of those projects on the environment and for their

prior assessment. The first recital of the preamble to Directive 85/337 however states that it is necessary for the competent authority to take effects on the environment into account at the earliest possible stage in all the technical planning and decision-making processes, the objective being to prevent the creation of pollution or nuisances at source rather than subsequently trying to counteract their effects.

59 Lastly, Ireland cannot usefully rely on *Wells*. Paragraphs 64 and 65 of that judgment point out that, under the principle of cooperation in good faith laid down in Article 10 EC, Member States are required to nullify the unlawful consequences of a breach of Community law. The competent authorities are therefore obliged to take the measures necessary to remedy failure to carry out an environmental impact assessment, for example the revocation or suspension of a consent already granted in order to carry out such an assessment, subject to the limits resulting from the procedural autonomy of the Member States.

60 This cannot be taken to mean that a remedial environmental impact assessment, undertaken to remedy the failure to carry out an assessment as provided for and arranged by Directive 85/337 as amended, since the project has already been carried out, is equivalent to an environmental impact assessment preceding issue of the development consent, as required by and governed by that directive.

61 It follows from the foregoing that, by giving to retention permission, which can be issued even where no exceptional circumstances are proved, the same effects as those attached to a planning permission preceding the carrying out of works and development, when, pursuant to Articles 2(1) and 4(1) and (2) of Directive 85/337 as amended, projects for which an environmental impact assessment is required must be identified and then – before the grant of development consent and, therefore, necessarily before they are carried out – must be subject to an application for development consent and to such an assessment, Ireland has failed to comply with the requirements of that directive.

62 Consequently, the first two pleas in law are well founded.

The third plea in law

– Arguments of the parties

63 According to the Commission, there are shortcomings in the Irish legislation relating to enforcement measures and in the resulting enforcement practices which undermine the proper transposition and implementation of Directive 85/337 as amended, when, under that directive, an effective system of control and enforcement is mandatory.

64 First, the Commission claims that the enforcement measures provided for by Irish planning legislation do not offset the absence of provisions requiring compliance with the obligations as to an environmental impact assessment before development is carried out.

65 Secondly, the Commission claims that enforcement practices undermine the proper transposition of Directive 85/337 as amended. The Commission refers to specific situations which illustrate, in its opinion, the deficiencies of the Irish legislation regarding supervising compliance with the rules established by that directive.

66 As regards the procedure relating to enforcement, Ireland contends the choice and form of enforcement is a matter within the discretion of Member States, in particular as there has been no harmonisation at Community level of planning and environmental controls.

67 In any event, Ireland states that the system of enforcement established by the Irish legislation is comprehensive and effective. The Member State adds that, under environmental law, the applicable provisions are legally binding.

68 Thus, the legislation places planning authorities under the obligation of sending a warning letter when they learn that an unauthorised development is being carried out, unless they consider that the development is of minor importance.

69 Once the warning letter has been sent, the planning authorities must decide whether it is appropriate to issue an enforcement notice.

70 The warning letter is intended to enable the persons responsible for unauthorised developments to undertake remedial action before the enforcement notice and the other stages of enforcement proceedings.

71 If an enforcement notice is issued, that sets out obligations and failure to comply with its requirements constitutes an offence.

72 Ireland adds that the enforcement regime must take account of various competing rights held by developers, landowners, the public and individuals directly affected by the development, and the weight of those various rights must be measured in order to reach a fair result.

73 Lastly, Ireland does not accept that the examples reported by the Commission prove the alleged failure to fulfil its obligations, since the Commission limits itself to general assertions.

– Findings of the Court

74 It is undisputed that, in Ireland, the absence of an environmental impact assessment required by Directive 85/337 as amended can be remedied by obtaining a retention permission which makes it possible, in particular, to leave projects which were not properly authorised undisturbed, provided that the application for such a permission is made before the commencement of enforcement proceedings.

75 The consequence of that possibility, as indeed Ireland recognises, may be that the competent authorities do not take action to suspend or put an end to a project that is within the scope of Directive 85/337 as amended and is being carried out or has already been carried out with no regard to the requirements relating to development consent and to an environmental impact assessment prior to issue of that development consent, and that they refrain from initiating the enforcement procedure provided for by the PDA, in relation to which Ireland points out that the powers are discretionary.

76 The inadequacy of the enforcement system set up by Ireland is accordingly demonstrated inasmuch as the existence of retention permission deprives it of any effectiveness, and that inadequacy is the direct consequence of the Member State's failure to

fulfil its obligations which was found in the course of consideration of the first two pleas in law.

77 That conclusion is not affected by the fact that, according to Ireland, the enforcement regime must take account of the various competing rights held by developers, landowners, the public and individuals directly affected by the development. The need to weigh those interests cannot in itself provide justification for the ineffectiveness of a system of control and enforcement.

78 Accordingly, it becomes superfluous to analyse the various examples put forward by the Commission to illustrate the deficiencies in application of the enforcement measures, since those deficiencies are the direct result of the inadequacies of the Irish legislation itself.

79 Consequently, the third plea in law is also well founded, and therefore the first complaint must be upheld on all of the pleas in law.

80 Lastly, the decision that the first complaint is well founded holds good both with regard to Directive 85/337 as amended and with regard to Directive 85/337. Under both the original and the amended version of the directive, projects likely to have significant effects on the environment must be subject to an assessment of their effects before the grant of development consent, the definition of development consent moreover remaining unchanged. In addition, the characteristics of the retention permission that are specified by the Irish legislation have remained the same.

81 It follows from the foregoing that, by failing to adopt all measures necessary to ensure that projects which are within the scope of Directive 85/337 either before or after amendment by Directive 97/11 are, before they are executed in whole or in part, first, considered with regard to the need for an environmental impact assessment and, secondly, where those projects are likely to have significant effects on the environment by virtue of their nature, size or location, that they are made subject to an assessment with regard to their effects in accordance with Articles 5 to 10 of that directive, Ireland has failed to fulfil its obligations under Articles 2, 4 and 5 to 10 of that directive.

The second complaint

82 This complaint relates to the circumstances obtaining for the construction of a wind farm at Derrybrien, County Galway, in relation to which it is useful first to note the various consents obtained.

83 As is clear from the documents before the Court, applications for consent relating to the first two phases of the development, each involving 23 wind turbines, were submitted on 4 and 18 December 1997. Fresh applications were lodged on 23 January 1998, since the earlier applications for consent were held to be invalid. Permission was issued on 12 March 1998. On 5 October 2000, an application was made for consent for a third phase of works relating, inter alia, to 25 turbines and service roadways, which was approved on 15 November 2001. On 20 June 2002, the developer applied for consent to alter the first two phases of the development, and those changes were authorised on 30 July 2002. In October 2003, when the consent granted for the first two phases of the works had expired, the developer applied for renewal of that consent, which was granted in November 2003.

Arguments of the parties

84 By this complaint, the Commission claims that Ireland did not take all the measures necessary to ensure that the development consents relating to the wind farm and associated works were preceded by an assessment of the environmental effects of the project, in accordance with Articles 5 to 10 of Directive 85/337 and of Directive 85/337 as amended.

85 The Commission argues that, while, pursuant to the Irish legislation, environmental impact assessments were carried out for various constituent parts of the development, those assessments were deficient.

86 In particular, the environmental impact assessment carried out in 1998 did not properly address the environmental risks attached to execution of the various constituent parts of the development. The impact assessment carried out for the third phase of the development was vitiated by the same inadequacies.

87 The Commission adds that the wind farm is the largest terrestrial wind-energy development ever planned in Ireland and one of the largest in Europe.

88 The Commission claims also that the construction of the wind farm required the destruction of large areas of coniferous forest amounting to 263 hectares, a felling licence having been granted on 20 May 2003. However, no environmental impact assessment was carried out for that operation, contrary to the very requirements of the Irish legislation.

89 The Commission adds that, after the landslide which occurred on 16 October 2003 and the consequent ecological disaster, when the mass of peat which was dislodged from an area under development for the wind farm polluted the Owendalulleegh river, causing the death of about 50 000 fish and lasting damage to the fish spawning beds, Ireland carried out no fresh environmental impact assessment of this construction before the resumption of work on the site by the developer in 2004.

90 Ireland contends that, when consents were applied for, in 1997 and in 1998, for the first two phases of construction of the wind farm, neither Annex I nor Annex II to Directive 85/337 referred to that category of project as being among those within its scope. Accordingly, it was not necessary that consent be preceded by an environmental impact assessment as governed by that directive. Ireland adds that the applications submitted in 1998 were, however, accompanied, in accordance with the Irish legislation, by an environmental impact statement.

91 Ireland considers, moreover, that it is artificial to attempt to suggest that ancillary aspects of the wind farm project, such as road construction, peat extraction, quarrying or electricity transmission, were of such importance that they made an environmental impact assessment within the meaning of Directive 85/337 necessary.

92 Ireland considers, in addition, that an application to extend the duration of a planning permission does not constitute 'development consent' within the meaning of Directive 85/337 as amended.

93 Ireland contends lastly that the landslide was caused by the construction methods used and that there was no question of difficulties which could have been anticipated by an

environmental impact assessment, even one in conformity with the Community requirements. It also states that, in order to ensure the safe completion of the wind farm, construction work practices were changed, after construction work had been suspended and an investigation carried out.

Findings of the Court

94 First, as regards the circumstances in which the consents relating to the first two phases of construction of the wind farm project were granted on 12 March 1998 following applications submitted on 23 January 1998, it is necessary to begin by deciding whether Directive 85/337 is applicable.

95 It is clear from Article 3 of Directive 97/11 that if an application for development consent was submitted to a competent authority before 14 March 1999, the provisions of Directive 85/337 continued to apply.

96 Moreover, while it is common ground that installations for the harnessing of wind power for energy production are not listed in either Annex I or Annex II to Directive 85/337, it is not disputed by Ireland that the first two phases of construction of the wind farm required a number of works, including the extraction of peat and of minerals other than metalliferous and energy-producing minerals, and also road construction, which are listed in Annex II to that directive, respectively in point 2(a) and (c) and in point 10(d).

97 Consequently, Directive 85/337 was applicable to the first two phases of construction of the wind farm in so far as they involved specifically the carrying out of work on projects referred to in Annex II to that directive.

98 It follows that Ireland was bound to subject the work on the projects to an impact assessment if they were likely to have significant effects on the environment, by virtue, inter alia, of their nature, size or location (see, to that effect, Case C-72/95 *Kraaijeveld and Others* [1996] ECR I-5403, paragraph 50, and Case C-2/07 *Abraham and Others* [2008] ECR I-0000, paragraph 37).

99 However, Ireland states that the competent authorities took the view that Annex II to Directive 85/337 was not applicable, since the ancillary works of peat extraction and road construction were minor aspects of the project of wind farm construction itself.

100 The competent authorities therefore considered that there was no need either to investigate whether the intended projects were likely to have significant effects on the environment or, accordingly, to conduct an environmental impact assessment meeting the requirements of Directive 85/337 prior to granting the consents.

101 However, the fact that the abovementioned projects falling under Annex II to that directive may have been of secondary importance vis-à-vis the wind farm construction project taken as a whole did not mean that, by virtue of that fact alone, those projects were not likely to have significant effects on the environment.

102 The intended projects of peat and mineral extraction and road construction were not insignificant in terms of scale by comparison with the overall area of the wind farm project which covered 200 hectares of peat bog and which was the largest project of its kind in

Ireland, and they were moreover essential both to the installation of the turbines and to the progress of the construction works as a whole. In addition, those works were carried out on the slopes of Cashlaundrumlahan Mountain, where there are layers of peat up to 5.5 metres in depth, largely covered by plantation forestry.

103 It follows from those factors, which are not disputed by Ireland, that the location and size of the projects of peat and mineral extraction and road construction, and the proximity of the site to a river, all constitute specific characteristics which demonstrate that those projects, which were inseparable from the installation of 46 wind turbines, had to be regarded as likely to have significant effects on the environment and, accordingly, had to be subject to an assessment of their effects on the environment.

104 The purpose of carrying out an environmental impact assessment in conformity with the requirements of Directive 85/337 is to identify, describe and assess in an appropriate manner the direct and indirect effects of a project on factors such as fauna and flora, soil and water and the interaction of those factors. In the present case, the environmental impact statements supplied by the developer had certain deficiencies and did not examine, in particular, the question of soil stability, although that is fundamental when excavation is intended.

105 Consequently, by failing to take all measures necessary to ensure that the grant of development consents relating to the first two phases of construction of the wind farm was preceded by an environmental impact assessment in conformity with Articles 5 to 10 of Directive 85/337 and by merely attaching to the applications for consent environmental impact statements which did not satisfy those requirements, Ireland has failed to fulfil its obligations under that directive.

106 Secondly, as regards the application for consent relating to the third phase of construction of the wind farm, submitted on 5 October 2000, and the application for consent to alter the first two originally authorised phases of construction, lodged on 20 June 2002, the complaint must be considered in the light of Directive 85/337 as amended, since the applications for consent concerned were submitted after 14 March 1999.

107 It is not disputed, first, that the competent authorities gave their approval to the change in the type of wind turbines originally planned without requiring an environmental impact assessment in conformity with Directive 85/337 as amended and, secondly, that the consent given for the third phase of construction was also not accompanied by such an assessment. In addition, such an assessment did not precede the deforestation authorised in May 2003, contrary to the requirements of the Irish legislation.

108 However, point 3(i) of Annex II to Directive 85/337 as amended refers to installations for the harnessing of wind power for energy production (wind farms) and point 13 of that annex refers to any change or extension of projects listed in Annex II, already authorised, executed or in the process of being executed, which may have significant adverse effects on the environment.

109 In addition, the relevant selection criteria in Annex III to Directive 85/337 as amended, which are applicable to the projects listed in Annex II and are referred to in Article 4(3) of that directive, include the risk of accidents having regard inter alia to the technologies used. Noteworthy among those criteria is the environmental sensitivity of the geographical area,

which must be considered having regard, inter alia, to 'the absorption capacity of the natural environment', paying particular attention to mountain and forest areas.

110 Since the installation of 25 new turbines, the construction of new service roadways and the change in the type of wind turbines initially authorised, which was intended to increase the production of electricity, are projects which are referred to in Annex II to Directive 85/337 as amended and which were likely, having regard to the specific features of the site noted in paragraph 102 of this judgment and the criteria referred to in the preceding paragraph of this judgment, to have significant effects on the environment, they should, before being authorised, have been subject to a requirement for development consent and to an assessment of their effects on the environment, in conformity with the conditions laid down in Articles 5 to 10 of Directive 85/337 as amended.

111 Consequently, by failing to take all measures necessary to ensure that the grant of the amending consents and the consent relating to the third phase of construction of the wind farm was preceded by such an assessment, and by merely attaching to the applications for consent environmental impact statements which did not satisfy those requirements, Ireland has failed to fulfil its obligations under Directive 85/337 as amended.

112 It follows from the foregoing that, by failing to take all measures necessary to ensure that the development consents given for, and the execution of, wind farm developments and associated works at Derrybrien, County Galway, were preceded by an assessment with regard to their environmental effects, in accordance with Articles 5 to 10 of Directive 85/337 either before or after amendment by Directive 97/11, Ireland has failed to fulfil its obligations under Articles 2, 4 and 5 to 10 of that directive.

Costs

113 Under Article 69(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. Since the Commission has applied for costs to be awarded against Ireland and the latter has been unsuccessful, Ireland must be ordered to pay the costs.

On those grounds, the Court (Second Chamber) hereby:

1. **Declares that, by failing to adopt all measures necessary to ensure that:**

– **projects which are within the scope of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment either before or after amendment by Council Directive 97/11/EC of 3 March 1997 are, before they are executed in whole or in part, first, considered with regard to the need for an environmental impact assessment and, secondly, where those projects are likely to have significant effects on the environment by virtue of their nature, size or location, that they are made subject to an assessment with regard to their effects in accordance with Articles 5 to 10 of Directive 85/337, and**

– **the development consents given for, and the execution of, wind farm developments and associated works at Derrybrien, County Galway, were preceded by an assessment with regard to their environmental effects, in accordance with Articles 5 to 10 of Directive 85/337 either before or after amendment by Directive 97/11,**

Ireland has failed to fulfil its obligations under Articles 2, 4 and 5 to 10 of that directive;

2. **Orders Ireland to pay the costs.**

[Signatures]

JUDGMENT OF THE COURT (First Chamber)

4 May 2006 *

In Case C-508/03,

ACTION under Article 226 EC for failure to fulfil obligations, brought on 1 December 2003,

Commission of the European Communities, represented by F. Simonetti and X. Lewis, acting as Agents,

applicant,

v

United Kingdom of Great Britain and Northern Ireland, represented by K. Manji, acting as Agent, D. Elvin QC and J. Maurici, Barrister,

defendant,

* Language of the case: English.

THE COURT (First Chamber),

composed of P. Jann (Rapporteur), President of the Chamber, K. Schiemann, N. Colneric, E. Juhász and E. Levits, Judges,

Advocate General: P. Léger,
Registrar: L. Hewlett, Principal Administrator,

having regard to the written procedure and further to the hearing on 22 June 2005,

having decided, after hearing the Advocate General, to proceed to judgment without an Opinion,

gives the following

Judgment

1 By its application, the Commission of the European Communities seeks a declaration from the Court that:

— by failing to apply correctly Articles 2(1) and 4(2) of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and

private projects on the environment (OJ 1985 L 175, p. 40) in relation to the proposed urban development projects at White City and at Crystal Palace as projects falling within point 10(b) of Annex II to the directive, the United Kingdom of Great Britain and Northern Ireland has failed to fulfil its obligations under that directive;

— by failing to ensure the correct application of Articles 2(1), 4(2), 5(2) and 8 of Directive 85/337, as amended by Council Directive 97/11/EC of 3 March 1997 (OJ 1997 L 73, p. 5) ('Directive 85/337, as amended'), when development consent is granted in a multi-stage procedure, the United Kingdom of Great Britain and Northern Ireland has failed to fulfil its obligations under that directive.

Legal context

Community legislation

2 According to the fifth recital in the preamble thereto, Directive 85/337 is intended to establish general principles for the assessment of environmental effects with a view to supplementing and coordinating development consent procedures governing public and private projects which are likely to have an effect on the environment.

3 For this purpose, Article 1(2) of Directive 85/337 defines 'development consent' as 'the decision of the competent authority or authorities which entitles the developer to proceed with the project'.

4 Article 2(1) of the directive states:

'Member States shall adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment by virtue inter alia of their nature, size or location are made subject to an assessment with regard to their effects.

These projects are defined in Article 4.'

5 Article 4 of the directive provides:

'1. Subject to Article 2(3), projects of the classes listed in Annex I shall be made subject to an assessment in accordance with Articles 5 to 10.

2. Projects of the classes listed in Annex II shall be made subject to an assessment, in accordance with Articles 5 to 10, where Member States consider that their characteristics so require.

To this end Member States may inter alia specify certain types of projects as being subject to an assessment or may establish the criteria and/or thresholds necessary to determine which of the projects of the classes listed in Annex II are to be subject to an assessment in accordance with Articles 5 to 10.'

6 Article 5(2) of the directive provides that 'the information to be provided by the developer in accordance with paragraph 1 shall include at least:

— a description of the project comprising information on the site, design and size of the project,

— a description of the measures envisaged in order to avoid, reduce and, if possible, remedy significant adverse effects,

— the data required to identify and assess the main effects which the project is likely to have on the environment,

— a non-technical summary of the information mentioned in indents 1 to 3'.

7 Under Article 8 of the directive, 'information gathered pursuant to Articles 5, 6 and 7 must be taken into consideration in the development consent procedure'.

8 Point 10(b) of Annex II to the directive refers to 'urban development projects'.

9 Directive 85/337, in particular the rules relating to projects falling within Annex II, was substantially amended by Directive 97/11, which had to be transposed in the United Kingdom by 14 March 1999 at the latest. Since the applications seeking consent for the two projects at issue in the first complaint were submitted to the competent authorities before that date, those amendments are not relevant to the projects, as is clear from Article 3(2) of Directive 97/11.

10 The second complaint, however, must be considered in the light of Directive 85/337, as amended.

11 In that regard, while Article 1(2) of Directive 85/337, as amended, remains unchanged, Article 2(1) of the directive now provides that 'Member States shall adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment by virtue, inter alia, of their nature, size or location are made subject to a requirement for development consent and an assessment with regard to their effects. These projects are defined in Article 4'.

12 Directive 97/11 also made a minor amendment to the wording of Article 5(2) of Directive 85/337 by inserting an indent requiring the developer also to provide:

'— an outline of the main alternatives studied by the developer and an indication of the main reasons for his choice, taking into account the environmental effects'.

13 The numbering of that provision also changed and it became Article 5(3) of Directive 85/337, as amended.

14 Article 8 of the directive provides, in its amended version, that 'the results of consultations and the information gathered pursuant to Articles 5, 6 and 7 must be taken into consideration in the development consent procedure'.

National legislation

15 In England, the principal legal instrument relating to land planning is the Town and Country Planning Act 1990 ('the Town and Country Planning Act'), which lays down general rules concerning both the grant of planning permission and the modification or revocation of such permission. This Act is amplified by the Town and Country Planning (General Development Procedure) Order 1995 ('the General Development Procedure Order') and the Town and Country Planning (Assessment of Environmental Effects) Regulations 1988 ('the Assessment of Environmental Effects Regulations').

16 The Assessment of Environmental Effects Regulations were replaced by the Town and Country Planning (Environmental Impact Assessment) (England and Wales) Regulations 1999 ('the 1999 Regulations'). Since these new regulations apply only to applications lodged on or after 14 March 1999, they are not relevant to the two

projects at issue in the first complaint. On the other hand, they determine the relevant national law for the purposes of the second complaint.

— The Town and Country Planning Act and the General Development Procedure Order

17 Under section 57(1) of the Town and Country Planning Act, planning permission is required for any 'development' within the meaning of section 55, a term which includes 'the carrying out of building ... or other operations in, on, over or under land ...'.

18 Planning permission may be granted in several forms, one of which is outline permission with a requirement of subsequent approval of the reserved matters.

19 Section 92(1) of the Town and Country Planning Act provides that 'outline planning permission' is permission 'granted, in accordance with the provisions of a development order, with the reservation for subsequent approval by the local planning authority or the Secretary of State of matters not particularised in the application ("reserved matters")'.

20 Article 1(2) of the General Development Procedure Order defines such 'reserved matters' as 'any of the following matters in respect of which details have not been given in the application, namely (a) siting, (b) design, (c) external appearance, (d) means of access, (e) the landscaping of the site'.

21 Section 92(2) of the Town and Country Planning Act implicitly provides that consent is deemed to be finally given for a reserved matter by the decision granting subsequent approval.

22 It is apparent from section 73 of the Town and Country Planning Act that an application for an amendment to an existing permission constitutes an application for a new planning permission.

— The Assessment of Environmental Effects Regulations and the 1999 Regulations

23 By virtue of the Assessment of Environmental Effects Regulations, certain projects must be subject to an environmental impact assessment before consent is granted.

24 Schedule 2 to the Assessment of Environmental Effects Regulations sets out the classes of project which are listed in Annex II to Directive 85/337, including 'urban development project[s]'.

25 Under regulation 2(1) of the Assessment of Environmental Effects Regulations, 'Schedule 2 application' means 'an application for planning permission ... for the carrying out of development of any description mentioned in Schedule 2, which is not exempt development and which would be likely to have significant effects on the environment by virtue of factors such as its nature, size or location', this being a matter to be assessed by the competent authority on a case-by-case basis.

26 As provided in regulation 4(1) and (2) of the Assessment of Environmental Effects Regulations, the competent authority cannot grant planning permission in respect of, inter alia, a Schedule 2 application unless it has first taken the environmental information into consideration and states in its decision that it has done so.

27 When faced with an application for planning permission in respect of a project envisaged in Schedule 2 to the regulations, the competent authority must therefore, on a case-by-case basis, determine prior to any grant of planning permission whether the characteristics of the project require an assessment of its environmental impact, that is to say whether the project is likely to have significant effects on the environment, and refuse permission if it does not have sufficient information to come to a decision on this point.

28 Under national law, outline planning permission constitutes 'planning permission' for the purposes of regulation 4 of the Assessment of Environmental Effects Regulations, whereas the decision approving reserved matters does not. For this reason, an environmental impact assessment can, under national law, be carried out in respect of a project only at the initial outline planning permission stage, and not at the later stage of approval of the reserved matters.

29 While the 1999 Regulations made substantive amendments to the rules applying to environmental impact assessment, they in no way altered the fact, at issue in the second complaint, that an assessment cannot be carried out at the reserved matters stage.

National implementing measures

30 Circular 15/88, issued by the Department of the Environment, provides non-statutory guidance to help the competent authorities to identify projects as referred to in Schedule 2 to the Assessment of Environmental Effects Regulations which must be the subject of an environmental impact assessment.

31 After stating, in paragraph 18, that the basic question to be asked is whether a project is likely to give rise to significant environmental effects, Circular 15/88 then explains, in paragraph 20, that in general terms an assessment is needed (i) for projects which are of more than local importance, (ii) for projects proposed in sensitive locations and (iii) for projects with unusually complex and potentially adverse effects.

32 Paragraphs 30 and 31 of Circular 15/88 state that, for certain categories of project, criteria and thresholds are listed in Appendix A to the circular that are intended to give a broad indication of the types of cases in which, in the Secretary of State's view, an environmental assessment may be required under the Assessment of Environmental Effects Regulations or, conversely, is not likely to be required. The circular adds, however, that those criteria and thresholds are purely indicative and the fundamental test to be applied in each case is whether the project is likely to have significant environmental effects.

33 With regard, more particularly, to urban development projects, the circular states, in paragraph 15 of Appendix A, that redevelopment of previously developed land is unlikely to require an assessment, unless the proposed development is one of certain specific types or is on a very much greater scale than the previous development.

34 The circular states, in paragraph 16 of Appendix A, with regard to projects on sites which have not previously been intensively developed that 'the need for [an assessment] should be considered in the light of the sensitivity of the particular location'. Thus, 'such schemes ... may require [an assessment] where:

(i) the site area of the scheme is more than five hectares in an urbanised area; or

(ii) there are significant numbers of dwellings in close proximity to the site of the proposed development, e.g. more than 700 dwellings within 200 metres of the site boundaries; or

(iii) the development would provide a total of more than 10 000 square metres (gross) of shops, offices or other commercial uses'.

35 In addition, paragraph 42 of the circular states that the preparation of an environmental statement is bound to require the developer to work out his proposals in some detail. Otherwise any thorough appraisal of likely effects will be impossible. It will be for the planning authority to judge how much information is required in the particular case. The information given in the environmental statement will have an important bearing on whether matters may be reserved in an outline planning permission. Where the information states or implies a particular treatment of any matter, it will not be appropriate to reserve that matter in the planning permission.

36 Paragraph 48 of Circular 2/99 issued by the Department of the Environment, Transport and the Regions, which replaced Circular 15/88 in March 1999 (in order to take account of the 1999 Regulations), notes that, in the case of outline planning permission with a requirement of subsequent approval of the reserved matters, an environmental impact assessment can be carried out only at the initial stage of granting such permission and not at the later stage of approval of the reserved matters.

Facts and pre-litigation procedure

White City

37 In December 1993 Chesfield Plc ('Chesfield') applied to the London Borough of Hammersmith & Fulham ('Hammersmith & Fulham LBC'), the competent planning authority, for outline planning permission to develop retail and leisure facilities at White City, London (the 'White City development project'), a project falling within Annex II to Directive 85/337.

38 After considering the effects of the project, as set out in a number of reports, and following public consultation, Hammersmith & Fulham LBC took the view that an assessment of the effects that the project might have on the environment was not required.

39 In March 1996 Hammersmith & Fulham LBC granted outline planning permission. Certain matters were reserved for subsequent approval by that authority.

40 In October 1997 and September 1998 Chesfield made applications for approval of the reserved matters.

41 On 12 October 1999 Hammersmith & Fulham LBC gave such approval.

42 Works commenced after the approval.

43 Following receipt of a complaint, the Commission, by letter of 19 April 2001, gave the United Kingdom the opportunity to submit its observations and, on 20 August 2002, sent it a reasoned opinion, alleging that it had infringed Articles 2(1) and 4(2) of Directive 85/337 in relation to the White City development project, a project falling within point 10(b) of Annex II to that directive. The Commission set the United Kingdom a time-limit of two months for it to take the measures necessary to comply with the reasoned opinion. Being dissatisfied with the response given by the United Kingdom Government in its letter of 29 October 2002, the Commission brought the present action.

Crystal Palace

44 Crystal Palace Park, in London, is Metropolitan Open Land listed as a Grade II* historic park on the statutory register kept by English Heritage. Part of the site at issue relating to the access and adjoining land fall within the Crystal Palace Park Conservation Area.

45 On 4 April 1997 London & Regional Properties Ltd ('L&R') applied to the London Borough of Bromley ('Bromley LBC'), the competent planning authority, for outline planning permission to develop a leisure complex in Crystal Palace Park ('the Crystal Palace development project'), a project falling within Annex II to Directive 85/337.

46 After consideration which took into account a number of reports and additional information, Bromley LBC concluded that an environmental impact assessment was not required for the project.

47 On 24 March 1998 Bromley LBC granted outline planning permission, reserving certain matters for subsequent approval before any development was commenced.

48 On 25 January 1999 L&R applied to Bromley LBC for final determination of certain reserved matters. The details of the Crystal Palace development project then showed: (i) on the ground floor, 18 cinemas, a leisure area and an exhibition area; (ii) at the gallery level, restaurants and cafes, two leisure areas and public toilets; (iii) at roof level, a roof-top car park with a maximum of 950 spaces, four viewing areas and areas enclosing plant and equipment; (iv) the addition of a mezzanine floor of 800 square metres; and (v) changes to the construction of the external walls.

49 Those matters fell wholly within the parameters of the outline permission already granted.

50 However, at the meeting where a decision was to be taken on approval of the reserved matters, some Bromley LBC councillors expressed the wish that an environmental impact assessment should be carried out. After legal advice had been sought, they were informed that as a matter of domestic law an assessment could be carried out only at the initial outline planning permission stage.

51 Bromley LBC issued the notice of approval on 10 May 1999.

52 However, the planning permission has expired in the meantime without the project being carried out.

53 Following receipt of a complaint, the Commission, by letter of 6 November 2000, gave the United Kingdom the opportunity to submit its observations and, on 26 July 2001, sent it a reasoned opinion, alleging that it had infringed Articles 2(1) and 4(2) of Directive 85/337 in relation to the Crystal Palace development project, a project falling within point 10(b) of Annex II to that directive. The Commission set the United Kingdom a time-limit of two months for it to take the measures necessary to comply with the reasoned opinion. Being dissatisfied with the response given by the United Kingdom Government in its letter of 3 December 2001, the Commission brought the present action.

Incorrect transposition of Directive 85/337, as amended, regarding outline planning permission with a requirement of subsequent approval of the reserved matters

54 On 26 July 2001, having given the United Kingdom the opportunity to submit its observations, the Commission sent it a reasoned opinion, in which it stated that some aspects of the national legislation concerning assessment of the environmental

impact of projects, in particular as regards outline planning permission with a requirement of subsequent approval of the reserved matters, appeared to it to be incompatible with Directive 85/337, as amended. The Commission set the United Kingdom a time-limit of two months for it to take the measures necessary to comply with the reasoned opinion. Being dissatisfied with the response given by the United Kingdom Government in its letter of 3 December 2001, the Commission brought the present action.

The action

55 The Commission puts forward two complaints in support of its action.

56 The first complaint, as advanced by the Commission during the pre-litigation procedure and in its reply, is in essence divided into three limbs:

— infringement of Articles 2(1) and 4(2) of Directive 85/337 in that Hammersmith & Fulham LBC failed to investigate whether the White City development project required an environmental impact assessment;

— infringement of Articles 2(1) and 4(2) of Directive 85/337 in that Hammersmith & Fulham LBC failed to adopt a formal decision allowing it to be checked that the decision was based on adequate prior investigation;

— infringement of Articles 2(1) and 4(2) of Directive 85/337 in that neither Hammersmith & Fulham LBC nor Bromley LBC carried out an environmental impact assessment of the White City and Crystal Palace development projects respectively.

57 However, in its application the Commission mentions only the third limb of this complaint.

58 The second complaint concerns the incorrect transposition into national law of Articles 2(1), 4(2), 5(3) and 8 of Directive 85/337, as amended, in the national rules which provide that, in the case of outline planning permission with a requirement of subsequent approval of the reserved matters, an assessment may be carried out only at the initial stage of granting such permission, and not at the later reserved matters stage ('the rules at issue in the present case').

The first complaint: breach of the obligations to investigate whether an assessment was required, to adopt a formal decision in that regard and to carry out such an assessment (Articles 2(1) and 4(2) of Directive 85/337)

Admissibility of the first complaint

59 The United Kingdom Government puts forward four pleas of inadmissibility, alleging that a new complaint is involved, that the principle of legal certainty is infringed, that the national courts have jurisdiction and that the action is devoid of purpose.

— A new complaint

60 The United Kingdom Government contends that the first and second limbs of the first complaint, as set out in the Commission's reply, constitute a new complaint. While mention was admittedly made of those limbs in the letter of formal notice and the reasoned opinion and they were subsequently restated in the reply submitted to the Court, they were not, however, set out in the application initiating the proceedings. It is the application which defines the subject-matter of a case.

61 As to those submissions, it is not permissible for a party to alter the very subject-matter of the case during the proceedings, and the merits of the action must be examined solely in the light of the claims contained in the application initiating the proceedings (see, to that effect, Case 232/78 *Commission* v *France* [1979] ECR 2729, paragraph 3, and Case C-256/98 *Commission* v *France* [2000] ECR I-2487, paragraph 31).

62 Furthermore, by virtue of Article 21 of the Statute of the Court of Justice and Article 38(1)(c) of its Rules of Procedure, the Commission must, in any application made under Article 226 EC, indicate the specific complaints on which the Court is asked to rule and, at the very least in summary form, the legal and factual particulars on which those complaints are based (see Case C-52/90 *Commission* v *Denmark* [1992] ECR I-2187, paragraph 17).

63 In the present case, no mention is made of the first and second limbs of the first complaint in the claims at the end of the application. Nor do they appear in the part of the application headed 'in law'.

64 Accordingly, the first two limbs of the first complaint, which were not included in the application initiating proceedings, are inadmissible although they were set out in the Commission's reply and mention is made of them in the letter of formal notice and the reasoned opinion.

65 It remains to consider, therefore, the admissibility of the third limb of the first complaint in the light of the other pleas of inadmissibility raised by the United Kingdom Government.

— Infringement of the principle of legal certainty

66 The United Kingdom Government contends that, in view of the considerable length of time that has passed since the planning permissions at issue were granted, the action for failure to fulfil obligations offends against the principle of legal certainty and undermines the legitimate expectations which developers derive from acquired rights.

67 It should be stated with regard to those submissions, first, that the infringement procedure is based on the objective finding that a Member State has failed to fulfil its obligations under the Treaty or secondary legislation (see, to that effect, Case C-71/97 *Commission* v *Spain* [1998] ECR I-5991, paragraph 14, and Case C-83/99 *Commission* v *Spain* [2001] ECR I-445, paragraph 23).

68 Secondly, it follows from case-law that, while the principles of legal certainty and of the protection of legitimate expectations require the withdrawal of an unlawful measure to occur within a reasonable time and regard must be had to how far the person concerned might have been led to rely on the lawfulness of the measure, the

fact remains that such withdrawal is, in principle, permitted (see, in particular, Joined Cases 7/56 and 3/57 to 7/57 *Algera and Others* v *Common Assembly of the ECSC* [1957] ECR 39, at 55 and 56; Case 14/81 *Alpha Steel* v *Commission* [1982] ECR 749, paragraph 10; and Case 15/85 *Consorzio Cooperative d'Abruzzo* v *Commission* [1987] ECR 1005, paragraph 12).

69 A Member State cannot therefore rely on legal certainty and legitimate expectations derived by developers from acquired rights in order to prevent the Commission from bringing an action seeking an objective finding that the Member State has failed to fulfil its obligations under Directive 85/337 with regard to assessment of the effects of certain projects on the environment.

— The jurisdiction of the national courts

70 The United Kingdom Government contends that it is for national courts and not the Court of Justice to determine whether a competent authority has correctly assessed whether a project will have significant effects on the environment.

71 As to that submission, the fact that proceedings have been brought before a national court to challenge the decision of a competent authority which is the subject of an action for failure to fulfil obligations and the decision of that court cannot affect the admissibility of the action for failure to fulfil obligations brought by the Commission. The existence of the remedies available through the national courts cannot prejudice the bringing of an action under Article 226 EC, since the two procedures have different objectives and effects (see Case 31/69 *Commission* v *Italy* [1970] ECR 25, paragraph 9; Case 85/85 *Commission* v *Belgium* [1986] ECR 1149, paragraph 24; and Case C-87/02 *Commission* v *Italy* [2004] ECR I-5975, paragraph 39).

— The action is devoid of purpose

72 The United Kingdom Government maintains that the permission granted in respect of the Crystal Palace development project expired in March 2003 without being implemented and that any infringement, even if established, is therefore wholly theoretical.

73 As to that submission, an action in respect of an infringement which no longer existed on the date upon which the period laid down in the reasoned opinion expired is, according to the case-law, inadmissible because it is devoid of purpose (see Case C-362/90 *Commission* v *Italy* [1992] ECR I-2353, paragraph 13, and Case C-209/02 *Commission* v *Austria* [2004] ECR I-1211, paragraphs 17 and 18).

74 It is clear from settled case-law that the purpose of an action brought under Article 226 EC is to obtain a declaration that the State concerned has failed to fulfil its obligations under the Treaty and that it has failed to put an end to that infringement within the time set by the Commission in its reasoned opinion (Case C-347/88 *Commission* v *Greece* [1990] ECR I-4747, paragraph 40). The Court has also consistently held that the question whether a Member State has failed to fulfil its obligations must be assessed by reference to the situation prevailing in the Member State concerned at the end of the period laid down in the reasoned opinion (see Case C-200/88 *Commission* v *Greece* [1990] ECR I-4299, paragraph 13, and Case C-362/90 *Commission* v *Italy*, paragraph 10).

75 In the present case, the fact that on expiry of the period laid down in the reasoned opinion, namely on 26 September 2001, the planning permission at issue was still in force is sufficient to preclude the action for failure to fulfil obligations from being regarded as devoid of purpose.

76 It follows from the above considerations that the pleas of inadmissibility in respect of the third limb of the first complaint must be dismissed.

The merits of the third limb of the first complaint

77 Before considering the merits, it is appropriate first to note that in proceedings under Article 226 EC for failure to fulfil obligations it is incumbent upon the Commission to prove the allegation that the obligation has not been fulfilled. It is the Commission's responsibility to place before the Court the information needed to enable the Court to establish that the obligation has not been fulfilled, and in so doing the Commission may not rely on any presumptions (see, in particular, Case C-494/01 *Commission* v *Ireland* [2005] ECR I-3331, paragraph 41 and the case-law cited).

78 Thus, with regard more specifically to Directive 85/337, the Court held in Case C-117/02 *Commission* v *Portugal* [2004] ECR I-5517, at paragraph 85, that the Commission must furnish at least some evidence of the effects that the project in question is likely to have on the environment.

79 However, the Member States are required, under Article 10 EC, to facilitate the achievement of the Commission's tasks, which consist in particular, pursuant to Article 211 EC, in ensuring that the provisions of the Treaty and the measures taken by the institutions pursuant thereto are applied (see, in particular, *Commission* v *Ireland*, paragraph 42 and the case-law cited).

80 It follows in particular that, where the Commission has adduced sufficient evidence of certain matters in the territory of the defendant Member State, it is incumbent on

the latter to challenge in substance and in detail the information produced and the consequences flowing therefrom (see *Commission* v *Ireland*, paragraph 44 and the case-law cited).

81 It is in the light of those principles that the merits should be considered.

82 The Commission submits, in the third limb of its first complaint, that Articles 2(1) and 4(2) of Directive 85/337 have been infringed, on the ground that neither Hammersmith & Fulham LBC nor Bromley LBC carried out an environmental impact assessment of the White City and Crystal Palace development projects respectively, although those projects are likely to have significant effects.

83 The Commission notes that the White City development project involves about 58 000 square metres of retail and leisure development, including a major new road junction, 4 500 car parking spaces and a link to the Underground network. In its opinion, for a project of that size there is a presumption that an assessment is necessary, unless such a presumption is mitigated by other factors.

84 The Commission notes that the Crystal Palace development project includes leisure and commercial uses (18 cinemas, galleries, restaurants) covering 52 000 square metres, a roof-top car park with 950 spaces and a car park at ground level. The Commission is of the view that the scale and size of the project are such that it is likely to have significant effects on the environment, and that the competent authority therefore exceeded the limits of its discretion.

85 The United Kingdom Government considers that the competent authorities, in the light of the reports and studies in their possession and following the consultations that they carried out, were entitled to conclude that neither of the two projects was likely to have significant effects on the environment, and that they did not therefore need to be the subject of an environmental impact assessment.

86 As to those submissions, it should be noted that, as provided in Article 2(1) of Directive 85/337, 'projects' within the meaning of Article 4 of that directive which are likely to have significant effects must be made subject to an assessment with regard to their effects on the environment before consent for them is given.

87 For that purpose, Article 4(2) of Directive 85/337, read in conjunction with Annex II thereto, lists the projects to be made subject to an impact assessment where Member States consider that their characteristics so require.

88 Although in those circumstances Article 4(2) of Directive 85/337 gives the competent authority a degree of freedom in appraising whether or not a particular project must be made subject to an assessment, it is, however, clear from settled case-law that the limits of that discretion are to be found in the obligation, set out in Article 2(1) of the directive, that all projects which are likely to have significant effects on the environment are to be subject to an assessment (see, to that effect, Case C-435/97 *WWF and Others* [1999] ECR I-5613, paragraphs 44 and 45; Case C-87/02 *Commission* v *Italy*, paragraphs 43 and 44; and Case C-83/03 *Commission* v *Italy* [2005] ECR I-4747, paragraph 19).

89 Thus, it is clear from case-law that Directive 85/337 requires that all projects falling within Annex II that are likely to have significant effects on the environment be

made subject to an assessment (see, to that effect, *WWF and Others*, paragraph 45; *Commission* v *Portugal*, paragraph 82; and Case C-87/02 *Commission* v *Italy*, paragraph 44).

90 However, as has already been noted in paragraphs 77 to 80 above, proof that Article 2(1) of Directive 85/337 has been infringed requires the Commission to demonstrate that a Member State has failed to adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment by virtue inter alia of their nature, size or location are made subject to an assessment with regard to their effects. That proof may effectively be furnished by demonstrating that a Member State did not take the measures necessary to ascertain whether a project which does not reach the thresholds envisaged in Article 4(2) of Directive 85/337 is nevertheless likely to have significant effects on the environment by virtue inter alia of its nature, size or location. The Commission might also establish that a project likely to have significant effects on the environment was not the subject of an impact assessment although it should have been (*Commission* v *Portugal*, paragraph 82).

91 In that last respect, it is also clear from paragraphs 85 and 87 of *Commission* v *Portugal* that, in order to demonstrate that the national authorities exceeded the limits of their discretion by failing to require that an impact assessment be carried out before giving consent for a specific project, the Commission cannot limit itself to general assertions by, for example, merely pointing out that the information provided shows that the project in question is located in a highly sensitive area, without presenting specific evidence to demonstrate that the national authorities concerned made a manifest error of assessment when they gave consent to a project. The Commission must furnish at least some evidence of the effects that the project is likely to have on the environment.

92 In the present case, it is clear that the Commission did not satisfy the burden of proof placed upon it. It cannot merely rely on presumptions that large-scale projects are automatically likely to have significant effects on the environment without establishing, on the basis of at least some specific evidence, that the competent authorities made a manifest error of assessment.

93 Despite the analytical material and documents supplied by the United Kingdom Government, the Commission did not seek to back up its own assertions and refute those of the defendant Member State through detailed examination of that material or by obtaining, producing, examining or providing an analytical presentation of tangible and specific evidence which might have enabled the Court to assess whether the competent authorities did in fact exceed the limits of their discretion.

94 In those circumstances, the third limb of the first complaint must be dismissed as unfounded.

The second complaint: incorrect transposition into domestic law of Articles 2(1), 4(2), 5(3) and 8 of Directive 85/337, as amended

95 By its second complaint, the Commission in essence contends that the national rules at issue, under which an assessment may be carried out only at the initial outline planning permission stage, and not at the later reserved matters stage, incorrectly transpose into domestic law Articles 2(1), 4(2), 5(3) and 8 of Directive 85/337, as amended.

96 The Commission argues that, where national law provides for a consent procedure comprising more than one stage, Directive 85/337, as amended, requires that an assessment may in principle be carried out at each stage in that procedure if it appears that the project in question is likely to have significant effects on the environment.

97 The Commission contends that, in so far as the national rules at issue in the present case preclude an assessment at the later reserved matters stage, they do not satisfy that requirement.

98 In its view, those rules allow some projects to escape assessment although they are likely to have significant effects on the environment.

99 The United Kingdom Government contends, on the other hand, that Article 2(1) of that directive makes it clear that a project must be subject to an assessment 'before consent is given'. Since that 'consent' is given when outline planning permission is granted (and not when the reserved matters are subsequently approved), the rules at issue correctly transpose Articles 2(1), 4(2), 5(3) and 8 of Directive 85/337, as amended.

100 As to those submissions, it should be noted that Article 1(2) of that directive defines 'development consent' for the purposes of the directive as the decision of the competent authority or authorities which entitles the developer to proceed with the project.

101 In the present case, it is common ground that, under national law, a developer cannot commence works in implementation of his project until he has obtained reserved matters approval. Until such approval has been granted, the development in question is still not (entirely) authorised.

102 Therefore, the two decisions provided for by the rules at issue in the present case, namely outline planning permission and the decision approving reserved matters, must be considered to constitute, as a whole, a (multi-stage) 'development consent' within the meaning of Article 1(2) of Directive 85/337, as amended.

103 In those circumstances, it is clear from Article 2(1) of Directive 85/337, as amended, that projects likely to have significant effects on the environment, as referred to in Article 4 of the directive read in conjunction with Annexes I and II thereto, must be made subject to an assessment with regard to their effects before (multi-stage) development consent is given (see, to that effect, Case C-201/02 *Wells* [2004] ECR I-723, paragraph 42).

104 In that regard, the Court stated in *Wells*, at paragraph 52, that where national law provides for a consent procedure comprising more than one stage, one involving a principal decision and the other involving an implementing decision which cannot extend beyond the parameters set by the principal decision, the effects which a project may have on the environment must be identified and assessed at the time of the procedure relating to the principal decision. It is only if those effects are not identifiable until the time of the procedure relating to the implementing decision that the assessment should be carried out in the course of that procedure.

105 In the present case, the rules at issue provide that an environmental impact assessment in respect of a project may be carried out only at the initial outline planning permission stage, and not at the later reserved matters stage.

106 Those rules are therefore contrary to Articles 2(1) and 4(2) of Directive 85/337, as amended. The United Kingdom has thus failed to fulfil its obligation to transpose those provisions into domestic law.

107 However, so far as concerns Articles 5(3) and 8 of Directive 85/337, as amended, the Commission has not provided any explanation as to why it considers that those two provisions have not been complied with.

108 Accordingly, the second complaint is partly well founded.

109 In the light of all the above considerations, it must be held that the United Kingdom of Great Britain and Northern Ireland has failed to fulfil its obligations under Community law by incorrectly transposing into domestic law Articles 2(1) and 4(2) of Directive 85/337, as amended, as a result of the national rules under which, in the case of outline planning permission with a requirement of subsequent approval of the reserved matters, an assessment may be carried out only at the initial stage of granting such permission, and not at the later reserved matters stage.

Costs

110 Under Article 69(3) of the Rules of Procedure, the Court may order that the costs be shared or that the parties bear their own costs, if each party succeeds on some and fails on other heads. Since the parties have respectively been unsuccessful on a number of heads, they must be ordered to bear their own costs.

On those grounds, the Court (First Chamber) hereby:

1. **Declares that the United Kingdom of Great Britain and Northern Ireland has failed to fulfil its obligations under Community law by incorrectly transposing into domestic law Articles 2(1) and 4(2) of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment, as amended by Council Directive 97/11/EC of 3 March 1997, as a result of the national rules under which, in the case of outline planning permission with a requirement of subsequent approval of the reserved matters, an assessment may be carried out only at the initial stage of granting such permission, and not at the later reserved matters stage;**

2. **Dismisses the action as to the remainder;**

3. **Orders the Commission of the European Communities and the United Kingdom to bear their own costs.**

JUDGMENT OF THE COURT (First Chamber)

4 May 2006 *

In Case C-290/03,

REFERENCE for a preliminary ruling under Article 234 EC from the House of Lords (United Kingdom), made by order of 30 June 2003, received at the Court on 3 July 2003, in the proceedings

The Queen, on the application of:

Diane Barker,

v

London Borough of Bromley,

intervener:

First Secretary of State,

* Language of the case: English.

THE COURT (First Chamber),

composed of P. Jann (Rapporteur), President of the Chamber, K. Schiemann, N. Colneric, E. Juhász and E. Levits, Judges,

Advocate General: P. Léger,
Registrar: L. Hewlett, Principal Administrator,

having regard to the written procedure and further to the hearing on 22 June 2005,

after considering the observations submitted on behalf of:

— Ms Barker, by R. McCracken QC and G. Jones and J. Pereira, Barristers, instructed by R.M. Buxton, Solicitor,

— the London Borough of Bromley, by T. Straker QC and J. Strachan, Barrister, instructed by Sharpe Pritchard, Solicitors,

— the United Kingdom Government, by K. Manji, acting as Agent, D. Elvin QC and J. Maurici, Barrister,

— the French Government, by G. de Bergues and D. Petrausch, acting as Agents,

— the Commission of the European Communities, by F. Simonetti and X. Lewis, acting as Agents,

having decided, after hearing the Advocate General, to proceed to judgment without an Opinion,

gives the following

Judgment

1 This reference for a preliminary ruling concerns the interpretation of Articles 1(2), 2(1) and 4(2) of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40).

2 The reference was made in the course of proceedings between Ms Barker and the London Borough of Bromley ('Bromley LBC'), the competent planning authority, concerning the grant of planning permission to develop a leisure complex in Crystal Palace Park, London, without an environmental impact assessment having been carried out.

Legal context

Community legislation

3 According to the fifth recital in the preamble thereto, Directive 85/337 is intended to establish general principles for the assessment of environmental effects with a view to supplementing and coordinating development consent procedures governing public and private projects which are likely to have an effect on the environment.

4 For this purpose, Article 1(2) of Directive 85/337 defines 'development consent' as 'the decision of the competent authority or authorities which entitles the developer to proceed with the project'.

5 Article 2(1) of the directive states:

'Member States shall adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment by virtue inter alia of their nature, size or location are made subject to an assessment with regard to their effects.

These projects are defined in Article 4.'

6 Article 4 of the directive provides:

'1. Subject to Article 2(3), projects of the classes listed in Annex I shall be made subject to an assessment in accordance with Articles 5 to 10.

2. Projects of the classes listed in Annex II shall be made subject to an assessment, in accordance with Articles 5 to 10, where Member States consider that their characteristics so require.

To this end Member States may inter alia specify certain types of projects as being subject to an assessment or may establish the criteria and/or thresholds necessary to determine which of the projects of the classes listed in Annex II are to be subject to an assessment in accordance with Articles 5 to 10.'

7 Point 10(b) of Annex II to the directive refers to 'urban development projects'.

8 Directive 85/337, in particular the rules relating to projects falling within Annex II, was substantially amended by Council Directive 97/11/EC of 3 March 1997 (OJ 1997 L 73, p. 5), which had to be transposed in the United Kingdom by 14 March 1999 at the latest. Since the application seeking consent for the project at issue in the main proceedings was submitted to the competent authority before the latter date, those amendments are not relevant to the project, as is clear from Article 3(2) of Directive 97/11.

National legislation

9 In England, the principal legal instrument relating to land planning is the Town and Country Planning Act 1990 ('the Town and Country Planning Act'), which lays down general rules concerning both the grant of planning permission and the modification or revocation of such permission. This Act is amplified by the Town and Country Planning (General Development Procedure) Order 1995 ('the General Development Procedure Order') and the Town and Country Planning (Assessment of Environmental Effects) Regulations 1988 ('the Assessment of Environmental Effects Regulations').

10 The Assessment of Environmental Effects Regulations were replaced by the Town and Country Planning (Environmental Impact Assessment) (England and Wales) Regulations 1999. However, since these new regulations apply only to applications lodged on or after 14 March 1999, they are not relevant to the project at issue in the main proceedings.

— The Town and Country Planning Act and the General Development Procedure Order

11 Under section 57(1) of the Town and Country Planning Act, planning permission is required for any 'development' within the meaning of section 55, a term which includes 'the carrying out of building ... or other operations in, on, over or under land ...'.

12 Planning permission may be granted in several forms, one of which is outline permission with a requirement of subsequent approval of the reserved matters.

13 Section 92(1) of the Town and Country Planning Act provides that 'outline planning permission' is permission 'granted, in accordance with the provisions of a development order, with the reservation for subsequent approval by the local planning authority or the Secretary of State of matters not particularised in the application ("reserved matters")'.

14 Article 1(2) of the General Development Procedure Order defines such 'reserved matters' as 'any of the following matters in respect of which details have not been given in the application, namely (a) siting, (b) design, (c) external appearance, (d) means of access, (e) the landscaping of the site'.

15 Section 92(2) of the Town and Country Planning Act implicitly provides that consent is deemed to be finally given for a reserved matter by the decision granting subsequent approval.

16 It is apparent from section 73 of the Town and Country Planning Act that an application for an amendment to an existing permission constitutes an application for a new planning permission.

— The Assessment of Environmental Effects Regulations

17 By virtue of the Assessment of Environmental Effects Regulations, certain projects must be subject to an environmental impact assessment before consent is granted.

18 Schedule 2 to the regulations sets out the classes of project which are listed in Annex II to Directive 85/337, including 'urban development project[s]'.

19 Under regulation 2(1) of the Assessment of Environmental Effects Regulations, 'Schedule 2 application' means 'an application for planning permission ... for the carrying out of development of any description mentioned in Schedule 2, which is not exempt development and which would be likely to have significant effects on the environment by virtue of factors such as its nature, size or location', this being a matter to be assessed by the competent authority on a case-by-case basis.

20 As provided in regulation 4(1) and (2) of the Assessment of Environmental Effects Regulations, the competent authority cannot grant planning permission in respect of, inter alia, a Schedule 2 application unless it has first taken the environmental information into consideration and states in its decision that it has done so.

21 When faced with an application for planning permission in respect of a project envisaged in Schedule 2 to the regulations, the competent authority must therefore, on a case-by-case basis, determine prior to any grant of planning permission whether the characteristics of the project require an assessment of its environmental

impact, that is to say whether the project is likely to have significant effects on the environment, and refuse permission if it does not have sufficient information to come to a decision on this point.

22 Under national law, outline planning permission constitutes 'planning permission' for the purposes of regulation 4 of the Assessment of Environmental Effects Regulations, whereas the decision approving reserved matters does not. For this reason, an environmental impact assessment can, under national law, be carried out in respect of a project only at the initial outline planning permission stage, and not at the later stage of approval of the reserved matters.

Implementing measures

23 Circular 15/88, issued by the Department of the Environment, provides non-statutory guidance to help the competent authorities to identify projects as referred to in Schedule 2 to the Assessment of Environmental Effects Regulations which must be the subject of an environmental impact assessment.

24 After stating, in paragraph 18, that the basic question to be asked is whether a project is likely to give rise to significant environmental effects, Circular 15/88 then explains, in paragraph 20, that in general terms an assessment is needed (i) for projects which are of more than local importance, (ii) for projects proposed in sensitive locations and (iii) for projects with unusually complex and potentially adverse effects.

25 Paragraphs 30 and 31 of Circular 15/88 state that, for certain categories of project, criteria and thresholds are listed in Appendix A to the circular that are intended to give a broad indication of the types of cases in which, in the Secretary of State's view, an environmental assessment may be required under the Assessment of Environmental Effects Regulations or, conversely, is not likely to be required. The circular adds, however, that those criteria and thresholds are purely indicative and the fundamental test to be applied in each case is whether the project is likely to have significant environmental effects.

26 With regard, more particularly, to urban development projects, the circular states, in paragraph 15 of Appendix A, that redevelopment of previously developed land is unlikely to require an assessment, unless the proposed development is one of certain specific types or is on a very much greater scale than the previous development.

27 The circular states, in paragraph 16 of Appendix A, with regard to projects on sites which have not previously been intensively developed that 'the need for [an assessment] should be considered in the light of the sensitivity of the particular location'. Thus, 'such schemes ... may require [an assessment] where:

(i) the site area of the scheme is more than five hectares in an urbanised area; or

(ii) there are significant numbers of dwellings in close proximity to the site of the proposed development, e.g. more than 700 dwellings within 200 metres of the site boundaries; or

(iii) the development would provide a total of more than 10 000 square metres (gross) of shops, offices or other commercial uses'.

28 In addition, paragraph 42 of the circular states that the preparation of an environmental statement is bound to require the developer to work out his proposals in some detail. Otherwise any thorough appraisal of likely effects will be impossible. It will be for the planning authority to judge how much information is required in the particular case. The information given in the environmental statement will have an important bearing on whether matters may be reserved in an outline planning permission. Where the information states or implies a particular treatment of any matter, it will not be appropriate to reserve that matter in the planning permission.

The main proceedings and the questions referred for a preliminary ruling

29 Ms Barker lives in the vicinity of Crystal Palace Park.

30 On 4 April 1997 London & Regional Properties Ltd ('L&R') applied to Bromley LBC for outline planning permission to develop a leisure complex in Crystal Palace Park ('the Crystal Palace development project'), a project falling within Annex II to Directive 85/337.

31 After consideration which took into account a number of reports and additional information, Bromley LBC concluded that an environmental impact assessment was not required for the project.

32 On 24 March 1998 Bromley LBC granted outline planning permission, reserving certain matters for subsequent approval before any development was commenced.

33 On 25 January 1999 L&R applied to Bromley LBC for final determination of certain reserved matters. The details of the Crystal Palace development project then showed: (i) on the ground floor, 18 cinemas, a leisure area and an exhibition area; (ii) at the gallery level, restaurants and cafes, two leisure areas and public toilets; (iii) at roof level, a roof-top car park with a maximum of 950 spaces, four viewing areas and areas enclosing plant and equipment; (iv) the addition of a mezzanine floor of 800 square metres; and (v) changes to the construction of the external walls.

34 At the meeting where a decision was to be taken on approval of the reserved matters, some Bromley LBC councillors expressed the wish that an environmental impact assessment should be carried out. However, after legal advice had been sought, they were informed that as a matter of domestic law an assessment could be carried out only at the initial outline planning permission stage.

35 Bromley LBC issued the notice of approval on 10 May 1999.

36 Ms Barker's action challenging that approval and the legal advice on which it was based was dismissed at first instance and by the Court of Appeal.

37 Since the House of Lords, before which Ms Barker brought an appeal, had doubts as to the compatibility with Community law of the national rules according to which an

environmental impact assessment can be carried out only at the outline planning permission stage and not when the reserved matters are subsequently approved ('the rules at issue in the main proceedings'), it decided to stay proceedings and refer the following questions to the Court for a preliminary ruling:

'(1) Is identification of "the decision of the competent authority or authorities which entitles the developer to proceed with the project" (Article 1(2) of Directive 85/337/EEC ("the Directive")) exclusively a matter for the national court applying national law?

(2) Does the Directive require an EIA [environmental impact assessment] to be carried out if, following the grant of outline planning permission subject to conditions that reserved matters be approved, without an EIA being carried out, it appears when approval of reserved matters is sought that the project may have significant effects on the environment by virtue inter alia of its nature, size or location (Article 2(1) of the Directive)?

(3) In circumstances where:

(a) national planning law provides for the grant of outline planning permission at an initial stage of the planning process and requires consideration by the competent authority at that stage as to whether an EIA is required for purposes of the Directive; and

(b) the competent authority then determines that it is unnecessary to carry out an EIA and grants outline planning permission subject to conditions reserving specified matters for later approval; and

(c) that decision can then be challenged in the national courts;

may national law, consistently with the Directive, preclude a competent authority from requiring that an EIA be carried out at a later stage of the planning process?'

Consideration of the questions

Question 1

38 By its first question, the national court essentially asks whether classification of a decision as a 'development consent' within the meaning of Article 1(2) of Directive 85/337 depends exclusively on national law.

39 Article 1(2) of Directive 85/337 defines 'development consent' for the purposes of the directive as the decision of the competent authority or authorities which entitles the developer to proceed with the project.

40 Thus, while this term is modelled on certain elements of national law, it remains a Community concept which, contrary to the submissions of Bromley LBC and the United Kingdom Government, falls exclusively within Community law. According to settled case-law, the terms used in a provision of Community law which makes no express reference to the law of the Member States for the purpose of determining its meaning and scope are normally to be given throughout the Community an autonomous and uniform interpretation which must take into account the context of the provision and the purpose of the legislation in question (see, to this effect, Case 327/82 *Ekro* [1984] ECR 107, paragraph 11; Case C-287/98 *Linster* [2000] ECR I-6917, paragraph 43; and Case C-201/02 *Wells* [2004] ECR I-723, paragraph 37).

41 The answer to the first question must therefore be that classification of a decision as a 'development consent' within the meaning of Article 1(2) of Directive 85/337 must be carried out pursuant to national law in a manner consistent with Community law.

Questions 2 and 3

42 By its second and third questions, which it is appropriate to consider together, the national court essentially asks whether Articles 2(1) and 4(2) of Directive 85/337 are to be interpreted as requiring an environmental impact assessment to be carried out if, following the grant of outline planning permission, it appears at the time of approval of the reserved matters that the project is likely to have significant effects on the environment by virtue inter alia of its nature, size or location.

43 First, according to Article 2(1) of Directive 85/337, projects likely to have significant effects on the environment, as referred to in Article 4 of the directive read in conjunction with Annexes I and II thereto, must be made subject to an assessment with regard to their effects before development consent is given (*Wells*, paragraph 42).

44 As has been noted in paragraph 39 of the present judgment, Article 1(2) of Directive 85/337 defines 'development consent' for the purposes of the directive as the decision of the competent authority or authorities which entitles the developer to proceed with the project.

45 It is apparent from the scheme and the objectives of Directive 85/337 that this provision refers to the decision (involving one or more stages) which allows the developer to commence the works for carrying out his project.

46 Having regard to those points, it is therefore the task of the national court to verify whether the outline planning permission and decision approving reserved matters which are at issue in the main proceedings constitute, as a whole, a 'development consent' for the purposes of Directive 85/337 (see, in this connection, the judgment delivered today in Case C-508/03 *Commission* v *United Kingdom* [2006] ECR I-3969, paragraphs 101 and 102).

47 Second, as the Court explained in *Wells*, at paragraph 52, where national law provides for a consent procedure comprising more than one stage, one involving a principal decision and the other involving an implementing decision which cannot extend beyond the parameters set by the principal decision, the effects which a project may have on the environment must be identified and assessed at the time of

the procedure relating to the principal decision. It is only if those effects are not identifiable until the time of the procedure relating to the implementing decision that the assessment should be carried out in the course of that procedure.

48 If the national court therefore concludes that the procedure laid down by the rules at issue in the main proceedings is a consent procedure comprising more than one stage, one involving a principal decision and the other involving an implementing decision which cannot extend beyond the parameters set by the principal decision, it follows that the competent authority is, in some circumstances, obliged to carry out an environmental impact assessment in respect of a project even after the grant of outline planning permission, when the reserved matters are subsequently approved (see, in this regard, *Commission* v *United Kingdom*, paragraphs 103 to 106). This assessment must be of a comprehensive nature, so as to relate to all the aspects of the project which have not yet been assessed or which require a fresh assessment.

49 In the light of all of the foregoing, the answer to the second and third questions must be that Articles 2(1) and 4(2) of Directive 85/337 are to be interpreted as requiring an environmental impact assessment to be carried out if, in the case of grant of consent comprising more than one stage, it becomes apparent, in the course of the second stage, that the project is likely to have significant effects on the environment by virtue inter alia of its nature, size or location.

Costs

50 Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the national court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (First Chamber) hereby rules:

1. **Classification of a decision as a 'development consent' within the meaning of Article 1(2) of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment must be carried out pursuant to national law in a manner consistent with Community law.**

2. **Articles 2(1) and 4(2) of Directive 85/337 are to be interpreted as requiring an environmental impact assessment to be carried out if, in the case of grant of consent comprising more than one stage, it becomes apparent, in the course of the second stage, that the project is likely to have significant effects on the environment by virtue inter alia of its nature, size or location.**

JUDGMENT OF THE COURT (Second Chamber)
16 September 2004 *

In Case C-227/01,

ACTION under Article 226 EC for failure to fulfil obligations,

brought on 7 June 2001,

Commission of the European Communities, represented by G. Valero Jordana, acting as Agent, with an address for service in Luxembourg,

applicant,

v

Kingdom of Spain, represented by S. Ortiz Vaamonde, acting as Agent, with an address for service in Luxembourg,

defendant,

* Language of the case: Spanish.

THE COURT (Second Chamber),

composed of: C.W.A. Timmermans, President of the Chamber, C. Gulmann, J.N. Cunha Rodrigues, R. Schintgen (Rapporteur) and F. Macken, Judges,

Advocate General: L. Poiares Maduro,
Registrar: M. Múgica Arzamendi, Principal Administrator,

having regard to the written procedure and further to the hearing on 19 February 2004,

after considering the observations submitted by the parties,

after hearing the Opinion of the Advocate General at the sitting on 24 March 2004,

gives the following

Judgment

1 By its application the Commission of the European Communities has brought an action for a declaration that in failing to carry out an assessment of the effects on the environment of the 'project for a Valencia-Tarragona railway line, Las Palmas-Oropesa section. Roadbed', which forms part of the project known as the 'Mediterranean corridor', the Kingdom of Spain has failed to fulfil its obligations

under Articles 2, 3, 5(2) and 6(2) of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40).

Legal framework

Community legislation

2 According to the first and sixth recitals in its preamble, Directive 85/337 seeks to prevent pollution and other damage to the environment by making certain public and private projects subject to prior assessment of their environmental effects.

3 As is clear from the fifth recital in the preamble, to that end the Directive introduces general principles for the assessment of environmental effects with a view to supplementing and coordinating development consent procedures governing public and private projects likely to have a major effect on the environment.

4 The eighth and eleventh recitals in the preamble to Directive 85/337 state that certain types of projects have significant effects on the environment and must as a rule be subject to systematic assessment in order to take account of concerns to protect human health, to contribute by means of a better environment to the quality of life, to ensure maintenance of the diversity of species and to maintain the reproductive capacity of the ecosystem as a basic resource for life.

5 The provisions of Directive 85/337 relevant in this case, in their wording prior to Council Directive 97/11/EC of 3 March 1997 amending that directive (OJ 1997 L 73, p. 5), are as follows.

6 Article 1 of Directive 85/337 reads:

— '1. This Directive shall apply to the assessment of the environmental effects of those public and private projects which are likely to have significant effects on the environment.

— 2. For the purposes of this Directive:

— "project" means:

— the execution of construction works or of other installations or schemes,

— other interventions in the natural surroundings and landscape ...'.

7 Article 2 of the Directive states:

'1. Member States shall adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment by virtue, inter

alia, of their nature, size or location are made subject to an assessment with regard to their effects.

These projects are defined in Article 4.

...

3. Member States may, in exceptional cases, exempt a specific project in whole or in part from the provisions laid down in this Directive.

In this event, the Member States shall:

(a) consider whether another form of assessment would be appropriate and whether the information thus collected should be made available to the public;

(b) make available to the public concerned the information relating to the exemption and the reasons for granting it;

(c) inform the Commission, prior to granting consent, of the reasons justifying the exemption granted, and provide it with the information made available, where appropriate, to their own nationals.

The Commission shall immediately forward the documents received to the other Member States.

...'

8 Article 3 of the Directive provides:

'The environmental impact assessment will identify, describe and assess in an appropriate manner, in the light of each individual case and in accordance with the Articles 4 to 11, the direct and indirect effects of a project on the following factors:

— human beings, fauna and flora,

— soil, water, air, climate and the landscape,

— the inter-action between the factors mentioned in the first and second indents,

— material assets and the cultural heritage.'

9 Article 4 of Directive 85/337, to which the second subparagraph of Article 2(1) thereof refers, states:

'1. Subject to Article 2(3), projects of the classes listed in Annex I shall be made subject to an assessment in accordance with Articles 5 to 10.

2. Projects of the classes listed in Annex II shall be made subject to an assessment, in accordance with Articles 5 to 10, where Member States consider that their characteristics so require.

...'

10 Point 7 of Annex I to that directive refers, among other projects, to 'construction of ... lines for long-distance railway traffic'.

11 Point 12 of Annex II to the Directive refers, inter alia, to 'modifications to development projects included in Annex I'.

12 Article 5(1) and (2) of Directive 85/337 state:

'1. In the case of projects which, pursuant to Article 4, must be subjected to an environmental impact assessment in accordance with Articles 5 to 10, Member States shall adopt the necessary measures to ensure that the developer supplies in an appropriate form the information specified in Annex III inasmuch as:

(a) the Member States consider that the information is relevant to a given stage of the consent procedure and to the specific characteristics of a particular project or type of project and of the environmental features likely to be affected;

(b) the Member States consider that a developer may reasonably be required to compile this information having regard inter alia to current knowledge and methods of assessment.

2. The information to be provided by the developer in accordance with paragraph 1 shall include at least:

— a description of the project comprising information on the site, design and size of the project,

— a description of the measures envisaged in order to avoid, reduce and, if possible, remedy significant adverse effects,

— the data required to identify and assess the main effects which the project is likely to have on the environment,

— a non-technical summary of the information mentioned in indents 1 to 3.'

13 According to Article 6(2) of the Directive:

'Member States shall ensure that:

— any request for development consent and any information gathered pursuant to Article 5 are made available to the public,

— the public concerned is given the opportunity to express an opinion before the project is initiated.'

14 Article 12 of Directive 85/337 provides:

'1. Member States shall take the measures necessary to comply with this Directive within three years of its notification.

2. Member States shall communicate to the Commission the texts of the provisions of national law which they adopt in the field covered by this Directive.'

15 The Directive was notified to the Member States on 3 July 1985.

National legislation

16 The Spanish legislation which implements point 7 of Annex I to Directive 85/337 lists, among the projects which must be made subject to an environmental impact assessment procedure, 'long-distance railway lines which involve a new route'.

The pre-litigation procedure

17 Following receipt of a complaint in May 1999 and an exchange of letters between the Commission and the Spanish authorities, the Commission gave the Kingdom of Spain formal notice by letter of 13 April 2000 to submit its observations within two months. It took the view that those authorities had incorrectly implemented Directive 85/337 by not subjecting to a prior environmental impact assessment the 'project for a Valencia-Tarragona railway line, Las Palmas-Oropesa section. Roadbed', which forms part of the project known as the 'Mediterranean corridor'.

18 Since it was not satisfied with the explanations provided by the Spanish Government, the Commission sent a reasoned opinion to the Kingdom of Spain on 26 September 2000, requesting that it adopt, within two months from the notification of that opinion, the measures necessary to comply therewith.

19 After the Spanish Government replied to that reasoned opinion by a letter of 2 January 2001 in which it repeated its earlier arguments, the Commission decided to bring the present action.

The application

20 The Commission complains that the Spanish Government failed to fulfil its obligations under Articles 2, 3, 5(2) and 6(2) of Directive 85/337 by not carrying out an assessment of the effects on the environment of the 'project for a Valencia-Tarragona railway line, Las Palmas-Oropesa section. Roadbed', which forms part of

the project known as the 'Mediterranean corridor' linking the Spanish region of Levante to Catalonia and the French border.

Admissibility

21 At the hearing, the Spanish Government challenged the admissibility of the action on the ground that the application was based on a complaint different from that relied on during the pre-litigation procedure.

22 That Government maintains that during the pre-litigation procedure, the subject-matter of the dispute was clearly limited to a 13.2-km-long section of the railway line which separates Las Palmas from the town of Oropesa. At that stage of the proceedings the Commission complained more particularly that the Spanish Government had not complied with the requirements of Directive 85/337 as regards a 7.64-km-long part of that section, where the route was moved a maximum of 800 m to the west in order to bypass the town of Benicasim. The Commission did not, however, in either the letter of formal notice or the reasoned opinion, refer to the doubling of the track on the rest of the section, which is 13.2 km in length; in particular, it at no point stated that the doubling of existing track falls within the scope of the Directive.

23 In its application, the Commission insists that such a doubling of the track of an existing railway line should be held to be subject to the requirements of the Directive. In addition, it refers to the entire length of the Valencia-Tarragona line, which is 251 km.

24 Under those conditions, the subject-matter of the dispute has clearly been expanded.

25 First of all, in this case, the Court notes that the validity of the reasoned opinion and of the procedure which preceded it is not in dispute. Nevertheless, the Spanish Government maintains that the complaint put forward in the application differs from that contained in the letter of formal notice and the reasoned opinion.

26 It is settled case-law that the subject-matter of proceedings brought under Article 226 EC is circumscribed by the pre-litigation procedure provided for by that provision and that, consequently, the Commission's reasoned opinion and the application must be based on the same complaints (see, inter alia, Case C-139/00 *Commission* v *Spain* [2002] ECR I-6407, paragraph 18).

27 In the present case, however, it cannot be maintained that the subject-matter of the dispute as defined during the pre-litigation procedure has been expanded or modified.

28 First, in response to a question by the Court, the Commission confirmed that the subject-matter of the present action is limited to a 13.2-km-long section between Las Palmas and Oropesa and that, contrary to the Spanish Government's assertion, it in no way extends to the whole of the route of the Valencia-Tarragona line, which is 251 km in length.

29 Secondly, both the letter of formal notice and the reasoned opinion sent by the Commission to the Kingdom of Spain refer, as does the application, to the 'Las Palmas-Oropesa section', which the defendant Government does not deny is 13.2 km in length. Moreover, the defence lodged by the Spanish Government shows unambiguously that it in no way misunderstood the scope of the proceedings, since it itself considers that the project at issue concerns the 13.2 km section which separates the towns of Las Palmas and Oropesa, on which the existing track is doubled and adapted for speeds of up to 220 km/h, a 7.64-km-long section of which constitutes a new route intended to bypass the town of Benicasim.

30 Consequently, the present action is admissible.

Substance

Arguments of the parties

31 In support of its action, the Commission states that it is common ground that the 'project for a Valencia-Tarragona railway line, Las Palmas-Oropesa section. Roadbed', which forms part of the project known as the 'Mediterranean corridor', was not made subject to the environmental impact assessment procedure laid down in Directive 85/337.

32 According to the Commission, such an assessment was mandatory in the present case, since it involved one of the projects mentioned in point 7 of Annex I to the Directive, to which Article 4(1) thereof refers.

33 The Commission infers from this that Directive 85/337 was incorrectly implemented in respect of the project in question and that the Kingdom of Spain has therefore infringed Articles 2, 3, 5(2) and 6(2) of the Directive.

34 In the opinion of the Commission, none of the reasons relied on by the Spanish Government to justify its method of proceeding in the present case can be accepted.

35 The line of argument put forward by that Government conflicts with the letter of Directive 85/337, and in particular the actual wording of point 7 of Annex I thereto, and is incompatible with the spirit and purpose of that directive.

36 The Spanish Government admits that the project at issue was not formally made subject to the environmental impact assessment procedure laid down by Directive 85/337, but it takes the view that that procedure was not necessary in the present case.

37 That directive was not applicable since the work undertaken merely consisted in improving an already existing railway line by doubling the original single track without constructing a new railway line and with no need for a new long-distance route.

38 That view is supported by the wording of the national legislation transposing point 7 of Annex I to Directive 85/337 into Spanish law, which the Commission at no time claimed was incompatible with the requirements of the Directive. Moreover, as regards the wording of point 7, the English-language version also uses the term 'lines' rather than the term 'tracks'.

39 In addition, the project at issue is not intended for long-distance traffic within the meaning of point 7, since it links two towns which are only 13.2 km distant from one another.

40 Moreover, the doubling of the tracks does not in fact have environmental effects beyond those caused by the construction of the original line and, in any event, the Commission has not furnished evidence of the existence of such effects.

41 The Spanish Government adds, in the alternative, that the requirements of the Directive have in the present case been complied with in substance, since the revision of the general development plan for Benicasim, which took place in 1992, was preceded by an impact assessment submitted to a public inquiry and an environmental impact declaration. Since the subject-matter of that revision was precisely the setting aside of an area for construction of the loop line around the town of Benicasim, a new study on the effects of the work undertaken for that purpose was not required.

42 Finally, the competent national authorities acted in good faith in the present case and demonstrated their cooperative spirit by accepting the Commission's position as regards the part of the project where it was still possible to do so, since they submitted 'modification No 3' of that project, which in essence relates to the construction of a 754.5-m-long viaduct, to a public inquiry before completion of the works.

Findings of the Court

43 Given the line of argument of the defendant Government, in order to assess the merits of the Commission's action it is appropriate to establish whether Directive 85/337 and, in particular, the obligation which it lays down to carry out an environmental impact assessment, apply to the project in question and, if so, whether that project was carried out in compliance with the rules set out in that directive.

44 As regards the first point, the argument put forward by the Spanish Government that point 7 of Annex I to the Directive refers only to the construction of a new line in the sense of a new railway connection between two towns and therefore does not apply to a doubling of existing tracks cannot be upheld.

45 While it is not necessary in the context of these proceedings to give a ruling on whether all the language versions of point 7 of Annex I to Directive 85/337 use a

term equivalent to the term 'tracks' ('vias' in the Spanish-language version) or on the compatibility with the Directive of the Spanish legislation adopted to implement that provision inasmuch as it uses the term 'lines' ('líneas'), it is clear from the Court's case-law that the need for a uniform interpretation of Community law requires, in the case of divergence between different language versions of a provision, that it be interpreted by reference to the purpose and general scheme of the rules of which it forms part (see, inter alia, Case C-72/95 *Kraaijeveld and Others* [1996] ECR I-5403, paragraph 28).

46 The Court has already held that the wording of Directive 85/337 indicates that its scope is wide and its purpose very broad (*Kraaijeveld and Others*, cited above, paragraphs 31 and 39).

47 In particular, Articles 1(1) and 2(1) and the first, fifth, sixth, eighth and 11th recitals in the preamble make clear that the Directive's fundamental objective is that, before consent is granted, projects likely to have significant effects on the environment by virtue, inter alia, of their nature, size or location should be made subject to a mandatory assessment with regard to their effects (see to that effect Case C-287/98 *Linster* [2000] ECR I-6917, paragraph 52).

48 On the basis of those considerations alone, point 7 of Annex I to Directive 85/337 must be understood to include the doubling of an already existing railway track.

49 A project of that kind can have a significant effect on the environment within the meaning of that directive, since it is likely to have lasting effects on, for example, flora and fauna and the composition of soil or even on the landscape and produce significant noise effects, inter alia, so that it must be included in the scope of the Directive. The objective of Directive 85/337 would be seriously undermined if that type of project for the construction of new railway track, even parallel to existing track, could be excluded from the obligation to carry out an assessment of its effects on the environment. Accordingly, a project of that sort cannot be considered a mere modification to an earlier project within the meaning of point 12 of Annex II to the Directive.

50 Moreover, that conclusion is all the more obvious when, as in the present case, the execution of the project at issue involves a new track route, even if that applies only to part of the project. Such a construction project is by its nature likely to have significant effects on the environment within the meaning of Directive 85/337.

51 The argument of the Spanish Government that the conditions for applying point 7 of Annex I to the Directive are not fulfilled, since the project in question does not relate to long-distance traffic within the meaning of that provision but rather only to a 13.2 km section between neighbouring towns, is also without substance.

52 As the Commission rightly maintains, the project in question is part of a 251-km-long railway line between Valencia and Tarragona, which forms part of the project known as the 'Mediterranean corridor', linking the Spanish region of Levante to Catalonia and the French border.

53 If the argument of the Spanish Government were upheld, the effectiveness of Directive 85/337 could be seriously compromised, since the national authorities concerned would need only to split up a long-distance project into successive shorter sections in order to exclude from the requirements of the Directive both the project as a whole and the sections resulting from that division.

54 In the light of all those considerations, the project which is the subject of the Commission's action, which concerns laying a supplementary 13.2-km-long railway track, a 7.64 km section of which covers a new route in order to bypass the town of Benicasim, and which is part of a 251-km-long railway line, belongs in one of the categories listed in Annex I to Directive 85/337 which must in principle be made subject to a mandatory systematic assessment pursuant to Articles 4(1) and 5(1) of the Directive.

55 As to whether that project was carried out in compliance with the rules set out in Directive 85/337, it should be noted that the Spanish Government admits that the project as such was not made subject to the requirements of the Directive as regards assessment of its effects on the environment. Moreover, that Government does not claim that the conditions laid down in Article 2(3) of the Directive are fulfilled in this case.

56 Next, as regards the Spanish Government's argument that the 1992 revision of the general development plan for Benicasim was preceded by an impact assessment submitted to a public inquiry and an environmental impact declaration, it must be pointed out that even if that plan included all the information necessary to fulfil the

minimum conditions set by Directive 85/337 it could not, in any event, be considered adequate since, as the Commission claims without being seriously contradicted on that point by the defendant Government, the plan involves only the territory of the town of Benicasim and, more specifically, the bypass around that town, while the parties agree that the contested project is far broader. It follows that, at least for the remaining part of that project, the Directive's requirements have not been correctly applied.

57 Nor is the Spanish Government's assertion that the competent authorities complied with the requirements of that directive as regards 'modification No 3' of the project justified. First, according to the defendant Government, the information intended for the public was published only after work on the project had begun. Such a method of proceeding is clearly contrary to the requirements of Article 6(2) of Directive 85/337, which states that the public concerned is to be given the opportunity to express an opinion before the project is initiated. The fact, invoked by the Spanish Government, that the public inquiry took place before the work was completed is therefore wholly irrelevant. Secondly, that procedure related to only one part of the section in question, which is 13.2 km in length, namely 'modification No 3', relating essentially to the construction of a viaduct of some 750 m in length.

58 Moreover, the fact that the national authorities acted in good faith is also irrelevant. It is settled case-law that an action for failure to fulfil obligations is objective in nature and the fact that a failure to fulfil obligations results from a Member State's incorrect interpretation of the Community-law provisions in question cannot preclude the Court from declaring that there has been such a failure (Case C-73/92 *Commission* v *Spain* [1993] ECR I-5997, paragraph 19).

59 Finally, as regards the Spanish Government's contention that the Commission failed to provide a proper statement of reasons for the alleged infringement since it did not furnish evidence that the doubling of an existing track has effects on the environment beyond those produced by the construction of the original line, suffice it to point out that the relevant criterion for the implementation of Directive 85/337 is the significant effect that a particular project is 'likely' to have on the environment (see, in that regard, Article 1(1) of the Directive and the fifth and sixth recitals in the preamble thereto). Under those conditions, it is not for the Commission to establish the concrete negative effects that a project in fact has on the environment. On the other hand, the Commission has in the present case proved to the requisite legal standard that the project in question falls within the scope of one of the provisions of Annex I to that directive and must therefore be made subject to a mandatory environmental impact assessment. Moreover, it is indisputable that a project of this type is such as to create significant new nuisances, even if only as the result of the adaptation of the railway line with a view to traffic which can attain a speed of 220 km/h.

60 In the light of all the foregoing considerations, the Commission's application must be considered well-founded.

61 Consequently, it must be held that by failing to carry out an assessment of the effects on the environment of the 'project for a Valencia-Tarragona railway line, Las Palmas-Oropesa section. Roadbed', which forms part of the project known as the 'Mediterranean corridor', the Kingdom of Spain has failed to fulfil its obligations under Articles 2, 3, 5(2) and 6(2) of Directive 85/337.

Costs

62 Under Article 69(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. Since the Commission has applied for costs and the Kingdom of Spain has been unsuccessful, the latter must be ordered to pay the costs.

On those grounds, the Court (Second Chamber) hereby:

1. **Declares that by failing to carry out an assessment of the effects on the environment of the 'project for a Valencia-Tarragona railway line, Las Palmas-Oropesa section. Roadbed', which forms part of the project known as the 'Mediterranean corridor', the Kingdom of Spain has failed to fulfil its obligations under Articles 2, 3, 5(2) and 6(2) of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment;**

2. **Orders the Kingdom of Spain to pay the costs.**

Signatures.

JUDGMENT OF THE COURT (First Chamber)

10 June 2004 *

In Case C-87/02,

after hearing the Opinion of the Advocate General at the sitting on 8 January 2004,

gives the following

Judgment

1 By an application lodged at the Registry of the Court on 13 March 2002, the Commission of the European Communities brought an action under Article 226 EC for a declaration that, since the Abruzzo Region failed to ascertain whether the project to construct an outer ring road at Teramo (Italy) (a project known as 'Lotto zero-Variante, tra Teramo e Giulianova, alla strada statale SS 80', hereinafter the 'Lotto zero' project), of a type listed in Annex II to Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40), required an environmental impact assessment in accordance with Articles 5 to 10 of the Directive, the Italian Republic has failed to fulfil its obligations under Article 4(2) of that directive.

Legal background

Community legislation

2 Directive 85/337 applies, according to Article 1(1) thereof, to the assessment of the environmental effects of those public and private projects which are likely to have significant effects on the environment.

3 Article 1(2) of the Directive defines a project as:

'— the execution of construction works or of other installations or schemes,

— other interventions in the natural surroundings and landscape including those involving the extraction of mineral resources'.

4 Article 2(1) of Directive 85/337 states:

'Member States shall adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment by virtue, inter alia, of their nature, size or location are made subject to an assessment with regard to their effects.

These projects are defined in Article 4.'

5 Article 4 of Directive 85/337 provides:

'1. Subject to Article 2(3), projects of the classes listed in Annex I shall be made subject to an assessment in accordance with Articles 5 to 10.

2. Projects of the classes listed in Annex II shall be made subject to an assessment, in accordance with Articles 5 to 10, where Member States consider that their characteristics so require.

To this end Member States may inter alia specify certain types of projects as being subject to an assessment or may establish the criteria and/or thresholds necessary to determine which of the projects of the classes listed in Annex II are to be subject to an assessment in accordance with Articles 5 to 10.'

6 Annex II to Directive 85/337, relating to projects subject to Article 4(2) thereof, lists in paragraph (d) of point 10, headed 'Infrastructure projects':

'Construction of roads, harbours, including fishing harbours, and airfields (projects not listed in Annex I)'.

7 Article 5 of Directive 85/337 in essence specifies the minimum information to be provided by the developer. Article 6 requires Member States to take the measures necessary to ensure that the authorities and members of the public concerned are informed and are able to express an opinion before the project is initiated. Article 8 requires the competent authorities to take into consideration information gathered pursuant to Articles 5 and 6. Article 9 imposes an obligation on the competent authorities to inform the public of the decision taken and any conditions attached to it.

8 Article 12 of Directive 85/337 provides that Member States are to take the measures necessary to comply with the Directive within three years of its notification. It was notified to Member States on 3 July 1985.

9 That directive was amended by Council Directive 97/11/EC of 3 March 1997 (OJ 1997 L 73, p. 5), Article 3(1) of which provides for implementation by 14 March 1999 at the latest. Directive 97/11 was therefore not applicable in the present case at the material time.

10 Article 4(2) et seq. of Directive 85/337, as amended by Directive 97/11, states:

'2. Subject to Article 2(3), for projects listed in Annex II, the Member States shall determine through:

(a) a case-by-case examination,

or

(b) thresholds or criteria set by the Member State

whether the project shall be made subject to an assessment in accordance with Articles 5 to 10.

Member States may decide to apply both procedures referred to in (a) and (b).

3. When a case-by-case examination is carried out or thresholds or criteria are set for the purpose of paragraph 2, the relevant selection criteria set out in Annex III shall be taken into account.

4. Member States shall ensure that the determination made by the competent authorities under paragraph 2 is made available to the public.'

National legislation

11 The Decree of the President of the Republic of 12 April 1996, entitled 'Atto di indirizzo e coordinamento per l'attuazione dell'art. 40, comma 1, della L. 22 febbraio 1994, n. 146, concernente disposizioni in materia di valutazione di impatto ambientale' (Policy and coordination measure for the application of Article 40(1) of Law No 146 of 22 February 1994 on the provisions relating to the assessment of environmental effects) (GURI No 210, of 7 September 1996, p. 28, hereinafter 'the Decree of 12 April 1996') states, in Article 1:

'1. The Regions and the Autonomous Provinces of Trento and Bolzano shall ensure that an environmental impact assessment is carried out for projects listed in Annexes A and B, in conformity with Directive 85/337/EEC, following the guidelines contained in the present measure.

...

4. Projects included in Annex B which are situated, even in part, within the protected natural areas defined by Law No 394 of 6 December 1991 shall be made subject to an assessment of their effects on the environment.

...

6. For projects listed in Annex B which are not situated in a protected natural area, the competent authority shall ascertain, in accordance with the rules laid down in Article 10 and on the basis of the information provided in Annex D, whether the characteristics of a project require an assessment of its effects on the environment to be undertaken.'

12 Article 10(1) and (2) of the Decree of 12 April 1996 states:

'1. For the projects referred to in paragraph 6 of Article 1, the developer or authority which submits the proposal shall request the screening provided for in that paragraph. The information which the proposing developer or authority must provide for that screening shall contain a description of the project and the information necessary in order to understand and assess the main effects which the project could have on the environment.

2. The competent authority shall take a decision within 60 days on the basis of the information required under Annex D and shall identify potential measures making it possible to mitigate effects and to monitor works and/or installations. In the event that the competent authority does not respond within the period referred to above, the project shall be considered exempted from the procedure. The Regions and Autonomous Provinces of Trento and Bolzano shall adopt the measures necessary to make public the list of projects for which screening has been requested and the results thereof.'

13 Annex B to the Decree of 12 April 1996 on the types of projects referred to in Article 1(4) of that decree lists in point 7(g) and (h):

'(g) Secondary outer roads,

(h) Construction of relief roads in urban areas or reinforcement of existing roads of four or more lanes of a length greater than 1 500 metres in an urban area.'

14 Annex D to the Decree of 12 April 1996 specifies the information which the competent authority must take into account when examining the characteristics and location of a project in the context of the screening provided for in the sixth paragraph of Article 1 of that decree.

15 The Abruzzo Region transposed the Decree of 12 April 1996 by Regional Law No 112, of 23 September 1997, entitled 'Norme urgenti per il recepimento del decreto del Presidente della Repubblica 12 aprile 1996' (Urgent rules for the transposition of the Decree of the President of the Republic, of 12 April 1996).

Pre-litigation procedure

16 It is apparent from the application made by the Commission that on 11 May 1998 it asked the Italian authorities to provide information on the 'Lotto zero' project. According to the information available to the Commission at the time, consent for

that project was given without its being made subject to an environmental impact assessment and to screening intended to determine whether an assessment of its effects on the environment was necessary.

17 The Commission had been informed, in the context of a question put by a Member of the European Parliament, that the purpose of the project was to construct a stretch of express relief road 10.50 metres wide, comprising four viaducts and four tunnels. The road, which would cross an area close to residences some metres from the historic centre of the commune of Teramo in Abruzzo (Italy), would affect the bed of the Tordino river, the subject of the environmental improvement project known as 'Fiume Tordino medio corso', financed by the Community. That area was proposed by the Italian Republic as a site of Community importance under the procedure intended to set up the European ecological network known as 'Natura 2000', within the meaning of Council Directive 92/43/EEC of 21 May 1992 on the conservation of natural habitats and of wild fauna and flora (OJ 1992 L 206, p. 7).

18 By letter of 23 July 1998, the Republic of Italy confirmed to the Commission that the project concerned construction of a two-lane road 10.50 metres in width and of an unspecified length, one section of which, crossing the territory of the commune of Teramo, would affect the right part of the basin of the Tordino river and would measure 5 440 metres in length, including 2 260 metres of viaduct and 930 metres of tunnel.

19 It emerges from the correspondence between the Commission, the Italian Environment Ministry and the Permanent Representation that, on 12 March 1999, the Abruzzo Region gave its consent to carrying out the works and that the special commissioner appointed for that work decided not to subject the operation to either an environmental impact assessment or screening.

20 By letter of 21 May 1999, the Ministry drew attention to the requirements imposed by the Decree of 12 April 1996 and asked the special commissioner for the project and the Abruzzo Region to give reasons for the decision not to subject that project to either an impact assessment or screening. The special commissioner then asked the Abruzzo Region to initiate the regional procedures for screening environmental compatibility, in accordance with the Decree of 12 April 1996.

21 The project was subjected to the procedure intended to ascertain whether it was required to undergo an assessment of its effects on the environment. Since the Abruzzo Region considered that the area in question was not part of a protected area within the meaning of Law No 394/91 and Regional Law No 38/96, it decided, by means of Regional Decree No 25/99, prot. No 3624 of 15 November 1999, to approve the screening of environmental compatibility and thereby exempt the project from the environmental impact assessment procedure.

22 By letter of 30 May 2000, sent to the Commission by a note of 16 June 2000 from the Permanent Representation, the Italian Environment Ministry pointed out that Regional Decree No 25/99 had been adopted following the favourable opinion by the Comitato di Coordinamento Regionale sulla Valutazione di Impatto Ambientale (Regional Coordinating Committee on environmental impact assessment, hereinafter 'the Coordinating Committee') No 3/76 of 22 October 1999, which for its part referred back to a civil engineering opinion which was not mentioned in Regional Decree No 25/99. The Decree provided no explanation for that omission and no argument in support of the decision taken by the regional administration.

23 On 24 October 2000, the Commission sent a letter of formal notice to the Italian Republic, stating that the information available to it did not indicate that the Abruzzo Region had subjected the project in question, which is listed in Annex II to Directive 85/337, to screening intended to establish whether its characteristics required an assessment within the meaning of Articles 5 to 10 of the Directive.

24 Since the Commission did not consider the various responses by the Italian authorities to that formal notice to be satisfactory, it delivered a reasoned opinion to the Italian Republic by letter of 18 July 2001, giving it two months in which to adopt the measures required in order to comply with it.

Procedure before the Court

25 The Court decided to ask various questions of the Italian Republic and of the Commission and to request that they produce several documents. In particular, it asked the Italian Republic to produce the civil engineer's opinion referred to in the context of the pre-litigation procedure. After examining the responses and documents, the Court decided, in accordance with Article 44a of the Rules of Procedure, to give judgment without a hearing.

Substance

Arguments of the parties

26 The Commission points out that, under the first paragraph of Article 4(2) of Directive 85/337, projects listed in Annex II are to be made subject to an assessment, in accordance with Articles 5 to 10 of the Directive, when Member States consider that their characteristics require it. The second paragraph of Article 4(2) of Directive 85/337 authorises Member States, inter alia, to set criteria or thresholds in order to determine which of the projects listed in the classes set out in Annex II must be made subject to an assessment in accordance with Articles 5 to 10 of that directive.

27 The Commission states that, as is clear from Case C-435/97 *WWF and Others* [1999] ECR I-5613, in the absence of a legislative measure which specifies, from the outset and in its entirety, which projects to subject to an environmental impact assessment procedure, Member States have the power to exclude a specific project from that procedure only following a concrete examination of that project which makes clear, on the basis of a full screening, the reasons why it cannot have an effect on the environment.

28 In the Decree of 12 April 1996, the Italian Republic failed to specify, from the outset and in their entirety, in accordance with the second paragraph of Article 4(2) of Directive 85/337, what projects must be made subject to an environmental impact assessment. It merely referred to those likely to be made subject to screening intended to establish the need to carry out an environmental impact assessment. Such is the case for the projects listed in Annex B to the Decree of 12 April 1996, in particular in point 7(g) (secondary outer roads) or 7(h) (construction of relief roads in urban areas or widening of an existing road to four or more lanes, of a length greater than 1 500 metres within an urban area), which correspond to the projects listed in Annex II to Directive 85/337, in particular in point 10(d) and (e) (construction of airfields, roads, harbours, including fishing harbours).

29 Since the project 'Lotto zero' corresponds to the projects provided for by those provisions, it should have been made subject to screening, and clear and precise reasons should have been given for the decision not to carry out an assessment in accordance with Articles 5 to 10 of Directive 85/337. However, the decision not to make the project subject to assessment makes no mention of any established assessment criteria and fails to explain whether the screening referred to in the sixth paragraph of Article 1 of the Decree of 12 April 1996 was carried out or, if it was, how it was carried out. The statement of reasons provided for Regional Decree No 25/99 therefore suggests that the Abruzzo Region did not ascertain whether it was necessary for the project to be made subject to an assessment in accordance with Articles 5 to 10 of Directive 85/337. In its reply, the Commission states that the opinion of the Coordinating Committee referred to in Decree No 25/99 was never brought to its attention.

30 It points out that, even if the content and mechanism of the screening referred to in Article 4(2) of Directive 85/337 were elaborated only by Directive 97/11, which amends Directive 85/337 but which is not applicable in the present case, it is not acceptable that it be completely ignored without any reasons being given for the decision.

31 In addition, the argument that the rejection by national courts of applications brought by environmental protection associations prevents the Commission from ascertaining whether a Member State has fulfilled its obligations under the Directive is without any foundation and contrary to the Court's case-law. It is in fact clear from *WWF*, cited above, that it is for the national court to ascertain whether the competent authorities have correctly assessed the significance of the effects of a project on the environment. However, that does not preclude the Court's ruling on the obligations for Member States which result from Article 4(2) of Directive 85/337 and, accordingly, the Commission, on the basis of the powers conferred on it under Article 226 EC, has the duty to draw attention to a failure to comply with a provision of Community law.

32 Finally, the Commission points out that a Member State must deal with infringements not only by its central government but also those by its local and decentralised authorities.

33 The Italian Republic recalls the circumstances in which the Abruzzo Region adopted Regional Decree No 25/99 of 15 November 1999.

34 As regards the reasons for that decision, it maintains that Article 4(2) of Directive 85/337 allows a case-by-case examination to determine whether the project must be made subject to assessment. That directive thus provides for the adoption of an express measure before subjecting a project to an assessment. Accordingly, it is

warranted to allow the competent authorities not to respond when no assessment is needed and not to require them to adopt formal measures unless the project must be made subject to an impact assessment.

35 Such would be the procedure under Article 10(2) of the Decree of 12 April 1996, by which the competent authority may fail to respond where it takes the view that no assessment is needed, which is tantamount to a decision to close the screening procedure.

36 The Italian Republic in any event denies the alleged infringement, since the national competent authority adopted an explicit measure, namely Decree No 25/99, on the basis of an opinion by the Coordinating Committee.

37 It points out that, as is clear from the judgment in *WWF*, cited above, it is for the national court to review whether the competent authorities have correctly assessed the significance of the effects of a project on the environment. In the present case, the project 'Lotto zero' was subjected to review by the Tribunale amministrativo regionale del Lazio as the result of an application introduced by the Associazione Italiana Nostra-Onlus and the Associazione Italiana per il World Wildlife Fund. By an order of 21 June 2000, that court rejected the application to suspend implementation of the contested decisions relating to that project.

Findings of the Court

38 First of all, it should be recalled that the fact that a Member State has conferred on its regions the responsibility for giving effect to directives cannot have any bearing on the application of Article 226 EC. The Court has consistently held that a Member

State cannot plead conditions existing within its own legal system in order to justify its failure to comply with obligations and time-limits resulting from Community directives. While each Member State may freely allocate internal legislative powers as it sees fit, the fact remains that it alone is responsible towards the Community under Article 226 EC for compliance with obligations arising under Community law (Case C-33/90 *Commission* v *Italy* [1991] ECR I-5987, paragraph 24; also, to that effect, the order in Case C-180/97 *Regione Toscana* v *Commission* [1997] ECR I-5245, paragraph 7). Therefore, it is not relevant in the present case that the infringement results from a decision by the Abruzzo Region.

39 The fact that proceedings have been brought before a national court to challenge the decision of a national authority which is the subject of an action for failure to fulfil obligations and the decision of that court not to suspend implementation of that decision cannot affect the admissibility of the action for failure to fulfil obligations brought by the Commission. The existence of remedies available through the national courts cannot in any way prejudice the bringing of an action under Article 226 EC, since the two procedures have different objectives and effects (Case 31/69 *Commission* v *Italy* [1970] ECR 25, paragraph 9, and Case 85/85 *Commission* v *Belgium* [1986] ECR 1149, paragraph 24).

40 As regards the present action, in accordance with the first paragraph of Article 4(2) of Directive 85/337, projects of the classes listed in Annex II are to be made subject to an assessment where Member States consider that their characteristics so require. The second paragraph of Article 4(2) of the Directive provides that 'Member States may inter alia specify certain types of projects as being subject to an assessment or may establish the criteria and/or thresholds necessary to determine which of the projects of the classes listed in Annex II are to be subject to an assessment in accordance with Articles 5 to 10'.

41 The Court has already held that the second paragraph of Article 4(2) mentions, by way of indication, methods to which the Member States may have recourse when determining which of the projects falling within Annex II are to be subject to an assessment within the meaning of Directive 85/337 (*WWF*, paragraph 42).

42 Consequently, Directive 85/337 confers a measure of discretion on the Member States and does not therefore prevent them from using other methods to specify the projects requiring an environmental impact assessment under the Directive. So the Directive in no way excludes the method consisting in the designation, on the basis of an individual examination of each project concerned or pursuant to national legislation, of a particular project falling within Annex II to the Directive as not being subject to the procedure for assessing its environmental effects (*WWF*, paragraph 43).

43 However, the fact that the Member State has the discretion referred to in the previous paragraph is not in itself sufficient to exclude a given project from the assessment procedure under the Directive. If that were not the case, the discretion accorded to the Member States by Article 4(2) of the Directive could be used by them to take a particular project outside the assessment obligation when, by virtue of its nature, size or location, it could have significant environmental effects (*WWF*, paragraph 44).

44 Consequently, whatever the method adopted by a Member State to determine whether or not a specific project needs to be assessed, be it by legislative designation or following an individual examination of the project, the method adopted must not undermine the objective of the Directive, which is that no project likely to have significant effects on the environment, within the meaning of the Directive, should be exempt from assessment, unless the specific project excluded could, on the basis

of a comprehensive screening, be regarded as not being likely to have such effects (*WWF*, paragraph 45).

45 In the present case, the infringement relates to a project to construct a road which, in accordance with the Italian legislation which transposes Directive 85/337 and with the Directive itself, should have been screened to determine whether it needed to be subjected to an assessment. The Commission claims that the Italian Republic in essence failed to state reasons for the decision by the Abruzzo Region not to carry out an impact assessment, which suggests that no preliminary screening was carried out.

46 Examination of the documents produced shows that Decree No 25/99, by which the Abruzzo Region gives a favourable opinion as regards the outcome of the screening procedure and decides to exempt the project from the assessment procedure, is based on a cursory statement of reasons and merely refers to the favourable opinion by the Coordinating Committee. The latter opinion, which appears in the handwritten minutes of the Committee's meeting of 22 October 1999, contains a sentence which conveys the favourable opinion and states that in adopting that opinion, the Committee had available to it the civil engineer's opinion No 8634 of 6 July 1999.

47 As the Advocate General rightly observes in point 33 of his Opinion, that opinion by Teramo's civil engineering department, produced at the Court's request, is not an opinion on the environmental effects of the project, but merely an authorisation 'solely for hydraulic purposes' to cross the Tordino river and carry out certain works. The document attached by the Italian Republic to its defence, the cover page of which gives the necessary details as to the nature of the document and which was produced at the Court's request, does not appear to be required under the Law as part of the screening procedure. Moreover, the Court does not have information which would allow it to conclude that it was used by the competent authority as a basis for its decision.

48 That information indicates that no screening was carried out to determine whether to subject the project 'Lotto zero' to an impact study and that the failure to fulfil obligations as set out by the Commission in its claims is established.

49 It should be pointed out, however, that if the civil engineer's opinion had not been produced at the request of the Court, it would have been impossible to determine whether the screening had been carried out or not. It must be observed that a decision by which the national competent authority takes the view that a project's characteristics do not require it to be subjected to an assessment of its effects on the environment must contain or be accompanied by all the information that makes it possible to check that it is based on adequate screening, carried out in accordance with the requirements of Directive 85/337.

50 In conclusion, it must be held that since the Abruzzo Region did not ascertain whether the project to construct an outer ring road at Teramo (a project known as 'Lotto zero — Variante, tra Teramo e Giulianova, alla strada statale SS 80'), of a type listed in Annex II to Directive 85/337, required an environmental impact assessment in accordance with Articles 5 to 10 of that directive, the Italian Republic has failed to fulfil its obligations under Article 4(2) of that directive.

Costs

51 Under Article 69(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. Since the Commission has applied for costs and the Italian Republic has been unsuccessful, it must be ordered to pay the costs.

On those grounds,

THE COURT (First Chamber)

hereby:

1. **Declares that, since the Abruzzo Region failed to ascertain whether the project to construct an outer ring road at Teramo (a project known as 'Lotto zero-Variante, tra Teramo e Giulianova, alla strada statale SS 80'), of a type listed in Annex II to Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment, required an environmental impact assessment in accordance with Articles 5 to 10 of that directive, the Italian Republic has failed to fulfil its obligations under Article 4(2) of that directive.**

2. **Orders the Italian Republic to pay the costs.**

JUDGMENT OF THE COURT (Fifth Chamber)

7 January 2004 *

In Case C-201/02,

REFERENCE to the Court under Article 234 EC by the High Court of Justice of England and Wales, Queen's Bench Division (Administrative Court), for a preliminary ruling in the proceedings pending before that court between

The Queen on the application of **Delena Wells**

and

Secretary of State for Transport, Local Government and the Regions,

on the interpretation of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment,

* Language of the case: English.

THE COURT (Fifth Chamber),

composed of: P. Jann (Rapporteur), acting for the President of the Fifth Chamber, D.A.O. Edward and A. La Pergola, Judges,

Advocate General: P. Léger,
Registrar: L. Hewlett, Principal Administrator,

after considering the written observations submitted on behalf of:

— Mrs Wells, by R. Gordon QC and J. Pereira, barrister, instructed by R. Buxton, solicitor,

— the United Kingdom Government, by P. Ormond, acting as Agent, D. Elvin QC and J. Maurici, barrister,

— the Commission of the European Communities, by X. Lewis, acting as Agent, and N. Khan, barrister,

having regard to the Report for the Hearing,

after hearing the oral observations of Mrs Wells, represented by R. Gordon and J. Pereira, instructed by S. Ring, solicitor; the United Kingdom Government, represented by R. Caudwell, acting as Agent, and D. Elvin; and the Commission, represented by X. Lewis and N. Khan, at the hearing on 12 June 2003,

after hearing the Opinion of the Advocate General at the sitting on 25 September 2003,

gives the following

Judgment

1 By order of 12 February 2002, received at the Court on 6 May 2002, the High Court of Justice of England and Wales, Queen's Bench Division (Administrative Court), referred to the Court for a preliminary ruling under Article 234 EC five questions on the interpretation of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40).

2 Those questions were raised in proceedings between Mrs Wells and the Secretary of State for Transport, Local Government and the Regions (hereinafter 'the Secretary of State') concerning the grant of a new consent for mining operations at Conygar Quarry without an environmental impact assessment having first been carried out.

Legal context

Community legislation

3 As stated in the fifth recital in its preamble, Directive 85/337 is intended to introduce general principles for the assessment of environmental effects with a view to supplementing and coordinating development consent procedures for public and private projects likely to have a major effect on the environment.

4 Article 1(2) of the directive defines 'development consent' as 'the decision of the competent authority or authorities which entitles the developer to proceed with the project'.

5 Article 2(1) of the directive states:

'Member States shall adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment by virtue, inter alia, of their nature, size or location are made subject to an assessment with regard to their effects.

These projects are defined in Article 4.'

6 In Article 4, the directive divides projects into two wide categories: those likely by their nature to give rise to significant effects on the environment and those which will not necessarily do so in all cases. Article 4(2) thus provides:

'Projects of the classes listed in Annex II shall be made subject to an assessment, in accordance with Articles 5 to 10, where Member States consider that their characteristics so require.

To this end Member States may inter alia specify certain types of projects as being subject to an assessment or may establish the criteria and/or thresholds necessary to determine which of the projects of the classes listed in Annex II are to be subject to an assessment in accordance with Articles 5 to 10.'

7 Point 2(c) of Annex II to the directive refers to projects for 'extraction of minerals other than metalliferous and energy-producing minerals, such as marble, sand, gravel, shale, salt, phosphates and potash'.

National legislation

8 Prior to the Town and Country Planning Act 1947, the Town and Country Planning (General Interim Development) Order 1946 empowered the competent authorities to grant, by interim development orders, consents for mineral

extraction ('old mining permissions') in order to respond to the need for construction materials which arose during the period immediately following World War II.

9 Since then, the Town and Country Planning Act, as enacted in 1947 and in its subsequent versions, has constituted the principal legal instrument relating to land planning in the United Kingdom.

10 The Act lays down general rules concerning both the grant of planning permission and the modification or revocation of such permission.

11 Thus, under sections 97 and 100 of the Town and Country Planning Act 1990, the competent authorities have the power to revoke or modify any permission on planning grounds. The power to revoke a permission may be exercised at any time before the operations authorised have been completed.

12 By virtue of paragraphs 1 and 11 of Schedule 9 to the Town and Country Planning 1990, the competent authorities may by order require discontinuance of the use of land for the winning and working of minerals or impose certain conditions on the continuance of such use.

13 Section 22 of the Planning and Compensation Act 1991 lays down a special set of rules for old mining permissions.

14 Section 22(3) of the Planning and Compensation Act 1991 provides that if no development has, at any time in the period of two years ending on 1 May 1991, been carried out to any substantial extent, operations may not resume until 'the conditions to which the [old mining] permission is to be subject' have been determined and registered in accordance with section 22(2). On the other hand, if no application for registration is made before 25 March 1992, the old mining permission will cease to have effect (section 22(4) of the Act and paragraph 1(3) of Schedule 2 thereto).

15 Schedule 2 to the Planning and Compensation Act 1991 describes in detail the procedures for determining the registration conditions.

16 Under paragraphs 1 and 2 of Schedule 2 to the Planning and Compensation Act 1991, applications for registration and for determination of planning conditions are to be made to the competent mineral planning authority (hereinafter 'MPA').

17 If the conditions determined by the MPA differ from those set out in the application, the applicant may appeal to the Secretary of State (paragraph 5(2) of Schedule 2 to the Planning and Compensation Act 1991).

18 In accordance with section 22(7) of the Planning and Compensation Act 1991, the provisions relating to old mining permissions are to have effect as if they were included in the Town and Country Planning Act 1990. That presumption has the effect of integrating the provisions relating to old mining permissions into the general land use planning regime, in so far as no specific provision was adopted in the Planning and Compensation Act 1991.

19 Under the Town and Country Planning (Assessment of Environmental Effects) Regulations 1988, mining permissions granted pursuant to the Town and Country Planning Act 1990 are subject to environmental impact assessment in accordance with Directive 85/337. The regime prescribed in section 22 of the Planning and Compensation Act 1991 for old mining permissions was not, on the other hand, considered to be subject to such an environmental impact assessment procedure.

The main proceedings and the questions referred for a preliminary ruling

20 In 1947 an old mining permission was granted for Conygar Quarry by interim development order under the Town and Country Planning (General Interim Development) Order 1946.

21 Conygar Quarry is divided into two sections, of slightly more than 7.5 hectares each, separated by a road on which Mrs Wells's house is situated. Mrs Wells bought her house in 1984, that is to say 37 years after the permission had been granted, but at a time when the quarry had long since been dormant. However, in June 1991 operations recommenced for a short period.

22 The site is recognised to be environmentally extremely sensitive. The area in or adjacent to which the quarry lies is subject to several designations of nature and environmental conservation importance.

23 At the beginning of 1991, the owners of Conygar Quarry applied to the competent MPA for registration of the old mining permission under the Planning and Compensation Act 1991.

24 Registration was granted by a decision of 24 August 1992, which stated that no development could lawfully be carried out unless and until an application for the determination of new planning conditions had been made to the MPA and finally determined ('the registration decision').

25 The owners of Conygar Quarry therefore applied to the competent MPA for determination of new planning conditions.

26 After the MPA, by decision of 22 December 1994, had imposed more stringent conditions than those submitted by the owners of Conygar Quarry, the latter exercised their right of appeal to the Secretary of State.

27 By decision of 25 June 1997 (hereinafter, together with the decision of 22 December 1994, 'the decision determining new conditions'), the Secretary of State imposed 54 planning conditions, leaving some matters to be decided by the competent MPA.

28 Those matters were approved by the competent MPA by decision of 8 July 1999 (hereinafter 'the decision approving matters reserved by the new conditions').

29 Neither the Secretary of State nor the competent MPA examined whether it was necessary to carry out an environmental impact assessment pursuant to Directive 85/337. At no time was a formal environmental statement considered.

30 By letter of 10 June 1999, Mrs Wells requested the Secretary of State to take appropriate action, namely revocation or modification of the planning permission, to remedy the lack of an environmental impact assessment in the consent procedure. Since she received no reply to her request, she brought proceedings before the High Court of Justice.

31 Pursuant to an undertaking given to the High Court at the first hearing, the Secretary of State, by letter of 28 March 2001, provided a reasoned response to Mrs Wells's letter, in which he declined to revoke or modify the planning permission. Mrs Wells then amended her initial application to include a challenge to the decision contained in the letter of 28 March 2001.

32 Since the High Court of Justice of England and Wales, Queen's Bench Division (Administrative Court), considered that interpretation of Community law was needed in the case before it, it decided to stay proceedings and refer the following questions to the Court of Justice for a preliminary ruling:

'[1] Whether an approval of a new set of conditions on an existing permission granted by an Interim Development Order ("old mining permission") pursuant to section 22 and Schedule 2 of the Planning and Compensation Act 1991 is a "development consent" for the purposes of the EIA [Environmental Impact Assessment] Directive.

[2] Whether, following the approval of a new scheme of conditions on an IDO "old mining permission" under the Planning and Compensation Act 1991, the approval of further matters required under the new scheme of conditions is itself capable of being a "development consent" for the purposes of the EIA Directive.

[3] If the answer to [1.] is "yes" but [2.] is "no", is the Member State nevertheless under a continuing duty to remedy its failure to require EIA, and if so, how?

[4] Whether (i) it is open to individual citizens to challenge the State's failure to require EIA, or whether (ii) that may be prohibited under the limitations imposed by the Court on the doctrine of direct effect e.g. by "horizontal direct effect" or by the imposition of burdens or obligations on individuals by an emanation of the State.

[5] If the answer to [4.](ii) is "yes" what are the limits of such prohibitions on direct effect in the present circumstances and what steps may the UK lawfully take consistent with the EIA Directive?'

Consideration of the questions referred for a preliminary ruling

The first and second questions: the obligation to carry out an environmental impact assessment

33 By its first two questions, which it is appropriate to consider together, the referring court essentially asks whether Article 2(1) of Directive 85/337, read in

conjunction with Article 4(2) thereof, is to be interpreted as meaning that, in the context of applying provisions such as section 22 of the Planning and Compensation Act 1991 and Schedule 2 to that Act, the decisions adopted by the competent authorities, whose effect is to permit the resumption of mining operations, involve a 'development consent' within the meaning of Article 1(2) of that directive, so that the competent authorities are obliged, where appropriate, to carry out an assessment of the environmental effects of such operations.

Classification as a 'development consent'

— Admissibility

34 While recognising that Community law favours giving an autonomous interpretation to concepts used in Community measures, the Commission contends that in Case C-81/96 *Gedeputeerde Staten van Noord-Holland* [1998] ECR I-3923 the Court held that the question of when 'development consent' is granted is a question of national law. In the Commission's submission, the Court did not resile from that position in Case C-435/97 *WWF and Others* [1999] ECR I-5613 and Case C-287/98 *Linster* [2000] ECR I-6917. The question whether certain procedural measures in national law are development consents for the purpose of Directive 85/337 is therefore inadmissible.

35 As to that, a question referred by a national court for a preliminary ruling is inadmissible only if it is quite obvious that the question does not concern the interpretation of Community law or that it is hypothetical (see, inter alia, Case C-83/91 *Meilicke* [1992] ECR I-4871, paragraphs 25 and 32, Case C-62/93 *BP Supergas* [1995] ECR I-1883, paragraph 10, and Case C-143/94 *Furlanis* [1995] ECR I-3633, paragraph 12).

36 That is not the case here.

37 The question whether the decision determining new conditions and the decision approving matters reserved by the new conditions constitute development consent within the meaning of Article 1(2) of Directive 85/337 is a question concerning the interpretation of Community law. The Court has consistently held that, in light of both the principle that Community law should be applied uniformly and the principle of equality, the terms of a provision of Community law which makes no express reference to the law of the Member States for the purpose of determining its meaning and scope is normally to be given throughout the Community an autonomous and uniform interpretation which must take into account the context of the provision and the purpose of the legislation in question (Case 327/82 *Ekro* [1984] ECR 107, paragraph 11, and *Linster*, cited above, paragraph 43).

38 Accordingly, the question whether the decision determining new conditions and the decision approving matters reserved by the new conditions constitute development consent within the meaning of Article 1(2) of Directive 85/337 is admissible.

— Substance

39 The United Kingdom Government contends that neither the decision determining new conditions nor the decision approving matters reserved by the new conditions constitutes development consent within the meaning of Article 1(2) of Directive 85/337.

40 It states with regard to the decision determining new conditions that development was authorised many years before Directive 85/337 created obligations for the Member States. The determination of conditions under the Planning and Compensation Act 1991 involves merely the detailed regulation of activities for which the principal consent has already been given. In the United Kingdom Government's submission, the reasoning with regard to the decision determining new conditions and the decision approving matters reserved by the new conditions is therefore the same as in 'pipeline' cases (see paragraph 43 of this judgment). For reasons of legal certainty, the directive does not apply to such projects.

41 As regards the decision approving matters reserved by the new conditions, the United Kingdom Government observes that the decision likely to affect the environment had already been taken and the approval of details may not extend beyond the parameters set by the initial determination of the scheme of planning conditions.

42 As to those submissions, under Article 2(1) of Directive 85/337 projects likely to have significant effects on the environment, as referred to in Article 4 of the directive read in conjunction with Annexes I and II thereto, must be made subject to an assessment with regard to such effects before consent is given.

43 This does not apply only where consent was granted before 3 July 1988 (an old consent), that is to say before the time-limit laid down for implementation of Directive 85/337, or where consent was granted after 3 July 1988 but the consent procedure was initiated before that date ('pipeline' projects) (see, to this effect, Case C-431/92 *Commission* v *Germany* [1995] ECR I-2189, paragraph 32, and

Gedeputeerde Staten van Noord-Holland, cited above, paragraph 23). The directive thus requires an assessment of the environmental effects of the project in question in the case of new consents.

44 In the main proceedings, the owners of Conygar Quarry were obliged under the Planning and Compensation Act 1991, if they wished to resume working of the quarry, to have the old mining permission registered and to seek decisions determining new planning conditions and approving matters reserved by those conditions. Had they not done so, the permission would have ceased to have effect.

45 Without new decisions such as those referred to in the previous paragraph, there would no longer have been 'consent', within the meaning of Article 2(1) of Directive 85/337, to work the quarry.

46 It would undermine the effectiveness of that directive to regard as mere modification of an existing 'consent' the adoption of decisions which, in circumstances such as those of the main proceedings, replace not only the terms but the very substance of a prior consent, such as the old mining permission.

47 Accordingly, decisions such as the decision determining new conditions and the decision approving matters reserved by the new conditions for the working of Conygar Quarry must be considered to constitute, as a whole, a new 'consent' within the meaning of Article 2(1) of Directive 85/337, read in conjunction with Article 1(2) thereof.

48 It should be added that, since those decisions were adopted on 25 June 1997 and 8 July 1999 respectively, an old consent granted before 3 July 1988 is not in issue. Nor is this a 'pipeline' case since the applications leading to the decisions were submitted in 1993 or 1994 and in 1997 or 1998 respectively.

The time at which the environmental impact assessment must be carried out

49 Given that, in the context of a consent procedure comprising several stages, merely establishing that there is a 'development consent' within the meaning of Directive 85/337 cannot provide the referring court with a complete answer as regards the obligation on Member States to carry out an assessment of the environmental effects of the project at issue, it is necessary to consider the question as to when such an assessment must be carried out.

50 As provided in Article 2(1) of Directive 85/337, the environmental impact assessment must be carried out 'before consent is given'.

51 According to the first recital in the preamble to the directive, the competent authority is to take account of the environmental effects of the project in question 'at the earliest possible stage' in the decision-making process.

52 Accordingly, where national law provides that the consent procedure is to be carried out in several stages, one involving a principal decision and the other involving an implementing decision which cannot extend beyond the parameters

set by the principal decision, the effects which the project may have on the environment must be identified and assessed at the time of the procedure relating to the principal decision. It is only if those effects are not identifiable until the time of the procedure relating to the implementing decision that the assessment should be carried out in the course of that procedure.

53 The answer to the first two questions must therefore be that Article 2(1) of Directive 85/337, read in conjunction with Article 4(2) thereof, is to be interpreted as meaning that, in the context of applying provisions such as section 22 of the Planning and Compensation Act 1991 and Schedule 2 to that Act, the decisions adopted by the competent authorities, whose effect is to permit the resumption of mining operations, comprise, as a whole, a 'development consent' within the meaning of Article 1(2) of that directive, so that the competent authorities are obliged, where appropriate, to carry out an assessment of the environmental effects of such operations.

In a consent procedure comprising several stages, that assessment must, in principle, be carried out as soon as it is possible to identify and assess all the effects which the project may have on the environment.

The fourth and fifth questions: the ability of individuals to invoke the provisions of Directive 85/337

54 By its fourth and fifth questions, which it is appropriate to consider together, the referring court essentially asks whether, in circumstances such as those of the main proceedings, an individual may, where appropriate, rely on Article 2(1) of Directive 85/337, read in conjunction with Articles 1(2) and 4(2) thereof, or whether the principle of legal certainty precludes such an interpretation.

The 'direct effect' of Article 2(1) of Directive 85/337, read in conjunction with Articles 1(2) and 4(2)

55 According to the United Kingdom Government, acceptance that an individual is entitled to invoke Article 2(1) of Directive 85/337, read in conjunction with Articles 1(2) and 4(2) thereof, would amount to 'inverse direct effect' directly obliging the Member State concerned, at the request of an individual, such as Mrs Wells, to deprive another individual or individuals, such as the owners of Conygar Quarry, of their rights.

56 As to that submission, the principle of legal certainty prevents directives from creating obligations for individuals. For them, the provisions of a directive can only create rights (see Case 152/84 *Marshall* [1986] ECR 723, paragraph 48). Consequently, an individual may not rely on a directive against a Member State where it is a matter of a State obligation directly linked to the performance of another obligation falling, pursuant to that directive, on a third party (see, to this effect, Case C-221/88 *Busseni* [1990] ECR I-495, paragraphs 23 to 26, and Case C-97/96 *Daihatsu Deutschland* [1997] ECR I-6843, paragraphs 24 and 26).

57 On the other hand, mere adverse repercussions on the rights of third parties, even if the repercussions are certain, do not justify preventing an individual from invoking the provisions of a directive against the Member State concerned (see to this effect, in particular, Case 103/88 *Fratelli Costanzo* [1989] ECR 1839, paragraphs 28 to 33, *WWF and Others*, cited above, paragraphs 69 and 71, Case C-194/94 *CIA Security International* [1996] ECR I-2201, paragraphs 40 to 55, Case C-201/94 *Smith & Nephew and Primecrown* [1996] ECR I-5819, paragraphs 33 to 39, and Case C-443/98 *Unilever* [2000] ECR I-7535, paragraphs 45 to 52).

58 In the main proceedings, the obligation on the Member State concerned to ensure that the competent authorities carry out an assessment of the environmental effects of the working of the quarry is not directly linked to the performance of any obligation which would fall, pursuant to Directive 85/337, on the quarry owners. The fact that mining operations must be halted to await the results of the assessment is admittedly the consequence of the belated performance of that State's obligations. Such a consequence cannot, however, as the United Kingdom claims, be described as 'inverse direct effect' of the provisions of that directive in relation to the quarry owners.

The period that elapsed between the decision determining new conditions and Mrs Wells's request that the situation be remedied

59 The United Kingdom Government further submits that the considerable period which has elapsed since the decision determining new conditions in 1997 renders revocation of that decision contrary to the principle of legal certainty. The claimant in the main proceedings should have challenged the decision in due time before the competent court.

60 As to that submission, the final stage of the planning consent procedure was not completed when the claimant in the main proceedings submitted her request to the Secretary of State. It cannot therefore be contended that revocation of the consent would have been contrary to the principle of legal certainty.

61 Accordingly, the answer to the fourth and fifth questions must be that, in circumstances such as those of the main proceedings, an individual may, where appropriate, rely on Article 2(1) of Directive 85/337, read in conjunction with Articles 1(2) and 4(2) thereof.

The third question: the obligation to remedy the failure to carry out an environmental impact assessment

62 By its third question, the referring court essentially seeks to ascertain the scope of the obligation to remedy the failure to carry out an assessment of the environmental effects of the project in question.

63 The United Kingdom Government contends that, in the circumstances of the main proceedings, there is no obligation on the competent authority to revoke or modify the permission issued for the working of Conygar Quarry or to order discontinuance of the working.

64 As to that submission, it is clear from settled case-law that under the principle of cooperation in good faith laid down in Article 10 EC the Member States are required to nullify the unlawful consequences of a breach of Community law (see, in particular, Case 6/60 *Humblet* [1960] ECR 559, at 569, and Joined Cases C-6/90 and C-9/90 *Francovich and Others* [1991] ECR I-5357, paragraph 36). Such an obligation is owed, within the sphere of its competence, by every organ of the Member State concerned (see, to this effect, Case C-8/88 *Germany* v *Commission* [1990] ECR I-2321, paragraph 13).

65 Thus, it is for the competent authorities of a Member State to take, within the sphere of their competence, all the general or particular measures necessary to ensure that projects are examined in order to determine whether they are likely to have significant effects on the environment and, if so, to ensure that they are subject to an impact assessment (see, to this effect, Case C-72/95 *Kraaijeveld and Others* [1996] ECR I-5403, paragraph 61, and *WWF and Others*, cited above, paragraph 70). Such particular measures include, subject to the limits laid down

by the principle of procedural autonomy of the Member States, the revocation or suspension of a consent already granted, in order to carry out an assessment of the environmental effects of the project in question as provided for by Directive 85/337.

66 The Member State is likewise required to make good any harm caused by the failure to carry out an environmental impact assessment.

67 The detailed procedural rules applicable are a matter for the domestic legal order of each Member State, under the principle of procedural autonomy of the Member States, provided that they are not less favourable than those governing similar domestic situations (principle of equivalence) and that they do not render impossible in practice or excessively difficult the exercise of rights conferred by the Community legal order (principle of effectiveness) (see to this effect, inter alia, Case C-312/93 *Peterbroeck* [1995] ECR I-4599, paragraph 12, and Case C-78/98 *Preston and Others* [2000] ECR I-3201, paragraph 31).

68 So far as the main proceedings are concerned, if the working of Conygar Quarry should have been subject to an assessment of its environmental effects in accordance with the requirements of Directive 85/337, the competent authorities are obliged to take all general or particular measures for remedying the failure to carry out such an assessment.

69 In that regard, it is for the national court to determine whether it is possible under domestic law for a consent already granted to be revoked or suspended in order to subject the project in question to an assessment of its environmental effects, in accordance with the requirements of Directive 85/337, or alternatively, if the individual so agrees, whether it is possible for the latter to claim compensation for the harm suffered.

70 The answer to the third question must therefore be that under Article 10 EC the competent authorities are obliged to take, within the sphere of their competence, all general or particular measures for remedying the failure to carry out an assessment of the environmental effects of a project as provided for in Article 2(1) of Directive 85/337.

The detailed procedural rules applicable in that context are a matter for the domestic legal order of each Member State, under the principle of procedural autonomy of the Member States, provided that they are not less favourable than those governing similar domestic situations (principle of equivalence) and that they do not render impossible in practice or excessively difficult the exercise of rights conferred by the Community legal order (principle of effectiveness).

In that regard, it is for the national court to determine whether it is possible under domestic law for a consent already granted to be revoked or suspended in order to subject the project to an assessment of its environmental effects, in accordance with the requirements of Directive 85/337, or alternatively, if the individual so agrees, whether it is possible for the latter to claim compensation for the harm suffered.

Costs

71 The costs incurred by the United Kingdom Government and the Commission, which have submitted observations to the Court, are not recoverable. Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the referring court, the decision on costs is a matter for that court.

On those grounds,

THE COURT (Fifth Chamber),

in answer to the questions referred to it by the High Court of Justice of England and Wales, Queen's Bench Division (Administrative Court), by order of 12 February 2002, hereby rules:

1. Article 2(1) of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment, read in conjunction with Article 4(2) thereof, is to be interpreted as meaning that, in the context of applying provisions such as section 22 of the Planning and Compensation Act 1991 and Schedule 2 to that Act, the decisions adopted by the competent authorities, whose effect is to permit the resumption of mining operations, comprise, as a whole, a 'development consent' within the meaning of Article 1(2) of that directive, so that the competent authorities are obliged, where appropriate, to carry out an assessment of the environmental effects of such operations.

   In a consent procedure comprising several stages, that assessment must, in principle, be carried out as soon as it is possible to identify and assess all the effects which the project may have on the environment.

2. In circumstances such as those of the main proceedings, an individual may, where appropriate, rely on Article 2(1) of Directive 85/337, read in conjunction with Articles 1(2) and 4(2) thereof.

3. Under Article 10 EC the competent authorities are obliged to take, within the sphere of their competence, all general or particular measures for remedying the failure to carry out an assessment of the environmental effects of a project as provided for in Article 2(1) of Directive 85/337.

The detailed procedural rules applicable in that context are a matter for the domestic legal order of each Member State, under the principle of procedural autonomy of the Member States, provided that they are not less favourable than those governing similar domestic situations (principle of equivalence) and that they do not render impossible in practice or excessively difficult the exercise of rights conferred by the Community legal order (principle of effectiveness).

In that regard, it is for the national court to determine whether it is possible under domestic law for a consent already granted to be revoked or suspended in order to subject the project to an assessment of its environmental effects, in accordance with the requirements of Directive 85/337, or alternatively, if the individual so agrees, whether it is possible for the latter to claim compensation for the harm suffered.

JUDGMENT OF THE COURT (Third Chamber)

14 June 2001 *

In Case C-230/00,

Commission of the European Communities, represented by H. van Lier, acting as Agent, assisted by M.H. van der Woude and T.E.M. Chellingsworth, lawyers, with an address for service in Luxembourg,

applicant,

v

Kingdom of Belgium, represented by A. Snoecx, acting as Agent,

defendant,

APPLICATION for a declaration that, by failing to adopt the laws, regulations and administrative provisions necessary to implement fully the following:

* Language of the case: Dutch.

— Council Directive 75/442/EEC of 15 July 1975 on waste (OJ 1975 L 194, p. 39), as amended by Council Directive 91/156/EEC of 18 March 1991 (OJ 1991 L 78, p. 32),

— Council Directive 76/464/EEC of 4 May 1976 on pollution caused by certain dangerous substances discharged into the aquatic environment of the Community (OJ 1976 L 129, p. 23),

— Council Directive 80/68/EEC of 17 December 1979 on the protection of groundwater against pollution caused by certain dangerous substances (OJ 1980 L 20, p. 43),

— Council Directive 84/360/EEC of 28 June 1984 on the combating of air pollution from industrial plants (OJ 1984 L 188, p. 20), and

— Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40),

the Kingdom of Belgium has failed to fulfil its obligations under Articles 9 of Directive 75/442, 3, 4, 5, and 7 of Directive 76/464, 3, 4, 5, 7 and 10 of Directive 80/68, 3, 4, 9 and 10 of Directive 84/360, 2 and 8 of Directive 85/337 and Article 189 of the EC Treaty (now Article 249 EC),

THE COURT (Third Chamber),

composed of: C. Gulmann, President of the Chamber, J.-P. Puissochet and J.N. Cunha Rodrigues (Rapporteur), Judges,

Advocate General: J. Mischo,
Registrar: R. Grass,

having regard to the report of the Judge-Rapporteur,

after hearing the Opinion of the Advocate General at the sitting on 8 March 2001,

gives the following

Judgment

1 By application lodged at the Registry of the Court on 9 June 2000, the Commission of the European Communities brought an action under Article 226 EC for a declaration that, by failing to adopt the laws, regulations and administrative provisions necessary to implement fully:

— Council Directive 75/442/EEC of 15 July 1975 on waste (OJ 1975 L 194, p. 39), as amended by Council Directive 91/156/EEC of 18 March 1991 (OJ 1991 L 78, p. 32),

— Council Directive 76/464/EEC of 4 May 1976 on pollution caused by certain dangerous substances discharged into the aquatic environment of the Community (OJ 1976 L 129, p. 23),

— Council Directive 80/68/EEC of 17 December 1979 on the protection of groundwater against pollution caused by certain dangerous substances (OJ 1980 L 20, p. 43),

— Council Directive 84/360/EEC of 28 June 1984 on the combating of air pollution from industrial plants (OJ 1984 L 188, p. 20), and

— Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40),

the Kingdom of Belgium has failed to fulfil its obligations under Articles 9 of Directive 75/442, 3, 4, 5, and 7 of Directive 76/464, 3, 4, 5, 7 and 10 of Directive 80/68, 3, 4, 9 and 10 of Directive 84/360, 2 and 8 of Directive 85/337 and Article 189 of the EC Treaty (now Article 249 EC).

Legal context

2 Directives 75/442, 76/464, 80/68 and 84/360 require the Member States to take the necessary measures to ensure that the activities or industrial plants which they regulate are subjected to prior authorisation.

3 Article 2 of Directive 85/337 provides that the Member States are to adopt all measures necessary to ensure that projects likely to have significant effects on the environment are made subject to an assessment of such effects prior to the grant of authorisation.

4 The provisions of Belgian law which were intended to implement Directives 75/442, 76/464, 80/68, 84/360 and 85/337 imposed a requirement to seek authorisation. However, some of the provisions, particularly those contained in the rules of the Regions of Flanders and Wallonia, provide for a system of tacit grant and refusal of authorisation.

5 If the first-level competent authority does not determine a request for authorisation, it is deemed to have been refused. On the other hand, at second level, in the absence of a decision by the competent authority within the time allowed, authorisation is deemed to have been granted. Such is, essentially, the system laid down in Articles 34 to 42 and 49 to 55 of the Order of the Flemish Government of 6 February 1991 enacting the regulations concerning environmental consent (*Moniteur belge* of 26 June 1991, p. 14269), and in Article 11 of the Decree of the Walloon Regional Council of 27 June 1996 on waste (*Moniteur belge* of 2 August 1996, p. 20685).

Pre-litigation procedure

6 Taking the view that the Kingdom of Belgium had not properly implemented Directives 75/442, 76/464, 80/68, 84/360 and 85/337, by letter of 6 July 1998, the Commission gave the Member State an opportunity to submit its observations in accordance with the procedure laid down in the Treaty in respect of the failure by a Member State to fulfil its obligations.

7 Since no reply to that letter was received, the Commission sent a reasoned opinion to the Kingdom of Belgium on 18 December 1998.

8 On 6 January 1999 the Commission received a letter from the Belgian Government to which was attached a letter from the Flemish Government of 8 December 1998. In this, the Flemish authorities submitted the observations requested in the Commission's letter of 6 July 1998, emphasising particularly the limited field of application of tacit authorisation and the small number of such authorisations issued. The Flemish Government added that all the competent authorities and all the consultative bodies concerned were well aware of the consequences of the lack of a decision so that they always ensured that every request for authorisation was subjected to a thorough examination.

9 The reply of the Flemish Government to the reasoned opinion, which was received by the Commission on 15 March 1999, repeated the arguments set out in its letter of 8 December 1998. The Regional Government added, however, that tacit authorisation did not imply passive assessment or neglect on the part of the competent authority, as each request for authorisation gave rise to a detailed assessment.

10 Taking the view that the Kingdom of Belgium had not taken all the measures necessary to comply with the reasoned opinion, the Commission decided to bring the present action.

Substance

11 The Commission submits that the Court has already held that a system of tacit authorisation is incompatible with the requirements of Directive 80/68 (Case C-360/87 *Commission* v *Italy* [1991] ECR I-791, paragraph 31). That case-law should also apply to the authorisation referred to in Directives 75/442, 76/464, 84/360 and 85/337.

12 The system of tacit authorisation described in paragraph 5 of this judgment is therefore, according to the Commission, incompatible with the provisions of the directives in question.

13 Without disputing the failure of which it is accused, the Kingdom of Belgium confines itself to pointing out, in its defence, that the Flemish Government is in the process of preparing a draft decree on this subject and that the Walloon Government has adopted two preliminary drafts of orders, as well as various measures implementing the Decree of 11 March 1999 relating to environmental consents (*Moniteur belge* of 8 June 1999, p. 21101).

14 In this respect it should be noted that the Court has held, in respect of Directive 80/68, that it 'requires that after each investigation and in the light of the results thereof an express measure, either prohibition or authorisation, must be adopted' (Case C-131/88 *Commission* v *Germany* [1991] ECR I-825, paragraph 38).

15 Moreover, as was pointed out at paragraph 52 of the judgment in Case C-287/98 *Linster* [2000] ECR I-6917, the essential aim of Directive 85/337 'is that, before consent is given, projects likely to have significant effects on the environment by virtue, *inter alia*, of their nature, size or location should be made subject to an assessment with regard to their effects'.

16 It follows from that case-law that tacit authorisation cannot be compatible with the requirements of the directives referred to in this action because they prescribe, in the case of Directives 75/442, 76/464, 80/68 and 84/360, systems of prior authorisation, and, in the case of Directive 85/337, assessment procedures preceding the grant of authorisation. The national authorities are therefore required under each of those directives to examine individually every request for authorisation.

17 As for the additional implementing measures which the Regions of Flanders and Wallonia are in the course of adopting, it is appropriate to point out that under the third paragraph of Article 189 of the Treaty, directives are binding upon each Member State to which they are addressed as to the result to be achieved. It follows from settled case-law that that obligation requires compliance with the time-limits set by directives (see, among others, Case 10/76 *Commission* v *Italy* [1976] ECR 1359, paragraphs 11 and 12, and Case C-176/00 *Commission* v *Greece* [2001] ECR I-2063, paragraph 7).

18 In those circumstances it must be held that, by failing to adopt the laws, regulations and administrative provisions necessary to implement fully Directives 75/442, 76/464, 80/68, 84/360 and 85/337, the Kingdom of Belgium has failed to fulfil its obligations under Articles 9 of Directive 75/442, 3, 4, 5 and 7 of Directive 76/464, 3, 4, 5, 7 and 10 of Directive 80/68, 3, 4, 9 and 10 of Directive 84/360 and 2 and 8 of Directive 85/337.

Costs

19 Under Article 69(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. Since the Commission has applied for costs and the Kingdom of Belgium has been unsuccessful, the latter must be ordered to pay the costs.

On those grounds,

THE COURT (Third Chamber)

hereby:

1. Declares that by failing to adopt the laws, regulations and administrative provisions necessary to implement fully:

— Council Directive 75/442/EEC of 15 July 1975 on waste, as amended by Council Directive 91/156/EEC of 18 March 1991,

— Council Directive 76/464/EEC of 4 May 1976 on pollution caused by certain dangerous substances discharged into the aquatic environment of the Community,

— Council Directive 80/68/EEC of 17 December 1979 on the protection of groundwater against pollution caused by certain dangerous substances,

— Council Directive 84/360/EEC of 28 June 1984 on the combating of air pollution from industrial plants, and

— Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment,

the Kingdom of Belgium has failed to fulfil its obligations under Articles 9 of Directive 75/442, as amended by Directive 91/156, 3, 4, 5, and 7 of Directive 76/464, 3, 4, 5, 7 and 10 of Directive 80/68, 3, 4, 9 and 10 of Directive 84/360 and 2 and 8 of Directive 85/337.

2. Orders the Kingdom of Belgium to pay the costs.

JUDGMENT OF THE COURT (Fifth Chamber)

21 September 1999 *

In Case C-392/96,

Commission of the European Communities, represented by Richard B. Wainwright, Principal Legal Adviser, acting as Agent, with an address for service in Luxembourg at the office of Carlos Gómez de la Cruz, of its Legal Service, Wagner Centre, Kirchberg,

applicant,

v

Ireland, represented by Michael A. Buckley, Chief State Solicitor, acting as Agent, Philip O'Sullivan SC and Niamh Hyland BL, with an address for service in Luxembourg at the Irish Embassy, 28 Route d'Arlon,

defendant,

APPLICATION for a declaration that, by failing to adopt all the necessary measures to ensure the correct transposition of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40), Ireland has failed to fulfil its

* Language of the case: English.

obligations under that directive, in particular Article 12 thereof, and under the EC Treaty,

THE COURT (Fifth Chamber),

composed of: J.-P. Puissochet, President of the Chamber, J.C. Moitinho de Almeida, C. Gulmann, D.A.O. Edward and L. Sevón (Rapporteur), Judges,

Advocate General: A. La Pergola,

Registrar: L. Hewlett, Administrator,

having regard to the Report for the Hearing,

after hearing oral argument from the parties at the hearing on 24 September 1998, at which the Commission was represented by Richard B. Wainwright and the Irish Government by James Connolly SC and Niamh Hyland,

after hearing the Opinion of the Advocate General at the sitting on 17 December 1998,

gives the following

Judgment

1 By application lodged at the Court Registry on 5 December 1996, the Commission of the European Communities brought an action under Article 169 of the EC Treaty (now Article 226 EC) for a declaration that, by failing to adopt all the necessary measures to ensure the correct transposition of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40, hereinafter 'the Directive'), Ireland has failed to fulfil its obligations under the Directive, in particular Article 12 thereof, and under the EC Treaty.

2 The Commission alleges that Ireland has incorrectly transposed Article 4(2) of the Directive and points 1(b) and (d) and 2(a) of Annex II thereto, as well as Articles 2(3), 5 and 7.

3 Article 2(1) of the Directive specifies the types of projects which are to be subject to an assessment:

'Member States shall adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment by virtue *inter alia* of their nature, size or location are made subject to an assessment with regard to their effects.

These projects are defined in Article 4.'

4 An assessment is always required for certain projects, set out in Annex I to the Directive.

5 As regards other types of projects, Article 4(2) provides:

'Projects of the classes listed in Annex II shall be made subject to an assessment, in accordance with Articles 5 to 10, where Member States consider that their characteristics so require.

To this end Member States may *inter alia* specify certain types of projects as being subject to an assessment or may establish the criteria and/or thresholds necessary to determine which of the projects of the classes listed in Annex II are to be subject to an assessment in accordance with Articles 5 to 10.'

6 Annex II lists a number of projects, including:

'1. Agriculture

...

(b) Projects for the use of uncultivated land or semi-natural areas for intensive agricultural purposes;

...

(d) Initial afforestation where this may lead to adverse ecological changes and land reclamation for the purposes of conversion to another type of land use;

...

2. Extractive industry

(a) Extraction of peat

...'

7 Article 2(3) of the Directive states:

'Member States may, in exceptional cases, exempt a specific project in whole or in part from the provisions laid down in this Directive.

In this event, the Member States shall:

(a) consider whether another form of assessment would be appropriate and whether the information thus collected should be made available to the public;

(b) make available to the public concerned the information relating to the exemption and the reasons for granting it;

(c) inform the Commission, prior to granting consent, of the reasons justifying the exemption granted, and provide it with the information made available, where appropriate, to their own nationals.

The Commission shall immediately forward the documents received to the other Member States.

The Commission shall report annually to the Council on the application of this paragraph.'

8 Article 3 provides that an environmental impact assessment is to identify, describe and assess the direct and indirect effects of a project, in particular on human beings, fauna and flora, soil, water, air, climate, landscape, material assets and cultural heritage.

9 Article 5 states:

'1. In the case of projects which, pursuant to Article 4, must be subjected to an environmental impact assessment in accordance with Articles 5 to 10, Member

States shall adopt the necessary measures to ensure that the developer supplies in an appropriate form the information specified in Annex III inasmuch as:

(a) the Member States consider that the information is relevant to a given stage of the consent procedure and to the specific characteristics of a particular project or type of project and of the environmental features likely to be affected;

(b) the Member States consider that a developer may reasonably be required to compile this information having regard *inter alia* to current knowledge and methods of assessment.

2. The information to be provided by the developer in accordance with paragraph 1 shall include at least:

— a description of the project comprising information on the site, design and size of the project,

— a description of the measures envisaged in order to avoid, reduce and, if possible, remedy significant adverse effects,

— the data required to identify and assess the main effects which the project is likely to have on the environment,

— a non-technical summary of the information mentioned in indents 1 to 3.

3. Where they consider it necessary, Member States shall ensure that any authorities with relevant information in their possession make this information available to the developer.'

10 Article 7 provides:

'Where a Member State is aware that a project is likely to have significant effects on the environment in another Member State or where a Member State likely to be significantly affected so requests, the Member State in whose territory the project is intended to be carried out shall forward the information gathered pursuant to Article 5 to the other Member State at the same time as it makes it available to its own nationals. Such information shall serve as a basis for any consultations necessary in the framework of the bilateral relations between two Member States on a reciprocal and equivalent basis.'

11 Under Article 12(1) of the Directive, the Member States had to take the measures necessary to comply with the Directive within three years of its notification. As the Directive was notified on 3 July 1985, that period expired on 3 July 1988.

12 Since the Commission considered that Ireland had not transposed the Directive correctly, on 13 October 1989 it sent a first letter of formal notice, in which it alleged that Articles 2 and 4 of the Directive had been inadequately transposed, having regard to the projects listed in Annexes I and II, and that Articles 5 to 9 had not been transposed.

13 In reply to that letter, Ireland sent the text of two legislative measures:

— the European Communities (Environmental Impact Assessment) Regulations, 1989 (S.I. No 349 of 1989) (hereinafter 'S.I. No 349 of 1989'); and

— the Local Government (Planning and Development) Regulations, 1990 (S.I. No 25 of 1990) (hereinafter 'S.I. No 25 of 1990').

14 However, since the Commission took the view that this new legislation still did not produce a correct transposition of the Directive, it sent Ireland a further letter of formal notice on 7 November 1991.

15 By letter of 12 May 1992 Ireland replied that the provisions of the Directive were, in practice, complied with.

16 On 28 April 1993 the Commission, dissatisfied with that reply, sent Ireland a reasoned opinion in which it alleged, in particular, that Ireland had failed:

— to transpose properly Article 4(2) of the Directive and Annex II thereto;

— to make proper provision for exemptions under Article 2(3) of the Directive;

— to specify properly the information to be supplied by the developer in accordance with Article 5 of the Directive; and

— to make proper provision for the information to be supplied to other Member States in accordance with Article 7 of the Directive.

17 By letter of 20 August 1993 Ireland disputed some of the objections formulated in its regard. It then sent, by letter of 7 December 1994, the text of the Local Government (Planning and Development) Regulations 1994 and last, by letter of 7 May 1996, the text of the European Communities (Environmental Impact Assessment) (Amendment) Regulations, 1996 (S.I. No 101 of 1996) (hereinafter 'S.I. No 101 of 1996').

18 In addition, after the reasoned opinion had been sent, correspondence was exchanged regarding complaints related to classes of projects at issue in this action, namely Complaint No P 95/4724 concerning afforestation on Pettigo Plateau and Complaint No P 95/4219 concerning peat extraction, in particular from Clonfinane Bog.

Infringement of Article 4(2) of the Directive and points 1(b) and (d) and 2(a) of Annex II thereto

19 The Commission alleges that Ireland has transposed Article 4(2) of the Directive incorrectly by setting absolute thresholds for the classes of projects covered by points 1(b) (use of uncultivated land or semi-natural areas for intensive agricultural purposes), 1(d) (initial afforestation/land reclamation) and 2(a) (extraction of peat) of Annex II to the Directive. The absolute nature of the thresholds means that it is not possible to ensure that every project likely to have significant effects on the environment is subject to an impact assessment, because the mere fact that a project does not reach the threshold is sufficient for it not to

subjected to such assessment, regardless of its other characteristics. Under Article 4(2) of the Directive, however, account must be taken of all the characteristics of a project, not the single factor of size or capacity. Furthermore, Article 2(1) refers also to a project's nature and location as criteria for assessing whether it is likely to have significant environmental effects. The Commission considers that this analysis is consistent with the judgments of the Court in Case C-133/94 *Commission* v *Belgium* [1996] ECR I-2323 and in Case C-72/95 *Kraaijeveld and Others* v *Gedeputeerde Staten van Zuid-Holland* [1996] ECR I-5403.

20 According to the Commission, projects which do not exceed the thresholds set may none the less have significant environmental effects. Two factors are important in that regard.

21 The first factor is that certain sites which are particularly sensitive or valuable may be damaged by projects which do not exceed the thresholds set. That is the case with areas identified as valuable and important for nature conservation and areas of particular archaeological or geomorphological interest.

22 The second factor is that the legislation fails to take account of the cumulative effect of projects. A number of separate projects, which individually do not exceed the threshold set and therefore do not require an impact assessment may, taken together, have significant environmental effects.

23 The Commission considers that the setting of absolute thresholds for the classes of projects covered by points 1(b) (use of uncultivated land or semi-natural areas for intensive agricultural purposes), 1(d) (initial afforestation/land reclamation) and 2(a) (extraction of peat) of Annex II to the Directive infringes Article 4(2) because one or both factors apply. It gives a number of examples of projects which are likely to have, or have had, significant environmental effects but which have not been the subject of any impact assessment because of the absolute nature of the thresholds.

24 As regards projects for the use of uncultivated land or semi-natural areas for intensive agricultural purposes, covered by point 1(b) of Annex II to the Directive, the Commission challenges the threshold of 100 ha set by Article 24 of S.I. No 349 of 1989 and paragraph 1(a) of Part II of the First Schedule thereto, in conjunction with other provisions of the Irish legislation transposing the Directive. It states that 60 000 ha of semi-natural terrain in the west of Ireland have come to be used for intensive sheep farming and are suffering from serious degradation. The increase in sheep numbers should, in its view, have been the subject of an impact assessment, in which the intensity of use could have been determined by reference to a criterion of stocking density per hectare. Furthermore, 'project' is defined broadly in the Directive and also covers an 'intervention' relating to open land such as sheep grazing. Projects of that type have significant environmental effects in that they involve an alteration in uncultivated land or semi-natural areas through overgrazing which leads to soil degradation and erosion.

25 So far as concerns initial afforestation covered by point 1(d) of Annex II to the Directive, the Commission contests in particular the threshold of 70 ha prescribed by S.I. No 101 of 1996. According to that provision, an impact assessment is to be carried out in the case of initial afforestation only where the area involved, either on its own or taken together with any adjacent area planted by or on behalf of the applicant within the previous three years, would result in a total area planted exceeding 70 ha.

26 The Commission states that afforestation projects may have a significant effect on the environment even where they fall below the 70 ha threshold.

27 In that regard, it refers to the acidification and eutrophication of waters caused by afforestation. It cites the report *The Trophic Status of Lough Conn, An Investigation into the Causes of Recent Accelerated Eutrophication* (McGarrigle and others on behalf of the Lough Conn Committee, published by Mayo County Council in association with the Environmental Protection Agency, Central Fisheries Board, North Western Fisheries Board, Teagasc, Bord na Mona, Department of Agriculture and Department of Marine, December 1993) and *A*

Study of the Effects of Stream Hydrology and Water Quality in Forested Catchments on Fish and Invertebrates (known as the 'Aquafor Report').

28 It also points out the failure of the Irish legislation to take account of the significant environmental effects which afforestation projects may have in areas of active blanket bog. Since afforestation entails ploughing, drainage, the use of fertilisers and a radical change in vegetation, it transforms the peatland ecosystem so fundamentally that it is effectively destroyed. The Commission refers in that regard to *Birds, Bogs and Forestry, the Peatlands of Caithness and Sutherland* (Strout, Reeds and Others, Nature Conservancy Council, United Kingdom), which analyses the effects of afforestation on blanket bog.

29 The Commission cites, by way of example, the afforestation carried out at Dunragh Loughs and Pettigo Plateau which was brought to its attention by Complaint No P 95/4724. Those sites are included in the list of Natural Heritage Areas (hereinafter 'NHAs') drawn up by the Irish authorities. Pettigo Plateau, in particular, is a vast intact blanket bog (approximately 2 097 ha) of great scientific interest and is one of the sites covered by the contract entered into on 28 December 1995 between the Commission and the National Parks and Wildlife Service pursuant to Council Regulation (EEC) No 1973/92 of 21 May 1992 establishing a financial instrument for the environment (LIFE) (OJ 1992 L 206, p. 1). Part of the plateau (619.2 ha) has been classified as a special protection area under Council Directive 79/409/EEC of 2 April 1979 on the conservation of wild birds (OJ 1979 L 103, p. 1). It is also a cross-border site in that the plateau extends into County Fermanagh in the United Kingdom, which proposes to classify the portion of the plateau in its territory as a special protection area under Directive 79/409 and as a special area of conservation under Council Directive 92/43/EEC of 21 May 1992 on the conservation of natural habitats and of wild fauna and flora (OJ 1992 L 206, p. 7). There is a risk that the part of the plateau in the United Kingdom will be subjected to the significant effects of the afforestation projects on the environment, since planting is liable to affect adversely the hydrology of the peatlands on both sides of the border. Notwithstanding the interest of that area, planting, some grant-aided, has been carried out there, without the threshold set being exceeded in any case.

30 The Commission acknowledges that S.I. No 101 of 1996 is an improvement on the previous legislation inasmuch as it has lowered the threshold from 200 ha to 70 ha. Nevertheless, the protection remains inadequate because the whole of a proposed NHA could, in theory, be afforested without an impact assessment being required if the afforestation were carried out by different developers who all kept within the threshold of 70 ha over three years. The Irish legislation fails to take sufficient account of the cumulative effect of projects.

31 As regards land reclamation for the purposes of conversion to another type of land use, covered by point 1(d) of Annex II to the Directive, the Commission objects to the threshold of 100 ha set by the Irish legislation (Article 24 of S.I. No 349 of 1989 and paragraph 1(c)(ii) of Part II of the First Schedule thereto, in conjunction with other provisions of the Irish legislation transposing the Directive) and retained in the more recent legislation (S.I. No 101 of 1996).

32 It considers that the Irish legislation fails to ensure that a prior assessment is carried out with regard to the significant environmental effects of land reclamation projects which, because of their size, do not have to be the subject of an impact assessment but, considered together, are nevertheless likely to have such effects.

33 It refers in that regard to the reclamation which has taken place in the Burren, an extensive area of limestone pavement in County Clare which is of exceptional interest for its fauna, flora and natural landscape and rich in archaeological remains. The cumulative effects of this reclamation drew the attention of the Heritage Council and a report in 1996 commissioned by it, entitled 'A survey of recent reclamation in the Burren', shows that there are 59 'new' reclamation sites totalling 256 ha in that area, including 31 sites in proposed NHAs. The interventions involve the levelling of limestone pavement with bulldozers, the clearance of scrub (hazel bushes are a characteristic feature of that habitat) and the seeding and fertilisation of the cleared land. The report also records the loss of numerous archaeological and historical remains, such as holy wells and ancient field systems.

34 As regards, finally, peat extraction projects, covered by point 2(a) of Annex II to the Directive, the Commission objects to the threshold of 50 ha set by Article 24 of S.I. No 349 of 1989 and paragraph 2(a) of Part II of the First Schedule thereto, in conjunction with other provisions of the Irish legislation transposing the Directive.

35 It explains that peat extraction entails drainage, which has a drying effect on the plants which form the peat. The vegetation changes from a sphagnum and peatmoss-dominated community to a vegetation dominated by dry bog species, after which the bog is colonised by trees. The lowering of the water table causes a reduction in peat volume. The sloping of the bog increases water run-off, which exacerbates the drying-out process. Peat extraction accordingly has significant and irreversible environmental effects.

36 The Commission cites the example of Ballyduff-Clonfinane Bog in County Tipperary, which it examined specifically following Complaint No P 95/4219. That site of approximately 312 ha comprises two bogs, Ballyduff and Clonfinane (187 ha). Following a survey carried out by the National Parks and Wildlife Service in 1983, the site was designated as an area of scientific interest (ASI). Under a report prepared in 1990 for the Irish Minister of Finance the site was to become part of a raised bog nature reserve network. In 1995 it became a proposed NHA. The site was also among those covered by the contract entered into on 28 December 1995 between the Commission and the National Parks and Wildlife Service pursuant to Regulation No 1973/92. In addition, it benefited from Commission Decision C(96) 2113 of 29 July 1996 in respect of the Cohesion Fund, which approved the grant of ECU 344 000 for the preservation of the bogs. None the less, a peat extraction project began in 1994 at Clonfinane without an impact assessment being required, as the area being developed was below the 50 ha threshold. When, in 1996, the question was raised as to whether an impact assessment was required, the development already covered more than 50 ha.

37 The Commission compares the threshold applicable to bogs (50 ha) with that applicable to the extraction of stone, gravel, sand or clay (5 ha) and notes that in the latter case an impact assessment is required below an area of 5 ha where the competent local authority considers that significant effects on the environment

are likely (Article 24 of S.I. No 349 of 1989, paragraph 2 of Part II of the First Schedule thereto, and Articles 4(1) and 6(1) of S.I. No 25 of 1990). The absolute nature of the threshold applicable to bogs precludes any real assessment as to whether a project might have significant environmental effects.

38 The Commission notes that there are at least 49 peat-producing companies, that the economics of small-scale extraction have been transformed by the introduction of new peat-extraction equipment and that the quantity of peat extracted by small producers has therefore increased considerably since 1980. The fact that no peat extraction project has given rise to an assessment, despite continuing losses harmful to nature conservation, shows that the Irish threshold is such that the Directive has no impact with regard to bogs of conservation importance.

39 In its defence, Ireland contests the admissibility of the objection relating to the cumulative effect of projects on the ground that it was not raised during the pre-litigation procedure and, in particular, in the reasoned opinion. It also maintains that the complaints to which the Commission refers cannot be used in evidence because they were not mentioned in the reasoned opinion and are the subject of separate investigation.

40 Generally, Ireland submits that the Commission has failed to prove actual abuse of thresholds through cumulative projects. The theoretical possibility of such abuse does not make the use of thresholds unlawful: their use is envisaged by the Directive and has been approved in the two cases considered by the Court (*Commission* v *Belgium* and *Kraaijeveld*, both cited above). It is only Council Directive 97/11/EC of 3 March 1997 amending Directive 85/337 (OJ 1997 L 73, p. 5) which has required account to be taken of the cumulation of projects.

41 As regards projects for the use of uncultivated land or semi-natural areas for intensive agricultural purposes, covered by point 1(b) of Annex II to the

Directive, Ireland disputes that sheep grazing as practised in its territory comes under intensive agriculture and can be considered to be a project within the meaning of Article 1(2) of the Directive. It is not an intervention in the natural surroundings and landscape within the meaning of that provision and it would be absurd to suggest that a farmer is obliged to seek prior consent whenever he wants to increase the number of sheep able to graze on a piece of land. That suggestion is particularly impracticable because much of the land used for the grazing of sheep is commonage, shared between a number of farmers who all have the right to graze their sheep there.

42 Ireland considers that the Directive was never intended to cover certain types of agriculture, such as sheep farming on vast areas of land, and is unsuited to such practices, in particular because of the cost of carrying out impact assessments in relation to the farmers' income. On the other hand, environmental protection is the object of the scheme established by Council Regulation (EEC) No 2078/92 of 30 June 1992 on agricultural production methods compatible with the requirements of the protection of the environment and the maintenance of the countryside (OJ 1992 L 215, p. 85), implemented by Commission Regulation (EC) No 746/96 of 24 April 1996 laying down detailed rules for the application of Regulation No 2078/92 (OJ 1996 L 102, p. 19). More than 15% of Irish farmers already participate in that Rural Environment Protection Scheme, which seeks to stop farmers from farming their land intensively, and the Minister for Agriculture submitted proposals to the Commission pursuant to the Operational Programme for Agriculture, Rural Development and Forestry under the Community Support Framework for Ireland 1994-99 to the effect that, from 1 January 1998, farmers in degraded areas are entitled to sheep/ewe headage premium grants only if they are participating in the Rural Environment Protection Scheme.

43 As regards the objection relating to afforestation, Ireland submits that the Commission has adduced no objectively verifiable evidence that afforestation below the threshold has had significant effects on waters. It failed to annex to the application the two reports which it cites (the report on Lough Conn and the Aquafor Report), one of which, moreover, is not yet final.

44 Nor is there any evidence that afforestation on peatland has had significant environmental effects. Besides, little forestry development takes place on peatland, because of the minimum productivity requirements of the grant system and the fact that peatland has a lower forestry yield per hectare than other types of land.

45 Ireland contends, furthermore, that the Commission's presentation of the issues relating to Pettigo Plateau is inaccurate. The afforestation took place on a very small area only and therefore did not require consultation with the United Kingdom authorities under Article 7 of the Directive. Furthermore, the part of Pettigo classified as a special protection area under Directive 79/409 belongs to the National Parks and Wildlife Service and was not affected by the afforestation. Finally, it was only after the afforestation grant was given that the National Parks and Wildlife Service decided to designate the area as a proposed NHA, without knowing that afforestation was to take place there. In any event, the allegations made in that complaint concern only the management of the regime and not Ireland's implementation of Article 4(2) of the Directive or Annex II thereto.

46 As regards land reclamation, covered by point 1(d) of Annex II to the Directive, Ireland states that the only example given by the Commission is the unique area of the Burren. The Commission relies on an unpublished and incomplete study and fails to identify the land reclamation which has taken place. Besides, the total area surveyed in the report which the Commission cites (approximately 250 ha) is not significant given the size of the Burren as a whole (approximately 30 000 ha). In the light of those factors, the Commission has not carried out an overall assessment of land reclamation projects in Ireland, as required by the judgment in *Kraaijeveld*, cited above.

47 Ireland puts forward the same argument in relation to peat extraction projects, referred to in point 2(a) of Annex II to the Directive, alleging that the Commission has provided just one example of an extraction project below the threshold which has supposedly had significant effects on the environment.

48 Also, the Commission's objections relate only to peat extraction from bogs which are of conservation interest. Legal and administrative measures exist to protect such bogs, namely the Habitats Regulations and the designation of areas as NHAs. The complaint concerning peat extraction from Ballyduff-Clonfinane Bog simply demonstrates the need for conservation measures. Ireland accepts that different thresholds could have been set but, given the adoption of special areas of conservation under the Habitats Regulations, it had not considered that to be necessary.

49 As for bogs which are not subject to the Habitats Regulations, Ireland justifies the threshold of 50 ha by stating that it is intended to distinguish between commercial peat extraction, which may have significant effects on the environment, and the non-commercial cutting of turf, which is a traditional activity in Irish rural life. The Directive was not intended to be interpreted as requiring an impact assessment for small-scale non-commercial peat extraction. The effect of requiring impact assessments for very small areas of bog would be to prevent all extraction because of the cost of an assessment compared with the likely return. Such an interpretation of the Directive would frustrate the traditional rights of landowning and tenant farmers to cut turf from the bog for their own needs.

Findings of the Court

50 It is necessary to consider first of all the plea raised by Ireland that the objection relating to the cumulative effect of projects is inadmissible on the ground that it was not relied on during the pre-litigation procedure and, in particular, in the reasoned opinion.

51 It should be remembered that the purpose of the pre-litigation procedure is to give the State concerned an opportunity, on the one hand, to comply with its obligations under Community law and, on the other, to avail itself of its right to defend itself against the objections formulated by the Commission. The subject-matter of an action brought under Article 169 of the Treaty is delimited by the pre-litigation procedure provided for by that article. Consequently, the action cannot be founded on any objections other than those set out in the reasoned opinion (see, in particular, Case C-206/96 *Commission* v *Luxembourg* [1998] ECR I-3401, paragraph 13).

52 In the present case, it is apparent from an examination of the documents exchanged in the course of the pre-litigation procedure that, while the Commission did not expressly use the words 'cumulative effect of projects', it was nevertheless addressing this question as part of the more general problem of the setting of thresholds and made the very point that a developer can avoid an impact assessment by splitting an initial project into a number of projects which do not exceed the threshold.

53 In those circumstances, it cannot be considered that the pre-litigation procedure did not allow Ireland to avail itself of its right to defend itself against the objection relating to the cumulative effect of projects.

54 Ireland also defends itself by pleading that the Commission cannot use complaints not mentioned in the reasoned opinion as evidence of an infringement, because they were received subsequent to the reasoned opinion and are still the subject of separate investigation.

55 This plea is linked, however, to the question of proof of the infringement, which should be examined as a whole.

56 Ireland disputes that the Commission has demonstrated that thresholds have actually been misused. In its view, such proof is necessary in order to establish that it has failed to fulfil its obligations.

57 The Commission replies that it is the use of absolute thresholds which constitutes the infringement and that all it had to do was put forward a body of evidence demonstrating that use of such thresholds could mean that projects likely to have significant effects on the environment escaped an impact assessment because they did not reach the threshold prescribed by law. It also maintains that it would be contrary to the objective of prevention pursued by the Directive if it were necessary to establish serious and grave environmental harm in order to prove inadequate transposition in Treaty infringement proceedings. Finally, it points out its difficulty in producing concrete evidence in the case of projects below the thresholds.

58 In that regard, it must be observed that the infringement alleged by the Commission is Ireland's incorrect transposition of Article 4(2) of the Directive through the use of thresholds which have the effect that all the characteristics of a project are not taken into consideration when it comes to determining whether the project is to be subject to an impact assessment. Certain projects likely to have significant effects on the environment may thus escape the assessment requirement because they do not reach the thresholds set.

59 So, the alleged infringement has to do with the way in which the Directive has been transposed into Irish law and not with the actual result of the application of the transposing legislation.

60 In order to prove that the transposition of a directive is insufficient or inadequate, it is not necessary to establish the actual effects of the legislation transposing it into national law: it is the wording of the legislation itself which harbours the insufficiencies or defects of transposition.

61 There is, therefore, nothing to prevent the Commission from demonstrating that transposition is defective or insufficient without waiting for the application of the transposing legislation to produce harmful effects.

62 Since the Directive forms part of Community environmental policy, which, as pointed out in the first recital in the preamble to the Directive, consists in preventing the creation of pollution or nuisances at source rather than subsequently trying to counteract their effects, the opposite conclusion would be even more unjustified in this case.

63 It does not therefore matter that the evidence adduced by the Commission in support of its action consists of mere complaints which have not yet been investigated.

64 As far as the objection to thresholds is concerned, although the second subparagraph of Article 4(2) of the Directive confers on Member States a measure of discretion to specify certain types of projects which are to be subject to an assessment or to establish the criteria or thresholds applicable, the limits of that discretion lie in the obligation set out in Article 2(1) that projects likely, by virtue *inter alia* of their nature, size or location, to have significant effects on the environment are to be subject to an impact assessment (*Kraaijeveld*, cited above, paragraph 50).

65 Thus, a Member State which established criteria or thresholds taking account only of the size of projects, without also taking their nature and location into consideration, would exceed the limits of its discretion under Articles 2(1) and 4(2) of the Directive.

66 Even a small-scale project can have significant effects on the environment if it is in a location where the environmental factors set out in Article 3 of the Directive,

such as fauna and flora, soil, water, climate or cultural heritage, are sensitive to the slightest alteration.

67 Similarly, a project is likely to have significant effects where, by reason of its nature, there is a risk that it will cause a substantial or irreversible change in those environmental factors, irrespective of its size.

68 In order to demonstrate that Ireland has failed to fulfil its obligations in this regard, the Commission has put forward several convincing examples of projects which, whilst considered solely in relation to their size, may none the less have significant effects on the environment by reason of their nature or location.

69 The most significant example is afforestation because, when carried out in areas of active blanket bog, it entails, by its nature and location, the destruction of the bog ecosystem and the irreversible loss of biotopes that are original, rare and of great scientific interest. In itself, it may also cause the acidification or eutrophication of waters.

70 It was however necessary, and possible, to take account of factors such as the nature or location of projects, for example by setting a number of thresholds corresponding to varying project sizes and applicable by reference to the nature or location of the project.

71 Ireland's explanation that other environmental protection legislation, such as the Habitats Regulations, made it unnecessary to assess afforestation, land reclamation or peat extraction projects carried out in environmentally sensitive locations must be dismissed. Nothing in the Directive excludes from its scope regions or

areas which are protected under other Community provisions from other aspects.

72 It follows that, by setting, for the classes of projects covered by points 1(d) and 2(a) of Annex II to the Directive, thresholds which take account only of the size of projects, to the exclusion of their nature and location, Ireland has exceeded the limits of its discretion under Articles 2(1) and 4(2) of the Directive.

73 As regards the cumulative effect of projects, it is to be remembered that the criteria and/or thresholds mentioned in Article 4(2) are designed to facilitate the examination of the actual characteristics exhibited by a given project in order to determine whether it is subject to the requirement to carry out an assessment, and not to exempt in advance from that obligation certain whole classes of projects listed in Annex II which may be envisaged on the territory of a Member State (*Commission* v *Belgium*, cited above, paragraph 42, *Kraaijeveld*, cited above, paragraph 51, and Case C-301/95 *Commission* v *Germany* [1998] ECR I-6135, paragraph 45).

74 The question whether, in laying down such criteria and/or thresholds, a Member State goes beyond the limits of its discretion cannot be determined in relation to the characteristics of a single project, but depends on an overall assessment of the characteristics of projects of that nature which could be envisaged in the Member State concerned (*Kraaijeveld*, paragraph 52).

75 So, a Member State which established criteria and/or thresholds at a level such that, in practice, all projects of a certain type would be exempted in advance from the requirement of an impact assessment would exceed the limits of its discretion under Articles 2(1) and 4(2) of the Directive unless all the projects excluded could, when viewed as a whole, be regarded as not being likely to have significant effects on the environment (see, to that effect, *Kraaijeveld*, paragraph 53).

76 That would be the case where a Member State merely set a criterion of project size and did not also ensure that the objective of the legislation would not be circumvented by the splitting of projects. Not taking account of the cumulative effect of projects means in practice that all projects of a certain type may escape the obligation to carry out an assessment when, taken together, they are likely to have significant effects on the environment within the meaning of Article 2(1) of the Directive.

77 In order to demonstrate that Ireland has failed to fulfil its obligations in this regard, the Commission has also provided various examples of the effects of the Irish legislation as drafted.

78 Ireland has not denied that no project for the extraction of peat, covered by point 2(a) of Annex II to the Directive, has been the subject of an impact assessment, although small-scale peat extraction has been mechanised, industrialised and considerably intensified, resulting in the unremitting loss of areas of bog of nature conservation importance.

79 As regards initial afforestation, covered by point 1(d) of Annex II to the Directive, such projects, encouraged by the grant of aid, may be implemented in proximity to one another without any impact assessment at all being carried out, if they are conducted by different developers who all keep within the threshold of 70 ha over three years.

80 The Commission has also cited the example of land reclamation projects, covered by point 1(d) of Annex II to the Directive, whose cumulative effect is not taken into account by the Irish legislation. Nor has it been disputed that much land clearance has taken place in the Burren without a single impact assessment being carried out, although it is an area of unquestionable interest. Limestone pavement, which is characteristic of the area, has been destroyed, as have vegetation and archaeological remains, giving way to pasture. Considered together, those interventions were likely to have significant environmental effects.

81 As regards sheep farming in particular, the Commission has proved that, again encouraged by the grant of aid, this has grown in an unrestrained fashion, which is a development which may have adverse environmental consequences. However, it has not demonstrated that sheep farming as practised in Ireland constitutes a project within the meaning of Article 1(2) of the Directive.

82 It follows from all of the foregoing that, by setting thresholds for the classes of projects covered by points 1(d) and 2(a) of Annex II to the Directive without also ensuring that the objective of the legislation will not be circumvented by the splitting of projects, Ireland has exceeded the limits of its discretion under Articles 2(1) and 4(2) of the Directive.

83 Consequently, the objection relating to infringement of Article 4(2) of the Directive in respect of the classes of projects covered by points 1(d) and 2(a) of Annex II to the Directive is well founded.

Infringement of Article 2(3) of the Directive

84 The Commission explains that S.I. No 349 of 1989 provides for an exemption formula enabling the competent Minister to dispense with an impact assessment for a project where he considers this to be warranted by exceptional circumstances. It points out that this provision is inconsistent with the Directive inasmuch as, first, the Minister is not required to consider whether another form of assessment would be appropriate and whether the information collected should be made available to the public and, second, he is not required to inform the Commission.

85 Ireland stated at the hearing that amending legislation had just been adopted.

86 However, it is settled case-law that amendments to national legislation are irrelevant for the purposes of giving judgment on the subject-matter of an action for failure to fulfil obligations if they have not been implemented before the expiry of the period set by the reasoned opinion (see, in particular, Case C-123/94 *Commission* v *Greece* [1995] ECR I-1457, paragraph 7).

87 It must accordingly be held that the objection relating to the infringement of Article 2(3) of the Directive is well founded.

Infringement of Article 5 of the Directive

88 The Commission considers that the Irish legislation does not properly transpose Article 5 since it makes no provision for considering the relevance or reasonableness of asking a developer for the information specified in Annex III. Article 2(5) of S.I. No 349 of 1989 merely provides that an impact assessment may include that information.

89 Ireland indicated at the hearing that amending legislation had just been adopted.

90 For the reason referred to in paragraph 86 above, it must be held that the objection relating to the infringement of Article 5 of the Directive is well founded.

Infringement of Article 7 of the Directive

91 The Commission states that Article 17 of S.I. No 25 of 1990 appears to be the transposition of Article 7 in respect of projects requiring consent under the Irish Local Government (Planning and Development) Acts 1963-1983. Article 17 provides a mechanism whereby local authorities are to notify the Irish Minister for the Environment of any application likely to have significant effects on the environment of another Member State. The Minister may then ask the local authority to provide him with the information and documents which he considers necessary.

92 The Commission considers, however, that that provision does not properly transpose Article 7 of the Directive since the Minister is not expressly required to transmit the information to the other Member State. Nor does the Minister have the power to require information from local authorities when it is the other Member State which has asked to be consulted.

93 Ireland stated in the course of the written procedure that it intended to clarify its legislation and that the amending legislation was in the process of being drafted. It added at the hearing that the Northern Ireland Agreements would enable better communication with the United Kingdom in the future.

94 For the reason given in paragraph 86 above, it must be held that the objection relating to the infringement of Article 7 of the Directive is well founded.

95 It follows from all of the foregoing that, by not adopting, for the classes of projects covered by points 1(d) and 2(a) of Annex II to the Directive, the measures necessary to transpose Article 4(2) of the Directive correctly, and by not transposing Articles 2(3), 5 and 7 of the Directive, Ireland has failed to fulfil its obligations under the Directive. The remainder of the action is to be dismissed.

Costs

96 Under Article 69(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. The Commission has applied for an order of costs against Ireland. Since the latter has been essentially unsuccessful in its defence, it must be ordered to pay the costs.

On those grounds,

THE COURT (Fifth Chamber)

hereby:

1. **Declares that, by not adopting, for the classes of projects covered by points 1(d) and 2(a) of Annex II to Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment, the measures necessary to transpose Article 4(2) of that directive correctly, and by not transposing Articles 2(3), 5 and 7 thereof, Ireland has failed to fulfil its obligations under that directive;**

2. **Dismisses the remainder of the application;**

3. Orders Ireland to pay the costs.

President of the Fifth Chamber

JUDGMENT OF THE COURT (Sixth Chamber)

16 September 1999 *

In Case C-435/97,

REFERENCE to the Court under Article 177 of the EC Treaty (now Article 234 EC) by the Verwaltungsgericht, Autonome Sektion für die Provinz Bozen, Italy, for a preliminary ruling in the proceedings pending before that court between

World Wildlife Fund (WWF) and Others

and

Autonome Provinz Bozen and Others

on the interpretation of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40),

* Language of the case: German.

THE COURT (Sixth Chamber),

composed of: P.J.G. Kapteyn, President of the Chamber, J.L. Murray and H. Ragnemalm (Rapporteur), Judges,

Advocate General: J. Mischo,

Registrar: L. Hewlett, Administrator,

after considering the written observations submitted on behalf of:

— the World Wildlife Fund (WWF) and Others, by W. Wielander, of the Bolzano Bar,

— Autonome Provinz Bozen, by H. Heiss and R. von Guggenberg, of the Bolzano Bar,

— Südtiroler Transportstrukturen AG, by C. Baur, of the Bolzano Bar, and S. Weber, Rechtsanwalt, Vienna,

— Airport Bolzano-Bozen AG, by P. Platter, of the Bolzano Bar,

— the Italian Government, by Professor U. Leanza, Head of the Legal Department of the Ministry of Foreign Affairs, acting as Agent, assisted by P.G. Ferri, Avvocato dello Stato,

— the Netherlands Government, by M.A. Fierstra, Deputy Legal Adviser in the Ministry of Foreign Affairs, acting as Agent,

— the United Kingdom Government, by J.E. Collins, Assistant Treasury Solicitor, acting as Agent, and D. Wyatt QC, and

— the Commission of the European Communities, by G. zur Hausen, Legal Adviser, acting as Agent,

having regard to the Report for the Hearing,

after hearing the oral observations of the World Wildlife Fund (WWF) and other applicants, Autonome Provinz Bozen, Südtiroler Transportstrukturen AG, Airport Bolzano-Bozen AG, the Italian Government, the United Kingdom Government and the Commission at the hearing on 18 March 1999,

after hearing the Opinion of the Advocate General at the sitting on 29 April 1999,

gives the following

Judgment

1 By order of 3 December 1997, received at the Court on 24 December 1997, the Verwaltungsgericht, Autonome Sektion für die Provinz Bozen (Administrative Court, Autonomous Division for the Province of Bolzano) referred to the Court for a preliminary ruling under Article 177 of the EC Treaty (now Article 234 EC) six questions on the interpretation of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40; hereinafter 'the Directive').

2 Those questions have been raised in proceedings brought before the national court by the applicants, who are persons claiming to live near Bolzano-St Jacob Airport and two environmental associations, to have Decision No 1230 of 27 March 1997 of the Government of the Autonomous Province of Bolzano and a letter of the Landeshauptmann (Regional Prime Minister) of 11 April 1997, which approved a project for the restructuring of that airport, set aside.

3 It is apparent from the order for reference that the purpose of the project is to transform an airfield, which since 1925/26 has been used for military purposes, for private flying and, during a certain period and to a limited extent, also for civil purposes, into an airport which can be used commercially, with the aim of having regular scheduled flights as well as charter and cargo flights.

4 The works and alterations envisaged are essentially the following: renewal of the existing runway, construction of access roads and car parks, construction of a control tower with air traffic control installations, construction of a departure building and of a hangar, the carrying out of the necessary connections and diversions and so forth, and extension of the runway from 1 040 to 1 400 metres. It is not in dispute that, at the date of the order for reference, the extension had not yet been approved because the local development plan had to be altered first.

5 This restructuring of Bolzano Airport was provided for in the regional development plan approved by Law No 3 of the Autonomous Province of Bolzano of 18 January 1995 (hereinafter 'Law No 3/95'), which required, in particular, that an environmental impact study be carried out. That study, which the developer, Südtiroler Transportstrukturen AG, entrusted to a team of experts, was drawn up in June 1996. In addition, various bodies, including the agency responsible for the environment, were consulted, the municipalities concerned were informed and opinions were sought.

6 In particular, following one of those requests for an opinion, the project was considered by the Amtsdirektorenkonferenz (Regional Directors' Conference) which issued an opinion under the procedure referred to by the national court as 'simplified environmental assessment', provided for by Articles 11, 12 and 13 of Law No 27 of the Autonomous Province of Bolzano of 7 July 1992 introducing an environmental impact assessment procedure in the version in force at the material time (B.V. Ordinary Supplement, 28 July 1992, No 31; hereinafter 'Law No 27/92'). However, it is common ground that the procedure under which the contested measures were adopted, with the exception of the extension of the runway which remained unapproved, was not that laid down by the Directive.

Legislation

The Directive

7 The Directive, as provided in Article 1(1) thereof, applies to the assessment of the environmental effects of public and private projects which are likely to have significant effects on the environment.

8 Article 1(2) defines 'project' as:

'— the execution of construction works or of other installations or schemes,

— other interventions in the natural surroundings and landscape including those involving the extraction of mineral resources'.

9 Article 1(4) and (5) respectively provide that the Directive does not cover 'projects serving national defence purposes' and that it is not to apply 'to projects the details of which are adopted by a specific act of national legislation, since the objectives of [the] Directive, including that of supplying information, are achieved through the legislative process'.

10 Article 2(1) of the Directive provides: 'Member States shall adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment by virtue, *inter alia*, of their nature, size or location are made subject to an assessment with regard to their effects. These projects are defined in Article 4.'

11 Article 4 distinguishes between two types of projects.

12 Article 4(1) provides that, subject to Article 2(3), projects of the classes listed in Annex I are to be made subject to an assessment in accordance with Articles 5 to 10. The projects covered by Article 4(1) include the 'construction of... airports with a basic runway length of 2 100 m or more', referred to in point 7 of Annex I.

13 So far as concerns other types of projects, Article 4(2) states:

'Projects of the classes listed in Annex II shall be made subject to an assessment, in accordance with Articles 5 to 10, where Member States consider that their characteristics so require.

To this end Member States may *inter alia* specify certain types of projects as being subject to an assessment or may establish the criteria and/or thresholds necessary to determine which of the projects of the classes listed in Annex II are to be subject to an assessment in accordance with Articles 5 to 10.'

14 As for the projects caught by Article 4(2), point 10(d) of Annex II refers to 'Construction of... airfields (projects not listed in Annex I)' and point 12 of Annex II refers to modifications to development projects in Annex I.

15 Articles 5 to 9 of the Directive, to which Article 4 refers, essentially provide as follows: Article 5 specifies the minimum information to be provided by the developer, Article 6 imposes, in particular, an obligation on the developer to inform the authorities and the public, Article 8 requires the competent authorities to take into consideration the information gathered in the course of the assessment procedure and Article 9 imposes a duty on the competent authorities to inform the public of the decision adopted and any conditions attached to it.

Law No 27/92

16 Law No 27/92 contains two annexes, Annex I and Annex II, which list various projects and, in conjunction with the main body of the Law, lay down the conditions in which those projects are subject to the environmental impact assessment procedure.

17 As regards airports, paragraph 11(e) of Annex II to Law No 27/92 makes all projects for the new construction of airports subject to such assessment.

18 On the other hand, the extension or alteration of existing airports, like all other projects comprising extensions or alterations, falls within Article 2(2) of Law No 27/92, which requires an environmental impact assessment for projects exceeding the thresholds referred to in Annex II by more than 20% and for projects required to be assessed under Annex I of that Law.

19 Annex II of Law No 27/92 does not set a threshold for airport projects while, under Annex I, an assessment is required only for airports with a runway length of 2 100 metres or more.

Proceedings before the national court

20 The applicants in the main proceedings have challenged before the national court the legality of the contested measures on the ground that the procedure followed for approving the project is not in conformity with the requirements of the Directive. According to them, since the project is likely, by virtue of its nature, size and location, to have significant effects on the environment, it falls within Article 2(1) of the Directive and should have been made subject to the assessment procedure under Article 4(2) thereof in conjunction with Annex II and not to a mere 'environmental impact study' followed by an examination of the project by the Amtsdirektorenkonferenz, which do not meet the Directive requirements.

21 According to the respondents in the main proceedings, on the other hand, the Directive is inapplicable to the project at issue for three fundamental reasons.

22 First, it is merely a small-scale project to improve an airport, which does not have a significant effect on the environment because it is designed to improve air traffic

and remedy the environmental harm caused by that traffic; furthermore, the extension of the runway from 1 040 to 1 400 metres remained unapproved.

23 Next, the project is not subject to environmental impact assessment under the Directive because, as is apparent from the provisions of Law No 27/92, it falls within the projects included in Annex II to the Directive which, in accordance with Article 4(2) thereof, are to be made subject to the assessment procedure under Articles 5 to 10 where Member States consider that their characteristics so require; it follows that Law No 27/92, which was adopted within the limits of the discretion allowed to the Member States by Article 4(2) of the Directive, is in conformity with the latter provision.

24 Finally, since the project serves both civil and military purposes and Law No 3/95, approving the regional development plan, makes provision for it, the exceptions respectively set out in Article 1(4) and (5) of the Directive apply.

25 The applicants in the main proceedings have challenged those arguments. They contend that, by allowing the national authorities not to subject to an impact assessment a project likely to have significant effects on the environment, Law No 27/92 is not in conformity with the Directive and should be disapplied in favour of the relevant provisions of the latter.

26 In its order for reference, the national court found that, inasmuch as the project at issue related to an airport with a runway shorter than 2 100 metres, it fell within the projects set out in Annex II to the Directive and was covered by Article 4(2);

also, by virtue of Article 2(2) of Law No 27/92, the extension or restructuring of airports with a runway shorter than 2 100 metres was not made subject to an environmental impact assessment by that Law since no threshold was set for airport projects. Nevertheless, the project at issue, by reason of its nature and size, and probably also by reason of its location in a hollow in the immediate vicinity of an industrial and a residential area, could have a significant effect on the environment.

27 Having regard to its findings of fact and the conclusions which it drew therefrom, to the arguments of the parties and to the relevant Community and national legislation, the Verwaltungsgericht, Autonome Sektion für die Provinz Bozen, was uncertain as to the interpretation of the Directive. It therefore decided to stay proceedings and to submit the following questions for a preliminary ruling:

'(1) Is Article 4(2) of Directive 85/337/EEC to be interpreted as meaning:

(a) that certain classes of the projects listed in Annex II may from the outset, in the absolute discretion of the Member States, be excluded in their entirety from the obligation to carry out an environmental assessment; or

(b) that the margin of discretion enjoyed by the Member States is limited by the obligation laid down in Article 2(1) of the Directive to subject to an environmental assessment in any event those projects likely to have

significant effects on the environment, by virtue *inter alia* of their nature, size or location?

(c) Does Article 4(2) of the Directive, in conjunction with Article 2(1) thereof, allow a Member State to specify (or not to specify) types of project or criteria and/or thresholds so that the restructuring of an airport with a runway shorter than 2 100 metres is excluded from environmental assessment from the outset although it is environmentally significant, or is the margin of discretion which the Member State enjoys under Article 4(2) of the Directive (if (b) is answered in the affirmative) thereby exceeded?

(2) Is Article 4(2) of the Directive, in conjunction with Article 2(1), to be interpreted as meaning that the obligation to carry out an environmental assessment also applies to the extension and restructuring of the projects in Annex II if significant effects on the environment are likely, or do Articles 4(2) and 2(1) allow environmentally significant projects comprising restructuring to be excluded, expressly or *impliedly* (for example, by rules which are not applicable to airports), from environmental assessment from the outset?

(3) To what extent does Article 2(1) of the Directive, also in conjunction with Article 2(2), allow the Member States to introduce (or use) alternative

assessment procedures to that of an ordinary environmental assessment and if a positive answer is given to this question:

(a) what essential requirements or minimum requirements must such an assessment satisfy in order to accord with the objectives of the Directive and, in particular,

(b) is the participation of the public within the meaning of Article 6 of the Directive an essential requirement of an environmental assessment?

(4) May Article 1(5) of Directive 85/337 be interpreted as also covering projects which, while provided for in a legislative provision which sets out a programme, are approved under a separate administrative procedure?

What minimum environmental requirements must the "legislative process" contain in order to achieve the "objectives... including that of supplying information" pursued by the Directive?

(5) Is the exclusion of projects from the scope of the Directive pursuant to Article 1(4) to be applied to an airfield used for both civil and military purposes?

Could the applicable criterion be the *predominant use* or is it sufficient for the exclusion to apply that the airfield is *also* used for military purposes?

(6) If the Directive has been incorrectly transposed, is Article 4(2) thereof, in conjunction with Article 2(1), vertically directly effective (self-executing) in the sense that the authorities of the Member State are required to subject the projects at issue to an environmental assessment?'

Preliminary issues

28 In their observations to the Court, the applicants in the main proceedings state that the national court, by a further order determining their ancillary application for interim measures, suspended the project at issue on the ground that no environmental impact assessment had been carried out; that order was contested in an action brought by the respondents and quashed by the Consiglio di Stato (Council of State) by judgment No 1411/97 of 29 August 1997, with the result that the works at issue have been pursued since then. The applicants ask the Court to rule, first, on the question whether the suspension of operation of the contested measure on which, according to them, the national court had validly decided in the present case, should have been upheld by the Consiglio di Stato and, second, should the Court consider that an environmental impact assessment was necessary, on the practical consequences of its own decision.

29 In response to those requests it is sufficient to state that the national court has not submitted any question in that regard and that there is therefore no need to consider them (see Case 5/72 *Grassi* v *Italian Finance Administration* [1972] ECR 443, paragraph 4, and Case C-196/89 *Nespoli and Crippa* [1990] ECR I-3647, paragraph 23).

30 One of the respondents in the main proceedings, Airport Bolzano-Bozen AG, disputes a number of facts set out by the national court in its order for reference. Relying on national law, it also challenges the jurisdiction of that court to adjudicate on the merits of the case, on the ground that its jurisdiction is limited to questions of law.

31 So far as concerns the contesting of certain facts by Airport Bolzano-Bozen AG, it should be remembered that Article 177 of the Treaty is based on a clear separation of functions between the national courts and the Court of Justice, so that, when ruling on the interpretation or validity of Community provisions, the latter is empowered to do so only on the basis of the facts which the national court puts before it (see Case C-30/93 *AC-ATEL Electronics Vertriebs* v *Hauptzollamt München-Mitte* [1994] ECR I-2305, paragraph 16, and Case C-326/96 *Levez* v *T.H. Jennings (Harlow Pools)* [1998] ECR I-7835, paragraph 25).

32 It is not for the Court of Justice but for the national court to ascertain the facts which have given rise to the dispute and to establish the consequences which they have for the judgment which it is required to deliver (see Case 17/81 *Pabst & Richarz* v *Hauptzollamt Oldenburg* [1982] ECR 1331, paragraph 12, *AC-ATEL Electronics Vertriebs*, cited above, paragraph 17, and *Levez*, cited above, paragraph 26).

33 As regards the challenge to the jurisdiction of the referring court made on the basis of national law, it is not for the Court of Justice, in view of the distribution of functions between itself and the national courts, to determine whether the decision whereby a matter is brought before it has been taken in accordance with the rules of national law governing the organisation of the courts and their procedure (see Joined Cases C-332/92, C-333/92 and C-335/92 *Eurico Italia and Others* v *Ente Nazional Risi* [1994] ECR I-711, paragraph 13).

The first and second questions

34 By its first and second questions, which should be considered together, the national court essentially raises two issues.

35 The first is whether Articles 4(2) and 2(1) of the Directive are to be interpreted as conferring on a Member State the power to exclude, from the outset and in their entirety, from the environmental impact assessment procedure established by the Directive certain classes of projects falling within Annex II to the Directive, including modifications to those projects, such as projects for the restructuring of an airport whose runway is shorter than 2 100 metres, even if they have significant effects on the environment.

36 In that regard, the second subparagraph of Article 4(2) of the Directive confers on Member States a measure of discretion to specify certain types of projects which will be subject to an assessment or to establish the criteria or thresholds applicable. However, the limits of that discretion are to be found in the obligation set out in Article 2(1) that projects likely, by virtue *inter alia* of their nature, size or location, to have significant effects on the environment are to be subject to an impact assessment (see Case C-72/95 *Kraaijeveld and Others* v *Gedeputeerde Staten van Zuid-Holland* [1996] ECR I-5403, paragraph 50, and Case C-301/95 *Commission* v *Germany* [1998] ECR I-6135, paragraph 45).

37 Thus, ruling on legislation of a Member State under which certain entire classes of projects listed in Annex II to the Directive were excluded from the assessment obligation, the Court held, in Case C-133/94 *Commission* v *Belgium* [1996] ECR I-2323, at paragraph 42, that the criteria and/or thresholds mentioned in Article 4(2) of the Directive are designed to facilitate examination of the actual characteristics of any given project in order to determine whether it is subject to the requirement to carry out an assessment, and not to exempt in advance from that obligation certain whole classes of projects listed in Annex II which may be envisaged on the territory of a Member State.

38 The Court also held in paragraph 53 of its judgment in *Kraaijeveld*, cited above, that a Member State which established criteria or thresholds at a level such that, in practice, an entire class of projects would be exempted in advance from the requirement of an impact assessment would exceed the limits of its discretion under Articles 2(1) and 4(2) of the Directive unless all projects excluded could, when viewed as a whole, be regarded as not being likely to have significant effects on the environment.

39 As regards modifications to such projects, the Court found in paragraph 40 of its judgment in *Kraaijeveld* that the mere fact that the Directive did not expressly refer to modifications to projects included in Annex II, as opposed to modifications to projects included in Annex I, did not justify the conclusion that they were not covered by the Directive.

40 Thus, observing that the scope of the Directive was wide and its purpose very broad, the Court held that the Directive covered 'modifications to development projects' even in relation to projects falling within Annex II, on the ground that its purpose would be undermined if 'modifications to development projects' were so construed as to enable certain works to escape the requirement of an impact assessment when, by reason of their nature, size or location, they were likely to have significant effects on the environment (*Kraaijeveld*, paragraph 39).

41 The second issue raised by the national court is whether, taking into account the fact that an airport is the only airport in the region in which it is located that can be restructured, Articles 4(2) and 2(1) of the Directive nevertheless confer on a Member State the power to exclude from the assessment procedure established by the Directive a specific project such as that in issue in the main proceedings as not being likely to have significant effects on the environment, either under national legislation, in the present case Law No 27/92, or on the basis of an individual examination of the project.

42 The second subparagraph of Article 4(2) of the Directive provides that '... Member States may *inter alia* specify certain types of projects as being subject to an assessment or may establish the criteria and/or thresholds necessary to determine which of the projects of the classes listed in Annex II are to be subject to an assessment in accordance with Articles 5 to 10'. That provision thus mentions, by way of indication, methods to which the Member States may have recourse when determining which of the projects falling within Annex II are to be subject to an assessment within the meaning of the Directive.

43 Consequently, the Directive confers a measure of discretion on the Member States and does not therefore prevent them from using other methods to specify the projects requiring an environmental impact assessment under the Directive. So the Directive in no way excludes the method consisting in the designation, on the basis of an individual examination of each project concerned or pursuant to national legislation, of a particular project falling within Annex II to the Directive as not being subject to the procedure for assessing its environmental effects.

44 However, the fact that the Member State has the discretion referred to in the previous paragraph is not in itself sufficient to exclude a given project from the assessment procedure under the Directive. If that were not the case, the discretion accorded to the Member States by Article 4(2) of the Directive could be used by them to take a particular project outside the assessment obligation when, by virtue of its nature, size or location, it could have significant environmental effects.

45 Consequently, whatever the method adopted by a Member State to determine whether or not a specific project needs to be assessed, be it by legislative designation or following an individual examination of the project, the method adopted must not undermine the objective of the Directive, which is that no project likely to have significant effects on the environment, within the meaning

of the Directive, should be exempt from assessment, unless the specific project excluded could, on the basis of a comprehensive assessment, be regarded as not being likely to have such effects.

46 It should be added, with regard to the exclusion of the project at issue in the main proceedings from the assessment procedure under Law No 27/92, that, even if that project concerns the only airport in the province which can be restructured and it has actually been specified by the legislature, the latter cannot in any event exempt the project from the assessment obligation unless, on the date when Law No 27/92 was adopted, it was able to assess precisely the overall environmental impact which all the works entailed by the project were likely to have.

47 As for the exclusion of the project on the basis of an individual examination carried out by the national authorities, the file shows that the contested measures were preceded by an environmental impact study carried out by a team of experts, that information was communicated to the municipalities concerned and that the public was informed by press notices. In addition, the environmental agency and the Amtsdirektorenkonferenz were consulted.

48 It is for the national court to review whether, on the basis of the individual examination carried out by the competent authorities which resulted in the exclusion of the specific project at issue in the main proceedings from the assessment procedure established by the Directive, those authorities correctly assessed, in accordance with the Directive, the significance of the effects of that project on the environment.

49 In view of the foregoing considerations, the answer to the first and second questions must be that Articles 4(2) and 2(1) of the Directive are to be interpreted as not conferring on a Member State the power either to exclude, from the outset and in their entirety, from the environmental impact assessment procedure established by the Directive certain classes of projects falling within Annex II to the Directive, including modifications to those projects, or to exempt from such a procedure a specific project, such as the project of restructuring an airport with a

runway shorter than 2 100 metres, either under national legislation or on the basis of an individual examination of that project, unless those classes of projects in their entirety or the specific project could be regarded, on the basis of a comprehensive assessment, as not being likely to have significant effects on the environment. It is for the national court to review whether, on the basis of the individual examination carried out by the national authorities which resulted in the exclusion of the specific project at issue from the assessment procedure established by the Directive, those authorities correctly assessed, in accordance with the Directive, the significance of the effects of that project on the environment.

The third question

50 By its third question, the national court asks essentially whether, in the case of a project requiring assessment under the Directive, Article 2(1) and (2) thereof are to be interpreted as allowing a Member State to use an assessment procedure other than the procedure introduced by the Directive and whether, where that alternative procedure is incorporated in a national procedure which exists or is to be established within the meaning of Article 2(2), it must satisfy the requirements of Articles 3 and 5 to 10 of the Directive, including public participation as provided for in Article 6.

51 In its order for reference the national court explains that it has doubts as to whether the consent procedure laid down in Articles 11, 12 and 13 of Law No 27/92 is appropriate for fully identifying the effects of the project on the environment. It states that neither noise nor the effects on the atmosphere were investigated, as Article 3 of the Directive requires, and that the public did not participate in that procedure, contrary to Article 6 of the Directive.

52 In that regard, Article 2(2) of the Directive provides: 'The environmental impact assessment may be integrated into the existing procedures for consent to projects in the Member States, or, failing this, into other procedures or into procedures to be established to comply with the aims of [the] Directive.' It is therefore clear from that provision that the Directive does not prevent the assessment procedure which it introduces from being incorporated in a national procedure which exists or is to be established, provided that the aims of the Directive are met.

53 However, where a project requires assessment within the meaning of the Directive, a Member State cannot, without undermining the Directive's objective, use an alternative procedure, even one incorporated in a national procedure which exists or is to be established, to exempt that project from the requirements laid down in Articles 3 and 5 to 10 of the Directive.

54 The answer to third question must therefore be that, in the case of a project requiring assessment under the Directive, Article 2(1) and (2) thereof are to be interpreted as allowing a Member State to use an assessment procedure other than the procedure introduced by the Directive where that alternative procedure is incorporated in a national procedure which exists or is to be established within the meaning of Article 2(2). However, an alternative procedure of that kind must satisfy the requirements of Articles 3 and 5 to 10 of the Directive, including public participation as provided for in Article 6.

The fourth question

55 By its fourth question, the national court asks essentially whether Article 1(5) of the Directive is to be interpreted as also applying to a project, such as that at issue in the main proceedings, which, while provided for by a legislative provision setting out a programme, has received development consent under a separate administrative procedure and, if so, what requirements such a provision and the

process under which it has been adopted must satisfy in order that the objectives of the Directive, including that of supplying information, can be regarded as achieved.

56 Article 1(5) provides that the Directive is not to apply 'to projects the details of which are adopted by a specific act of national legislation, since the objectives of [the] Directive, including that of supplying information, are achieved through the legislative process'.

57 That provision accordingly exempts projects envisaged by the Directive from the assessment procedure subject to two conditions. The first requires the details of the project to be adopted by a specific legislative act; under the second, the objectives of the Directive, including that of supplying information, must be achieved through the legislative process.

58 With regard to the first condition, it is to be observed that Article 1(2) of the Directive refers not to legislative acts but to development consent, which it defines as 'the decision of the competent authority or authorities which entitles the developer to proceed with the project'. Therefore, if it is a legislative act, instead of a decision of the competent authorities, which grants the developer the right to carry out the project, that act must be specific and display the same characteristics as the development consent specified in Article 1(2) of the Directive.

59 Consequently, in order for a legislative act to display the same characteristics as development consent, as defined by Article 1 of the Directive, the act must lay down the project in detail, that is to say in a sufficiently precise and definitive manner so as to include, like development consent, following their consideration by the legislature, all the elements of the project relevant to the environmental impact assessment.

60 It is only by complying with such requirements that the objectives referred to in the second condition laid down by Article 1(5) can be achieved through the legislative process. If the specific legislative act by which a particular project is adopted, and therefore authorised, does not include the elements of the specific project which may be relevant to the assessment of its impact on the environment, the objectives of the Directive would be undermined, because a project could be granted consent without prior assessment of its environmental effects even though they might be significant.

61 That interpretation is borne out by the sixth recital in the preamble to the Directive, which states that development consent for public and private projects which are likely to have significant effects on the environment should be granted only after prior assessment of the likely significant environmental effects of those projects, and that this assessment must be conducted on the basis of the appropriate information supplied by the developer, which may be supplemented by the authorities and by the people who may be concerned by the project.

62 It follows that the details of a project cannot be considered to be adopted by a Law, for the purposes of Article 1(5) of the Directive, if the Law does not include the elements necessary to assess the environmental impact of the project but, on the contrary, requires a study to be carried out for that purpose, which must be drawn up subsequently, and if the adoption of other measures are needed in order for the developer to be entitled to proceed with the project.

63 The answer to the fourth question must therefore be that Article 1(5) of the Directive is to be interpreted as not applying to a project, such as that at issue in the main proceedings, which, while provided for by a legislative provision setting out a programme, has received development consent under a separate administrative procedure. The requirements which such a provision and the process under which it has been adopted must satisfy in order that the objectives of the Directive, including that of supplying information, can be regarded as achieved

consist in the adoption of the project by a specific legislative act which includes all the elements which may be relevant to the assessment of the impact of the project on the environment.

The fifth question

64 By its fifth question, the national court asks whether Article 1(4) of the Directive is to be interpreted as meaning that an airport which may simultaneously serve both civil and military purposes, but whose main use is commercial, falls within the scope of the Directive.

65 The Directive, as stated in Article 1(4), does not cover 'projects serving national defence purposes'. That provision thus excludes from the Directive's scope and, therefore, from the assessment procedure for which it provides, projects intended to safeguard national defence. Such an exclusion introduces an exception to the general rule laid down by the Directive that environmental effects are to be assessed in advance and it must accordingly be interpreted restrictively. Only projects which mainly serve national defence purposes may therefore be excluded from the assessment obligation.

66 It follows that the Directive covers projects, such as that at issue in the main proceedings which, as the file shows, has the principal objective of restructuring an airport in order for it to be capable of commercial use, even though it may also be used for military purposes.

67 Accordingly, the answer to the fifth question must be that Article 1(4) of the Directive is to be interpreted as meaning that an airport which may simultaneously serve both civil and military purposes, but whose main use is commercial, falls within the scope of the Directive.

The sixth question

68 By its sixth question, the national court is essentially asking whether Articles 4(2) and 2(1) of the Directive are to be interpreted as meaning that, where the discretion conferred by those provisions has been exceeded by the legislative or administrative authorities of a Member State, individuals may rely on those provisions before a court of that Member State against the national authorities and thus obtain from the latter the setting aside of the national rules or measures incompatible with those provisions. In such a case, the national court is asking whether it is for the authorities of the Member State to take, according to their relevant powers, all the general or particular measures necessary to ensure that projects are examined in order to determine whether they are likely to have significant effects on the environment and, if so, to ensure that they are subject to an impact assessment.

69 As regards the right of individuals to rely on a directive and of the national court to take it into consideration, the Court has already held that it would be incompatible with the binding effect conferred on directives by Article 189 of the EC Treaty (now Article 249 EC) for the possibility for those concerned to rely on the obligation which directives impose to be excluded in principle. Particularly where the Community authorities have, by directive, imposed on Member States the obligation to pursue a particular course of conduct, the effectiveness of such an act would be diminished if individuals were prevented from relying on it in legal proceedings and if national courts were prevented from taking it into consideration as a matter of Community law in determining whether the national legislature, in exercising its choice as to the form and methods for implementing the directive, had kept within the limits of its discretion set out in the directive (Case 51/76 *Verbond van Nederlandse Ondernemingen* v *Inspecteur der Invoerrechten en Accijnzen* [1977] ECR 113, paragraphs 22, 23 and 24, and *Kraaijeveld*, cited above, paragraph 56).

70 Consequently, if that discretion has been exceeded and the national provisions must therefore be set aside on that account, it is for the authorities of the Member State, according to their relevant powers, to take all the general or particular measures necessary to ensure that projects are examined in order to determine

whether they are likely to have significant effects on the environment and, if so, to ensure that they are subject to an impact assessment (see *Kraaijeveld*, paragraph 61).

71 The answer to the sixth question must therefore be that Articles 4(2) and 2(1) of the Directive are to be interpreted as meaning that, where the discretion conferred by those provisions has been exceeded by the legislative or administrative authorities of a Member State, individuals may rely on those provisions before a court of that Member State against the national authorities and thus obtain from the latter the setting aside of the national rules or measures incompatible with those provisions. In such a case, it is for the authorities of the Member State to take, according to their relevant powers, all the general or particular measures necessary to ensure that projects are examined in order to determine whether they are likely to have significant effects on the environment and, if so, to ensure that they are subject to an impact assessment.

Costs

72 The costs incurred by the Italian, Netherlands and United Kingdom Governments and by the Commission, which have submitted observations to the Court, are not recoverable. Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the national court, the decision on costs is a matter for that court.

On those grounds,

THE COURT (Sixth Chamber),

in answer to the questions referred to it by the Verwaltungsgericht, Autonome Sektion für die Provinz Bozen, by order of 3 December 1997, hereby rules:

1. Articles 4(2) and 2(1) of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment are to be interpreted as not conferring on a Member State the power either to exclude, from the outset and in their entirety, from the environmental impact assessment procedure established by the Directive certain classes of projects falling within Annex II to the Directive, including modifications to those projects, or to exempt from such a procedure a specific project, such as the project of restructuring an airport with a runway shorter than 2 100 metres, either under national legislation or on the basis of an individual examination of that project, unless those classes of projects in their entirety or the specific project could be regarded, on the basis of a comprehensive assessment, as not being likely to have significant effects on the environment. It is for the national court to review whether, on the basis of the individual examination carried out by the national authorities which resulted in the exclusion of the specific project at issue from the assessment procedure established by the Directive, those authorities correctly assessed, in accordance with the Directive, the significance of the effects of that project on the environment.

2. In the case of a project requiring assessment under Directive 85/337, Article 2(1) and (2) thereof are to be interpreted as allowing a Member State to use an assessment procedure other than the procedure introduced by the Directive where that alternative procedure is incorporated in a national procedure which exists or is to be established within the meaning of Article 2(2) of the Directive. However, an alternative procedure of that kind

must satisfy the requirements of Articles 3 and 5 to 10 of the Directive, including public participation as provided for in Article 6.

3. Article 1(5) of Directive 85/337 is to be interpreted as not applying to a project, such as that at issue in the main proceedings, which, while provided for by a legislative provision setting out a programme, has received development consent under a separate administrative procedure. The requirements which such a provision and the process under which it has been adopted must satisfy in order that the objectives of the Directive, including that of supplying information, can be regarded as achieved consist in the adoption of the project by a specific legislative act which includes all the elements which may be relevant to the assessment of the impact of the project on the environment.

4. Article 1(4) of Directive 85/337 is to be interpreted as meaning that an airport which may simultaneously serve both civil and military purposes, but whose main use is commercial, falls within the scope of the Directive.

5. Articles 4(2) and 2(1) of Directive 85/337 are to be interpreted as meaning that, where the discretion conferred by those provisions has been exceeded by the legislative or administrative authorities of a Member State, individuals may rely on those provisions before a court of that Member State against the national authorities and thus obtain from the latter the setting aside of the national rules or measures incompatible with those provisions. In such a case, it is for the authorities of the Member State to take, according to their relevant powers, all the general or particular measures necessary to ensure that projects are examined in order to determine whether they are likely to

have significant effects on the environment and, if so, to ensure that they are subject to an impact assessment.

Kapteyn Murray Ragnemalm

Delivered in open court in Luxembourg on 16 September 1999.

R. Grass

Registrar

P.J.G. Kapteyn

President of the Sixth Chamber

JUDGMENT OF THE COURT (Sixth Chamber)
22 October 1998 *

In Case C-301/95,

Commission of the European Communities, represented by Götz zur Hausen, Legal Adviser, acting as Agent, with an address for service in Luxembourg at the office of Carlos Gómez de la Cruz, of its Legal Service, Wagner Centre, Kirchberg,

applicant,

v

Federal Republic of Germany, represented by Ernst Röder, Ministerialrat at the Federal Ministry of Economic Affairs, acting as Agent, and Dieter Sellner, Rechtsanwalt, Bonn, D-53107 Bonn,

defendant,

APPLICATION for a declaration that the Federal Republic of Germany has failed to comply with its obligations under Articles 5 and 189 of the EC Treaty and under Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40), in particular Articles 2, 3, 5(2), 6(2), 8, 9 and 12(1) and (2) thereof,

* Language of the case: German.

THE COURT (Sixth Chamber),

composed of: P. J. G. Kapteyn, President of the Chamber, G. F. Mancini, J. L. Murray, H. Ragnemalm and K. M. Ioannou (Rapporteur), Judges,

Advocate General: J. Mischo,
Registrar: H. A. Rühl, Principal Administrator,

having regard to the Report for the Hearing,

after hearing oral argument from the parties at the hearing on 22 January 1998,

after hearing the Opinion of the Advocate General at the sitting on 12 March 1998,

gives the following

Judgment

1 By application lodged at the Court Registry on 20 September 1995, the Commission of the European Communities brought an action under Article 169 of the EC Treaty for a declaration that the Federal Republic of Germany had failed to comply with its obligations under Articles 5 and 189 of the EC Treaty and under Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40, 'the Directive'), in particular Articles 2, 3, 5(2), 6(2), 8, 9 and 12(1) and (2) thereof.

2 The Directive was adopted on the basis of Articles 100 and 235 of the EEC Treaty. According to the 11th recital in the preamble, 'the effects of a project on the environment must be assessed in order to take account of concerns to protect human health, to contribute by means of a better environment to the quality of life, to ensure maintenance of the diversity of species and to maintain the reproductive capacity of the ecosystem as a basic resource for life'.

3 Article 1 of the Directive provides:

'1. This Directive shall apply to the assessment of the environmental effects of those public and private projects which are likely to have significant effects on the environment.

2. For the purposes of this Directive:

"project" means:

— the execution of construction works or of other installations or schemes,

...

"development consent" means:

the decision of the competent authority or authorities which entitles the developer to proceed with the project.

...'

4 Article 3 provides:

'The environmental impact assessment will identify, describe and assess in an appropriate manner, in the light of each individual case and in accordance with Articles 4 to 11, the direct and indirect effects of a project on the following factors:

— human beings, fauna and flora,

— soil, water, air, climate and the landscape,

— the interaction between the factors mentioned in the first and second indents,

— material assets and the cultural heritage.'

5 Pursuant to Article 12(1), the Member States were required to take the measures necessary to comply with the Directive within three years of its notification. Since the Directive was notified on 3 July 1985, that period expired on 3 July 1988.

6 In Germany the Directive was transposed by the Gesetz über die Umweltverträglichkeitsprüfung (Law on environmental impact assessment, 'the UVPG') of 12 February 1990, which came into force on 1 August 1990 (BGBl. I, p. 205).

7 On examining the provisions of the UVPG, the Commission reached the conclusion that the legislation in force in Germany, as notified to it, did not comply with the provisions of the Directive. It therefore sent a letter of formal notice on 4 February 1992 informing the German Government of the various points with which it took issue.

8 The German Government replied by letter of 16 June 1992, and the Commission reconsidered its position with regard to certain of the points raised in its letter of formal notice, finally limiting them, in its reasoned opinion sent to the German Government on 4 July 1994, to those falling under six headings each constituting a distinct instance of failure to transpose the Directive correctly. The Commission called on the German Government to take the measures necessary to comply with the reasoned opinion within two months from its notification.

9 Having received no reply to its reasoned opinion, the Commission brought the matter before the Court. Its action related to instances of failure to fulfil obligations falling under six different headings: delay in transposing the Directive; failure to communicate all the provisions adopted in the field covered by the Directive; failure to apply the Directive to all projects for which consent was given after 3 July 1988; incomplete transposition of Article 2 of the Directive with regard to the

projects listed in Annex II thereto; incomplete transposition of Article 5(2) of the Directive; and failure to apply the Directive to the implementation of two specific projects.

10 In the light of details furnished by the German Government in its defence, the Commission has withdrawn its claim concerning the aspects referred to under the sixth heading in its application.

Delay in transposing the Directive

11 The Commission submits that the German Government failed to take the measures necessary to comply with the Directive within the prescribed period, which expired on 3 July 1988 whereas the UVPG came into force on 1 August 1990. Germany has thus failed to fulfil its obligations under Article 5 and the third paragraph of Article 189 of the Treaty, read in conjunction with Article 12(1) of the Directive.

12 The German Government considers that it would be inappropriate to make a formal declaration of the alleged failure to fulfil obligations, since the Court has already held, in Case C-396/92 *Bund Naturschutz in Bayern and Others* v *Freistaat Bayern* [1994] ECR I-3717, that there had been a delay in transposing the Directive in Germany.

13 Here, though, it must be noted that the *Bund Naturschutz in Bayern* judgment was given in response to a request for a preliminary ruling on the interpretation of Article 12(1) of the Directive. An action for failure to fulfil obligations differs, however, in both its purpose and its consequences.

14 The purpose of such an action is to obtain a formal finding that a Member State has failed to fulfil its obligations under Community law.

15 As regards its consequences, that formal finding is a prerequisite for the initiation, where appropriate, of the procedure provided for in Article 171 of the EC Treaty, as amended by the Treaty on European Union.

16 Finally, as the Court has consistently held, the Commission, given its role as guardian of the Treaty, is alone competent to decide whether it is appropriate to bring proceedings against a Member State for failure to fulfil its obligations (Case C-431/92 *Commission* v *Germany* [1995] ECR I-2189, paragraph 22).

17 It must therefore be held that, by failing to take the necessary measures to comply with the Directive within the prescribed period, the Federal Republic of Germany has failed to fulfil its obligations under Article 12(1) thereof.

Failure to communicate all the provisions adopted in the field covered by the Directive

18 Article 12(2) of the Directive provides: 'Member States shall communicate to the Commission the texts of the provisions of national law which they adopt in the field covered by this Directive.'

19 The Commission states that the German Government did not communicate all the national provisions intended to transpose the Directive, in particular those adopted by the *Länder*. Such provisions, having been adopted in the field covered by the Directive, should in the Commission's view have been communicated in accordance with Article 12(2). Germany has thus failed to fulfil its obligations under Article 5 and the third paragraph of Article 189 of the Treaty, read in conjunction with Article 12(2) of the Directive.

20 The German Government counters that neither Article 12(2) nor any other provision of Community law obliges it to communicate to the Commission all the measures it has taken to comply with the Directive.

21 It further argues that under Paragraph 4 of the UVPG, that Law takes precedence over specific Laws and over the legislation of the *Länder*. In any instance where the requirements laid down by the latter fall short of those contained in the UVPG, the rules in the UVPG are directly applicable. The UVPG thus ensures that the requirements of the Directive are fully satisfied, making it unnecessary to communicate other provisions to the Commission.

22 Here it must be noted that the wording of Article 12(2) of the Directive leaves no doubt as to the scope of the obligation placed on Member States to communicate to the Commission all the provisions which they adopt in the field covered by the Directive. Nor does it give any reason to suppose that distinctions may be drawn as to the nature of that obligation according to whether a Member State has a federal or centralised structure or according to the legislative technique which it employs.

23 Since the obligation to communicate national provisions concerns all such provisions adopted in the field covered by the Directive, the finding that the Member State has failed to fulfil its obligations as alleged cannot be affected by the consideration that the provisions of the UVPG, which have been communicated to the Commission, take precedence over those which have not been communicated.

24 It must therefore be held that, by failing to communicate to the Commission all the measures which it has taken to comply with the Directive, the Federal Republic of Germany has failed to fulfil its obligations under Article 12(2) thereof.

Failure to apply the Directive to all projects for which consent was given after 3 July 1988

25 Paragraph 22(1) of the UVPG contains a transitional provision under which consent procedures already commenced are to be completed in accordance with the provisions of that Law where the project had not yet been made public by 1 August 1990, when the UVPG came into force.

26 In the Commission's submission, that transitional provision limits the scope *ratione temporis* of the UVPG, in that consent procedures commenced before 1 August 1990 but after 3 July 1988, when the period within which the Directive was to be transposed expired, are not subject to an environmental impact assessment in accordance with the requirements of the Directive. Germany has thus failed to fulfil its

obligations under Article 5 and the third paragraph of Article 189 of the Treaty, read in conjunction with Article 12(1) of the Directive.

27 The Federal Government argues that it was already made clear in the *Bund Naturschutz in Bayern* and *Commission* v *Germany* judgments, cited above, that the Federal Republic of Germany was not entitled to adopt a derogating provision such as that contained in Paragraph 22(1) of the UVPG concerning projects for which the consent application had been lodged before 3 July 1988 and thus to exempt such projects from the environmental impact assessment requirement. That question having been settled by those two judgments, there is no reason for the Court to rule afresh on the same point of law.

28 Here it must be observed that the subject-matter of the *Commission* v *Germany* case, cited above, was different, since it concerned a finding that Germany had failed to fulfil its obligations by failing to comply with the environmental impact assessment requirement laid down by the Directive in a specific case relating to a specific project. The application in that case did not seek a finding that the Member State had failed to fulfil its obligations by adopting Paragraph 22 of the UVPG.

29 Consequently, having regard to the considerations set out in paragraphs 13 to 15 above, it must be held that, by not requiring an environmental impact assessment for all projects on which such an assessment had to be carried out in compliance with the Directive, where the consent procedure was commenced after 3 July 1988, the Federal Republic of Germany has failed to fulfil its obligations under Article 12(1) of the Directive.

Incomplete transposition of Article 2 of the Directive with regard to the projects listed in Annex II thereto

30 Article 2 of the Directive provides:

'1. Member States shall adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment by virtue, *inter alia*, of their nature, size or location are made subject to an assessment with regard to their effects.

These projects are defined in Article 4.

...'

31 Article 4 provides:

'1. Subject to Article 2(3), projects of the classes listed in Annex I shall be made subject to an assessment in accordance with Articles 5 to 10.

2. Projects of the classes listed in Annex II shall be made subject to an assessment, in accordance with Articles 5 to 10, where Member States consider that their characteristics so require.

To this end Member States may *inter alia* specify certain types of projects as being subject to an assessment or may establish the criteria and/or thresholds necessary to determine which of the projects of the classes listed in Annex II are to be subject to an assessment in accordance with Articles 5 to 10.'

32 Annex I to the Directive lists nine categories of projects defined according to their nature, such as oil refineries, integrated chemical installations, construction of motorways and trading ports. Annex II, entitled 'Projects subject to Article 4(2)', lists 12 categories of projects. Unlike those in Annex I, the categories in Annex II are divided into sub-categories, each preceded by a letter of the alphabet, with the exception of those listed under points 5, 9 and 12.

33 The Federal Republic of Germany, availing itself of its right under Article 4(2) of the Directive in conjunction with Annex II thereto, defined certain projects in Paragraph 3 of the UVPG and in the Annex thereto which it decided to subject to the obligation to carry out an environmental impact assessment.

34 The Commission argues that the German legislation does not include all the classes of projects listed in Annex II to the Directive. In its opinion, all the projects listed in Annex II under the various letters of the alphabet preceding the subdivisions of the categories listed in that annex must be considered as 'classes' within the meaning of Article 4(2) of the Directive. The Commission does not dispute that the Member States may, under Article 4(2), distinguish on the basis of their characteristics between the projects falling within a particular class in Annex II to the Directive, but it considers that it is unacceptable not to impose the environmental assessment requirement on whole classes in general.

35 The Commission therefore asks the Court to find that, by excluding in advance whole classes of projects listed in Annex II to the Directive from the environmental impact assessment requirement, Germany has failed to fulfil its obligations under Article 5 and the third paragraph of Article 189 of the Treaty, read in conjunction with Articles 2(1) and 12(1) of the Directive.

36 The German Government considers that a distinction is to be drawn between the concepts of 'classes' and 'projects'. In its opinion, Annex II to the Directive lists a total of '12 classes of projects' within which there are 'specific' projects. Each of the 12 categories in the annex thus constitutes a class of projects and each of the subdivisions of those categories, preceded by a letter of the alphabet, constitutes a specific project.

37 It submits that, under Article 4(2) of the Directive, each Member State may decide, at its own discretion, which of the specific projects listed under the 12 classes has to be subject to the assessment requirement. The UVPG takes account of all the classes of projects in Annex II to the Directive and, within those classes, requires an environmental impact assessment to be carried out on those projects whose characteristics warrant it in the opinion of the federal legislature. To that end, the German Government used its discretionary power to set criteria and/or thresholds for certain types of projects in respect of the assessment obligation. It is thus wrong to claim that the Federal Republic of Germany has excluded whole classes of projects from the assessment requirement.

38 The Court has held that Article 4(2) of the Directive does not empower the Member States to exclude generally and definitively from possible assessment one or more classes mentioned in Annex II (see Case C-133/94 *Commission* v *Belgium* [1996] ECR I-2323, paragraph 43). In order to settle the dispute on this point, therefore, the question of the interpretation of the concept of classes of projects, within the meaning of Article 4 of the Directive, must first be dealt with.

39 Here, it must be noted that Article 4 of the Directive uses the same wording in both paragraphs 1 and 2 in relation to the concept in question, namely 'projects of the classes listed in Annex I shall be made subject to an assessment ...' and 'projects of the classes listed in Annex II shall be made subject to an assessment ... where ...'.

40 The tenor and scope of that concept thus clearly cannot differ depending whether it is used in Annex I or Annex II of the Directive.

41 Referring as it does in Annex I to categories of projects defined according to their nature, it can only refer to the same kind of categories of projects with regard to Annex II.

42 However, the nine categories of projects in Annex I cannot, by their nature, correspond to the 12 categories in Annex II, each of which constitutes a vast field of economic activity; they must rather correspond to the subdivisions of those categories, each preceded by a letter of the alphabet. That consideration is borne out by the fact that categories 5, 9 and 12 in Annex II, which are not subdivided, each constitute an activity confined within clear limits.

43 For example, the category of projects entitled 'Construction of motorways, express roads and lines for long-distance railway traffic and of airports ...' under point 7 in Annex I cannot correspond, as a class of projects, to the category under point 10 of Annex II, entitled 'Infrastructure projects'; it must rather correspond to subdivision (d) within that point, which refers to 'Construction of roads, harbours, including fishing harbours, and airfields (projects not listed in Annex I)'.

44 Any other interpretation of the concept in question would negate the effectiveness of the rule laid down in Article 2(1) of the Directive, that projects likely to have significant effects on the environment by virtue *inter alia* of their nature, size or location are to be made subject to an environmental impact assessment, and would leave Member States free to apply Annex II as they saw fit.

45 It is specifically on the basis of that rule that the Court has held that the limits of the discretion conferred on the Member States by Article 4(2) of the Directive are to be found in the obligation set out in Article 2(1) (Case C-72/95 *Kraaijeveld and Others* v *Gedeputeerde Staten van Zuid-Holland* [1996] ECR I-5403, paragraph 50), and that the criteria and/or thresholds mentioned in Article 4(2) are designed to facilitate the examination of the actual characteristics exhibited by a given project in order to determine whether it is subject to the requirement to carry out an assessment and not to exempt in advance from that obligation certain whole classes of projects listed in Annex II which may be envisaged on the territory of a Member State (Case C-133/94 *Commission* v *Belgium*, cited above, paragraph 42).

46 It must therefore be held that, by excluding in advance from the environmental impact assessment requirement whole classes of projects listed in Annex II to the Directive, the Federal Republic of Germany has failed to fulfil its obligations under Articles 2(1) and 4(1) of the Directive.

Incomplete transposition of Article 5(2) of the Directive

47 Article 5(1) of the Directive requires Member States to adopt the necessary measures to ensure that the developer supplies certain information concerning any project subject to an environmental impact assessment. That information is specified in Article 5(2) and in Annex III to the Directive.

48 The Commission notes that the provisions of Paragraph 6(3) and (4) of the UVPG, in transposing Article 5(1) of the Directive, define the information which the developer must supply. However, the second sentence of Paragraph 6(2) of the UVPG states that those provisions are applicable only 'if the information listed in subparagraphs 3 and 4 is not defined in detail by a statutory provision'.

49 According to the Commission, this means that other statutory provisions, defining in detail the information that must be provided by the developer, take precedence over the provisions of the UVPG and thus replace them in such cases. The Commission therefore considers that, by failing to lay down a general requirement in respect of the information to be supplied under the Directive, Germany has failed to fulfil its obligations under Article 5 and the third paragraph of Article 189 of the Treaty, in conjunction with Articles 5(2) and 12(1) of the Directive.

50 The German Government claims that the Commission's approach is based on a misinterpretation of Paragraph 6(2) of the UVPG. That provision does not derogate from the general rule in Paragraph 4 of the UVPG, governing the relationship between that Law and other statutory provisions laid down by the Federation or the *Länder* within the field covered by the Directive. In accordance with that rule, if the requirements laid down by such statutory provisions fall short of those of the UVPG, then the latter take precedence.

51 Here, it must be noted that Article 5(2) of the Directive specifies the minimum scope of the information to be supplied by the developer. The Commission does not claim that the provisions of Paragraph 6(3) and (4) of the UVPG do not provide a correct transposition of their counterpart in the Directive.

52 If, for reasons which may be linked to the federal structure of the State, other specific provisions of the Federation or the *Länder* lay down particular requirements corresponding, possibly, to the individual needs of the various fields of activity covered by the Directive, it must be noted that Article 13 of the Directive allows

the Member States to lay down stricter rules than those contained in the Directive. Furthermore, the general rule in Paragraph 4 of the UVPG ensures, as has been explained by the German Government, that the provisions of Paragraph 6(3) and (4) are to apply when the requirements contained in specific provisions fall short of those laid down in the corresponding provision of the UVPG.

53 In the light of those considerations, this part of the application must therefore be dismissed.

54 In view of all the foregoing, it must accordingly be held that

— by failing to take the necessary measures to comply with the Directive within the prescribed period,

— by failing to communicate to the Commission all the measures which it has taken to comply with the Directive,

— by not requiring an environmental impact assessment for all projects on which such an assessment had to be carried out in compliance with the Directive, where the consent procedure was commenced after 3 July 1988, and

— by excluding in advance from the environmental impact assessment requirement whole classes of projects listed in Annex II to the Directive,

the Federal Republic of Germany has failed to fulfil its obligations under Articles 2(1), 4(2) and 12(1) and (2) of the Directive.

55 The remainder of the application must be dismissed.

Costs

56 Under Article 69(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs. Since the Federal Republic of Germany has been unsuccessful in all essential respects, it must be ordered to pay the costs.

On those grounds,

THE COURT (Sixth Chamber)

hereby:

1) Declares that,

— **by failing to take the necessary measures to comply with Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment within the prescribed period,**

— **by failing to communicate to the Commission all the measures which it has taken to comply with that directive,**

— **by not requiring an environmental impact assessment for all projects on which such an assessment had to be carried out in compliance with that directive, where the consent procedure was commenced after 3 July 1988, and**

— **by excluding in advance from the environmental impact assessment requirement whole classes of projects listed in Annex II to that directive,**

the Federal Republic of Germany has failed to fulfil its obligations under Articles 2(1), 4(2) and 12(1) and (2) of that directive;

2) Dismisses the remainder of the application;

3) Orders the Federal Republic of Germany to bear the costs.

President of the Sixth Chamber

JUDGMENT OF THE COURT
24 October 1996 *

In Case C-72/95,

REFERENCE to the Court under Article 177 of the EC Treaty by the Nederlandse Raad van State (Netherlands) for a preliminary ruling in the proceedings pending before that court between

Aannemersbedrijf P. K. Kraaijeveld BV and Others

and

Gedeputeerde Staten van Zuid-Holland

on the interpretation of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40) and on the duty of national courts to ensure that a directive having direct effect is complied with although no individual has invoked it,

THE COURT,

composed of: G. C. Rodríguez Iglesias, President, G. F. Mancini, J. L. Murray, L. Sevón (Rapporteur), (Presidents of Chambers), C. N. Kakouris, P. J. G. Kapteyn, C. Gulmann, D. A. O. Edward, J.-P. Puissochet, G. Hirsch and M. Wathelet, Judges,

* Language of the case: Dutch.

Advocate General: M. B. Elmer,
Registrar: D. Louterman-Hubeau, Principal Administrator,

after considering the written observations submitted on behalf of:

— Aannemersbedrijf P. K. Kraaijeveld BV and Others, by J. A. Kraaijeveld, J. Kraaijeveld Sr., J. Kraaijeveld Jr., W. Kraaijeveld and P. K. Kraaijeveld,

— the Government of the Netherlands, by A. Bos, Legal Adviser at the Ministry of Foreign Affairs, acting as Agent,

— the Italian Government, by U. Leanza, Head of the Legal Department of the Ministry of Foreign Affairs, acting as Agent, assisted by P. G. Ferri, Avvocato dello Stato,

— the United Kingdom Government, by J. E. Collins, Assistant Treasury Solicitor, acting as Agent, assisted by D. Wyatt QC,

— the Commission of the European Communities, by M. van der Woude, of its Legal Service, acting as Agent,

having regard to the Report for the Hearing,

after hearing the oral observations of Aannemersbedrijf P. K. Kraaijeveld BV and Others, represented by J. Kraaijeveld Jr. and W. Kraaijeveld; the Government of the Netherlands, represented by J. S. van den Oosterkamp, Assistant Legal Adviser at the Ministry of Foreign Affairs, acting as Agent, assisted by J. Poot, expert adviser; the Italian Government, represented by P. G. Ferri; the United Kingdom

Government, represented by J. E. Collins, assisted by D. Wyatt; and the Commission, represented by W. Wils of its Legal Service, acting as Agent, at the hearing on 14 February 1996,

after hearing the Opinion of the Advocate General at the sitting on 26 March 1996,

gives the following

Judgment

1 By judgment of 8 March 1995, received at the Court on 14 March 1995, the Nederlandse Raad van State (Netherlands State Council) referred to the Court for a preliminary ruling under Article 177 of the EC Treaty four questions on the interpretation of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40, hereinafter 'the directive') and on the duty of national courts to ensure that a directive having direct effect is complied with although no individual has invoked it.

2 The questions were raised in proceedings brought by Aannemersbedrijf P. K. Kraaijeveld BV and Others (hereinafter 'Kraaijeveld') for annulment of a decision of 18 May 1993 by which the South Holland Provincial Executive approved a zoning plan entitled 'Partial modification of zoning plans in connection with dyke reinforcement' adopted by the Sliedrecht Municipal Council pursuant to the Wet op de ruimtelijke ordening (Regional Development Law).

Directive 85/337

3 The directive provides that, before certain works or other interventions in the natural surroundings are executed, an environmental impact assessment is to be carried out.

4 According to the sixth, eighth, ninth and eleventh recitals in the preamble to the directive:

'... development consent for public and private projects which are likely to have significant effects on the environment should be granted only after prior assessment of the likely significant environmental effects of these projects has been carried out; ... this assessment must be conducted on the basis of the appropriate information supplied by the developer, which may be supplemented by the authorities and by the people who may be concerned by the project in question;

... projects belonging to certain types have significant effects on the environment and these projects must as a rule be subject to systematic assessment;

... projects of other types may not have significant effects on the environment in every case and ... these projects should be assessed where the Member States consider that their characteristics so require;

... the effects of a project on the environment must be assessed in order to take account of concerns to protect human health, to contribute by means of a better environment to the quality of life, to ensure maintenance of the diversity of species and to maintain the reproductive capacity of the ecosystem as a basic resource for life'.

5 Article 1(1) of the directive states:

'This directive shall apply to the assessment of the environmental effects of those public and private projects which are likely to have significant effects on the environment.'

6 Article 1(2) states that for the purposes of the directive 'project' means:

'— the execution of construction works or of other installations or schemes,

— other interventions in the natural surroundings and landscape including those involving the extraction of mineral resources.'

7 Article 2(1) specifies the types of projects which are to be subject to an assessment:

'Member States shall adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment by virtue *inter alia* of their nature, size or location are made subject to an assessment with regard to their effects.

These projects are defined in Article 4.'

8 Article 3 provides:

'The environmental impact assessment will identify, describe and assess in an appropriate manner, in the light of each individual case and in accordance with Articles 4 to 11, the direct and indirect effects of a project on the following factors:

— human beings, fauna and flora,

— soil, water, air, climate and the landscape,

— the inter-action between the factors mentioned in the first and second indents,

— material assets and the cultural heritage.'

9 Article 4 distinguishes between two different types of projects. The first paragraph provides that an assessment is always required for projects described in Annex I. As regards other projects, Article 4(2) provides:

'Projects of the classes listed in Annex II shall be made subject to an assessment, in accordance with Articles 5 to 10, where Member States consider that their characteristics so require.

To this end Member States may *inter alia* specify certain types of projects as being subject to an assessment or may establish the criteria and/or thresholds necessary to determine which of the projects of the classes listed in Annex II are to be subject to an assessment in accordance with Articles 5 to 10'.

10 Annex II lists a number of projects, including:

'10. Infrastructure projects

...

(e) Canalization and flood-relief works.

...

12. Modifications to development projects included in Annex I and projects in Annex I undertaken exclusively or mainly for the development and testing of new methods or products and not used for more than one year.'

11 The directive contains no specific provision in relation to modifications to projects listed in Annex II.

12 Lastly, the directive provides for the public to be given information and the opportunity to express an opinion. Article 6(3) of the directive provides that the detailed arrangements for such information and consultation are to be determined by the Member States, in particular as regards determination of the public concerned and the way in which the public will be informed.

13 Article 12(1) of the directive provides that 'Member States shall take the measures necessary to comply with this directive within three years of its notification'.

The provisions of Netherlands law applicable to the facts of the main proceedings

14 In the Netherlands the Deltawet (of 8 May 1958) houdende de afsluiting van de zeearmen tussen de Westerschelde en de Rotterdamse Waterweg en de versterking van de hoogwaterkering ter beveiliging van het land tegen stormvloeden (*Staatsblad 246*, Delta Law providing for the closure of the sea inlets linking the Western Scheldt to the Rotterdam Waterway and consolidating the tide control scheme to protect land against storm tides, hereinafter the 'Delta Law') provides in particular for the construction of works intended to reinforce high-water protection along the Rotterdam Waterway and along the waters communicating with it (Article 1(II)d). Pursuant to that Law, studies were undertaken, mainly in 1987 and 1988, by the Dyke Reinforcement Coordinating Committee responsible to the South Holland Provincial Executive. A new dyke line in the West, Central and East Sliedrecht sector was proposed by the Committee, approved by the South Holland Provincial Executive and adopted by the Minister for Transport and Water Control on 26 April 1990 in accordance with Article 2(4) of the Delta Law. Subsequently the Sliedrecht Municipal Council adopted the zoning plan for that sector on 23 November 1992 under the Regional Development Law.

15 The directive was transposed into national law in the Netherlands by an amendment to the Wet algemene bepalingen milieuhygiëne (Law laying down general provisions on environmental health) of 13 June 1979 (hereinafter 'the 1979 Law'), Article 41b(1) of which provided, at the material time: 'Activities which are likely to have significant adverse effects on the environment shall be designated by a general administrative measure. The same instrument shall designate the decision(s) of the public authorities concerning such activities prior to which an environmental impact assessment must be made.' The 1979 Law was itself implemented by the Besluit milieu-effectrapportage (Environmental Impact Assessment Decision) of 20 May 1987. In Article 2 of the decision and Section C 12.1 of the annex thereto, in the version in force at the material time, defined the 'construction of a dyke' as an activity within the meaning of Article 41(b) of the Law if the dyke was 5 km or more in length, with a cross-section of at least 250 m^2. They also characterize as a

decision in respect of which an environmental impact assessment must be made the adoption of an outline plan or a decision made pursuant to Article 2(3) and (4) of the Delta Law.

16 The 1979 Law was amended and became, in 1994, the Wet milieubeheer (Environmental Management Law). A further implementing decision was adopted on 4 July 1994, omitting the criteria in respect of the size of the works. That decision is not applicable, however, to the facts of the case in the main proceedings.

Procedure before the national court and the questions referred for a preliminary ruling

17 Kraaijeveld contested the zoning plan adopted on 23 November 1992 by the Sliedrecht Municipal Council, in so far as it concerned the Merwede dyke, before the South Holland Provincial Executive which, by decision of 18 May 1993, nevertheless approved the plan. On 20 July 1993 Kraaijeveld brought an action before the Raad van State seeking annulment of that decision.

18 According to the new plan, the waterway to which Kraaijeveld has access will no longer be linked to navigable waterways; the removal of access to navigable waterways would be ruinous to Kraaijeveld's business, whose economic activity is related to waterways ('natte waterbouw').

19 The Nederlandse Raad van State observes that no environment impact assessment was made because the size of the works was less than the minimum laid down by national legislation.

20 By judgment of 8 March 1995 the Nederlandse Raad van State decided to refer to the Court of Justice for a preliminary ruling the following four questions:

'1. Must the expression "canalization and flood-relief works" in Annex II to Directive 85/337/EEC be interpreted as including certain types of work on a dyke running alongside waterways?

2. Having regard in particular to the terms "projects" and "modifications to development projects" employed in the directive, does it make any difference to the answer to Question 1 whether what is involved is:

(a) the construction of a new dyke;

(b) the relocation of an existing dyke;

(c) the reinforcement and/or widening of an existing dyke;

(d) the replacement *in situ* of a dyke whether or not the new dyke is stronger and/or wider than the old one; or

(e) a combination of two or more of (a) to (d) above?

3. Must Article 2(1) and Article 4(2) of the directive be interpreted as meaning that where a Member State in its national implementing legislation has laid down specifications, criteria or thresholds for a particular project covered by Annex II in accordance with Article 4(2) of the directive, but those specifica-

tions, criteria or thresholds are incorrect, Article 2(1) requires that an environmental impact assessment be made if the project is likely to have "significant effects on the environment by virtue *inter alia* of [its] nature, size or location" within the meaning of that provision?

4. If Question 3 is answered in the affirmative, does that obligation have direct effect, that is to say, may it be relied upon by an individual before a national court and must it be applied by the national court even if it was not in fact invoked in the matter pending before that court?'

Question 1

21 In this question the Nederlandse Raad van State asks whether the expression 'canalization and flood-relief works' in point 10(e) of Annex II to the directive is to be interpreted as including certain types of work on a dyke running alongside waterways.

22 In view of the wording of the English version of the directive ('canalization and flood-relief works'), the national court considers that projects falling under that heading of Annex II involve activities likely to have significant effects on the environment, so that the expression could encompass certain works relating to a dyke.

23 According to Kraaijeveld, river dyke projects are works which tend to alter the frequency with which river banks and the surrounding areas are submerged and

which thus have a significant effect on the environment. In the regulation of watercourses, dykes are no less important than other canalization and flood-relief works.

24 The Government of the Netherlands contends that there is a distinction between work on a dyke and flood-relief and canalization work. The latter are carried out to regulate water flow or for the benefit of river navigation. They change the character of the watercourse itself, that is to say, the quantity or quality of the water and the riverbanks and riverside, so that they have a considerable impact on aquatic flora and fauna. Dyke reinforcement work, on the other hand, consists in constructing or increasing the height of the embankment with sand or clay. The Rivierenwet (Law on Rivers) ensures that the works now undertaken do not affect the regulated level already achieved for any given river. Such work therefore has little effect on the fauna and flora of a river.

25 As regards the reference to the English version of the directive, the Government of the Netherlands considers that the Dutch version of the directive is, as far as it is concerned, the only authentic language version. It cites the Court's case-law to the effect that the elimination of linguistic discrepancies by way of interpretation may in certain circumstances run counter to the principle of legal certainty, inasmuch as one or more of the texts involved may have to be interpreted in a manner at variance with the natural and usual meaning of the words (Case 80/76 *North Kerry Milk Products* v *Minister for Agriculture and Fisheries* [1977] ECR 425, paragraph 11). Uniform interpretation cannot be determined by one particular language. The various language versions are equally authentic (Case 283/81 *CILFIT* [1982] ECR 3415).

26 Lastly, the Government of the Netherlands refers to the purpose of the directive, which is to create equal conditions of competition in the various Member States. The work referred to in the directive can therefore only refer to work which can be undertaken in practically all the Member States, not to work which is mainly carried out in only one Member State, such as the construction of dykes. The

Government of the Netherlands therefore concludes that reinforcement work on dykes along waterways in the Netherlands is not covered by the expression 'canalization and flood-relief works'.

27 According to the Commission, canalization of a river has an inevitable effect on its flow rate and water level. It may make it necessary to erect dykes along the river banks in order to prevent floods and safeguard the population. A dyke of that type must therefore be held to be flood-relief works. Moreover, it is necessary to take into account the purpose of the directive, which concerns the effects certain projects may have on the environment, regardless of their social objective. The construction of river dykes affects the environment, whether their purpose is to improve the navigability of a watercourse or to protect the population living on territory liable to flood. Works on a river dyke capable of having significant effects on the environment are therefore covered by the term 'canalization and flood-relief works'.

28 As the case-law of the Court shows, interpretation of a provision of Community law involves a comparison of the language versions (see Case 283/81 *CILFIT*, cited above, paragraph 18). Moreover, the need for a uniform interpretation of those versions requires, in the case of divergence between them, that the provision in question be interpreted by reference to the purpose and general scheme of the rules of which it forms part (Case C-449/93 *Rockfon* [1995] ECR I-4291, paragraph 28).

29 Examination of the various language versions of point 10(e) of Annex II to the directive shows that they fall into two categories according to whether the terms employed denote the idea of flooding. The English ('canalization and flood-relief works') and Finnish ('kanavointi-ja tulvasuojeluhankkeet') versions are similar, whereas the German, Greek, Spanish, French, Italian, Dutch and Portuguese versions refer to canalization and regulation of watercourses, the Greek version including in addition the French term 'canalisation' in brackets after the Greek

term 'διευθέτησης'. The Danish and Swedish versions contain only a single expression reflecting the idea of regulating watercourses ('anlæg til regulering af vandløb', 'anläggningar för reglering av vattenflöden').

30 Given that divergence, one must go to the purpose and general scheme of the directive. According to Article 1(2) of the directive, 'project' means 'the execution of construction works or of other installations or schemes' and 'other interventions in the natural surroundings and landscape including those involving the extraction of mineral resources'. According to Article 2(1), the directive is aimed at 'projects likely to have significant effects on the environment by virtue *inter alia* of their nature, size or location'. Article 3 provides that the environmental impact assessment is to identify, describe and assess the direct and indirect effects of a project on human beings, fauna and flora, soil, water, air, climate and the landscape, material assets and the cultural heritage.

31 The wording of the directive indicates that it has a wide scope and a broad purpose. That observation alone should suffice to interpret point 10(e) of Annex II to the directive as encompassing all works for retaining water and preventing floods — and therefore dyke works — even if not all the linguistic versions are so precise.

32 Even if, as argued by the Government of the Netherlands, dyke works consist in the construction or raising of the height of embankments in order to contain watercourses and avoid flooding, works retaining a static quantity of water, rather than a running watercourse, may have a significant effect on the environment within the meaning of the directive where they are liable permanently to affect the composition of the soil, flora and fauna or the landscape. Such works must therefore fall under the directive.

33 Consequently, the argument of the Government of the Netherlands that dyke work does not alter the course of a waterway is not well founded.

34 Lastly, the submission of the Government of the Netherlands that dykes do not fall within the scope of a Community directive because such work is specific to the Netherlands is irrelevant, since, as explained above, the criterion to be applied is the significance of the effect that a project is likely to have on the environment.

35 The reply to the first question is therefore that the expression 'canalization and flood-relief works' in point 10(e) of Annex II to the directive must be interpreted as including certain types of work on a dyke running alongside waterways.

Question 2

36 In this question the Nederlandse Raad van State asks whether, having regard in particular to the expressions 'projects' and 'modifications to development projects' employed in the directive, it makes any difference to the answer to Question 1 whether what is involved is:

(a) the construction of a new dyke;

(b) the relocation of an existing dyke;

(c) the reinforcement and/or widening of an existing dyke;

(d) the replacement *in situ* of a dyke whether or not the new dyke is stronger and/or wider than the old one; or

(e) a combination of two or more of (a) to (d) above.

37 Under the terms of the directive, modifications to development projects included in Annex I are to be subject to the same system as projects included in Annex II, and are thus subject to Article 4(2) of the directive. The lack of any reference to modifications of projects of the classes included in Annex II is construed, in the observations submitted, in different ways as regards their inclusion in the scope of the directive. According to the Italian and United Kingdom Governments, modifications of projects included in Annex II are also covered by that annex, whereas the Government of the Netherlands and the Commission argue that they do not fall within the scope of the directive. The Commission specifies, however, that it depends on the meaning attributed to the expression 'modifications to development projects' and in certain cases modifications may be so significant that they constitute a new project.

38 Since the directive provides no specific definition of 'modifications to development projects', the expression must be interpreted in the light of the general scheme and purpose of the directive.

39 It has already been pointed out in paragraph 31 above that the scope of the directive is wide and its purpose very broad. Its purpose would be undermined if 'modifications to development projects' were so construed as to enable certain works to escape the requirement of an impact assessment although, by reason of their nature, size or location, such works were likely to have significant effects on the environment.

40 Furthermore, the mere fact that the directive does not expressly refer to modifications to projects included in Annex II, as opposed to modifications to projects included in Annex I, does not justify the conclusion that they are not covered by the directive. The distinction between a 'project' and a 'modification to a project', where projects included in Annex I are concerned, relates to the different systems to which they are subject under the directive, whereas such a distinction in the case of projects included in Annex II would relate to the general scope of the directive.

41 Moreover, in Case C-431/92 *Commission* v *Germany* [1995] ECR I-2189, which concerned the Großkrotzenburg thermal power station, the Court held (paragraph 35) that links with a pre-existing construction of a new block of a thermal power station with a heat output of 500 megawatts did not prevent the project being a 'thermal power station with a heat output of 300 megawatts or more' so as to bring it within the category headed 'Modifications to development projects included in Annex I' mentioned in point 12 of Annex II. In that judgment the Court held that, in order to establish whether the work envisaged should undergo an impact assessment, such projects should be assessed irrespective of whether they were separate constructions, were added to a pre-existing construction, or even had close functional links with a pre-existing construction.

42 In the light of those considerations, the reply to the second question must be that the expression 'canalization and flood-relief works' in point 10(e) of Annex II to the directive is to be interpreted as including not only construction of a new dyke but also modification of an existing dyke involving its relocation, reinforcement or widening, replacement of a dyke by constructing a new dyke *in situ*, whether or not the new dyke is stronger or wider than the old one, or a combination of such works.

Questions 3 and 4

43 By these questions, which will be examined together, the national court asks whether Articles 2(1) and 4(2) of the directive should be interpreted as meaning that where a Member State in its national implementing legislation has laid down specifications, criteria or thresholds for a particular project covered by Annex II in accordance with Article 4(2) of the directive, but those specifications, criteria or thresholds are incorrect, Article 2(1) requires that an environmental impact assessment be made if the project is likely to have 'significant effects on the environment by virtue *inter alia* of [its] nature, size or location' within the meaning of that provision. If that question is answered in the affirmative, the national court asks whether that obligation to make an environmental impact assessment of the project has direct effect, so that it may be relied upon by an individual before a national court, and whether it must be applied by the national court even if it was not in fact invoked in the matter pending before that court.

44 Referring to Case C-355/90 *Commission* v *Spain* [1993] ECR I-4221, the Nederlandse Raad van State states that it is possible to argue that the measure of discretion which Article 4(2) allows the Member States in establishing the specifications, criteria or thresholds is limited by the expression 'likely to have significant effects on the environment by virtue *inter alia* of their nature, size or location' in Article 2(1).

45 Kraaijeveld and the Commission put forward a similar argument. The Commission states that the specifications, criteria or thresholds established by the Member States are primarily designed to facilitate examination of projects in order to determine whether they should undergo an impact assessment, but that the existence of those specifications, criteria or thresholds does not exempt the Member States from undertaking an actual examination of the project in order to verify that it satisfies the criteria in Article 2(1) of the directive. Both consider that the Kingdom of the Netherlands has not properly performed its obligation to implement the directive since the minimum size criteria laid down by the national legislation on

dykes was fixed at a level such that no river dyke projects met the criteria and hence all dyke reinforcement projects remained outside the ambit of impact assessments. On this issue Kraaijeveld produced a decision of a Netherlands court supporting its argument.

46 According to the Government of the Netherlands, however, the discretion allowed to the Member States is not limited in a precise manner in the directive. Moreover, the choice of thresholds for dyke length and cross-section measurements was made with due account taken of the impact of such work on the environment. The fact that, in practice, the Netherlands legislation transposing the directive left numerous projects free of the requirement of an assessment is wholly immaterial, since those projects had no harmful effects. It therefore considers that it did not go beyond the limits of its discretion in establishing those thresholds.

47 As regards the direct effect of the obligation to make impact assessments for some projects, the national court considers that that obligation may be regarded as resulting from a precise and unconditional provision of the directive. Kraaijeveld and the Commission have submitted observations to that effect, and the Commission adds that since the rules are of a procedural nature they leave no latitude as far as the result to be achieved is concerned. Conversely, the Netherlands and United Kingdom Governments consider that Article 2(1), read in conjunction with Article 4(2), of the directive is not sufficiently precise and unconditional to have direct effect, in view of the discretion conferred on Member States with regard to establishing thresholds and criteria or the procedure for consulting the public.

48 It should be noted that Article 2(1) of the directive refers to Article 4 for the definition of projects which must undergo an assessment of their effects. Article 4(2) allows Member States a certain discretion, since it states that projects of the classes listed in Annex II are to be subject to an assessment 'where Member States consider that their characteristics so require' and that, to that end, Member States may *inter alia* specify certain types of projects as being subject to an assessment or may

establish the criteria or thresholds necessary to determine which projects are to be subject to an assesment.

49 The interpretation put forward by the Commission — namely that the existence of specifications, criteria and thresholds does not remove the need for an actual examination of each project in order to verify that it fulfils the criteria of Article 2(1) — would deprive Article 4(2) of any point. A Member State would have no interest in fixing specifications, thresholds and criteria if, in any case, every project had to undergo an individual examination with respect to the criteria in Article 2(1).

50 However, although the second paragraph of Article 4(2) of the directive confers on Member States a measure of discretion to specify certain types of projects which will be subject to an assessment or to establish the criteria or thresholds applicable, the limits of that discretion are to be found in the obligation set out in Article 2(1) that projects likely, by virtue *inter alia* of their nature, size or location, to have significant effects on the environment are to be subject to an impact assessment.

51 Thus, ruling on the legislation of a Member State in terms of which certain entire classes of projects included in Annex II were excluded from the obligation of an impact assessment, the Court held in its judgment of 2 May 1996, in Case C-133/94 *Commission* v *Belgium*, [1996] ECR I-2323, at paragraph 42, that the criteria and/or the thresholds mentioned in Article 4(2) are designed to facilitate examination of the actual characteristics of any given project in order to determine whether it is subject to the requirement of assessment, not to exempt in advance from that obligation certain whole classes of projects listed in Annex II which may be envisaged as taking place on the territory of a Member State.

52 In a situation such as the present, it must be accepted that the Member State concerned was entitled to fix criteria relating to the size of dykes in order to establish

which dyke projects had to undergo an impact assessment. The question whether, in laying down such criteria, the Member State went beyond the limits of its discretion cannot be determined in relation to the characteristics of a single project. It depends on an overall assessment of the characteristics of projects of that nature which could be envisaged in the Member State.

53 Thus a Member State which established criteria or thresholds at a level such that, in practice, all projects relating to dykes would be exempted in advance from the requirement of an impact assessment would exceed the limits of its discretion under Articles 2(1) and 4(2) of the directive unless all projects excluded could, when viewed as a whole, be regarded as not being likely to have significant effects on the environment.

54 Lastly, as regards more particularly the fourth question, it appears from the order for reference that in its action Kraaijeveld did not raise the question whether an environmental impact assessment ought to have been made. In order to reply to the question, it must therefore be considered whether the national court hearing an action for annulment of a decision approving a zoning plan is required to raise of its own motion the question whether an environmental impact assessment should have been carried out pursuant to Article 2(1) and Article 4(2) of the directive.

55 First of all it should be recalled that the obligation of a Member State to take all the measures necessary to achieve the result prescribed by a directive is a binding obligation imposed by the third paragraph of Article 189 of the EC Treaty and by the directive itself (see Case 51/76 *Verbond van Nederlandse Ondernemingen* [1977] ECR 113, paragraph 22, and Case 152/84 *Marshall* [1986] ECR 723,

paragraph 48). That duty to take all appropriate measures, whether general or particular, is binding on all the authorities of Member States including, for matters within their jurisdiction, the courts (see Case C-106/89 *Marleasing* [1990] ECR I-4135, paragraph 8).

56 As regards the right of an individual to invoke a directive and of the national court to take it into consideration, the Court has already held that it would be incompatible with the binding effect attributed to a directive by Article 189 to exclude, in principle, the possibility that the obligation which it imposes may be invoked by those concerned. In particular, where the Community authorities have, by directive, imposed on Member States the obligation to pursue a particular course of conduct, the useful effect of such an act would be weakened if individuals were prevented from relying on it before their national courts, and if the latter were prevented from taking it into consideration as an element of Community law in order to rule whether the national legislature, in exercising the choice open to it as to the form and methods for implementation, has kept within the limits of its discretion set out in the directive (*Verbond van Nederlandse Ondernemingen*, paragraphs 22 to 24).

57 Secondly, where, by virtue of national law, courts or tribunals must, of their own motion, raise points of law based on binding domestic rules which have not been raised by the parties, such an obligation also exists where binding Community rules are concerned (see, in particular, Joined Cases C-430/93 and C-431/93 *Van Schijndel and Van Veen* v *SPF* [1995] ECR I-4705, paragraph 13).

58 The position is the same if national law confers on courts and tribunals a discretion to apply of their own motion binding rules of law. Indeed, pursuant to the principle of cooperation laid down in Article 5 of the Treaty, it is for national courts to ensure the legal protection which persons derive from the direct effect of provi-

sions of Community law (see, in particular, Case C-213/89 *Factortame* [1990] ECR I-2433, paragraph 19, and *Van Schijndel and Van Veen* v *SPF*, cited above, at paragraph 14).

59 The fact that in this case the Member States have a discretion under Articles 2(1) and 4(2) of the directive does not preclude judicial review of the question whether the national authorities exceeded their discretion (see, in particular, *Verbond van Nederlandse Ondernemingen*, paragraphs 27 to 29).

60 Consequently where, pursuant to national law, a court must or may raise of its own motion pleas in law based on a binding national rule which were not put forward by the parties, it must, for matters within its jurisdiction, examine of its own motion whether the legislative or administrative authorities of the Member State remained within the limits of their discretion under Articles 2(1) and 4(2) of the directive, and take account thereof when examining the action for annulment.

61 If that discretion has been exceeded and consequently the national provisions must be set aside in that respect, it is for the authorities of the Member State, according to their respective powers, to take all the general or particular measures necessary to ensure that projects are examined in order to determine whether they are likely to have significant effects on the environment and, if so, to ensure that they are subject to an impact assessment.

62 Consequently, the replies to the third and fourth questions must be that:

— Article 4(2) of the directive and point 10(e) of Annex II must be interpreted as meaning that a Member State which establishes the criteria or thresholds neces-

sary to classify projects relating to dykes at a level such that, in practice, all such projects are exempted in advance from the requirement of an impact assessment exceeds the limits of its discretion under Articles 2(1) and 4(2) of the directive unless all projects excluded could, when viewed as a whole, be regarded as not being likely to have significant effects on the environment.

— Where under national law a court must or may raise of its own motion pleas in law based on a binding national rule which have not been put forward by the parties, it must, for matters within its jurisdiction, examine of its own motion whether the legislative or administrative authorities of the Member State have remained within the limits of their discretion under Articles 2(1) and 4(2) of the directive, and take account thereof when examining the action for annulment.

— Where that discretion has been exceeded and consequently the national provisions must be set aside in that respect, it is for the authorities of the Member State, according to their respective powers, to take all the general or particular measures necessary to ensure that projects are examined in order to determine whether they are likely to have significant effects on the environment and, if so, to ensure that they are subject to an impact assessment.

Costs

63 The costs incurred by the Netherlands, Italian and United Kingdom Governments and the Commission of the European Communities, which have submitted observations to the Court, are not recoverable. Since these proceedings are, for the parties to the main proceedings, a step in the proceedings pending before the national court, the decision on costs is a matter for that court.

On those grounds,

THE COURT,

in answer to the questions referred to it by the Nederlandse Raad van State, by judgment of 8 March 1995, hereby rules:

1. The expression 'canalization and flood-relief works' in point 10(e) of Annex II to Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment must be interpreted as including certain types of work on a dyke running alongside waterways.

2. The expression 'canalization and flood-relief works' in point 10(e) of Annex II to Directive 85/337 is to be interpreted as including not only construction of a new dyke but also modification of an existing dyke involving its relocation, reinforcement or widening, replacement of a dyke by constructing a new dyke *in situ*, whether or not the new dyke is stronger or wider than the old one, or a combination of such works.

3. Article 4(2) of Directive 85/337 and point 10(e) of Annex II must be interpreted as meaning that a Member State which establishes the criteria or thresholds necessary to classify projects relating to dykes at a level such that, in practice, all such projects are exempted in advance from the requirement of an impact assessment exceeds the limits of its discretion under Articles 2(1) and 4(2) of the directive unless all projects excluded could, when viewed as a whole, be regarded as not being likely to have significant effects on the environment.

Where under national law a court must or may raise of its own motion pleas in law based on a binding national rule which have not been put forward by the parties, it must, for matters within its jurisdiction, examine of its own motion whether the legislative or administrative authorities of the Member State have remained within the limits of their discretion under Articles 2(1) and 4(2) of the directive, and take account thereof when examining the action for annulment.

Where that discretion has been exceeded and consequently the national provisions must be set aside in that respect, it is for the authorities of the Member State, according to their respective powers, to take all the general or particular measures necessary to ensure that projects are examined in order to determine whether they are likely to have significant effects on the environment and, if so, to ensure that they are subject to an impact assessment.

* Language of the case: Dutch.

APPLICATION for a declaration that, by not completely and correctly transposing into Belgian law Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40), the Kingdom of Belgium has failed to fulfil its obligations under that directive and Articles 5 and 189 of the EC Treaty,

THE COURT (Sixth Chamber),

composed of: C. N. Kakouris (Rapporteur), President of the Chamber, G. Hirsch, G. F. Mancini, F. A. Schockweiler and P. J. G. Kapteyn, Judges,

Advocate General: P. Léger,
Registrar: D. Louterman-Hubeau, Principal Administrator,

having regard to the Report for the Hearing,

after hearing oral argument from the parties at the hearing on 16 November 1995, at which the Kingdom of Belgium was represented by Jan Devadder, the Federal Republic of Germany by Ernst Röder and the Commission by Wouter Wils, of its Legal Service,

after hearing the Opinion of the Advocate General at the sitting on 11 January 1996,

gives the following

Judgment

1 By application lodged at the Court Registry on 6 May 1994, the Commission of the European Communities brought an action under Article 169 of the EC Treaty

for a declaration that, by not completely and correctly transposing into Belgian law Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40, 'the directive'), the Kingdom of Belgium has failed to fulfil its obligations under that directive and Articles 5 and 189 of the EC Treaty.

2 Under Article 12(1) of the directive, Member States had to take the measures necessary to comply with the directive within three years of its notification. Since it was notified on 3 July 1985, this period ran out on 3 July 1988.

3 By letter dated 29 December 1989, the Commission informed the Kingdom of Belgium pursuant to Article 169 of the Treaty that it considered that it had not completely and correctly implemented the directive, and asked the Belgian Government for its observations on this point.

4 The Belgian Government reacted to that letter giving it formal notice on 25 May 1990, sending the Commission additional information on 26 July 1991.

5 Considering that the Belgian Government's response was unsatisfactory, the Commission delivered a reasoned opinion on 3 December 1991 in which it adhered to its complaints against the Kingdom of Belgium and asked it to take remedial action within two months of notification of the opinion.

6 By letters dated 9 December 1991, 3 February 1992 and 23 July 1992, the Belgian Government notified to the Commission a number of measures and proposed measures designed to implement the directive in Belgian law completely.

7 Considering, however, that the directive had not been completely and correctly transposed, the Commission brought the present proceedings.

8 By order of the President of the Court of 25 November 1994, the Federal Republic of Germany was given leave to intervene in support of the form of order sought by the Kingdom of Belgium.

9 In its application, the Commission makes four complaints alleging, respectively, that Article 2(1) and Article 4(1) of the directive, in conjunction with point 2 of Annex I, have been incorrectly transposed at national level, that the Flemish Region has incorrectly transposed Article 2(1) and Article 4(1) of the directive, in conjunction with point 6 of Annex I, that the Flemish Region has also incorrectly transposed Article 4(2) of the directive, in conjunction with Article 2(1), and, lastly, that the Region of the Capital City of Brussels has failed to transpose Articles 7 and 9 of the directive.

10 In its application the Commission also complained that Article 6(2) of the directive, in conjunction with Article 9, had been incorrectly transposed. However, in the light of explanations provided by the Belgian Government, the Commission abandoned that complaint in its reply.

The complaint alleging that Article 2(1) and Article 4(1) of the directive, in conjunction with point 2 of Annex I, were incorrectly transposed at national level

11 Article 2(1) of the directive provides as follows:

'Member States shall adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment by virtue, *inter alia*, of their nature, size or location are made subject to an assessment with regard to their effects.

These projects are defined in Article 4.'

12 Article 4(1) states that:

'Subject to Article 2(3), projects of the classes listed in Annex I shall be made subject to an assessment in accordance with Articles 5 to 10.'

13 Point 2 of Annex I covers:

'2. Thermal power stations and other combustion installations with a heat output of 300 megawatts or more and nuclear power stations and other nuclear reactors

(except research installations for the production and conversion of fissionable and fertile materials, whose maximum power does not exceed 1 kilowatt continuous thermal load).'

14 The Commission argues that, under Article 4(1) of the directive, read together with Article 2(1), the projects listed in Annex I must be subjected to an environmental impact assessment. Consequently, Member States were not entitled to introduce any limitation in this area. In Belgium, however, there is no guarantee that a mandatory environmental impact assessment will be carried out in respect of nuclear power stations and other nuclear reactors (except research installations for the production and conversion of fissionable and fertile materials, whose standing power does not exceed 1 kilowatt continuous thermal load) or of installations used solely for the permanent storage or final disposal of radioactive waste.

15 In its rejoinder the Belgian Government states that, in that respect, the directive has been implemented in national law as a result of the amendments which the Royal Decree of 23 December 1993 (*Moniteur Belge* of 2 February 1994, p. 2142) made to the Royal Decree of 28 February 1963 laying down General Rules for the Protection of the Public and Workers against the Danger of Ionizing Radiation.

16 Whilst not contesting that the transposition carried out complies with the directive, the Commission adheres to its complaint. On the one hand, Belgium failed to implement the directive completely and correctly within the time-limit laid down by the reasoned opinion of 3 December 1991. On the other, on the date when the proceedings were brought, the Commission was unaware of the implementing measures adopted, since it was officially informed of them only by letter of 12 September 1994.

17 It should be noted in this regard that the Court has consistently held that the question whether there has been a failure to fulfil obligations must be examined on the basis of the position in which the Member State found itself at the end of the

period laid down in the reasoned opinion and the Court cannot take account of any subsequent changes (Case C-200/88 *Commission* v *Greece* [1990] ECR I-4299, paragraph 13).

18 In this case, the alleged implementing measures were adopted after the time-limit set by the reasoned opinion had expired.

19 Accordingly that complaint must be upheld.

The complaint alleging that the Flemish Region incorrectly transposed Article 2(1) and Article 4(1) of the directive, in conjunction with point 6 of Annex I

20 Point 6 of Annex I to the directive mentions 'integrated chemical installations' as being among the projects subject to assessment.

21 In the Flemish Region, the environmental impact assessment procedure was incorporated into existing consent procedures for establishments constituting a nuisance and establishments not constituting a nuisance.

22 Ps far as establishments constituting a nuisance are concerned, the consent procedures are governed by the Decree of the Flemish Council of 28 June 1985 relating to Anti-Pollution Consent (*Moniteur Belge* of 17 September 1985, p. 13304).

23 Pursuant to that decree, the Flemish Executive adopted on 23 March 1989 Order 89-928 (*Moniteur Belge* of 17 May 1989, p. 8442). Article 3(6) of that order defines integrated chemical installations as installations 'for the chemical processing of:

(a) unsaturated aliphatic hydrocarbons with less than 5 carbon atoms per molecule;

(b) cyclic unsaturated hydrocarbons including aromatics with less than 9 carbon atoms per molecule;

with a capacity of 100 000 tonnes per annum or more'.

24 The Commission maintains that the Flemish Executive interpreted the concept of 'integrated chemical installations' narrowly. Fixing quantitative criteria affords no guarantee that all integrated chemical installations will be subjected to an environmental impact assessment. Only installations for the processing of the substances mentioned under (a) and (b) of the Flemish Executive's definition and, of them, only those with a minimum processing capacity of at least 100 000 tonnes will be subjected to the assessment procedure. Yet point 6 of Annex I to the directive does not embody any quantitative limitation.

25 The Belgian Government takes the view that the concept of 'integrated chemical installations' is vague, as the Commission itself has acknowledged by providing a more precise definition of that concept in its proposal relating to the amendment

of the directive (document COM(93) 575 final, OJ 1994 C 130, p. 8). Accordingly and on grounds of legal certainty, the Flemish Government had no option other than to give a content to that concept itself. The reason why saturated hydrocarbons are not mentioned in its definition is that they are almost never used as basic chemical components owing to their low reactivity. In addition, the capacity criterion, which does not relate to production capacity expressed in terms of the quantity of finished product but to processing capacity expressed in terms of the quantity of basic components (small molecules), also does not limit the scope of the directive in real terms. Accordingly, the definition in question covers the most important chemical installations located in the territory of the Flemish Region.

26 The Court finds in this regard that point 6 of Annex I to the directive does not introduce any limitation as to the integrated chemical installations subject to assessment. On the contrary, when the Community legislature wished to limit the duty to carry out an assessment, it made express provision to that end. It did so in particular in points 1, 2, 5, 7 and 8 of that annex.

27 Besides, the crucial feature of the concept of 'integrated chemical installations' is precisely the fact that they are integrated, since other chemical installations come under point 6 of Annex II. As the Advocate General observed in points 36, 37 and 38 of his Opinion, the Flemish legislation neither specifies nor defines that concept and whether a chemical installation is integrated does not depend on its processing capacity or on the type of chemical substances processed in it but on the existence of interlinked production units constituting in terms of their operation a single production unit.

28 It follows that that complaint must also be upheld.

The complaint alleging that the Flemish Region incorrectly transposed Article 4(2) of the directive in conjunction with Article 2(1)

29 Article 4(2) of the directive provides as follows:

'Projects of the classes listed in Annex II shall be made subject to an assessment, in accordance with Articles 5 to 10, where Member States consider that their characteristics so require.

To this end Member States may *inter alia* specify certain types of projects as being subject to an assessment or may establish the criteria and/or thresholds necessary to determine which of the projects of the classes listed in Annex II are to be subject to an assessment in accordance with Articles 5 to 10.'

30 In the Flemish Region, Article 3 of Order 89-928 contains the list of establishments constituting a nuisance which must be subjected to assessment in accordance with the Degree of the Flemish Council of 28 June 1985 relating to Anti-Pollution Consent.

31 As regards establishments not constituting a nuisance, the Organic Law on Land-Use Planning and Town Planning of 29 March 1962 (*Moniteur Belge* of 12 April 1962, p. 3000) set up a procedure for the grant of planning permission. Pursuant to that law, the Flemish Executive adopted, among other things, Order 89-929 of 23 March 1989 (*Moniteur Belge* of 17 May 1989, p. 8450), which governs the assessment of effects on the environment of works and acts falling within the scope of the Organic Law of 29 March 1962. Article 2 of that order lists the projects having to be subjected to environmental impact assessment.

32 The Commission argues that Article 4(2) of the directive, when read in the light of Article 2(1), requires the Member States to examine the characteristics of each of the projects listed in Annex II specifically on a case-by-case basis. That examination will enable it to be decided subsequently whether, by reason of the nature, size or location of the project considered, an environmental impact assessment is necessary. The second subparagraph of Article 4(2) of the directive enables Member States to facilitate that examination by establishing criteria and/or thresholds. In contrast, it does not allow them to establish criteria and/or thresholds for exempting in advance certain projects listed in Annex II from that examination.

33 In the Commission's view, however, the legislation in force in the Flemish Region does not satisfy that requirement. The lists set out in Article 3 of Order 89-928 and Article 2 of Order 89-929 do not cover all the projects mentioned in Annex II. As a result, the projects not covered will never be examined in order to determine whether their characteristics are such as to require an environmental impact assessment.

34 The Belgian Government argues that, when it adopted the orders at issue, the Flemish Government took the view that, in the light of the state of the environment in Flanders, only some categories of projects mentioned in Annex II, which come within the thresholds and other criteria which it has established, ought, by reason of their nature, to be subjected to environmental impact assessment. It therefore considered implicitly that the characteristics of all the other projects mentioned in Annex II are such that it is unnecessary to subject them to assessment.

35 According to the Belgian Government, supported by the German Government, it does not appear from any provision of the directive that the Member States are only entitled to assess *in concreto* whether the characteristics of individual projects are such as to make it unnecessary to carry out an environmental impact assessment. Member States are also entitled to consider generally that the characteristics of certain projects listed in Annex II are such that assessment is unnecessary. The two governments refer in this connection to the wording of Article 4(2).

36 The German Government submits in particular that the wording of that provision suggests that the projects to be assessed should be determined in the abstract, since, if that were not so, it would not be the Member States, but the competent authorities in each case, which would have to determine whether a project ought to be subjected to assessment. In addition, the distinction made between 'classes' and 'projects' in the eighth and ninth recitals in the preamble to the directive and in Article 4(2) thereof shows that the choice of projects whose effects on the environment must be assessed may be carried out in the abstract.

37 The German Government further maintains that the fact that, under Article 2(3) of the directive, exemption from the requirement to make an assessment is possible only in the case of projects coming under Article 4(1) is an argument against the need for a detailed examination of projects mentioned in Annex II.

38 The Belgian Government adds that, according to the Commission's report to the European Parliament and the Council on the implementation of the directive (document COM(93) 28, Vol. 1, 2 April 1993), most Member States have interpreted Article 4(2) in the same way as the Flemish Government.

39 Lastly, the Belgian and German Governments refer, in support of their argument, to the proposal for the amendment of the directive made by the Commission to the Council (document COM(93) 575 final, cited above). In particular, the Commission proposed the adoption of a new Article 4(3), which, combined with a new Annex IIa, would require Member States to determine on a case-by-case basis whether an assessment is necessary. That proposal would be otiose if the obligation arising under it were already part of the law in force.

40 It should first be made clear that, as stated in paragraphs 33 and 34 of this judgment, the Flemish legislation excludes totally and definitively from environmental

impact assessment certain classes of projects mentioned in Annex II. The question is therefore whether such exclusion is permitted by Article 4(2) of the directive.

41 Whilst it appears from that provision that Member States may always specify certain 'types' of projects as being subject to assessment or may establish criteria and/or thresholds for determining which projects are to be subject to assessment, it must be emphasized that that power of the Member States is conferred within each of the classes listed in Annex II. This means that the Community legislature itself considered that all the classes of projects listed in Annex II may possibly have significant effects on the environment depending on the characteristics exhibited by those projects at the time when they were drawn up.

42 It follows that the criteria and/or the thresholds mentioned in Article 4(2) are designed to facilitate the examination of the actual characteristics exhibited by a given project in order to determine whether it is subject to the requirement to carry out an assessment and not to exempt in advance from that obligation certain whole classes of projects listed in Annex II which may be envisaged on the territory of a Member State.

43 Consequently, Article 4(2) does not empower the Member States to exclude generally and definitively from possible assessment one or more classes mentioned in Annex II.

44 In view of that finding, the aforementioned arguments put forward by the Belgian and German Governments to the effect that Article 4(2) does not preclude the possibility for a Member State to determine the projects to be subjected to assessment in the abstract using criteria and/or thresholds and therefore does not require a

decision to be taken on each specific project are irrelevant to this case, irrespective as to whether they are based on a correct interpretation of Article 4(2).

45 In view of the foregoing it must be held that the Flemish legislation at issue does not correctly transpose Article 2(1) and Article 4(2) of the directive, since it impliedly excludes in advance all the classes of projects mentioned in Annex II which are not covered by that legislation from the possibility of assessment, even if it should prove that the characteristics of projects belonging to those classes are such as to require such assessment.

46 It follows that that complaint must be upheld.

The complaint alleging that the Flemish Region and the Region of the Capital City of Brussels failed to transpose Articles 7 and 9 of the Directive

47 Article 7 of the directive provides as follows:

'Where a Member State is aware that a project is likely to have significant effects on the environment in another Member State or where a Member State likely to be significantly affected so requests, the Member State in whose territory the project is intended to be carried out shall forward the information gathered pursuant to Article 5 to the other Member State at the same time as it makes it available to its own nationals. Such information shall serve as a basis for any consultations necessary in the framework of the bilateral relations between two Member States on a reciprocal and equivalent basis.'

48 Article 9 provides for the public to be informed of the content of the final decision. The last paragraph of that article states as follows:

'If another Member State has been informed pursuant to Article 7, it will also be informed of the decision in question.'

49 The Commission asserts that the Flemish Region and the Region of the Capital City of Brussels have failed to transpose Articles 7 and 9 of the directive.

50 The Belgian Government admits that the Commission's complaint is well founded as regards the Flemish Region. It states, however, that a preliminary-draft decree exists which, when adopted, will bring the infringement complained of to an end.

51 In contrast, as far as the Region of the Capital City of Brussels is concerned, the Belgian Government considers that Articles 7 and 9 do not have to be transposed, on the ground that the geographical situation and the urban nature of that region preclude the establishment of industrial installations liable to have effects on the environment which would have consequences in other Member States.

52 That argument must be rejected.

53 The argument based on the geographical situation of the Region of the Capital City of Brussels is based on the assumption that only projects located in frontier

regions are capable of affecting the environment in another Member State. Yet, as the Commission has rightly observed, that assumption is wrong since it ignores the possibility of air-or water-borne pollution.

54 As for the argument based on the urban nature of the Region of the Capital City of Brussels, the Commission stated at the hearing, without being contradicted by the Belgian Government, that there are major chemical and petrochemical industries in that region.

55 Accordingly the Commission's complaint must be upheld.

56 Since the Kingdom of Belgium has failed to fulfil its specific obligations under the directive, no purpose is served by considering the question whether it has thereby also failed to fulfil its obligations under Article 5 of the Treaty (see Case C-374/89 *Commission* v *Belgium* [1991] ECR I-367, paragraph 13).

57 In the light of the foregoing it must be held that, by not completely and correctly transposing into Belgian law Directive 85/337, the Kingdom of Belgium has failed to fulfil its obligations under that directive and under Article 189 of the EC Treaty.

Costs

58 Under Article 69(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs. Since the Kingdom of Belgium has been unsuccessful, it

must be ordered to pay the costs. In accordance with the first subparagraph of Article 69(4) of those Rules, the Federal Republic of Germany, which intervened in the proceedings, must be ordered to bear its own costs.

On those grounds,

THE COURT (Sixth Chamber)

hereby:

1. **Declares that, by not completely and correctly transposing into Belgian law Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment, the Kingdom of Belgium has failed to fulfil its obligations under that directive and under Article 189 of the EC Treaty;**

2. **Orders the Kingdom of Belgium to pay the costs;**

3. **Orders the Federal Republic of Germany to bear its own costs.**

having regard to the Report for the Hearing,

after hearing oral argument from the parties at the hearing on 30 November 1994 at which the Commission was represented by Rolf Wägenbaur, assisted by Alexander Böhlke, the Federal Republic of Germany by Dieter Sellner and the United Kingdom by John E. Collins, Assistant Treasury Solicitor, acting as Agent, and Derrick Wyatt, Barrister,

after hearing the Opinion of the Advocate General at the sitting on 21 February 1995,

gives the following

Judgment

1 By application lodged at the Court Registry on 23 December 1992, the Commission of the European Communities brought an action under Article 169 of the EEC Treaty for a declaration that, by granting development consent by decision of 31 August 1989 for the construction of a new block at the Großkrotzenburg thermal power station without a preliminary environmental impact assessment, the Federal Republic of Germany has failed to comply with its obligations under Articles 5 and 189 of the EEC Treaty read in conjunction with Council Directive 85/377/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40), and in particular Articles 2, 3 and 8 of the directive.

2 The directive was adopted on the basis of Articles 100 and 235 of the Treaty. According to the first recital in the preamble, 'the ... action programmes of the European Communities on the environment ... affirm the need to take effects on the environment into account at the earliest possible stage in all the technical planning and decision-making processes ...' The eleventh recital states further that 'the effects of a project on the environment must be assessed in order to take account of concerns to protect human health, to contribute by means of a better environment to the quality of life, to ensure maintenance of the diversity of species and to maintain the reproductive capacity of the ecosystem as a basic resource for life'.

3 Article 1 of the directive provides:

'1. This directive shall apply to the assessment of the environmental effects of those public and private projects which are likely to have significant effects on the environment.

2. For the purposes of this directive:

"project" means:

— the execution of construction works or of other installations or schemes,

...

"development consent" means:

the decision of the competent authority or authorities which entitles the developer to proceed with the project.

3. The competent authority or authorities shall be that or those which the Member States designate as responsible for performing the duties arising from this directive.

...'

4 Article 2 provides:

'1. Member States shall adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment

by virtue *inter alia*, of their nature, size or location are made subject to an assessment with regard to their effects.

These projects are defined in Article 4.

2. The environmental impact assessment may be integrated into the existing procedures for consent to projects in the Member States, or, failing this, into other procedures or into procedures to be established to comply with the aims of this directive.

...'

5 Article 3 provides:

'The environmental impact assessment will identify, describe and assess in an appropriate manner, in the light of each individual case and in accordance with Articles 4 to 11, the direct and indirect effects of a project on the following factors:

— human beings, fauna and flora,

— soil, water, air, climate and the landscape,

— the interaction between the factors mentioned in the first and second indents,

— material assets and the cultural heritage.'

6 Article 4 provides:

'1. ... projects of the classes listed in Annex I shall be made subject to an assessment in accordance with Articles 5 to 10.

2. Projects of the classes listed in Annex II shall be made subject to an assessment, in accordance with Articles 5 to 10, where Member States consider that their characteristics so require.

...'

7 Paragraph 2 of Annex I refers in particular to 'Thermal power stations ... with a heat output of 300 megawatts or more'. Paragraph 12 of Annex II refers in particular to 'Modifications to development projects included in Annex I'.

8 Article 5 concerns the measures which the Member States must adopt to ensure that the developer supplies certain information specified in Annex III to the directive. Article 6 refers to the measures which the Member States must take to ensure that the national authorities likely to be concerned by the project in question are consulted and that the public concerned is informed and has the opportunity to express an opinion. Article 8 provides that 'Information gathered ... must be taken into consideration in the development consent procedure.'

9 Pursuant to Article 12(1) of the directive, the Member States were required to take the measures necessary to comply with the directive within three years of its notification. Since the directive was notified on 3 July 1985, that period expired on 3 July 1988.

10 According to the documents before the Court, in Germany the directive was belatedly transposed into national law by the Law of 12 February 1990 which came into force on 1 August 1990 (BGBl. I, p. 205).

11 Following a complaint that the Regierungspräsidium (District Office) Darmstadt as competent authority had granted consent on 31 August 1989 for the construction of a new block with a heat output of 500 megawatts at the Großkrotzenburg thermal power station without carrying out the preliminary environmental impact assessment required by the directive, the Commission on 15 May 1990 sent Germany a letter before action under Article 169 of the Treaty. In that letter it observed that the consent concerned a project for the construction of a thermal power station within the meaning of paragraph 2 of Annex I to the directive and that an assessment of its effects on the environment was therefore mandatory by virtue of Article 4(1) of the directive.

12 The Commission's reservations were not dispelled by the information given in Germany's letters in response of 16 and 17 August 1990. It therefore delivered a reasoned opinion on 25 September 1991 to which Germany replied by letter of 27 January 1992. Not content with Germany's reply, the Commission accordingly brought the present action.

Admissibility

13 Germany raises a preliminary plea that the action is inadmissible on the ground that the form of order sought in the application is too imprecise since what is sought is a declaration that the directive and 'in particular' Articles 2, 3 and 8 thereof have been infringed. Germany considers that only the infringement of the provisions of the directive expressly referred to, and not a general complaint that the directive has been breached, may be taken into account.

14 That plea cannot be accepted.

15 The express reference to Articles 2, 3 and 8 of the directive in the form of order sought in the application enabled Germany to understand unequivocally that an infringement of those specific provisions was alleged. In its context, the adverbial phrase 'in particular' was used in the sense of 'specifically' in order to designate precisely those articles of the directive which had been infringed. It could not therefore have led Germany to believe that the application also concerned infringements of other unspecified provisions of the directive and thus have given rise to uncertainty as to the scope of the proceedings.

16 Secondly, Germany submitted at the hearing before the Court that the infringement of Article 2 of the directive is not referred to in the conclusions arrived at in the reasoned opinion and was raised for the first time in the application. Since the subject-matter of the action is determined, according to settled case-law, by the pre-litigation procedure, Germany considers that the complaint concerning the infringement of that provision is inadmissible.

17 That plea must be rejected.

18 Although Article 2 of the directive is not formally referred to in the conclusions arrived at in the reasoned opinion, it is none the less mentioned in the body of the opinion among the provisions invoked by the Commission.

19 Thirdly, Germany submits that the action is inadmissible on the ground that proceedings can be initiated under Article 169 of the Treaty only in respect of failure to implement or incorrect implementation of a directive and not simply, as in this case, in respect of failure in a specific case to apply a directive which has not yet been implemented. The object of proceedings for a declaration of failure by a Member State to fulfil its obligations is to encourage the Member State concerned to put an end to existing infringements of the Treaty. Since Germany has implemented the directive in the meantime, it considers that the Commission no longer has any legal interest in bringing proceedings, particularly since the procedure which the Commission initiated simultaneously for a declaration that Germany has incorrectly implemented the directive is not yet before the Court.

20 That plea of inadmissibility must also be rejected.

21 In exercising its powers under Articles 155 and 169 of the Treaty, the Commission does not have to show that there is a specific interest in bringing an action. Article 169 is not intended to protect the Commission's own rights. The Commission's function, in the general interest of the Community, is to ensure that the Member States give effect to the Treaty and the provisions adopted by the institutions thereunder and to obtain a declaration of any failure to fulfil the obligations deriving therefrom with a view to bringing it to an end (Case 167/73 *Commission* v *France* [1974] ECR 359, paragraph 15, and Case C-422/92 *Commission* v *Germany* [1995] ECR I-1097, paragraph 16).

22 Given its role as guardian of the Treaty, the Commission alone is therefore competent to decide whether it is appropriate to bring proceedings against a Member State for failure to fulfil its obligations and to determine the conduct

or omission attributable to the Member State concerned on the basis of which those proceedings should be brought. It may therefore ask the Court to find that, in not having achieved, in a specific case, the result intended by the directive, a Member State has failed to fulfil its obligations.

23 In this case, Germany's submissions as to the inadmissibility of the action essentially come down to the fact that at the material time it had not yet implemented the directive. A Member State may not, however, plead the fact that it has not taken the necessary measures to implement a directive in order to prevent the Court from dealing with an application for a declaration that it has failed to fulfil a specific obligation flowing from that directive.

24 Finally, Germany submits that the case-law of the Court of Justice recognizes the direct effect of the provisions of a directive only where they confer specific rights on individuals. Articles 2, 3 and 8 of the directive, however, do not confer such rights. Since the Commission itself does not argue that the contested decision granting development consent failed to take account of the legal position of individuals protected by the directive, the latter's provisions cannot have direct effect irrespective of whether they are unconditional and sufficiently precise. The German authorities were not therefore required to apply them directly before implementing the directive. In their view, the action is consequently inadmissible.

25 That argument cannot be accepted either.

26 In its application, the Commission complains that Germany has not observed, in a specific case, the obligation flowing directly from the directive to assess the environmental impact of the project concerned. The question which arises is thus whether the directive is to be construed as imposing that obligation. That question is quite separate from the question whether individuals may rely as against the

State on provisions of an unimplemented directive which are unconditional and sufficiently clear and precise, a right which has been recognized by the Court of Justice.

27 Since none of the pleas of inadmissibility has been accepted, the action must be held to be admissible.

Substance

Application of the directive in time

28 In Case C-396/92 *Bund Naturschutz in Bayern and Others* v *Freistaat Bayern* [1994] ECR I-3717, paragraphs 19 and 20, the Court of Justice ruled that, regardless of whether the directive permits a Member State to waive the obligations concerning the environmental impact assessment in respect of consent procedures already initiated before the deadline for implementation, namely 3 July 1988, the directive in any case precludes such a waiver for procedures initiated after that date.

29 In this case, the documents before the Court show that the application for consent for the project at issue was lodged with the Regierungspräsidium Darmstadt by PreußenElektra AG, the developer, on 26 July 1988, and thus after 3 July 1988. Consequently, the obligation imposed by the directive to carry out an environmental impact assessment could not in principle be waived in respect of the consent procedure for the project at issue.

30 The German Government argues, however, that the formal application for consent of 26 July 1988, accompanied by the complete file on the project, had been preceded by a preliminary stage which was a significant part of the consent procedure. During that preliminary stage, which was initiated on 18 May 1987, the competent authority was to advise the developer on the content and lodging of the application for consent. A series of meetings took place at which specialist departments were also represented. In addition the project is said to have been notified on 7 March 1988 to the competent authority in accordance with the Landesplanungsgesetz (Law of the *Land* of Hesse on planning).

31 That argument cannot be accepted.

32 Informal contacts and meetings between the competent authority and the developer, even relating to the content and proposal to lodge an application for consent for a project, cannot be treated for the purposes of applying the directive as a definite indication of the date on which the procedure was initiated. The date when the application for consent was formally lodged thus constitutes the sole criterion which may be used. Such a criterion accords with the principle of legal certainty and is designed to safeguard the effectiveness of the directive. The Court moreover followed this approach in *Bund Naturschutz*, cited above (paragraph 16).

33 The consent procedure for the project at issue must accordingly be regarded as having been initiated after the deadline of 3 July 1988, with the result that the project was required to undergo an assessment of its effects on the environment in accordance with the directive.

Categorization of the project at issue

34 Germany, supported by the United Kingdom, submits that the new block at the Großkrotzenburg thermal power station is not a project within the meaning of Article 4(1) of the directive but a modification to a project. It cannot be regarded as in any way self-contained, but at a functional level is part of the power station as a whole. The consent at issue accordingly concerns a modification to a pre-existing power station. What is at issue is a modification to a project within the meaning of paragraph 12 of Annex II to the directive, a modification which in accordance with Article 4(2) of the directive the Member States may, rather than must, make subject to an environmental impact assessment.

35 By virtue of paragraph 2 of Annex I to the directive, projects for thermal power stations with a heat output of 300 megawatts or more must undergo a systematic assessment. For the purposes of that provision, such projects must be assessed irrespective of whether they are separate constructions, are added to a pre-existing construction or even have close functional links with a pre-existing construction. Links with an existing construction do not prevent the project from being a 'thermal power station with a heat output of 300 megawatts or more' so as to bring it within the category headed 'Modifications to development projects included in Annex I', mentioned in paragraph 12 of Annex II.

36 In this case, it is common ground that the construction at issue is a block of a thermal power station with a heat output of 500 megawatts. It is therefore a project within the meaning of Article 4(1) of, and Annex I to, the directive. That project was required to undergo an assessment of its effects on the environment in accordance with the directive.

Obligation to carry out an assessment in accordance with the directive

37 Germany submits that Articles 2, 3 and 8 of the directive, which it is alleged to have infringed, are not so clear and precise as unequivocally to lay down a specific obligation and thus for their application by the national authorities to be mandatory.

38 That argument cannot be accepted.

39 Article 2 of the directive lays down an unequivocal obligation, incumbent on the competent authority in each Member State for the approval of projects, to make certain projects subject to an assessment of their effects on the environment. Article 3 prescribes the content of the assessment, lists the factors which must be taken into account in it, and leaves the competent authority a certain discretion as to the appropriate way of carrying out the assessment in the light of each individual case. Article 8 furthermore requires the competent national authorities to take into consideration in the development consent procedure the information gathered in the course of the assessment.

40 Regardless of their details, those provisions therefore unequivocally impose on the national authorities responsible for granting consent an obligation to carry out an assessment of the effects of certain projects on the environment.

The question whether there has been a failure to fulfil the obligation to carry out an assessment

41 Germany submits, finally, that an assessment of the effects of the project at issue on the environment was carried out by the competent authority on the basis of the national legislation then in force, namely the Bundesimmissionsschutzgesetz of 15 March 1974 (German Federal Law on the protection of the environment). Although that assessment was not formally based on the directive, it is said by Germany to have complied with all its requirements.

42 The Commission does not deny that there was an assessment of the effects on the environment of the project at issue. However, that assessment does not satisfy the present requirements of the directive, which are stricter than the national legislation then in force. In particular, it did not comply with the obligation to take account of the interaction between the factors referred to in the first and second indents of Article 3 of the directive (human beings, fauna, flora, soil, water, air, climate and the landscape), an obligation which requires an overall assessment of those factors.

43 According to the documents before the Court, an environmental impact assessment was carried out in the course of the procedure for the grant of consent for the project by the Regierungspräsidium Darmstadt. The developer provided in particular information on the environmental impact of the project which was considered by the Commission itself as sufficient from the point of view of the requirements of Article 5 of, and Annex III to, the directive. That information also concerned the interrelationship between the factors referred to in Article 3 of the directive. Finally, it is common ground that the infor-

mation was made available to the public concerned who had the opportunity to express an opinion. In those circumstances, the objective of making the public aware of the environmental implications of a project on the basis of specific information provided by the developer was attained.

44 It is also apparent from the disputed decision of the Regierungspräsidium Darmstadt of 31 August 1989 and its report of 11 November 1991 drawn up in response to the reasoned opinion that the authority in question integrated the information gathered and the reactions of the sectors concerned in the consent procedure, and took that into account in its decision approving the project.

45 In the light of those considerations, the Commission should have specified on what specific points the requirements of the directive were not complied with during the procedure for consent for the project at issue and should have provided appropriate evidence of non-compliance. Its application does not include such details backed by specific evidence. It must therefore be dismissed as unfounded.

Costs

46 Under Article 69(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. Since Germany has not asked for the Commission to be ordered to pay the costs, the two parties must be ordered to bear their own costs. The United Kingdom, as intervener, is also to bear its own costs in accordance with Article 69(4) of the Rules of Procedure.

On those grounds,

THE COURT

hereby:

1. Dismisses the application;

2. Orders the parties, including the intervener, to bear their own costs.

having regard to the Report for the Hearing,

after hearing oral argument from the parties at the hearing on 7 October 1992,

after hearing the Opinion of the Advocate General at the sitting on 10 November 1992,

gives the following

Judgment

1 By application lodged at the Court Registry on 23 July 1991, the Commission of the European Communities brought an action under Article 169 of the EEC Treaty for a declaration that, by not bringing into force the laws, regulations and administrative provisions necessary to transpose into in its national law the obligation set out in Article 11 of Council Directive 85/203/EEC of 7 March 1985 on air quality standards for nitrogen dioxide (OJ 1985 L 87, p. 1, hereinafter 'the Directive'), the Kingdom of Belgium has failed to fulfil its obligations under that Article and under Article 189 of the EEC Treaty.

2 Article 2 of and Annexes I and II to the Directive fix the limit value and guide values for atmospheric concentrations of nitrogen dioxide.

3 Under Article 4 of the Directive, Member States may, in certain conditions, fix lower values than those laid down in Annexes I and II. A Member State intending to use that possibility in a region near the border with one or more other Member States is obliged by Article 11(1) to hold prior consultations with the Member States concerned. Article 11(2) requires those same Member States to hold

consultations, with a view to remedying the situation, if the limit value or the lower values fixed in accordance with Articles 4 and 11(1) above are exceeded or are likely to be exceeded following significant pollution which originates or may originate in another Member State. Article 11 requires that, in any event, the Commission is to be informed and may attend such consultations.

4 Under Article 15 of the Directive, Member States were required to adopt the laws, regulations and administrative provisions necessary to comply with the Directive by 1 January 1987 at the latest.

5 Accordingly, the Belgian Government enacted the Royal Decree of 1 July 1986, fixing air quality standards for nitrogen dioxide (*Moniteur Belge*, 23 September 1986, p. 12867, hereinafter 'the Royal Decree').

6 However, the Commission claims that the Belgian Government failed to transpose the provisions of Article 11 of the Directive in the Royal Decree, and thereby failed to enact into law either the obligation to consult the authorities of neighbouring Member States, in the circumstances defined in Article 11(1) and (2), or the obligation to inform the Commission so as to allow it to attend such consultations if it wished to do so.

7 Reference is made to the Report for the Hearing for a fuller account of the facts of the case, the procedure and the pleas and arguments of the parties, which are mentioned or discussed hereinafter only in so far as is necessary for the reasoning of the Court.

8 The Commission argues that, without the consultations required by Article 11(1) and (2), it would be impossible to ensure either the useful effect of the values fixed under Article 4 of the Directive or the Directive's general purpose of protecting the environment and human health. It considers that Article 11 of the Directive lays down precise and detailed rules, conferring rights and obligations on individuals.

9 The Belgian Government does not deny that Article 11 has not been transposed, but argues that the omission is justified because the Belgian authorities do not intend to take measures within the scope of that Article. In particular, it argues that, if the Belgian authorities were to change their mind, the consultations in question would necessarily have to take place, since measures of the type envisaged could not attain their objective unless neighbouring States adopted similar measures. Such consultations would be arranged in accordance with the provisions of the Belgian Constitution. Finally, the Belgian Government maintains that the obligation to consult in Article 11 does not in any case oblige neighbouring States to adopt similar measures, and cannot therefore confer rights on individuals.

10 It should be observed at the outset that, as the Commission says, the obligations in Article 11 of the Directive are the corollary of the right which Article 4 confers on Member States to fix lower values than those laid down in Annexes I and II to the Directive.

11 Secondly, to ensure full and effective protection of the atmosphere against excessive nitrogen dioxide concentrations in border areas, it is essential that the Member State concerned should legislate expressly for the prior consultation required by Article 11(1) of the Directive to take place before measures affecting border areas are taken. It is also essential that such legislation should provide expressly for the consultation required by Article 11(2) of the Directive to take place in cases where

there is significant pollution originating in a neighbouring Member State, so that the Member States concerned can remedy the situation.

12 A transposition into national law of Article 4 of the Directive, which confers a discretion on Member States, therefore constitutes an incomplete transposition of the Directive if it does not at the same time transpose Article 11, which imposes an obligation relating to the exercise of that discretion.

13 With regard to the defendant's argument based on the provisions of the Belgian Constitution regarding the respective powers of national authorities, on the one hand, and regional authorities, on the other, when dealing with neighbouring States, it is enough to point out that the Belgian Constitution nowhere imposes a duty to hold consultations such as those required by Article 11 of the Directive.

14 Having regard to the above considerations, it must be held that, by not adopting, within the prescribed time-limits, all the legislative, regulatory and administrative measures necessary to comply with the provisions of Article 11 of Council Directive 85/203/EEC of 7 March 1985 on air quality standards for nitrogen dioxide, the Kingdom of Belgium has failed to fulfil its obligations under the Treaty.

Costs

15 Under Article 69(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs. Since the Kingdom of Belgium has been unsuccessful, it must be ordered to pay the costs.

On those grounds,

THE COURT

hereby:

1. **Declares that, by not adopting, within the prescribed time limits, all the legislative, regulatory and administrative measures necessary to comply with the provisions of Article 11 of Council Directive 85/203/EEC of 7 March 1985 on air quality standards for nitrogen dioxide (OJ 1985 L 87, p. 1), the Kingdom of Belgium has failed to fulfil its obligations under the Treaty;**

2. **Orders the Kingdom of Belgium to pay the costs.**

* Language of the case: Italian.

Advocate General: W. Van Gerven,
Registrar: H. A. Rühl, Principal Administrator,

having regard to the Report for the Hearing and further to the hearing on 4 July 1990,

after hearing the Opinion of the Advocate General delivered at the sitting on 25 September 1990,

gives the following

Judgment

1 By an application lodged at the Court Registry on 2 December 1987 the Commission of the European Communities brought an action under Article 169 of the EEC Treaty for a declaration that by failing to adopt within the prescribed period the laws, regulations and administrative provisions necessary for the full and correct implementation in its national law of Council Directive 80/68/EEC of 17 December 1979 on the protection of groundwater against pollution caused by certain dangerous substances (OJ 1980 L 20, p. 43) (hereinafter referred to as 'the Directive'), the Italian Republic has failed to fulfil its obligations under the EEC Treaty.

2 Reference is made to the Report for the Hearing for a fuller account of the facts of the case, the Community and national provisions at issue, the course of the procedure and the pleas in law and arguments of the parties, which are mentioned or discussed hereinafter only in so far as is necessary for the reasoning of the Court.

The subject-matter of the dispute

3 In the course of the pre-litigation procedure and the written procedure before the Court the Italian Republic stated *inter alia* that Italian water was protected against pollution by Law No 319 of 10 May 1976, entitled 'Norme per la tutela delle

acque dall'inquinamento' (the 'Legge Merli I', Official Gazette of the Italian Republic No 141 of 29 May 1976, p. 4125), by Law No 650 of 24 December 1979, entitled 'Integrazioni e modifiche delle leggi 16 aprile 1973, No 171, e 10 maggio 1976, No 319, in materia di tutela delle acque dall'inquinamento' (the 'Legge Merli II', Official Gazette of the Italian Republic No 352 of 29 December 1979, p. 10533) and by the Decision of 4 February 1977 of the Interministerial Committee for the protection of water against pollution (Official Gazette of the Italian Republic, Ordinary Supplement No 48 of 21 February 1977, p. 2). However, at the hearing the Italian Republic stated that on certain points its legislation was not entirely in conformity with the Directive and indicated that the legislative procedure intended to bring about full conformity was in progress.

4 During the pre-litigation procedure the Italian Republic maintained that according to the legislation in force in Italy all direct discharges of waste water into groundwater were prohibited. The Italian legislation thus fulfilled the requirements of the first indent of Article 4(1) and the first indent of Article 5(1) of the Directive.

5 In its application the Commission stated that it took note of the statements made by the Italian Republic concerning the prohibition of direct discharges. At the hearing it stated that it had been established that the Italian legislation provided indirectly for the prohibition of any direct discharge and it accepted that on that point the absolute prohibition of direct discharge was in conformity with the Directive.

6 Having regard to those statements of the parties' respective positions, the specific complaints made by the Commission regarding the conformity of the Italian legislation with the Directive remain to be examined.

7 It should be observed as a preliminary point that the transposition of Community legislation into national law does not necessarily require the relevant provisions to be enacted in precisely the same words in a specific express legal provision; a general legal context may be sufficient if it does ensure the full application of the Directive in a sufficiently clear and precise manner (see the judgment in Case 252/85 *Commission* v *France* [1988] ECR 2243). Each of the Commission's complaints must therefore be examined on that basis.

The distinction between the substances in list I and those in list II

8 The Commission argues first that the Italian legislation on discharges makes no distinction between substances in list I and those in list II. That distinction is important in relation to the objective of the Directive, that is to say the effective protection of groundwater against pollution, because discharges of substances in list I must be prevented whereas discharges of substances in list II must merely be limited.

9 The Italian Republic did not take any position on that complaint in its defence or in its rejoinder; in its reply to the written question addressed to it by the Court, it referred to point 1 of Annex 5 to the Decision of 4 February 1977 of the Interministerial Committee, referred to above, and stated that under that Decision the direct discharge of substances in list I is absolutely precluded and the risk of indirect discharge is practically eliminated.

10 The Italian Republic also admitted at the hearing that the Italian legislation made no distinction between direct and indirect discharges, but it submits that the Decision of 4 February 1977 ensures that discharges cannot reach groundwater since that Decision authorizes discharge on the ground only where there is natural purification and discharges in the subsoil only where the discharge is carried out in deep and impermeable strata. The Italian Republic states, however, that through the distinction it makes between substances in lists I and II the Directive authorizes a certain degree of pollution in respect of substances in list II, contrary to the legislation in force in Italy, which is more rigorous on this point.

11 As is clear from the statements of the Italian Republic, it admits that its legislation makes no distinction between the substances in lists I and II. Article 3 of the Directive treats differently discharges of substances in list I, which must always be prohibited in the case of direct discharges and are subject to authorization, after an investigation, in the case of indirect discharges, and discharges of substances in list II, which are subject to other rules. Consequently, the distinction between the two types of substances is mandatory in view of the objective of the Directive. It

follows that it must be incorporated in national legislation with the requisite precision and clarity in order to meet the requirement of certainty.

12 Legislation which leaves the persons subject to it in a state of uncertainty as to the extent to which they may rely on Community law does not fulfil the obligation to transpose a directive into national law (see the judgment in Case 116/86 *Commission* v *Italy* [1988] ECR 1323).

13 As regards the argument of the Italian Republic to the effect that its legislation in practice eliminates the risk of indirect discharge, it should be observed that, as the Court held in its judgment in Case C-339/87 *Commission* v *Netherlands* [1990] ECR I-851, at paragraph 25, in order to secure the full implementation of directives in law and not only in fact, Member States must establish a specific legal framework in the area in question.

14 Consequently, this complaint of the Commission must be upheld.

Substances omitted by the Italian legislation

15 The Commission submits that the Italian legislation omits several of the substances included in lists I and II in the Annex to the Directive.

16 With regard to list I, the Commission submits that there is no mention in the Italian legislation of 'organotin compounds' (list I, point 3) or of most substances which 'possess carcinogenic, mutagenic or teratogenic properties in or via the aquatic environment' (list I, point 4), and that among the organohalogen compounds and substances which may form such compounds in the aquatic environment and organophosphorus compounds (list I, points 1 and 2), the Italian legislation refers only to chlorine-based pesticides, chlorine-based solvents and phosphor-based pesticides.

17 With regard to substances in list II, the Commission submits that the Italian legislation does not take into account the following chemical substances: antimony, molybdenum, titanium, beryllium, uranium, vanadium, cobalt, thallium, tellurium and silver, and that it does not cover several compounds which may be classed as 'biocides and their derivatives not appearing in list I'. It refers in that regard to examples such as carbamates, dithiocarbamates, organosulphate fungicides, quaternary ammonium derivatives etc., and the group of 'toxic or persistent organic compounds of silicon, and substances which may cause the formation of such compounds in water, excluding those which are biologically harmless or are rapidly converted in water into harmless substances' (points 1, 2 and 4 of list II).

18 In reply to a question in this regard from the Court, the Italian Republic admitted that the complaint concerning all those substances was well founded, and it confirmed that admission at the hearing. It observes, however, that with regard in particular to the substances referred to in point 4 of list I, that is to say those which possess carcinogenic, mutagenic or teratogenic properties, it has experienced some difficulty as a result of the fact that the Directive does not state what these substances are and that although it has asked the Commission for clarification on that point it has received no reply.

19 It is true that the Directive does not identify the substances which possess carcinogenic, mutagenic or teratogenic properties and that, as the Commission rightly stated, its silence is due to the constant developments in scientific knowledge in that regard. However, that difficulty does not justify the absence of any general mention of those substances in national legislation.

20 Consequently, this complaint of the Commission must be upheld.

The procedure for the issue of discharge authorizations

21 The Commission submits that the Italian Republic has not transposed Article 7 of the Directive, which specifies the nature of the prior scientific investigation, or Article 8, which lays down the condition that a discharge authorization cannot be issued before it has been checked that the groundwater, and in particular its quality, will undergo the requisite surveillance.

22 The Italian Republic submits that Law No 62 of 5 March 1982 (Official Gazette of the Italian Republic No 63 of 5 March 1982, p. 1713) meets the requirements of Article 7 of the Directive inasmuch as it provides that the regions are required to identify, by means of an appropriate plan, zones suitable for discharges of waste water and sludge, in accordance with the criteria laid down in Annex 5 of the Decision of the Interministerial Committee of 4 February 1977, which establishes very detailed rules concerning prior verifications. According to the Italian Republic those rules serve to predetermine the conditions under which any discharges are carried out.

23 That argument cannot be upheld. Article 7 of the Directive requires, having regard to the specific nature of the subject-matter of the investigation, that is to say the environment into which the discharge is to be made, that the investigation should have a specific objective, that is to say the study of the hydrogeological conditions of the area concerned, the possible purifying powers of the soil and subsoil and other factors; indeed, it is for that reason that the provision gives a precise indication of the factors which must be covered by the prior investigation. It thus makes the grant of authorization subject to precise and detailed conditions which must be regarded as mandatory in order to achieve the aim of the Directive. It follows that national legislation which defines in a vague and general manner a number of criteria and technical standards for the use of water cannot be regarded as complying with the requirements of the Directive.

24 With regard to the transposition of Article 8 of the Directive, the Italian Republic submits that the surveillance of water required by that article is ensured by point 2.8 of Annex 5 to the Decision of the Interministerial Committee of 4 February 1977, under which provision must be made for all the necessary verifications in order to assess the environmental impact of the discharge system and which indicates a number of checks to be carried out.

25 That argument cannot be upheld either. Article 8 of the Directive makes the grant of authorizations provided for in Articles 4, 5 and 6 subject in mandatory terms to prior specific checks of a well-defined nature.

26 The provisions relied on by the Italian Republic provide only for vague and general measures which cannot be regarded as implementing the article in question

with the requisite precision and clarity to satisfy fully the demands of legal certainty (see the judgment in Case 291/84 *Commission* v *Netherlands* [1987] ECR 3483, at paragraph 15).

27 Consequently, this complaint on the part of the Commission must also be upheld.

The tacit 'provisional authorization'

28 The Commission also submits that the Italian Republic has not transposed Articles 9 and 10 of the Directive, which indicate the matters which must be specified in authorizations, or Article 12 of the Directive, which sets out the circumstances in which authorization must be refused or withdrawn. The Commission submits that Article 15 of Law No 319 of 10 May 1976, cited above, makes the issue of authorization subject to no condition other than the obligation for the applicant to submit an application accompanied by a precise description of the discharge. The Commission further states that in accordance with that article provisional authorization is deemed to be granted when the application for grant of authorization has not been rejected within six months. According to the Commission, that provision establishes a system of authorization on demand and a 'tacit agreement' procedure which has repercussions as regards both authorization and verification, since in the event of tacit authorization it is not certain whether any verification has taken place, and where it has not the authorization is granted without compliance with the conditions laid down in Articles 9, 10 and 12 of the Directive.

29 The Italian Republic argues that the fact that the Italian legislation provides for tacit authorization does not mean that the system is incompatible in itself with the aim of the Directive, since the Member States are entitled to choose the manner in which they implement it. According to the Italian Republic, the competent authority must in any event verify, as regards tacit authorizations, that the area chosen for the discharge falls within that previously defined by the regional authority. Consequently Italian law ensures preventive and effective monitoring in accordance with the Directive.

30 The Directive provides that the refusal, grant or withdrawal of authorizations must take place by way of an express measure in accordance with precise rules of procedure which comply with a number of necessary conditions, conditions which create rights and obligations on the part of individuals.

31 Consequently, tacit authorization cannot be considered compatible with the requirements of the Directive, since in addition, as the Commission has stated, such authorization does not make it possible to carry out prior inquiries, subsequent inquiries or checks. It follows that the national legislation does not transpose the Directive with the requisite precision and clarity to satisfy fully the requirements of legal certainty.

32 Consequently, this complaint by the Commission must also be upheld.

The duration of authorization

33 According to the Commission, the Italian legislation, in particular Article 15 of Law No 319 of 10 May 1976, cited above, provides for definitive authorization, which, even if it can be withdrawn or amended at any time, is incompatible with Article 11 of the Directive, which requires the Member States to grant authorizations for a limited period which must be reviewed at least every four years.

34 The Italian Republic did not take any position on this issue in its written pleadings, but in reply to a question from the Court it admitted that the provisions of Italian legislation in force do not regulate the duration of authorization.

35 Consequently, this complaint of the Commission must be upheld.

Monitoring of compliance with the conditions laid down in authorizations and the effects of discharges

36 The Commission submits that Article 13 of the Directive, which requires Member States to monitor compliance with the conditions laid down in each authorization and the effects of discharges on groundwater, has not been correctly transposed since the sixth paragraph of Article 15 of Law No 319 of 10 May 1976, as amended by Law No 650 of 24 December 1979, cited above, gives the Italian authorities powers of supervision and monitoring which are vague in nature and

are restricted to monitoring compliance within the limits of acceptability laid down by the legislation.

37 With regard to the complaint concerning the monitoring of compliance with the conditions laid down in the authorization, the Italian Republic, in reply to a written question from the Court, states that Article 9 of Law No 650 of 24 December 1979 meets the requirements of the Directive since municipalities and mountain local authorities are required to monitor discharges and Article 22 of Law No 319 of 10 March 1976 lays down criminal penalties for persons who fail to observe the conditions laid down in authorizations. It points out that Article 8(4) of Law No 349 of 15 July 1986 (Official Gazette of the Italian Republic No 162 of 8 July 1986) established an environmental unit of *carabinieri.* According to the Italian Republic, the fact that failure to observe the conditions laid down in authorizations constitutes a criminal offence automatically entails a duty of surveillance and monitoring on the part of the authorities responsible for investigating offences.

38 With regard to the complaint concerning the monitoring of the effects of discharges, the Italian Republic, in reply to a question from the Court, states that such monitoring is ensured by point 2.8 of the Decision of the Interministerial Committee of 4 February 1977.

39 In reply to those arguments, the Commission maintains that the Italian legislation is vague and that the criminal penalties provided for in Article 22 of Law No 319 of 10 May 1976 are insufficient to ensure compliance with the Directive, because the Law itself does not take account of the precise and detailed provisions of the Directive. Furthermore, the Commission considers that the *carabinieri* unit, composed of some 20 men, cannot ensure effective protection against all offences concerning the environment.

40 Article 13 of the Directive places on the authorities of the Member States a specific duty to monitor all the conditions laid down in authorizations which have been issued and all the effects of discharges on groundwater.

41 The Italian legislation establishes a general criminal offence intended to penalize failure to comply with the conditions laid down in authorizations which are issued, but does not require any specific monitoring of compliance with those provisions. Nor does it provide for monitoring of the effects of discharges on groundwater.

42 It follows that the measures taken by the Italian Republic are not sufficient to meet the specific requirements of the Directive as regards both the monitoring of compliance with the conditions laid down in authorizations which are issued and the monitoring of the effects of discharges on groundwater.

43 Consequently, this complaint of the Commission must also be upheld.

The obligation to keep an inventory of authorizations.

44 The Commission submits that the Italian legislation does not comply with Article 15 of the Directive, which requires Member States to keep an inventory of authorizations. At present there is no such inventory in Italy, and even if there was one it would necessarily be incomplete at least in respect of tacit authorizations.

45 The Italian Republic replies that the fact that national legislation permits tacit authorization does not preclude the possibility of drawing up the inventory required by the Directive, because every application for authorization lodged with the competent department is accompanied by documentation containing all the information on the discharge.

46 That argument cannot be upheld, because the documentation referred to does not satisfy the obligation laid down by the Directive to keep an inventory of authorizations.

47 Consequently, this complaint of the Commission must also be upheld.

48 Having regard to all the foregoing considerations, it must be held that by not adopting within the prescribed period all the measures necessary to comply with Council Directive 80/68/EEC of 17 December 1979 on the protection of groundwater against pollution caused by certain dangerous substances the Italian Republic has failed to fulfil its obligations under the EEC Treaty.

Costs

49 Under Article 69(2) of the Rules of Procedure the unsuccessful party is to be ordered to pay the costs. Since the Italian Republic has been unsuccessful, it must be ordered to pay the costs.

On those grounds,

THE COURT

hereby:

(1) Declares that by not adopting within the prescribed period all the measures necessary to comply with Council Directive 80/68/EEC of 17 December 1979 on the protection of groundwater against pollution caused by certain dangerous substances the Italian Republic has failed to fulfil its obligations under the EEC Treaty;

(2) Orders the Italian Republic to pay the costs.

provisions of a binding nature. Mere administrative practices, which by their nature may be altered at the whim of the administration, may not be considered as constituting the proper fulfilment of the obligation deriving from the directive in question.

In Case 96/81

COMMISSION OF THE EUROPEAN COMMUNITIES, represented by its Legal Adviser, Robert Caspar Fischer, acting as Agent, assisted by Auke Haagsma, a member of its Legal Department, with an address for service in Luxembourg at the office of its Legal Adviser, Oreste Montalto, Jean Monnet Building, Kirchberg,

applicant,

v

KINGDOM OF THE NETHERLANDS, represented by Adriaan Bos, acting as Agent, Assistant Legal Adviser at the Ministry of Foreign Affairs, with an address for service in Luxembourg at the Embassy of the Kingdom of the Netherlands, 5 Rue C. M. Spoo,

defendant,

APPLICATION for a declaration that the Kingdom of the Netherlands has failed to fulfil an obligation imposed on it by the EEC Treaty, by not adopting within the period prescribed the laws, regulations and administrative provisions needed in order to comply with Council Directive No 76/160/EEC of 8 December 1975 concerning the quality of bathing water (Official Journal 1976, L 31, p. 1),

THE COURT

composed of: J. Mertens de Wilmars, President, G. Bosco and A. Touffait (Presidents of Chambers), Lord Mackenzie Stuart, A. O'Keeffe, T. Koopmans and U. Everling, Judges,

Advocate General: F. Capotorti
Registrar: J. A. Pompe, Deputy Registrar

gives the following

JUDGMENT

Facts and Issues

The facts of the case, the course of the procedure and the conclusions, submissions and arguments of the parties may be summarized as follows:

I — Summary of the facts

1. Council Directive No 76/160/EEC of 8 December 1975 concerning the quality of bathing water (Official Journal 1976, L 31, p. 1) provides that Member States are to take certain measures in order to reduce the pollution of bathing water and to protect such water against further deterioration. To that end, the directive lays down the physical, chemical and microbiological parameters applicable to bathing water and provides that Member States shall set, for all bathing areas or for each individual bathing area, the values applicable to bathing water as regards those parameters. Members States are obliged, by virtue of the directive, to take all necessary measures to ensure that, within a period of 10 years, the quality of bathing waters conforms with those values and to ensure that those values are observed in newly-created bathing areas. The competent authorities in the Member States are obliged to carry out sampling operations in accordance with the detailed rules laid down in the directive. Member States are obliged, four years following the notification of the directive and regular intervals thereafter, to submit a comprehensive report to the Commission on their bathing water and the most significant characteristics thereof.

Article 12 (1) of the directive provides as follows:

"Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with this directive within two years of its notification. They shall forthwith inform the Commission thereof."

Notification of the directive to the Netherlands took place on 10 December 1975. Thus the period specified in Article 12 expired on 10 December 1977.

2. By letters of 24 February 1976 and 13 October 1977 the Commission requested the Netherlands Government to inform the Commission of the measures taken by the Netherlands to implement the directive.

In reply to those letters the Ministerie van Verkeer en Waterstaat [Ministry of Transport, Water Control and Construction] of the Netherlands informed the Commission, by letter of 28 March 1978, that an amendment to the Wet Verontreiniging Oppervlaktewateren [Law relating to the pollution of surface water] was in preparation. That amendment would *inter alia* enable national standards to be set concerning the discharge of certain substances and to maintain everywhere a general minimum quality level required for the various uses of surface water. That amendment therefore had great significance in connection with the implementation of the directive.

Moreover, an amendment to the Wet Hygiëne en Veiligheid Zweminrichtingen [Law relating to hygiene and safety in bathing establishments] would enable the use of surface water in bathing water to be prohibited where the former did not satisfy the requirements laid down in the directive.

Furthermore the competent authorities were in the process of taking concerted action to extend the sampling programme in order to adapt it to the provisions of the directive.

Finally, the Netherlands Government remarked that certain requirements, based on an opinion of the Gezondheidsraad [Health Council] and contained in a report entitled "Interimrapport Zwemwater" ["Interim report on bathing water"] dated 25 June 1973, had been imposed for a long time in the Netherlands on the use of surface water for recreational purposes. That report was attached to the letter.

The Ministerie van Verkeer en Waterstaat concluded its letter of 28 March 1978 by stating its willingness to supply the Commission with any further information which it might require.

3. By letter of 8 February 1979 the Commission informed the Netherlands Government that it was of the opinion that the Kingdom of the Netherlands had failed to fulfil its obligations under the directive since the Netherlands authorities had still not adopted the measures needed to give effect to the directive under its internal law and since, notwithstanding the provisions of Article 12 (1) of the directive, the Commission had not yet received any communication regarding such measures. The Commission therefore invited the Netherlands Government, pursuant to Article 169 of the EEC Treaty, to submit its observations on the matter within two months.

The Netherlands Government replied to that letter by a letter dated 23 May 1979 from its Permanent Representation to the European Communities.

In that letter the Netherlands Government supplied a number of further details concerning the content of the law relating to the pollution of surface water accompanied by certain extracts of that law. It stated that that legislation provided for a certain number of methods of controlling the quality of surface water. A prospective multiennial programme drawn up every five years for the purposes of the campaign against water pollution, and determining the policy to be pursued in practice by the authorities responsible for the quality of water contained, in the annexes thereto, the norms laid down in the directive. The programme was attached to the letter. The Netherlands Government emphasized that whilst the preamble to and the explanatory statement accompanying the draft law designed to amend the law relating to the pollution of surface water referred to the directive that did not mean that the directive was not being applied in the Netherlands in the absence of such amendment since for that purpose the present law already provided for a number of methods and laid down certain administrative provisions enabling the directive to be implemented to a considerable extent.

The Netherlands Government also forwarded to the Commission a copy of the law relating to hygiene and safety in bathing establishments, which enabled certain measures to be taken, in respect of bathing establishments, concerning the quality of bathing water. The proposed amendment to that law would have the effect of extending still further the scope of its application.

In that connection the Netherlands Government also referred to the Wet bestrijding Infectieziekten en Opsporing Ziekteoorzaken [Law to combat infectious diseases and to detect the causes of disease] which compels the mayor of any municipality to order the total or partial closure of a bathing establishment if the department responsible for the inspection of public health makes a request to that effect.

The Netherlands Government annexed to that letter a report on bathing areas in respect of 1978 and on the most significant characterisitics of their bathing water.

The Netherlands Government concluded its letter by stating that it believed it had shown by the contents of the letter that it was in practice already implementing the directive as the basis of existing legislation. It added that it was prepared to supply the Commission with any further information which it might require.

4. By letter of 27 July 1979 the Commission delivered to the Netherlands Government a reasoned opinion within the meaning of Article 169 of the EEC Treaty stating that the Kingdom of the Netherlands had failed to fulfil an obligation imposed on it by the directive by not adopting the laws, regulations and administrative provisions needed to comply with its terms.

The Commission stated in its reasoned opinion that the Kingdom of the Netherlands had not informed the Commission of the measures taken to comply with the directive and the Commission must therefore assume that the Kingdom of the Netherlands had not yet taken such measures. The provisions of the existing legislation to which the Netherlands Permanent Representation had referred in its letter of 23 May 1979 and the report on bathing areas did not constitute implementation of the directive for the purposes of Article 12. The Commission had still not been informed that the proposed amendments to that legislation had been enacted.

In its reply to that reasoned opinion, by letter of 26 November 1979 from its Permanent Representation to the European Communities, the Netherlands Government reaffirmed that existing legislation already provided mechanisms making it possible to pursue a policy aimed at meeting or continuing to observe the quality requirements which surface water intended for bathing must satisfy. Although, for the purpose of implementing the directive, it was necessary to adapt the law relating to the pollution of surface water in order to create a legal instrument by which general and binding instructions might be issued to all the authorities responsible for the quality of water, that did not mean, contrary to the belief of the Commission, that it was impossible for the Netherlands to implement the directive without such adaptation. The amendments which were being made to the legislation on the subject were considered desirable and the Netherlands Government attached great importance to them. The Netherlands was already implementing the directive by means of existing legislative instruments. In that letter, the Netherlands Government supplied further details of the existing legislation and added that it was prepared to engage in any further consultations with the Commission.

By letter of 24 March 1981 the Permanent Representation of the Kingdom of the Netherlands to the European Communities informed the Commission as to the stage reached in the legislative procedure relating to the aforementioned amendments to the relevant Netherlands legislation.

II — Conclusion and written procedure

1. By an application registered at the Court on 24 April 1981, the *Commission* brought an action against the Kingdom of the Netherlands claiming that the Court should:

Declare that the Kingdom of the Netherlands, by not adopting within the period prescribed the laws, regulations and administrative provisions needed in order to comply with the requirements of Council Directive No 76/160/EEC of 8 December 1975, has failed to fulfil an obligation imposed upon it by the Treaty;

Order the Kingdom of the Netherlands to pay the costs.

The *Government of the Kingdom of the Netherlands* contends that the Court should:

Dismiss the application as unfounded;

Order the Commission to pay the costs.

2. At the conclusion of the written procedure, which followed normal course, the Court, upon hearing the views of the Advocate General, decided to request the Commission to reply in writing to a number of questions and decided to invite the Government of the Netherlands to submit in writing its observations on those replies.

The Court, upon hearing the views of the Advocate General, decided to open the oral procedure without any preparatory inquiry.

III — Submissions and arguments of the parties put forward during the written procedure.

1. The *Commission* contends in its *application* that the Netherlands Government did not deny, in its reply to the Commission or in its subsequent letters, that the directive required an amendment to the legislation in force in the Netherlands. It was apparent from the contents of those letters that that amendment to its legislation had still not been enacted and that therefore, contrary to Article 12 of the directive, the Netherlands still had not adopted all the laws, regulations and administrative provisions needed in order to implement the directive.

The statement, contained in the letter of 26 November 1979, that the Netherlands was implementing the directive by means of existing legilsative provisions, through administrative channels, as well as by means of guidelines at the practical level, is contradicted by certain statements also contained in that letter to the effect that it was "necessary to adapt that law for the purpose of implementing the directive". That notion also conflicts with the viewpoint expressed by the Netherlands Government in its reply of 28 March 1978.

The need for certain laws, regulations or administrative provisions also emerges clearly from a comparison of the directive with the existing legislation. It is not however necessary at this stage systematically to examine the differences between the Netherlands legislation and

the directive but the Commission expressly reserves the right to present further argument on this point if that should prove necessary during the course of the procedure.

In the Commission's view, the Netherlands Government wishes to give the impression that the quality of bathing water in the Netherlands is in fact largely the same as that prescribed by the directive without, however, denying that this situation derives only to an insufficient degree from the powers, and the mandatory statements and task-descriptions stipulated in the directive. What is important in the present case is not the practical result brought about by the policy pursued by the Government and by the various subordinate authorities in the Netherlands but the fact that the Netherlands legislation does not make provision for all the instruments prescribed in the directive.

2. In its *defence* the *Netherlands Government* points out that the Commission did not respond to the observations submitted on the reasoned opinion as to the manner in which the directive was already being implemented and that the Commission did not state which provisions of the directive had not been implemented in the Netherlands.

The Netherlands Government, by a letter of 23 May 1979 from its Permanent Representation, had already informed the Commission that its programme for sampling bathing water had been made to comply with the directive. The Commission had received reports concerning the most significant characteristics of the bathing water. In addition in an annex to its defence, the Netherlands Government gives the results of a quarterly bacteriological survey concerning the quality of bathing water.

Moreover, the Netherlands Government recalls that, according to Article 4 of the directive, it is only within a period of 10 years that the quality of bathing water must be made to conform to the limit values set in accordance with Article 3 of the directive.

The draft law amending the law relating to the pollution of surface water was considered desirable for the purpose of creating a uniform scheme in a system under which managerial responsibility for the quality of water rested with decentralized administrative authorities and under which central government did not have the power to regulate directly the management by those subordinate authorities as regards the grant of authorizations or the laying down of quality standards for surface water.

Nevertheless, the existing instruments taken, as a whole, could be used to implement the directive. The subordinate authorities, which are obliged to put into effect the terms of the directive, are aided in their management by all the instruments put at their disposal by the law relating to the pollution of surface water, in particular prohibitions, declarations of inadequacy, the provisions governing authorizations, the levying of a tax and the components of the general

improvement policy. Existing legislation confers, on every authority responsible for the quality of water, the necessary instruments for pursuing a policy aimed at ensuring that the quality of water satisfies requirements which are essential for its recognized use or function. It is not possible to conclude from the existence of a draft amendment to the law, intended to supplement the existing provisions, that the directive had not been implemented. The legislative amendment is designed to impose more stringent rules that those laid down in the directive. The instruments to be created within the framework of the law relating to the pollution of surface water are, moreover, based on Council Directive No 76/464/EEC of 4 May 1976 which is subsequent in time to the directive at issue and places that directive in a general context.

By their nature, the provisions of the directive at issue are primarily addressed to the national authorities. The Member States are free to choose the form and methods of implementing the directive. The Commission has not shown that the Netherlands did not have at its disposal the instruments needed for implementing the directive. The directive has hitherto been adequately implemented in the Netherlands.

3. In its *reply* the *Commission* maintains that the Netherlands Government fails to realize the true scope of the application and is basing itself on misconceptions as regards the nature of directives in general and of the directive at issue in particular.

The duty to inform the Commission under Article 12 (1) of the directive, on which the application is based, is for the Commission an indispensable instrument in its task of supervising the implementation of directives and constitutes a specific instance of the general duty, imposed on the Member States by Article 5 of the EEC Treaty, of facilitating the achievement of the Commission's tasks. A general communication stating that, for the purpose of its implementation the directive was the subject of a certain legislative amendment or that its implementation was already effected within the context of existing legislation, may not be considered as sufficient.

As with many other directives, under the system laid down by Article 12 (1) of the directive, the supervision by the Commission of the correct implementation of the directive is generally carried out in two stages.

During the first stage, which involves a general and formal examination, the Commission verifies whether the Member States have informed it of the provisions, whether existing or newly enacted, which they consider to be necessary for the implementation of the directive, and whether those provisions have entered into force within the prescribed period. During the second stage which involves a close and lengthy examination and a scrupulous comparison of the national provisions with the various provisions of the directive, the Commission verifies, on the basis of information supplied by the Member States pursuant to Article 12 (1) of the directive, whether the Member States have satisfactorily implemented the provisions of the directive.

The duty to supply information and the supervision, in two stages, of the implementation of the directive entails consequences as regards the procedure laid down in Article 169 of the EEC Treaty in the event of failure by a Member State to fulfil its obligations. An incomplete or delayed communication of the implementing provisions constitutes a failure to comply with the terms of the second sentence of Article 12 (1) of the directive which is sufficient of itself to justify the initiation of the procedure laid down in Article 169 of the EEC Treaty.

Failure to comply with the second sentence of Article 12 (1) of the directive also gives rise to the presumption that the Member State has not complied with its obligation to bring into force the necessary provisions as laid down in the first sentence of Article 12 (1). Where the Member State has informed the Commission of the implementing measures which it considered necessary but did not bring them into force within the prescribed period the Member State is not entitled to rebut that presumption by evidence to the contrary, thus contradicting the previous communication to the Commission.

On the basis of that presumption the Commission may also incorporate, in the default procedure which it initiates, a failure to fulfil the obligation to bring into force the provisions referred to in the first sentence of Article 12 (1), on the basis that the Member State had not brought into force within the prescribed period *all* the necessary implementing measures. There is no need for the Commission to state or demonstrate that the Member State has failed to comply with certain specific obligations laid down in the directive. Verification in regard to such matters takes place during the second stage of the procedure. In any event it is sufficient for the Commission to show that at least *one* of the provisions of the directive has not been implemented or has been implemented incorrectly.

The Commission brought this action during the first stage of its supervision of the implementation of the directive since, as it stated in its application, and that statement has not been contradicted, the Netherlands had not communicated to it, within the prescribed period, and pursuant to the second sentence of Article 12 (1), the implementing measures adopted. Both parties admit that the Netherlands has not complied with that provision of the directive. The Commission has confined the present case to the fact that the Netherlands had not brought into force, within the prescribed period, all the laws, regulations and administrative provisions necessary. On that narrow issue, the burden of proof on the Commission is clearly much less onerous and, in addition the aforementioned presumption applies.

The presumption of belated or incomplete implementation is confirmed by the letter of the Netherlands Government dated 28 March 1978 which shows that the Netherlands Government was, at that time, convinced that the implementation of the directive required the enactment of a certain number of provisions, indicated in outline. That letter therefore did not constitute the information stipulated by the second sentence of Article 12 (1). Whilst the more detailed information, contained in subsequent letters from the Netherlands Government, on the means available under existing Netherlands legislation constituted valuble material for the purpose of verifying the correct implementation of the directive during the second stage of the Commission's examination, it is of no significance in the present case which is concerned with the first stage of that examination.

The Netherlands Government stated for the first time, in its defence, explicitly and unequivocally, that adequate implementing measures had been adopted, ensuring, for the time being, the adequate implementation of the directive in the Netherlands. Such a viewpoint is unacceptable since it repudiates the earlier attitude adopted by the Netherlands and undermines the confidence with which that attitude

had inspired the Commission. The Commission continues therefore to rely on the presumption that the Netherlands has not adopted all the implementing measures and it need not reply in detail to all the arguments put forward by the Netherlands Government as regards the present state of the implementation of the directive.

In any event, the presumption that the directive has not been fully implemented has not been rebutted by the Netherlands Government even if it were accepted that that possibility is open to the Government. For that purpose, it would have had to demonstrate, in respect of each provision of the directive, that equivalent mandatory provisions already exist in Netherlands law and its defence does not contain any such demonstration.

Moreover, even supposing that no such presumption existed, the Commission has clearly shown that the Netherlands has not brought into force, within the prescribed period, all the necessary implementing provisions. Merely to bring into force some of the provisions of the directive is not sufficient to comply with Article 12 (1). It is clear that the implementation of the obligations contained in the directive requires a certain number of laws, regulations and administrative provisions and that such implementation could not be left to the discretion of the various authorities responsible for the quality of water. The Member States must adopt the implementing measures needed to incorporate in their legal system the terms of the directive and they are not at liberty to exempt themselves from the obligation to enact mandatory implementing rules by maintaining that the directive itself is directly binding on their authorities and that the practical result sought by the directive can already be achieved. The contents of the letters written by the Netherlands Government before this action was brought show sufficiently clearly that the implementation of the directive in the Netherlands was governed, at least in part, by means of non-mandatory provisions and that the existing legislation does not lay down all the measures prescribed by the directive.

4. In its *rejoinder* the *Netherlands Government* denies that it is agreed between the parties that the Netherlands is in breach of its duty in regard to the information to be given to the Commission by virtue of the second sentence of Article 12 (1) of the directive.

It is necessary to make a distinction between, on the one hand, information supplied by way of a general information procedure such as that instituted by the Council on 5 March 1973 concerning legal measures relating to the protection of the environment (Official Journal, C 9, 15. 3. 1973) under which all those measures designed for the protection and improvement of the environment were brought to the knowledge of the Commission, and, on the other hand, information concerning the implementation of the directive.

The directive is not merely binding on central government but also on the other administrative authorities responsible for ensuring the quality of water and it can in fact be implemented by those authorities. Among the rules issued by the provinces there are provisions relating to authorizations, to planning and to the

taking of samples etc., which require the approval of the State whose influence is thus ensured. The Netherlands Government has shown from the information supplied that it was not necessary, merely in order to implement the directive, to enact amending legislation.

The Netherlands Government acknowledges that the general information contained in its letter of 28 March 1978 concerning the new laws, regulations and administrative provisions, supplied in accordance with the Council Agreement of 5 March 1973, became intermingled with the information supplied concerning the implementation of the directive. However, in its letter of 23 March 1979 it supplied more detailed information relating to the system of Netherlands legislation and stressed the fact that the existing law relating to the pollution of surface water already provided the means needed for implementing the directive. The Netherlands Government considers that it has satisfied, albeit after a certain delay, its obligation in regard to the information to be given to the Commission and reserves the right to submit further observations during the course of the second stage relating to the allegation that the implementation of the directive has been inadequate.

IV — Answers to questions put by the Court

In reply to the questions put by the Court at the close of the written procedure, the *Commission* stated in particular that the legislative framework now existing in the Netherlands for the implementation of the directive was still incomplete since, as indicated in the first page of the explanatory memorandum to the draft law amending the Wet Hygiëne en Veiligheit Zweminrichtingen, no provisions yet existed determining the desired quality for bathing water by means of values for the parameters mentioned in the annex to the directive, as provided for in Article 3 of the directive or provisions prescribing the measures necessary to achieve the quality laid down for bathing water, as provided for in Article 4 (1) of the directive, measures which had to be brought into force within the period laid down in Article 12 of the directive, even though a period of 10 years was granted for achievement of the desired water quality. Moreover, the sampling and checking operations provided for in the directive were carried out only partially, the minimum frequency not always being observed, and then only on the basis of programmes and reports which could not be regarded as the "laws, regulations and administrative provisions" referred to in the directive.

The *Netherlands Government* observed that the law amending the Wet Verontreiniging Oppervlaktewateren had entered into force on 1 January 1982 and notice of that fact had been given to the Commission by letter of 14 January 1982. Therefore, in view of the present state of the Netherlands legislation, there was no reason to proceed with the action.

V — Oral procedure

At the sitting on 2 March 1982 oral argument was presented for the Commission by Auke Haagsma, a member of its Legal Department, and for the Government of the Kingdom of the

Netherlands, represented by Adriaan Bos, Assistant Legal Adviser, Ministry for Foreign Affairs.

The Advocate General delivered his opinion at the sitting on 31 March 1982.

Decision

1 By application received at the Court Registry on 24 April 1981, the Commission of the European Communities brought an action under Article 169 of the EEC Treaty for a declaration that, by not introducing within the period prescribed the laws, regulations and administrative provisions needed to comply with Council Directive No 76/160/EEC of 8 December 1975 concerning the quality of bathing water (Official Journal 1976, L 31, p. 1) the Kingdom of the Netherlands had failed to fulfil its obligation under the Treaty.

2 By virtue of that directive, which was adopted pursuant to Articles 100 and 235 of the EEC Treaty, Member States are obliged to set, for all bathing areas or for each individual bathing area, the values applicable to bathing water for the physical, chemical and microbiological parameters laid down in the directive, to adopt the necessary measures to ensure that, within a period of 10 years, the quality of bathing water conforms with those values, to ensure that those values are observed in newly-created bathing areas, to carry out sampling operations in accordance with the detailed rules laid down in the directive and, four years following the notification of the directive, to submit a first comprehensive report to the Commission on their bathing water and the most significant characteristics thereof.

3 Article 12 (1) of the directive provides that the Member States are to bring into force the laws, regulations and administrative provisions necessary to comply with the directive within two years of its notification, a period which expired on 10 December 1977, and forthwith to inform the Commission thereof.

4 The Commission considers that the Netherlands Government has failed to fulfil its obligation to provide information pursuant to the above-mentioned

provision. In view of that failure the Commission considers that it is entitled to presume, during the first phase of its verification of the implementation of the directive, which is confined to establishing in general whether the necessary implementing measures have been brought into force within the prescribed period, without any detailed examination of such measures, that the defendant has failed to fulfil the obligation to put into effect the necessary measures.

5 The subject-matter of these proceedings is not, however, failure to comply with the duty to provide information but failure to fulfil the obligation to bring into force the laws, regulations and administrative provisions needed to ensure compliance with the directive.

6 It should be emphasized that, in proceedings under Article 169 of the EEC Treaty for failure to fulfil an obligation, it is incumbent upon the Commission to prove the allegation that the obligation has not been fulfilled. It is the Commission's responsibility to place before the Court the information needed to enable the Court to establish that the obligation has not been fulfilled, and in so doing the Commission may not rely on any presumption.

7 It should nevertheless also be emphasized that the Member States are obliged, by virtue of Article 5 of the EEC Treaty, to facilitate the achievement of the Commission's tasks which, under Article 155 of the EEC Treaty, consist in particular of ensuring that the provisions of the Treaty and the measures adopted by the institutions pursuant thereto are applied. It is for those reasons that Article 12 of the directive in question, like other directives, imposes upon the Member States an obligation to provide information.

8 The information which the Member States are thus obliged to supply to the Commission must be clear and precise. It must indicate unequivocally the laws, regulations and administrative provisions by means of which the Member State considers that it has satisfied the various requirements imposed on it by the directive. In the absence of such information, the Commission is not in a position to ascertain whether the Member State has effectively and completely implemented the directive. The failure of a Member State to fulfil that obligation, whether by providing no information at all or by providing insufficiently clear and precise information, may of itself justify recourse to the procedure under Article 169 of the EEC Treaty in order to establish the failure to fulfil the obligation.

9 In view of the purpose of this action and in order to examine whether it is well founded, those provisions must be compared with the laws, regulations and administrative provisions existing in the Netherlands by means of which the Netherlands Government considers it has implemented the directive.

10 In that respect, it must be recorded that in reply to a question put by the Court at the close of the written procedure, the Commission stated that, as appears from the explanatory memorandum to the draft Netherlands law amending the Wet Hygiëne en Veiligheid Zweminrichtingen [Law relating to hygiene and safety in bathing establishments], at the present time no provisions exist in the Netherlands determining the desired quality for bathing water by means of values for the parameters mentioned in the annex to the directive, as provided for in Article 3 of the directive, nor are there any provisions prescribing the measures necessary to achieve the quality laid down for bathing water, as provided for in Article 4 (1). The Netherlands Government did not deny that fact either in its observations on the Commission's reply or during the oral procedure and it has adduced no evidence from which it might be inferred that such provisions already exist in the Netherlands.

11 The Netherlands Government referred to the fact that the supervision of the quality of water is carried out in the Netherlands within the framework of a decentralized system. The regional and local authorities are directly bound by the provisions of the directive and they implement it in the practical management of water quality, under the control of the national authorities.

12 It is true that each Member State is free to delegate powers to its domestic authorities as it considers fit and to implement the directive by means of measures adopted by regional or local authorities. That does not however release it from the obligation to give effect to the provisions of the directive by means of national provisions of a binding nature. The directive in question, adopted *inter alia* pursuant to Article 100 of the EEC Treaty, is intended to approximate the applicable laws, regulations and administrative provisions in the Member States. Mere administrative practices, which by their nature may be altered at the whim of the administration, may not be

considered as constituting the proper fulfilment of the obligation deriving from that directive.

13 None of the matters put forward by the Netherlands Government justifies the conclusion that provisions of a binding nature have actually been adopted either by the national authorities or by regional or local authorities in order to determine for all bathing areas or for each of them the values applicable to bathing water for all the parameters indicated in the annex to the directive and in order to ensure that the quality of bathing conforms with the values thus determined. In particular, the prospective multiennial programme to which the Netherlands Government referred in its correspondence with the Commission prior to the commencement of these proceedings, affirming that that programme adopted the rules contained in the directive, constituted, at that time, nothing more than a set of guidelines for those responsible for the supervision of water quality and had no legally binding force. That programme could not therefore be considered as sufficient for the purpose of implementation of the directive.

14 In its observations on the Commission's reply to the questions put by the Court before the oral procedure and also during the oral procedure, the Netherlands Government again referred to an amendment of the Wet Verontreiniging Oppervlaktewateren [Law relating to the pollution of surface water], which entered into force on 1 January 1982, claiming that by virtue of that amendment the prospective multiennial programme would enable the directive to be fully implemented. At the hearing, the Commission, whilst not departing from its views, declared that that amendment to the law would, if supplemented by certain administrative measures, make it possible for the directive to be implemented properly. In that regard it must be pointed out, without its being necessary to consider whether, merely by reason of that amendment, the failure to fulfil the obligation might have been wholly remedied, that the measures needed to ensure the full implementation of the directive were not adopted within the prescribed periods and in any case did not exist when this action was brought.

15 It follows from the foregoing that the Kingdom of the Netherlands did not adopt within the prescribed periods the provisions needed to ensure the full implementation of the directive in question and must be declared to have failed to fulfil its obligations under the Treaty.

Costs

16 Under Article 69 (2) of the Rules of Procedure the unsuccessful party is to be ordered to pay the costs, if they have been asked for in the successful party's pleading. As the defendant has failed in its submissions, it must be ordered to pay the costs.

On those grounds,

THE COURT

hereby:

1. **Declares that by not bringing into force within the periods prescribed the provisions needed to ensure the full implementation of Council Directive No 76/160/EEC of 8 December 1975 concerning the quality of bathing water, the Kingdom of the Netherlands has failed to fulfil its obligations under the Treaty;**

2. **Orders the Kingdom of the Netherlands to pay the costs.**

JUDGMENT OF THE COURT
22 June 1989 *

In Case 103/88

REFERENCE to the Court under Article 177 of the EEC Treaty by the Tribunale amministrativo regionale per la Lombardia (Regional Administrative Tribunal for Lombardy) for a preliminary ruling in the proceedings before that court between

Fratelli Costanzo SpA, a company incorporated under Italian law, whose registered office is at Misterbianco,

and

Comune di Milano (Municipality of Milan)

on the interpretation of Article 29(5) of Council Directive 71/305/EEC of 26 July 1971 concerning the coordination of procedures for the award of public works contracts (Official Journal, English Special Edition 1971 (II), p. 682) and the third paragraph of Article 189 of the EEC Treaty,

THE COURT

composed of: O. Due, President, R. Joliet and F. Grévisse (Presidents of Chambers), Sir Gordon Slynn, G. F. Mancini, F. A. Schockweiler and J. C. Moitinho de Almeida, Judges,

Advocate General: C. O. Lenz
Registrar: H. A. Rühl, Principal Administrator

after considering the observations submitted on behalf of:

Fratelli Costanzo SpA, the plaintiff in the main proceedings, by L. Acquarone, M. Alì, F. P. Pugliese, M. Annoni and G. Ciampoli, avvocati, in the written procedure and by L. Acquarone in the oral procedure,

* Language of the case: Italian

the Comune di Milano, the defendant in the main proceedings, by P. Marchese, C. Lopopolo and S. Ammendola, avvocati, in the written procedure and by P. Marchese in the oral procedure,

Ing. Lodigiani SpA, the intervener in the main proceedings, by E. Zauli and G. Pericu, avvocati, in the written procedure and by G. Pericu in the oral procedure,

the Government of the Kingdom of Spain, by J. Conde de Saro and R. Silva de Lapuerta, acting as Agents, in the written procedure and by R. Silva de Lapuerta, acting as Agent, in the oral procedure,

the Government of the Italian Republic, by Professor L. Ferrari Bravo, Head of the Legal Department of the Ministry of Foreign Affairs, acting as Agent, assisted by I. M. Braguglia, avvocato dello Stato,

the Commission of the European Communities, by G. Berardis, a member of its Legal Department, acting as Agent, in the written and oral procedures,

having regard to the Report for the Hearing and further to the hearing on 7 March 1989,

after hearing the Opinion of the Advocate General delivered at the sitting on 25 April 1989,

gives the following

Judgment

1 By order of 16 December 1987, which was received at the Court Registry on 30 March 1988, the Tribunale amministrativo regionale per la Lombardia referred to the Court for a preliminary ruling under Article 177 of the EEC Treaty a number of questions on the interpretation of Article 29(5) of Council Directive 71/305/EEC of 26 July 1971 concerning the coordination of procedures for the

award of public works contracts (Official Journal, English Special Edition 1971 (II), p. 682) and the third paragraph of Article 189 of the EEC Treaty.

2 The questions were raised in proceedings brought by Fratelli Costanzo SpA (hereinafter referred to as 'Costanzo'), the plaintiff in the main proceedings, for the annulment of a decision of the Giunta municipale (Municipal Executive Board) of Milan eliminating the tender submitted by Costanzo from a tendering procedure for a public works contract and awarding the contract in question to Ing. Lodigiani SpA (hereinafter: 'Lodigiani').

3 Article 29(5) of Council Directive 71/305/EEC provides as follows:

'If, for a given contract, tenders are obviously abnormally low in relation to the transaction, the authority awarding contracts shall examine the details of the tenders before deciding to whom it will award the contract. The result of this examination shall be taken into account.

For this purpose it shall request the tenderer to furnish the necessary explanations and, where appropriate, it shall indicate which parts it finds unacceptable.

If the documents relating to the contract provide for its award at the lowest price tendered, the authority awarding contracts must justify to the Advisory Committee set up by the Council Decision of 26 July 1971 the rejection of tenders which it considers to be too low.'

4 Article 29(5) of Directive 71/305 was implemented in Italy by the third paragraph of Article 24 of Law No 584 of 8 August 1977 amending the procedures for the award of public works contracts in accordance with the directives of the European Economic Community (*Gazzetta ufficiale della Repubblica italiana* (Official Journal of the Italian Republic) No 232, 26.8.1977, p. 6272). That provision is worded as follows:

'If, for a given contract, tenders are abnormally low in relation to the transaction, the authority awarding the contract shall, after requesting the tenderer to furnish the necessary explanations and after indicating, where appropriate, which parts it considers unacceptable, examine the details of the tenders and may disallow them

if it takes the view that they are not valid; in that event, if the call for tenders provides that the lowest tender price is the criterion for the award of the contract, the awarding authority is obliged to notify the rejection of the tenders, together with its reasons for doing so, to the Ministry of Public Works, which is responsible for forwarding the information to the Advisory Committee for Public Works Contracts of the European Economic Community within the period laid down by the first paragraph of Article 6 of this Law.'

5 Subsequently, in 1987, the Italian Government adopted three decree laws in succession which provisionally amended the third paragraph of Article 24 of Law No 584 (Decree Law No 206 of 25 May 1987, Gazzetta ufficiale No 120, 26.5.1987, p. 5; Decree Law No 302 of 27 July 1987, Gazzetta ufficiale No 174, 28.7.1987, p. 3; and Decree Law No 393 of 25 September 1987, Gazzetta ufficiale No 225, 26.9.1987, p. 3).

6 The three decree laws each contain an Article 4 worded in identical terms, as follows:

'In order to speed up the procedures for the award of public works contracts, for a period of two years from the date on which this decree enters into force tenders with a percentage discount greater than the average percentage divergence of the tenders admitted, increased by a percentage which must be stated in the call for tenders, shall be considered abnormal for the purposes of the third paragraph of Article 24 of Law No 584 of 8 August 1977 and shall be excluded from the tendering procedure.'

7 The decree laws lapsed because they were not converted into laws within the period prescribed by the Italian Constitution. However, a subsequent law provided that the effects of legal measures adopted pursuant to them were to remain valid (Article 1(2) of Law No 478 of 25 November 1987, Gazzetta ufficiale No 277, 26.11.1987, p. 3).

8 In preparation for the 1990 World Cup for football, to be held in Italy, the Comune di Milano issued a restricted call for tenders for alteration work on a football stadium. The criterion chosen for awarding the contract was that of the lowest price.

9 The call for tenders stated that in accordance with Article 4 of Decree Law No 206 of 25 May 1987 tenders which exceeded the basic amount fixed for the price of the work by a percentage more than 10 points below the average percentage by which the tenders admitted exceeded that amount would be considered anomalous and consequently eliminated.

10 The tenders admitted to the procedure exceeded the basic amount fixed for the price of the work by an average of 19.48%. In accordance with the call for tenders any tender which did not exceed the basic amount by at least 9.48% was to be automatically eliminated.

11 The tender submitted by Costanzo was less than the basic amount. Accordingly, on 6 October 1987 the Giunta Municipale, on the basis of Article 4 of Decree Law No 393 of 25 September 1987, which in the mean time had replaced the decree law cited in the call for tenders, decided to exclude Costanzo's bid from the tendering procedure and to award the contract to Lodigiani, which had submitted the lowest tender of those which fulfilled the condition set out in the call for tenders.

12 Costanzo challenged that decision in proceedings before the Tribunale amministrativo regionale per la Lombardia, claiming *inter alia* that it was illegal on the ground that it was based on a decree law which was itself incompatible with Article 29(5) of Council Directive 71/305.

13 The national court therefore referred the following questions to the Court of Justice for a preliminary ruling:

'A — Given that, under Article 189 of the EEC Treaty, the provisions contained in a directive may relate to the "result to be achieved" (hereinafter referred to as "provisions as to results") or else be concerned with the "form and methods" required to achieve a given result (hereinafter referred to as "provisions as to form and methods"), is the rule contained in Article 29(5) of Council Directive 71/305/EEC of 26 July 1971 (where it provides that — should a tender be obviously abnormally low — the authority must "examine the details" of the

tender and request the tenderer to furnish the necessary explanations, indicating where appropriate which parts it finds unacceptable) a "provision as to results" and therefore of such a nature that the Italian Republic was obliged to "transpose" it without any amendment of substance (as indeed it did, by the third paragraph of Article 24 of Law No 584 of 8 August 1977) or is it a "provision as to form and methods", with the result that the Italian Republic could derogate from it by providing that where a tender is abnormally low the tenderer must *automatically* be eliminated from the tendering procedure, without any "examination of the details" and without any request to the tenderer to furnish "explanations" for the "abnormal tender"?

B — If the reply to Question A is negative (in the sense that Article 29(5) of Council Directive 71/305/EEC is to be held to be a "provision as to form and methods"):

B — 1. Did the Italian Republic (after "transposing" the aforesaid provision by way of Law No 584 of 8 August 1977 without introducing any amendment of substance regarding the procedure to be followed in cases where a tender is abnormally low) retain the power to amend the domestic implementing provision? In particular, could Article 4 of Decree Law No 206 of 25 May 1987, Decree Law No 302 of 27 July 1987 and Decree Law No 393 of 25 September 1987 (whose wording is identical) amend Article 24 of Law No 584 of 8 August 1977?

B — 2. Could the (identically worded) Articles 4 of the decree laws mentioned above amend Article 29(5) of Council Directive 71/305/EEC, as implemented by Law No 584 of 8 August 1977, without stating adequate reasons therefor, regard being had to the fact that a statement of reasons — which is necessary for Community legislation (see Article 190 of the EEC Treaty) — appears also to be necessary for domestic legislation introduced to give effect to Community provisions (which is therefore "sub-primary" legislation and, in the absence of indication to the contrary, must also be subject to the rule which requires "primary" legislation to state reasons)?

C — Is there, in any event, a conflict between Article 29(5) of Council Directive 71/305/EEC and the following provisions:

(a) the third paragraph of Article 24 of Law No 584 of 8 August 1977 (which refers to "abnormally low" tenders, whereas the directive is concerned with tenders which are "obviously" abnormally low and provides for examination of the details only in cases of "obvious" abnormality);

(b) Article 4 of Decree Laws Nos 206 of 25 May 1987, 302 of 27 July 1987 and 393 of 25 September 1987 (which make no allowance for preliminary examination of the details or a request for clarification to the party concerned, contrary to Article 29(5) of the Directive; furthermore, the decree laws mentioned above do *not* refer to "obviously" abnormal tenders and to that extent appear to be invalid, as does Law No 584 of 8 August 1977)?

D — If the Court of Justice rules that the aforesaid Italian legislative provisions conflict with Article 29(5) of Council Directive 71/305/EEC, was the municipal authority empowered, or obliged, to disregard the domestic provisions which conflicted with the aforesaid Community provision (consulting the central authorities if necessary), or does that power or obligation vest solely in the national courts?'

14 Reference is made to the Report for the Hearing for a fuller account of the facts of the case before the national court, the applicable legislation, the course of the procedure, and the written observations submitted to the Court, which are mentioned or discussed hereinafter only in so far as is necessary for the reasoning of the Court.

The second part of the third question and the first question

15 In the second part of the third question the Tribunale amministrativo regionale seeks in essence to establish whether Article 29(5) of Council Directive 71/305 prohibits Member States from introducing provisions which require the automatic exclusion from procedures for the award of public works contracts of certain tenders determined according to a mathematical criterion, instead of obliging the awarding authority to apply the examination procedure laid down in the directive, giving the tenderer an opportunity to furnish explanations. In its first question it asks whether the Member States may, when implementing Council Directive 71/305, depart to any material extent from Article 29(5) thereof.

16 With regard to the second part of the third question it should be noted that Article 29(5) of Directive 71/305 requires the awarding authority to examine the details of tenders which are obviously abnormally low, and for that purpose obliges the authority to request the tenderer to furnish the necessary explanations. Article 29(5) further requires the awarding authority, where appropriate, to indicate which parts of those explanations it finds unacceptable. Finally, if the criterion adopted for the award of the contract is the lowest price tendered, the awarding authority must justify to the Advisory Committee set up by the Council Decision of 26 July 1971 (Official Journal, English Special Edition 1971 (II), p. 693) the rejection of tenders which it considers to be too low.

17 The Comune di Milano and the Italian Government maintain that it is in keeping with the aim of Article 29(5) to replace the examination procedure which it envisages, giving the tenderer an opportunity to state its views, with a mathematical criterion for exclusion. They point out that the aim of that provision is, as the Court ruled in its judgment of 10 February 1982 in Case 76/81 *Transporoute* v *Minister for Public Works* [1982] ECR 417, at p. 428, to protect tenderers against arbitrariness on the part of the authority awarding the contract. A mathematical criterion for exclusion affords an absolute safeguard. It has the further advantage of being faster in its application than the procedure laid down by the Directive.

18 That argument cannot be upheld. A mathematical criterion for exclusion deprives tenderers who have submitted exceptionally low tenders of the opportunity of demonstrating that those tenders are genuine ones. The application of such a criterion is contrary to the aim of Directive 71/305, namely to promote the development of effective competition in the field of public contracts.

19 The answer to the second part of the third question must therefore be that Article 29(5) of Council Directive 71/305 prohibits Member States from introducing provisions which require the automatic exclusion from procedures for the award of public works contracts of certain tenders determined according to a mathematical criterion, instead of obliging the awarding authority to apply the examination procedure laid down in the Directive, giving the tenderer an opportunity to furnish explanations.

20 With regard to the first question, it should be observed that it was in order to enable tenderers submitting exceptionally low tenders to demonstrate that those

tenders are genuine ones that the Council, in Article 29(5) of Directive 71/305, laid down a precise, detailed procedure for the examination of tenders which appear to be abnormally low. That aim would be jeopardized if Member States were able, when implementing Article 29(5) of the Directive, to depart from it to any material extent.

21 The answer to the first question must therefore be that when implementing Council Directive 71/305 Member States may not depart to any material extent from the provisions of Article 29(5) thereof.

The second question

22 In its second question the national court asks whether, after implementing Article 29(5) of Council Directive 71/305 without departing from it to any material extent, Member States may subsequently amend the domestic implementing provision, and if so whether they must give reasons for doing so.

23 The national court raised this question only in the event that the answer to the first question should be that Member States could, when implementing Article 29(5) of Directive 71/305, depart materially from it.

24 In the light of the answer given to the first question the second question is devoid of purpose.

The first part of the third question

25 In the first part of its third question the national court seeks to establish whether Article 29(5) of Council Directive 71/305 allows Member States to require the examination of tenders whenever they appear to be abnormally low, and not only when they are obviously abnormally low.

26 The examination procedure must be applied whenever the awarding authority is contemplating the elimination of tenders because they are abnormally low in relation to the transaction. Consequently, whatever the threshold for the commencement of that procedure may be, tenderers can be sure that they will not be disqualified from the award of the contract without first having the opportunity of furnishing explanations regarding the genuine nature of their tenders.

27 It follows that the answer to be given to the first part of the third question is that Article 29(5) of Council Directive 71/305 allows Member States to require that tenders be examined when those tenders appear to be abnormally low, and not only when they are obviously abnormally low.

The fourth question

28 In the fourth question the national court asks whether administrative authorities, including municipal authorities, are under the same obligation as a national court to apply the provisions of Article 29(5) of Council Directive 71/305 and to refrain from applying provisions of national law which conflict with them.

29 In its judgments of 19 January 1982 in Case 8/81 *Becker* v *Finanzamt Münster-Innenstadt* [1982] ECR 53, at p. 71 and 26 February 1986 in Case 152/84 *Marshall* v *Southampton and South-West Hampshire Area Health Authority* [1986] ECR 723, at p. 748, the Court held that wherever the provisions of a directive appear, as far as their subject-matter is concerned, to be unconditional and sufficiently precise, those provisions may be relied upon by an individual against the State where that State has failed to implement the directive in national law by the end of the period prescribed or where it has failed to implement the Directive correctly.

30 It is important to note that the reason for which an individual may, in the circumstances described above, rely on the provisions of a directive in proceedings before the national courts is that the obligations arising under those provisions are binding upon all the authorities of the Member States.

31 It would, moreover, be contradictory to rule that an individual may rely upon the provisions of a directive which fulfil the conditions defined above in proceedings before the national courts seeking an order against the administrative authorities, and yet to hold that those authorities are under no obligation to apply the provisions of the directive and refrain from applying provisions of national law which conflict with them. It follows that when the conditions under which the Court has held that individuals may rely on the provisions of a directive before the national courts are met, all organs of the administration, including decentralized authorities such as municipalities, are obliged to apply those provisions.

32 With specific regard to Article 29(5) of Directive 71/305, it is apparent from the discussion of the first question that it is unconditional and sufficiently precise to be relied upon by an individual against the State. An individual may therefore plead that provision before the national courts and, as is clear from the foregoing, all organs of the administration, including decentralized authorities such as municipalities, are obliged to apply it.

33 The answer to the fourth question must therefore be that administrative authorities, including municipal authorities, are under the same obligation as a national court to apply the provisions of Article 29(5) of Council Directive 71/305/EEC and to refrain from applying provisions of national law which conflict with them.

Costs

34 The costs incurred by the Spanish Government, the Italian Government and the Commission of the European Communities, which have submitted observations to the Court, are not recoverable. As these proceedings are, in so far as the parties to the main proceedings are concerned, in the nature of a step in the action before the national court, the decision on costs is a matter for that court.

On those grounds,

THE COURT,

in answer to the questions referred to it by the Tribunale amministrativo regionale per la Lombardia, by order of 16 December 1987, hereby rules:

(1) Article 29(5) of Council Directive 71/305 prohibits Member States from introducing provisions which require the automatic exclusion from procedures for the award of public works contracts of certain tenders determined according to a mathematical criterion, instead of obliging the awarding authority to apply the examination procedure laid down in the Directive, giving the tenderer an opportunity to furnish explanations.

(2) When implementing Council Directive 71/305/EEC, Member States may not depart to any material extent from the provisions of Article 29(5) thereof.

(3) Article 29(5) of Council Directive 71/305 allows Member States to require that tenders be examined when those tenders appear to be abnormally low, and not only when they are obviously abnormally low.

(4) Administrative authorities, including municipal authorities, are under the same obligation as a national court to apply the provisions of Article 29(5) of Council Directive 71/305/EEC and to refrain from applying provisions of national law which conflict with them.

JUDGMENT OF THE COURT (Second Chamber)

16 July 2009 (*)

(Failure of a Member State to fulfil obligations – Assessment of the effects of projects on the environment – Directive 85/337/EEC – Access to justice – Directive 2003/35/EC)

In Case C-427/07,

ACTION under Article 226 EC for failure to fulfil obligations, brought on 14 September 2007,

Commission of the European Communities, represented by D. Recchia, P. Oliver and J.-B. Laignelot, acting as Agents, with an address for service in Luxembourg,

applicant,

v

Ireland, represented by D. O'Hagan, acting as Agent, and M. Collins SC, and D. McGrath BL, with an address for service in Luxembourg,

defendant,

THE COURT (Second Chamber),

composed of C.W.A. Timmermans, President of the Chamber, J.-C. Bonichot, K. Schiemann, J. Makarczyk (Rapporteur) and C. Toader, Judges,

Advocate General: J. Kokott,

Registrar: K. Sztranc-Sławiczek, Administrator,

having regard to the written procedure and further to the hearing on 27 November 2008,

after hearing the Opinion of the Advocate General at the sitting on 15 January 2009,

gives the following

Judgment

1 By its application, the Commission of the European Communities requests the Court to declare that:

– by failing to adopt, in conformity with Article 2(1) and Article 4(2) to (4) of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40) as amended by Council Directive 97/11/EC of 3 March 1997 (OJ 1997 L 73, p. 5) ('Directive 85/337 as amended by Directive 97/11'), all measures to ensure that, before consent is given, projects likely to have significant effects on the environment in the road construction category covered by point 10(e) of Annex II to Directive 85/337 as amended by Directive 97/11 are made subject to a requirement for development consent and to an assessment with regard to their effects in accordance with Articles 5 to 10 of that amended directive, and

– by failing to adopt the laws, regulations and administrative provisions necessary to comply with Articles 3(1) and (3) to (7) and 4(1) to (6) of Directive 2003/35/EC of the European Parliament and of the Council of 26 May 2003 providing for public participation in respect of the drawing up of certain plans and programmes relating to the environment and amending with regard to public participation and access to justice Council Directives 85/337/EEC and 96/61/EC (OJ 2003 L 156, p. 17) or, in any event, by failing to adequately notify such provisions to the Commission,

Ireland has failed to fulfil its obligations under Directive 85/337, as amended by Directive 97/11, and Article 6 of Directive 2003/35.

Legal context

Community legislation

Directive 2003/35

2 Article 1 of Directive 2003/35 provides:

'The objective of this Directive is to contribute to the implementation of the obligations arising under the Århus Convention [on access to information, public participation in decision-making and access to justice in environmental matters], in particular by:

(a) providing for public participation in respect of the drawing up of certain plans and programmes relating to the environment;

(b) improving the public participation and providing for provisions on access to justice within Council Directive 85/337… and 96/61/EC.'

3 Article 6 of Directive 2003/35 states:

'Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with this Directive by 25 June 2005 at the latest. They shall forthwith inform the Commission thereof.

When Member States adopt these measures, they shall contain a reference to this Directive or shall be accompanied by such a reference on the occasion of their official publication. The methods of making such reference shall be laid down by Member States.'

Directive 85/337

4 In accordance with Article 1(2) of Directive 85/337, as amended by Article 3(1) of Directive 2003/35, for the purposes of that directive:

'…

"the public" means: one or more natural or legal persons and, in accordance with national legislation or practice, their associations, organisations or groups;

"the public concerned" means: the public affected or likely to be affected by, or having an interest in, the environmental decision-making procedures referred to in Article 2(2); for the purposes of this definition, non-governmental organisations promoting environmental protection and meeting any requirements under national law shall be deemed to have an interest.'

5 Article 2(1) and (3) of Directive 85/337, as amended by Article 3(3) of Directive 2003/35, states:

'1. Member States shall adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment by virtue, inter alia, of their nature, size or location are made subject to a requirement for development consent and an assessment with regard to their effects. These projects are defined in Article 4.

…

3. Without prejudice to Article 7, Member States may, in exceptional cases, exempt a specific project in whole or in part from the provisions laid down in this Directive.

In this event, the Member States shall:

(a) consider whether another form of assessment would be appropriate;

(b) make available to the public concerned the information obtained under other forms of assessment referred to in point (a), the information relating to the exemption decision and the reasons for granting it;

…'

6 Article 4 of Directive 85/337 as amended by Directive 97/11 provides:

'1. Subject to Article 2(3), projects listed in Annex I shall be made subject to an assessment in accordance with Articles 5 to 10.

2. Subject to Article 2(3), for projects listed in Annex II, the Member States shall determine through:

(a) a case-by-case examination,

or

(b) thresholds or criteria set by the Member State,

whether the project shall be made subject to an assessment in accordance with Articles 5 to 10.

Member States may decide to apply both procedures referred to in (a) and (b).

3. When a case-by-case examination is carried out or thresholds or criteria are set for the purpose of paragraph 2, the relevant selection criteria set out in Annex III shall be taken into account.

4. Member States shall ensure that the determination made by the competent authorities under paragraph 2 is made available to the public.'

7 Article 5 of Directive 85/337 as amended by Directive 97/11 provides:

'1. In the case of projects which, pursuant to Article 4, must be subjected to an environmental impact assessment in accordance with Articles 5 to 10, Member States shall adopt the necessary measures to ensure that the developer supplies in an appropriate form the information specified in Annex IV inasmuch as:

(a) the Member States consider that the information is relevant to a given stage of the consent procedure and to the specific characteristics of a particular project or type of project and of the environmental features likely to be affected;

(b) the Member States consider that a developer may reasonably be required to compile this information having regard inter alia to current knowledge and methods of assessment.

…

3. The information to be provided by the developer in accordance with paragraph 1 shall include at least:

– a description of the project comprising information on the site, design and size of the project,

– a description of the measures envisaged in order to avoid, reduce and, if possible, remedy significant adverse effects,

– the data required to identify and assess the main effects which the project is likely to have on the environment,

– an outline of the main alternatives studied by the developer and an indication of the main reasons for his choice, taking into account the environmental effects,

– a non-technical summary of the information mentioned in the previous indents.

…'

8 Article 6(2) to (6) of Directive 85/337, as amended by Article 3(4) of Directive 2003/35, states as follows:

'2. The public shall be informed, whether by public notices or other appropriate means such as electronic media where available, of the following matters early in the environmental decision-making procedures referred to in Article 2(2) and, at the latest, as soon as information can reasonably be provided:

(a) the request for development consent;

(b) the fact that the project is subject to an environmental impact assessment procedure and, where relevant, the fact that Article 7 applies;

(c) details of the competent authorities responsible for taking the decision, those from which relevant information can be obtained, those to which comments or questions can be submitted, and details of the time schedule for transmitting comments or questions;

(d) the nature of possible decisions or, where there is one, the draft decision;

(e) an indication of the availability of the information gathered pursuant to Article 5;

(f) an indication of the times and places where and means by which the relevant information will be made available;

(g) details of the arrangements for public participation made pursuant to paragraph 5 of this Article.

3. Member States shall ensure that, within reasonable time-frames, the following is made available to the public concerned:

(a) any information gathered pursuant to Article 5;

(b) in accordance with national legislation, the main reports and advice issued to the competent authority or authorities at the time when the public concerned is informed in accordance with paragraph 2 of this Article;

(c) in accordance with the provisions of Directive 2003/4/EC of the European Parliament and of the Council of 28 January 2003 on public access to environmental information …, information other than that referred to in paragraph 2 of this Article which is relevant for the decision in accordance with Article 8 and which only becomes available after the time the public concerned was informed in accordance with paragraph 2 of this Article.

4. The public concerned shall be given early and effective opportunities to participate in the environmental decision-making procedures referred to in Article 2(2) and shall, for that purpose, be entitled to express comments and opinions when all options are open to the competent authority or authorities before the decision on the request for development consent is taken.

5. The detailed arrangements for informing the public (for example by bill posting within a certain radius or publication in local newspapers) and for consulting the public concerned (for example by written submissions or by way of a public inquiry) shall be determined by the Member States.

6. Reasonable time-frames for the different phases shall be provided, allowing sufficient time for informing the public and for the public concerned to prepare and participate effectively in environmental decision-making subject to the provisions of this Article.'

9 Article 7 of Directive 85/337, as amended by Article 3(5) of Directive 2003/35, provides:

‘1. Where a Member State is aware that a project is likely to have significant effects on the environment in another Member State or where a Member State likely to be significantly affected so requests, the Member State in whose territory the project is intended to be carried out shall send to the affected Member State as soon as possible and no later than when informing its own public, inter alia:

(a) a description of the project, together with any available information on its possible transboundary impact;

(b) information on the nature of the decision which may be taken,

and shall give the other Member State a reasonable time in which to indicate whether it wishes to participate in the environmental decision-making procedures referred to in Article 2(2), and may include the information referred to in paragraph 2 of this Article.

2. If a Member State which receives information pursuant to paragraph 1 indicates that it intends to participate in the environmental decision-making procedures referred to in Article 2(2), the Member State in whose territory the project is intended to be carried out shall, if it has not already done so, send to the affected Member State the information required to be given pursuant to Article 6(2) and made available pursuant to Article 6(3)(a) and (b).

…

5. The detailed arrangements for implementing this Article may be determined by the Member States concerned and shall be such as to enable the public concerned in the territory of the affected Member State to participate effectively in the environmental decision-making procedures referred to in Article 2(2) for the project.’

10 Article 9 of Directive 85/337, as amended by Article 3(6) of Directive 2003/35, provides:

‘1. When a decision to grant or refuse development consent has been taken, the competent authority or authorities shall inform the public thereof in accordance with the appropriate procedures and shall make available to the public the following information:

– the content of the decision and any conditions attached thereto,

– having examined the concerns and opinions expressed by the public concerned, the main reasons and considerations on which the decision is based, including information about the public participation process,

– a description, where necessary, of the main measures to avoid, reduce and, if possible, offset the major adverse effects.

2. The competent authority or authorities shall inform any Member State which has been consulted pursuant to Article 7, forwarding to it the information referred to in paragraph 1 of this Article.

The consulted Member States shall ensure that that information is made available in an appropriate manner to the public concerned in their own territory.'

11 Article 10a of Directive 85/337, inserted by Article 3(7) of Directive 2003/35, states as follows:

'Member States shall ensure that, in accordance with the relevant national legal system, members of the public concerned:

(a) having a sufficient interest, or alternatively

(b) maintaining the impairment of a right, where administrative procedural law of a Member State requires this as a precondition,

have access to a review procedure before a court of law or another independent and impartial body established by law to challenge the substantive or procedural legality of decisions, acts or omissions subject to the public participation provisions of this Directive.

Member States shall determine at what stage the decisions, acts or omissions may be challenged.

What constitutes a sufficient interest and impairment of a right shall be determined by the Member States, consistently with the objective of giving the public concerned wide access to justice. To this end, the interest of any non-governmental organisation meeting the requirements referred to in Article 1(2), shall be deemed sufficient for the purpose of subparagraph (a) of this Article. Such organisations shall also be deemed to have rights capable of being impaired for the purpose of subparagraph (b) of this Article.

The provisions of this Article shall not exclude the possibility of a preliminary review procedure before an administrative authority and shall not affect the requirement of exhaustion of administrative review procedures prior to recourse to judicial review procedures, where such a requirement exists under national law.

Any such procedure shall be fair, equitable, timely and not prohibitively expensive.

In order to further the effectiveness of the provisions of this article, Member States shall ensure that practical information is made available to the public on access to administrative and judicial review procedures.'

12 Annex II to Directive 85/337 as amended by Directive 97/11 lists the projects subject to Article 4(2) of that amended directive. Under the heading 'Infrastructure projects', point 10(e) of that annex covers the construction of roads, harbours and port installations, including fishing harbours (projects not included in Annex I).

Directive 96/61/EC

13 In accordance with Article 2(13) and (14) of Council Directive 96/61/EC of 24 September 1996 concerning integrated pollution prevention and control (OJ 1996 L 257, p. 26), as amended by Article 4(1) of Directive 2003/35:

'13. "the public" shall mean one or more natural or legal persons and, in accordance with national legislation or practice, their associations, organisations or groups;

14. "the public concerned" shall mean the public affected or likely to be affected by, or having an interest in, the taking of a decision on the issuing or the updating of a permit or of permit conditions; for the purposes of this definition, non-governmental organisations promoting environmental protection and meeting any requirements under national law shall be deemed to have an interest.'

14 Article 15(1) and (5) of Directive 96/61, as amended by Article 4(3) of Directive 2003/35, states as follows:

'1. Member States shall ensure that the public concerned are given early and effective opportunities to participate in the procedure for:

– issuing a permit for new installations,

– issuing a permit for any substantial change in the operation of an installation,

– updating of a permit or permit conditions for an installation in accordance with Article 13, paragraph 2, first indent.

The procedure set out in Annex V shall apply for the purposes of such participation.

…

5. When a decision has been taken, the competent authority shall inform the public in accordance with the appropriate procedures and shall make available to the public the following information:

(a) the content of the decision, including a copy of the permit and of any conditions and any subsequent updates; and

(b) having examined the concerns and opinions expressed by the public concerned, the reasons and considerations on which the decision is based, including information on the public participation process.'

15 Article 15a of Directive 96/61, inserted by Article 4(4) of Directive 2003/35, provides:

'Member States shall ensure that, in accordance with the relevant national legal system, members of the public concerned:

(a) having a sufficient interest, or alternatively,

(b) maintaining the impairment of a right, where administrative procedural law of a Member State requires this as a precondition;

have access to a review procedure before a court of law or another independent and impartial body established by law to challenge the substantive or procedural legality of decisions, acts or omissions subject to the public participation provisions of this Directive.

Member States shall determine at what stage the decisions, acts or omissions may be challenged.

What constitutes a sufficient interest and impairment of a right shall be determined by the Member States, consistently with the objective of giving the public concerned wide access to justice. To this end, the interest of any non-governmental organisation meeting the requirements referred to in Article 2(14) shall be deemed sufficient for the purpose of subparagraph (a) of this Article. Such organisations shall also be deemed to have rights capable of being impaired for the purpose of subparagraph (b) of this Article.

The provisions of this Article shall not exclude the possibility of a preliminary review procedure before an administrative authority and shall not affect the requirement of exhaustion of administrative review procedures prior to recourse to judicial review procedures, where such a requirement exists under national law.

Any such procedure shall be fair, equitable, timely and not prohibitively expensive.

In order to further the effectiveness of the provisions of this Article, Member States shall ensure that practical information is made available to the public on access to administrative and judicial review procedures.'

National legislation

16 According to the combined provisions of section 176 of the Planning and Development Act 2000 (No 30/2000), as amended by the Planning and Development (Strategic Infrastructure) Act 2006 (No 27/2006, S.I. No 525/2006) ('the PDA'), and Schedule 5 to the Planning and Development Regulations 2001 (S.I. No 600/2001), an environmental impact statement and an environmental impact assessment are mandatory in respect of certain projects where the thresholds specified are exceeded, but private roads development is not identified as a discrete category of project.

17 Judicial review is governed by Order 84 of the Rules of the Superior Courts. Those courts have jurisdiction to review, subject to certain conditions, the decisions of lower courts and administrative bodies.

18 Both public-law and private-law remedies are available in judicial review proceedings. The traditional public law remedies relate to review of whether those lower courts or bodies have acted in excess or abuse of jurisdiction and to supervision of the exercise of their jurisdiction.

19 Judicial review is a two-stage process. An application for leave to bring judicial review proceedings must be made to the court, accompanied by a statement of grounds identifying the relief sought and an affidavit setting out the facts relied on. If leave is granted, the applicant can bring judicial review proceedings.

20 A specific statutory procedure applies to applications for judicial review of decisions of the competent planning authorities, which is governed by sections 50 and 50A of the PDA.

21 Section 50A(3) of the PDA states:

'The Court shall not grant section 50 leave unless it is satisfied that –

(a) there are substantial grounds for contending that the decision or act concerned is invalid or ought to be quashed, and

(b) (i) the applicant has a substantial interest in the matter which is the subject of the application, or

(ii) where the decision or act concerned relates to a development identified in or under regulations made under section 176, for the time being in force, as being development which may have significant effects on the environment, the applicant —

(I) is a body or organisation (other than a State authority, a public authority or governmental body or agency) the aims or objectives of which relate to the promotion of environmental protection,

(II) has, during the period of 12 months preceding the date of the application, pursued those aims or objectives, and

(III) satisfies such requirements (if any) as a body or organisation, if it were to make an appeal under section 37(4)(c), would have to satisfy by virtue of section 37(4)(d)(iii) (and, for this purpose, any requirement prescribed under section 37(4)(e)(iv) shall apply as if the reference in it to the class of matter into which the decision, the subject of the appeal, falls were a reference to the class of matter into which the decision or act, the subject of the application for section 50 leave, falls).'

22 Section 50A(4) of the PDA specifies that the substantial interest required is not limited to an interest in land or other financial interest.

23 Section 50A(10) and (11)(b) of the PDA require the court, in determining applications, to act as expeditiously as possible consistent with the administration of justice. Section 50A(12) of the PDA allows for additional rules to be adopted to expedite the procedure.

The pre-litigation procedure

24 The Commission has combined, in the present action, complaints raised in two pre-litigation procedures.

25 First, in 2001 the Commission registered a complaint against Ireland concerning damage to a coastal wetland at Commogue Marsh, Kinsale, County Cork caused by a private road project. On 18 October 2002, the Commission sent a letter of formal notice to Ireland, indicating that it appeared that no consent for the project in question had been granted and that no prior environmental impact assessment had been carried out despite the sensitivity of the site, contrary to the requirements of Directive 85/337 as amended by Directive 97/11.

26 Ireland replied to that letter of formal notice on 5 March 2003, pointing out that the project at issue was a part of a development for which consent had been given.

27 As the Commission was not satisfied with that reply, it issued a reasoned opinion on 11 July 2003, calling on Ireland to take the necessary measures to comply with Directive 85/337 as amended by Directive 97/11 within two months of receipt of that opinion.

28 By letter of 9 September 2003, Ireland requested an extension of the two-month time-limit for reply to the reasoned opinion. Ireland replied to the reasoned opinion by letter of 10 November 2003.

29 Secondly, the Commission sent a letter of formal notice to Ireland on 28 July 2005 concerning the transposition of Directive 2003/35, inviting Ireland to submit its observations within two months of receipt of that letter.

30 Ireland replied by letter of 7 September 2005, in which it admitted that it had only partially transposed Directive 2003/35.

31 The Commission issued a reasoned opinion on 19 December 2005, calling on Ireland to take the necessary measures to comply with that directive within two months of receipt of that opinion.

32 By letter of 14 February 2006, Ireland indicated that transposition measures were in preparation.

33 On 18 October 2006, the Commission issued an additional reasoned opinion calling on Ireland to adopt the necessary measures to comply with that opinion within two months of receipt. Ireland replied on 27 February 2007, outside the time-limit prescribed by the Commission.

34 As it was not satisfied with Ireland's replies in the course of those two pre-litigation procedures, the Commission brought the present action pursuant to the second paragraph of Article 226 EC.

The action

35 The Commission's action is based on two complaints.

The first complaint

Arguments of the parties

36 The Commission considers that the construction of a private road constitutes an infrastructure project that falls within point 10(e) of Annex II to Directive 85/337 as amended by Directive 97/11 and that, as a consequence, the Irish authorities are bound, in accordance with Article 2 of that amended directive, to ensure that, before consent is given, such projects are made subject to an assessment with regard to their effects on the environment if it is considered that they are likely to have significant effects on the environment.

37 In limiting the need to carry out an environmental impact assessment to public road projects proposed by public authorities, the Irish legislation thus fails to take account of Community requirements.

38 Ireland contends that private road construction development which, it does not dispute, falls within point 10(e) of Annex II to Directive 85/337 as amended by Directive 97/11, almost invariably forms an integral part of other developments which, for their part, are subject to the requirement of an environmental impact assessment under the combined provisions of Article 176 of the PDA and Schedule 5 to the Planning and Development Regulations 2001 if they are likely to have significant effects on the environment.

39 Ireland accepts, moreover, that Directive 85/337 as amended by Directive 97/11 makes no distinction between public and private road projects, and it indicates its intention to amend its legislation so as to include road development as a stand-alone category subject to an environmental impact assessment if the road development is likely to have significant effects on the environment.

Findings of the Court

40 Pursuant to Article 4(2) of Directive 85/337 as amended by Directive 97/11, the Member States are to determine, for projects in the classes listed in Annex II to that amended directive, through a case-by-case examination, or thresholds or criteria, whether those projects are to be made subject to an environmental impact assessment in accordance with Articles 5 to 10 of that directive. According to that same provision, the Member States may also decide to apply both procedures.

41 Although the Member States have thus been allowed a measure of discretion in specifying certain types of projects which will be subject to an assessment or to establish the criteria and/or thresholds applicable, the limits of that discretion are to be found in the obligation set out in Article 2(1) of Directive 85/337 as amended by Directive 97/11 that projects likely, by virtue inter alia of their nature, size or location, to have significant effects on the environment are to be subject to an impact assessment (see Case C-72/95 *Kraaijeveld and Others*[1996] ECR I-5403, paragraph 50; Case C-2/07 *Abraham and*

Others [2008] ECR I-1197, paragraph 37; and Case C-75/08 *Mellor* [2009] ECR I-0000, paragraph 50).

42 In that regard, the Court has already held that a Member State which established criteria or thresholds at a level such that, in practice, an entire class of projects would be exempted in advance from the requirement of an impact assessment would exceed the limits of its discretion under Articles 2(1) and 4(2) of that amended directive unless all projects excluded could, when viewed as a whole, be regarded as not being likely to have significant effects on the environment (see *Kraaijeveld and Others*, paragraph 53, and Case C-435/97 *WWF and Others* [1999] ECR I-5613, paragraph 38).

43 Among the projects subject to Article 4(2) of Directive 85/337 as amended by Directive 97/11, point 10(e) of Annex II to that amended directive refers to 'construction of roads'.

44 In that regard, by subjecting private road construction development to an environmental impact assessment only if that development formed part of other developments coming within the scope of Directive 85/337 as amended by Directive 97/11 and themselves subject to the assessment obligation, the Irish legislation, as applicable when the time-limit set in the reasoned opinion expired, meant that any private road construction development carried out in isolation could avoid an environmental impact assessment, even if the development was likely to have significant effects on the environment.

45 It should also be pointed out that a criterion relating to the private or public nature of the road is irrelevant as regards the applicability of point 10(e) of Annex II to Directive 85/337 as amended by Directive 97/11.

46 Therefore, the first complaint is well founded.

The second complaint

47 It is apparent from the most recent of the Commission's written pleadings that, in its view, and having regard to the withdrawal of the complaints concerning Article 4(1), (5) and (6) of Directive 2003/35, Ireland's transposition of Article 3(1) and (3) to (7) and Article 4(2) to (4) of that directive remains incomplete, as a result of which there is a failure to fulfil obligations under Article 6 of that directive.

48 In addition, the Commission takes the view that, in any event, Ireland did not communicate within the prescribed time-limit the provisions which were deemed to implement the aforementioned articles, contrary to the requirements of Article 6.

49 The second complaint, considered in its various parts, as pleaded in essence by the Commission, thus relates exclusively – as the Commission, moreover, confirmed at the hearing – to the failure to transpose certain provisions of Directive 2003/35, without any criticism of the quality of transposition, and, consequently, no such criticism may properly be raised by the Commission in the context of this case.

50 Moreover, it should be noted that the provisions of the PDA referred to in the present action are those which result from amendments introduced by the amending Act of 2006, mentioned in paragraph 16 of this judgment. Those provisions, as the Advocate General noted in point 53 of her Opinion, entered into force on 17 October 2006, that is to say, before the expiry of the time-limit laid down in the additional reasoned opinion.

The requirement to transpose the provisions of Article 3(1) of Directive 2003/35

– Arguments of the parties

51 As regards Article 3(1) of Directive 2003/35, the Commission claims that the Irish authorities must adopt measures to ensure that domestic legislation does not treat the concepts of ‘the public’ and ‘the public concerned’ more narrowly than Directive 2003/35. It points out, in particular, that the rights conferred on non-governmental organisations are not sufficiently guaranteed, as is apparent from the case-law, although that directive confers on such non-governmental organisations certain rights as being among the public concerned.

52 Ireland counters that, in the light of the general obligation to interpret national law in accordance with the provisions of Community law which applies, in particular, to the courts, it is not necessary to introduce legislative definitions of ‘the public’ and ‘the public concerned’ in order to give full effect to those definitions. It adds that the newly-created rights are already guaranteed to all of the public and that it is not, therefore, necessary to give a specific definition of ‘the public concerned’.

53 Ireland also contends that, pursuant to section 50A(3)(b)(ii) of the PDA, non-governmental organisations promoting the environment are exempted from the requirement to demonstrate that they have a substantial interest.

– Findings of the Court

54 It should be recalled that, according to settled case-law, the transposition of a directive into domestic law does not necessarily require the provisions of the directive to be enacted in precisely the same words in a specific, express

provision of national law and a general legal context may be sufficient if it actually ensures the full application of the directive in a sufficiently clear and precise manner (see, inter alia, Case C-214/98 *Commission* v *Greece*[2000] ECR I-9601, paragraph 49; Case C-38/99 *Commission* v *France* [2000] ECR I-10941, paragraph 53; and Case C-32/05 *Commission* v *Luxembourg* [2006] ECR I-11323, paragraph 34).

55 It follows from an equally consistent line of case-law that the provisions of a directive must be implemented with unquestionable binding force and with the specificity, precision and clarity required in order to satisfy the need for legal certainty, which requires that, in the case of a directive intended to confer rights on individuals, the persons concerned must be enabled to ascertain the full extent of their rights (see, inter alia, Case C-197/96 *Commission* v*France* [1997] ECR I-1489, paragraph 15; Case C-207/96 *Commission* v *Italy* [1997] ECR I-6869, paragraph 26; and *Commission* v *Luxembourg*, paragraph 34).

56 In the light of the purpose of Article 3(1) of Directive 2003/35, which is to add definitions to those appearing in Article 1(2) of Directive 85/337, and in particular to indicate, for the purposes of the latter directive, what is to be meant by 'the public concerned' and, whereas, at the same time, Directive 2003/35 accords new rights to that public, it cannot be concluded from Ireland's failure to reproduce those definitions in its legislation expressly that Ireland has not fulfilled its obligation to transpose the provisions in question.

57 The scope of the new definition of 'the public concerned' thus introduced by Directive 2003/35 can be assessed, as the Advocate General stated in points 36 and 37 of her Opinion, only with regard to all of the rights which that directive accords to 'the public concerned', since those two aspects are indissociable.

58 In that regard, the Commission does not establish to what extent 'the public concerned', understood as the public affected or likely to be affected by, or having an interest in, environmental decision-making procedures, does not have the rights which it is deemed to enjoy under the amendments introduced by Directive 2003/35.

59 Lastly, it should be pointed out that the Commission's arguments relating to the construal, in the case-law, of the role of non-governmental organisations promoting the environment as belonging to 'the public concerned' deal, primarily, with possible defects in the effective implementation of the rights which those organisations may rely on, in particular in judicial review proceedings, and are, consequently, outside the scope of the complaint before the Court alleging, solely, a failure to transpose.

60 It follows from the foregoing that the second complaint, in so far as it concerns the transposition of Article 3(1) of Directive 2003/35, is unfounded.

The requirement to transpose Articles 3(3) to (6), and 4(2) and (3), of Directive 2003/35

– Arguments of the parties

61 According to the Commission, Article 3(3) to (6), and Article 4(2) and (3), have not been fully transposed.

62 As regards those provisions, Ireland contends that there has been transposition in so far as the planning consent system is concerned, but it accepts that it was still necessary, when the time-limit prescribed in the additional reasoned opinion elapsed, to transpose those provisions by adopting legislative measures in relation to other consent procedures.

63 As regards Article 4(2) and (3) of that directive, Ireland recognises that it still had to adopt and notify certain measures in relation to full transposition of those provisions when the time-limit prescribed in that reasoned opinion elapsed.

– Findings of the Court

64 It must be borne in mind that, according to settled case-law, the question whether a Member State has failed to fulfil its obligations must be determined by reference to the situation in that Member State as it stood at the end of the period laid down in the reasoned opinion (see, inter alia, Case C-173/01 *Commission* v *Greece* [2002] ECR I-6129, paragraph 7, and Case C-114/02 *Commission* v *France* [2003] ECR I-3783, paragraph 9).

65 It is not in dispute that, by the end of the period laid down in the additional reasoned opinion, Ireland had not adopted the laws, regulations and administrative provisions necessary to ensure full transposition of Article 3(3) to (6), and Article 4(2) and (3), of Directive 2003/35. Furthermore, and in accordance with settled case-law, any subsequent changes once the action for failure to fulfil obligations has been lodged cannot be taken into consideration by the Court (see, inter alia, Case C-211/02 *Commission* v *Luxembourg*[2003] ECR I-2429, paragraph 6).

66 In so far as it concerns the failure to transpose Article 3(3) to (6) and Article 4(2) and (3) of Directive 2003/35, the second complaint is therefore well founded.

The requirement to transpose Articles 3(7) and 4(4) of Directive 2003/35

– Arguments of the parties

67 The Commission claims that Ireland did not transpose the requirements arising out of Articles 3(7) and 4(4) of Directive 2003/35, those provisions having inserted, respectively, Article 10a into Directive 85/337 and Article 15a into Directive 96/61. The Commission puts forward five arguments in support of this part of the second complaint.

68 By its first argument, which concerns the concept of sufficient interest in Article 3(7) and Article 4(4) of Directive 2003/35, the Commission asserts that the criterion that a 'substantial interest' must be established in the context of the specific statutory procedure for applying for judicial review of decisions of competent planning authorities laid down in Section 50 of the PDA does not correspond to the 'sufficient interest' criterion in Directive 2003/35.

69 The setting of such a criterion – stricter than that used in Article 10a of Directive 85/337, inserted by Article 3(7) of Directive 2003/35, and Article 15a of Directive 96/61, inserted by Article 4(4) of Directive 2003/35, – amounts, according to the Commission, to non transposition of the requirements laid down in Directive 2003/35.

70 Lastly, the Commission points out that two judgments of the Irish High Court handed down in the *Friends of the Curragh Environment Ltd* case on 14 July 2006 and 8 December 2006 show that the system of judicial review in force in Ireland cannot be regarded as implementing Directive 2003/35, since the High Court stated, in the second of those judgments, in relation to the assessment of 'substantial interest', that that directive had not yet been implemented in Irish law.

71 Ireland contests the relevance of those High Court judgments, inasmuch as they were dealing, primarily, with the issue of the direct effect of Directive 2003/35.

72 It adds that the judgment handed down by the High Court on 26 April 2007 in the*Sweetman* case established, on the contrary, that the abovementioned provisions of that directive are implemented by the judicial review procedure, supplemented by specific procedural rules laid down in certain legislation, in particular section 50 of the PDA, since the criterion of substantial interest was held by the judge to be flexible and not inconsistent with Article 10a of Directive 85/337, inserted by Article 3(7) of Directive 2003/35.

73 By its second argument, the Commission claims that Article 10a of Directive 85/337, inserted by Article 3(7) of Directive 2003/35, and Article 15a of Directive 96/61, inserted by Article 4(4) of Directive 2003/35, have

not been transposed, on the ground that, contrary to the first paragraph in each of those articles, the requirement that an applicant must be able to challenge the substantive legality of decisions, acts or omissions subject to the public participation provisions in each of the directives has not been transposed into Irish law.

74 Ireland contends, in that regard, that those articles do not require provision to be made for an exhaustive review of the merits of a decision, but merely require that it be possible to contest the substantive legality of a decision. Such a form of review is provided for under Irish law.

75 Ireland also asserts that the requirements laid down in Article 10a of Directive 85/337, inserted by Article 3(7) of Directive 2003/35, and in Article 15a of Directive 96/61, inserted by Article 4(4) of Directive 2003/35, are fully implemented into Irish law by reason of the existence of the judicial review procedure available before Irish courts. The purpose of judicial review is to provide a form of review of decisions made and actions taken by courts and administrative bodies, to ensure that the functions conferred on such authorities have been carried out correctly and legally.

76 In addition, according to Ireland, a specific statutory judicial review procedure applies to challenges to decisions of the competent planning authorities, which is governed by sections 50 and 50A of the PDA.

77 The Commission claims, in its third argument, that no measure has been taken by Ireland to ensure transposition of the requirement of timeliness, laid down in Article 10a of Directive 85/337, inserted by Article 3(7) of Directive 2003/35, and in Article 15a of Directive 96/61, inserted by Article 4(4) Directive 2003/35.

78 In its fourth argument, the Commission raises the same failure to transpose as regards the requirement that any such procedure must not be prohibitively expensive, pointing out that, in relation to costs, there is no applicable ceiling as regards the amount that an unsuccessful applicant will have to pay, as there is no legal provision which refers to the fact that the procedure will not be prohibitively expensive.

79 According to Ireland, the existing procedures are fair, equitable and not prohibitively expensive. They enable, furthermore, the decisions referred to in Directives 83/337 and 96/61, as amended by Directive 2003/35, to be reviewed in a timely manner.

80 Lastly, by its fifth argument, the Commission criticises Ireland for not having made available to the public practical information on access to administrative and judicial review procedures, as required by the sixth

paragraph of Article 10a of Directive 85/337, inserted by Article 3(7) of Directive 2003/35, and the sixth paragraph of Article 15a of Directive 96/61, inserted by Article 4(4) of Directive 2003/35.

81 Ireland takes the view that it has fulfilled that obligation, since Order 84 of the Rules of the Superior Courts, referred to in paragraph 17 of this judgment, is a statutory provision and there is, in addition, a website for the Courts Service of Ireland which describes the different courts and the limits of their jurisdiction, and allows for access to High Court judgments.

– Findings of the Court

82 As regards the first argument relating to sufficient interest, it is clear from paragraphs (a) and (b) of the first paragraph of Article 10a of Directive 85/337, inserted by Article 3(7) of Directive 2003/35, and from paragraphs (a) and (b) of the first paragraph of Article 15a of Directive 96/61, inserted by Article 4(4) of Directive 2003/35, that the Member States must ensure that, in accordance with the relevant national legal system, members of the public concerned having a sufficient interest, or alternatively, maintaining the impairment of a right, where the administrative procedural law of a Member State requires this as a precondition, have access to a review procedure under the conditions specified in those provisions, and must determine what constitutes a sufficient interest and impairment of a right consistently with the objective of giving the public concerned wide access to justice.

83 It is not in dispute that, by enabling applicants who are members of 'the public concerned' and who can claim an interest meeting the conditions laid down in section 50A(3) of the PDA to challenge certain planning measures, Ireland has adopted provisions under which the right of access to justice in that particular area depends directly on those applicants' interest, as the Advocate General points out in point 57 of her Opinion.

84 In that regard, inasmuch as, as has been stated in paragraph 49 of this judgment, the Commission disputes only the failure to transpose certain provisions – having moreover expressly stated that it did not mean to allege incorrect or incomplete transposition – there is no need to ascertain whether the criterion of substantial interest as applied and interpreted by the Irish courts corresponds to the sufficient interest referred to in Directive 2003/35, as that would lead to calling into question the quality of the transposition having regard, in particular, to the competence of the Member States recognised by that directive to determine what constitutes a sufficient interest consistently with the objective which that directive pursues.

85 Furthermore, the second judgment of the High Court in *Friends of the Curragh Environment Ltd*, to which the Commission principally refers, was

handed down under the legislation applicable prior to the amendments made to the PDA in 2006 and it is not, in any event, enough to prove the alleged failure to transpose.

86 The first argument is therefore unfounded.

87 In relation to the second argument, it is common ground that in Irish law, apart from the specific statutory procedure applicable pursuant to sections 50 and 50A of the PDA, there is judicial review governed by Order 84 of the Rules of the Superior Courts. In those review procedures applicants can ask for decisions or acts to be quashed in the context of supervision in relation to decisions and actions taken by lower courts and administrative bodies to ensure that the functions conferred on those authorities are carried out legally.

88 The various procedures thus established for judicial review are applicable to decisions, acts or omissions subject to the public participation provisions in Directives 85/337 and 96/61 as amended by Directive 2003/35, inter alia, in the specific area of planning, and may therefore be considered to constitute transposition of Article 10a of Directive 85/337, inserted by Article 3(7) of Directive 2003/35, and Article 15a of Directive 96/61, inserted by Article 4(4) of Directive 2003/35, inasmuch as they require that the applicant be able to challenge the substantive or procedural legality of such acts, decisions or omissions.

89 Since the Court does not have before it a complaint alleging incorrect transposition of those provisions, it cannot examine the arguments submitted by the Commission relating to the extent of the review actually carried out in the context of judicial review, as shown, in particular, by the case-law of the High Court.

90 The second argument is therefore unfounded.

91 As regards the third argument relating to the failure to transpose Article 10a of Directive 85/337, inserted by Article 3(7) of Directive 2003/35, and Article 15a of Directive 96/61, inserted by Article 4(4) of Directive 2003/35, in so far as they require that the procedures should be timely, having regard to what was stated in paragraph 49 of this judgment and inasmuch as it follows from sections 50A(10) and (11)(b) of the PDA that the courts having jurisdiction must determine applications as expeditiously as possible consistent with the administration of justice, that argument is therefore unfounded.

92 As regards the fourth argument concerning the costs of proceedings, it is clear from Article 10a of Directive 85/337, inserted by Article 3(7) of Directive 2003/35, and Article 15a of Directive 96/61, inserted by Article 4(4) of Directive 2003/35, that the procedures established in the context of

those provisions must not be prohibitively expensive. That covers only the costs arising from participation in such procedures. Such a condition does not prevent the courts from making an order for costs provided that the amount of those costs complies with that requirement.

93 Although it is common ground that the Irish courts may decline to order an unsuccessful party to pay the costs and can, in addition, order expenditure incurred by the unsuccessful party to be borne by the other party, that is merely a discretionary practice on the part of the courts.

94 That mere practice which cannot, by definition, be certain, in the light of the requirements laid down by the settled case-law of the Court, cited in paragraphs 54 and 55 of this judgment, cannot be regarded as valid implementation of the obligations arising from Article 10a of Directive 85/337, inserted by Article 3(7) of Directive 2003/35, and Article 15a of Directive 96/61, inserted by Article 4(4) of Directive 2003/35.

95 The fourth argument is thus well founded.

96 As regards the fifth argument, it must be borne in mind that one of the underlying principles of Directive 2003/35 is to promote access to justice in environmental matters, along the lines of the Århus Convention on access to information, public participation in decision-making and access to justice in environmental matters.

97 In that regard, the obligation to make available to the public practical information on access to administrative and judicial review procedures laid down in the sixth paragraph of Article 10a of Directive 85/337, inserted by Article 3(7) of Directive 2003/35, and in the sixth paragraph of Article 15a of Directive 96/61, inserted by Article 4(4) of Directive 2003/35, amounts to an obligation to obtain a precise result which the Member States must ensure is achieved.

98 In the absence of any specific statutory or regulatory provision concerning information on the rights thus offered to the public, the mere availability, through publications or on the internet, of rules concerning access to administrative and judicial review procedures and the possibility of access to court decisions cannot be regarded as ensuring, in a sufficiently clear and precise manner, that the public concerned is in a position to be aware of its rights on access to justice in environmental matters.

99 The fifth argument must thus be upheld.

100 It follows from the foregoing that the second complaint, in so far as it concerns the requirement to transpose Articles 3(7) and 4(4) of Directive 2003/35 is, in its fourth and fifth arguments, well founded.

Failure to comply with the first paragraph of Article 6 of Directive 2003/35, inasmuch as the obligation to inform the Commission was not fulfilled

– Arguments of the parties

101 The Commission claims that the information provided to it by Ireland in relation to the transposition of the provisions of Directive 2003/35 which introduced Article 10a of Directive 85/337 and Article 15a of Directive 96/61 is not sufficient.

102 It argues, in that regard, that Ireland did not draw to its attention the case-law establishing access for the public concerned to judicial review, or the precise legislative texts that show that the rights and obligations laid down in those provisions have been transposed, in particular as regards the requirement for a fair, equitable, timely and not prohibitively expensive judicial review procedure.

103 It adds that it was not informed of the relevant national case-law regarding, specifically, the use of review procedures in relation to Directive 2003/35, and in particular, that Ireland itself did not send it the judgments handed down by the High Court in the *Friends of the Curragh Environment Ltd* case, which were provided to the Commission by a separate source.

104 Ireland accepts that it has not fully complied with the obligation to inform the Commission laid down in Article 6 of Directive 2003/35. It nevertheless points out that, in so far as Articles 3(7) and 4(4) of that directive were already transposed by existing statutory provisions, it was not obliged to notify those provisions.

– Findings of the Court

105 It should be recalled that, while, in proceedings under Article 226 EC for failure to fulfil obligations, it is incumbent upon the Commission to prove the allegation and to place before the Court the information needed to enable the Court to establish that an obligation has not been fulfilled, in doing which the Commission may not rely on any presumption, it is also for the Member States, under Article 10 EC, to facilitate the achievement of the Commission's tasks, which consist in particular, pursuant to Article 211 EC, in ensuring that the provisions of the EC Treaty and the measures taken by the institutions pursuant thereto are applied (see, inter alia, Case C-408/97 *Commission* v *Netherlands* [2000] ECR I-6417, paragraphs 15 and

16, and Case C-456/03 *Commission* v *Italy* [2005] ECR I-5335, paragraph 26).

106 For the purposes set out in that case-law, Article 6 of Directive 2003/35, like other directives, imposes upon the Member States an obligation to provide information.

107 The information which the Member States are thus obliged to supply to the Commission must be clear and precise. It must indicate unequivocally the laws, regulations and administrative provisions by means of which the Member State considers that it has satisfied the various requirements imposed on it by the directive. In the absence of such information, the Commission is not in a position to ascertain whether the Member State has genuinely implemented the directive completely. The failure of a Member State to fulfil that obligation, whether by providing no information at all or by providing insufficiently clear and precise information, may of itself justify recourse to the procedure under Article 226 EC in order to establish the failure to fulfil the obligation (see Case C-456/03 *Commission* v *Italy*, paragraph 27).

108 Moreover, although the transposition of a directive may be carried out by means of domestic legal rules already in force, the Member States are not, in that event, absolved from the formal obligation to inform the Commission of the existence of those rules so that it can be in a position to assess whether the rules comply with the directive (see, to that effect, Case C-456/03 *Commission* v *Italy*, paragraph 30).

109 In the present case, in so far as the law already in force was deemed to ensure, by itself, the implementation of the provisions of Directive 2003/35 relating to access to justice in environmental matters, it was for Ireland to inform the Commission of the laws or regulations in question, and it cannot properly argue that it had previously notified the Commission of those domestic legal rules in the context of the transposition of Directives 85/337 and 96/61 as applicable before the amendments introduced by Directive 2003/35.

110 Since it claimed that transposition had been confirmed by the case-law of its national courts, in particular, that of the High Court, it was also for Ireland to communicate to the Commission a precise summary of that case-law, thus enabling the Commission to ascertain whether Ireland had indeed implemented Directive 2003/35 solely by virtue of applying national law as it existed before that directive entered into force, and to carry out its task of supervision under the Treaty.

111 Consequently, the second complaint is well founded in so far as it concerns infringement of the obligation to inform the Commission.

112 Therefore, having regard to all of the foregoing considerations, it must be held that

– by failing to adopt, in conformity with Article 2(1) and Article 4(2) to (4) of Council Directive 85/337 as amended by Directive 97/11, all measures to ensure that, before consent is given, projects likely to have significant effects on the environment in the road construction category covered by point 10(e) of Annex II to Directive 85/337 as amended by Directive 97/11 are made subject to a requirement for development consent and to an assessment with regard to their effects in accordance with Articles 5 to 10 of that amended directive, and

– by failing to adopt the laws, regulations and administrative provisions necessary to comply with Articles 3(3) to (7) and 4(2) to (4) of Directive 2003/35, and by failing to adequately notify such provisions to the Commission,

Ireland has failed to fulfil its obligations under Directive 85/337, as amended by Directive 97/11, and Article 6 of Directive 2003/35.

113 The remainder of the action is dismissed.

Costs

114 Under Article 69(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. Under Article 69(3) of those rules, where each party succeeds on some and fails on other heads, or where the circumstances are exceptional, the Court may order that the costs be shared or that the parties bear their own costs.

115 In the present dispute, while the Commission has requested that Ireland be ordered to pay the costs, account must be taken of the fact that a substantial number of the applicant's complaints were unsuccessful. Therefore, each of the parties will be ordered to bear its own costs.

On those grounds, the Court (Second Chamber) hereby:

1. Declares that

– by failing to adopt, in conformity with Article 2(1) and Article 4(2) to (4) of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment, as amended by Council Directive 97/11/EC of 3

March 1997, all measures to ensure that, before consent is given, projects likely to have significant effects on the environment in the road construction category, covered by point 10(e) of Annex II to Directive 85/337, as amended by Directive 97/11, are made subject to a requirement for development consent and to an assessment with regard to their effects in accordance with Articles 5 to 10 of that directive, and

– **by failing to adopt the laws, regulations and administrative provisions necessary to comply with Article 3(3) to (7) and Article 4(2) to (4) of Directive 2003/35/EC of the European Parliament and of the Council of 26 May 2003 providing for public participation in respect of the drawing up of certain plans and programmes relating to the environment and amending with regard to public participation and access to justice Council Directives 85/337/EEC and 96/61/EC, and by failing to adequately notify such provisions to the Commission of the European Communities,**

Ireland has failed to fulfil its obligations under Directive 85/337, as amended by Directive 97/11, and Article 6 of Directive 2003/35;

2. Dismisses the action as to the remainder;

3. Orders the Commission of the European Communities and Ireland to bear their own costs.

[Signatures]

JUDGMENT OF THE COURT (Second Chamber)

10 December 2009 (*)

(Reference for a preliminary hearing – Article 234 EC – Concept of 'national court or tribunal' – Admissibility – Directive 85/337/EEC – Environmental impact assessment – Construction of overhead electrical power lines – Length of more than 15 km – Transboundary constructions – Transboundary power line – Total length exceeding the threshold – Line mainly situated in the territory of a neighbouring Member State – Length of national section below the threshold)

In Case C-205/08,

REFERENCE for a preliminary ruling under Article 234 EC from the Umweltsenat (Austria), made by decision of 2 April 2008, received at the Court on 15 May 2008, in the proceedings

Umweltanwalt von Kärnten

v

Kärntner Landesregierung,

THE COURT (Second Chamber),

composed of J.-C. Bonichot, President of the Fourth Chamber, acting for the President of the Second Chamber, C.W.A. Timmermans, K. Schiemann, P. Kūris (Rapporteur) and L. Bay Larsen, Judges,

Advocate General: D. Ruiz-Jarabo Colomer,

Registrar: R. Grass,

having regard to the written procedure,

after considering the observations submitted on behalf of:

– the Umweltanwalt von Kärnten, by U. Scheuch, Landesrat,

– Alpe Adria Energia SpA, by M. Mendel, Rechtsanwalt,

– the European Commission, by J.-B. Laignelot and B. Kotschy, acting as Agents,

after hearing the Opinion of the Advocate General at the sitting on 25 June 2009,

gives the following

Judgment

1 This reference for a preliminary ruling concerns the interpretation of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40), as amended by Directive 2003/35/EC of the European Parliament and of the Council of 26 May 2003 (OJ 2003 L 156, p. 17, 'Directive 85/337').

2 The reference was made in the context of an action between Umweltanwalt von Kärnten (Environment ombudsman of Carinthia, 'the Umweltanwalt') and the Kärntner Landesregierung (Government of the Province of Carinthia) concerning a decision which the latter adopted on 11 October 2007 ('the contested decision') in regard to Alpe Adria Energia SpA ('Alpe Adria').

Legal context

Community legislation

3 According to the first recital in its preamble, Directive 85/337 seeks to prevent pollution and other damage to the environment by making certain public and private projects subject to prior assessment of their environmental effects.

4 As is clear from the fifth recital, to that end, the Directive introduces general principles for the assessment of environmental effects with a view to supplementing and coordinating development consent procedures governing public and private projects likely to have a major effect on the environment.

5 The eighth and eleventh recitals in the preamble to Directive 85/337 state that certain types of projects have significant effects on the environment and must as a rule be subject to systematic assessment in order to take account of concerns to protect human health, to contribute by means of a better environment to the quality of life, to ensure maintenance of the diversity of species and to maintain the reproductive capacity of the ecosystem as a basic resource for life.

6 Article 1(1) of Directive 85/337 provides as follows:

‘This Directive shall apply to the assessment of the environmental effects of those public and private projects which are likely to have significant effects on the environment.’

7 Article 2(1) of the Directive is worded as follows:

‘Member States shall adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment by virtue, inter alia, of their nature, size or location are made subject to a requirement for development consent and an assessment with regard to their effects. These projects are defined in Article 4’.

8 Article 4 of the Directive provides that:

‘… projects listed in Annex I shall be made subject to an assessment in accordance with Articles 5 to 10’.

9 Article 7(1) of Directive 85/337 provides:

‘Where a Member State is aware that a project is likely to have significant effects on the environment in another Member State or where a Member State likely to be significantly affected so requests, the Member State in whose territory the project is intended to be carried out shall send to the affected Member State as soon as possible and no later than when informing its own public, inter alia:

(a) a description of the project, together with any available information on its possible transboundary impact;

(b) information on the nature of the decision which may be taken,

and shall give the other Member State a reasonable time in which to indicate whether it wishes to participate in the environmental decision-making procedures referred to in Article 2(2), and may include the information referred to in paragraph 2 of this Article.’

10 Point 20 of Annex I to the Directive refers to ‘Construction of overhead electrical power lines with a voltage of 220 kV or more and a length of more than 15 km’.

National legislation

11 Article 11(7) of the Bundesverfassungsgesetz (Federal Law on the Constitution, ‘BVG’) provides that it is for the Umweltsenat (Environment Tribunal) to take decisions concerning the assessment of the environmental effects of those projects which are likely to have significant effects on the

environment once levels of executive review in each province have been exhausted.

12 According to that article, the Umweltsenat is an independent body composed of the chairman, judges and other legally qualified members, and is instated at the competent Federal Ministry. The establishment, responsibilities and procedure of the Umweltsenat are to be regulated by federal law. Its decisions are not be open to annulment or variation on appeal; an application to the Verwaltungsgerichtshof (Higher Administrative Court) is admissible.

13 Article 20(2) of the BVG reads as follows:

‘Where, by means of Federal law or the law of a Province, a collegiate authority comprising at least one member of the judiciary is established to decide matters at last instance and it is provided by law that its decisions may not be annulled or varied by administrative procedure, the other members of the authority are also not bound by any directions in the performance of their duties.’

14 Article 133(4) of the BVG provides for an exception to the rule conferring jurisdiction in general on the Verwaltungsgerichtshof to hear appeals against decisions adopted by the various public administrations, to the effect that independent bodies may hear such appeals in specified domains. The Umweltsenat is one such body.

15 Paragraph 1 of the Bundesgesetz über den Umweltsenat 2000 (Federal Law on the Umweltsenat 2000; ‘USG 2000’) provides as follows:

‘(1) An Umweltsenat shall be set up at the Bundesministerium für Land- und Forstwirtschaft, Umwelt und Wasserwirtschaft (Federal Ministry of Agriculture, Forestry, the Environment and Water Management).

(2) The Umweltsenat shall consist of 10 judges and a further 32 legally qualified members.

…’

16 Paragraph 2 of the USG 2000 provides that the members are to be appointed by the Federal President upon proposal of the Federal Government for a term of six years and may be re-appointed. In addition, the Federal Government is bound by certain proposals for appointment.

17 According to Paragraph 4 of the USG 2000:

‘Members of the Umweltsenat shall carry out their functions independently and are not bound by any directions.’

18 Paragraph 5 of the USG 2000 provides:

‘The Umweltsenat shall rule on appeals in matters set out in the first and second chapters of the Law on environmental impact assessments 2000 (Umweltverträglichkeitsprüfungsgesetz 2000 (BGBl No 697/1993), last amended by BGBl I 149/2006, “UVP-G 2000”) …’

19 Paragraph 6 of the USG 2000 states:

‘Decisions handed down by the Umweltsenat may not be annulled or varied by administrative action. An application to the Verwaltungsgerichtshof shall be admissible.’

20 According to Paragraph 2(2) of the UVP-G 2000, which transposed Directive 85/337 into Austrian law, a ‘project’ is defined as:

‘the construction of an installation or other intervention in the natural surroundings and landscape including all measures connected in geographical and factual terms …’.

21 Paragraph 3(1) of the UVP-G 2000 provides that:

‘The projects listed in Annex I … shall undergo an environmental impact assessment in accordance with the following provisions. The simplified procedure shall be applied to projects that are listed in columns 2 and 3 of Annex I …’

22 Paragraph 3(7) of the UVP-G 2000 provides that:

‘On application of the candidate for the project, an authority with which it is cooperating or the environment ombudsman [Umweltanwalt], the authority shall determine whether an environmental impact assessment is to be carried out for a particular project under this federal law and what objective in Annex I or Paragraph 3a(1) to (3) is attained by the project. That finding may also be made of the authority’s own motion. The decision shall be adopted by notice within six weeks, both at first and at second instance. The candidate for the project, the cooperating authority, the environment ombudsman and the municipality concerned shall be considered parties. The water planning body shall be heard before the decision is adopted. The essential content of, and grounds for, decisions shall be published by the authority in an adequate fashion or be open to consultation by the public. The municipality concerned may bring an action against the decision before the Verwaltungsgerichtshof. The environment ombudsman and the cooperating authority have no obligation to reimburse expenses.’

23 Annex I to the UVP-G 2000 sets out the projects for which an environmental impact assessment is required under Paragraph 3 thereof. They are divided into three groups (columns). Projects in the first two groups (columns) always require an environmental impact assessment if the thresholds are reached and the criteria laid down are fulfilled. Projects in the third group (column) must be assessed individually once the minimum threshold stated has been reached.

24 Point 16(a) of Annex I to the UVP-G 2000 refers, in column 1, to '[o]verhead electrical power lines with a voltage of 220 kV or more and a length of more than 15 km'.

25 Point 16(b) of Annex I to the UVP-G 2000 refers, in column 3, to '[o]verhead electrical power lines in category A [special conservation areas] or B [Alpine regions] protected areas with a voltage of 110 kV or more and a length of more than 20 km'.

The main proceedings and the question referred to the Court

26 The order for reference indicates that Alpe Adria is an Italian undertaking which is seeking to construct a 220 kV power line with a power rating of 300 MVA to connect the Italian Rete Elettrica Nazionale SpA network and the Austrian VERBUND-Austrian Power Grid AG network.

27 To that end, by letter of 12 July 2007, Alpe Adria applied to the Kärntner Landesregierung for the issue of a determination under Paragraph 3(7) of the UVP-G 2000 for the construction and operation of that project. In Austrian territory, the project comprises an overhead power line approximately 7.4 kilometres long with a switching substation to be constructed in Weidenburg extending up to the State border through the Kronhofgraben via the Kronhofer Törl. The length of the project on Italian territory is approximately 41 kilometres.

28 The Kärntner Landesregierung determined, in the contested decision, that no environmental impact assessment was required for the project at issue because the length of the Austrian part of the project did not reach the minimum 15 kilometre threshold stipulated in the UVP-G 2000.

29 It added that, if a project is likely to have significant effects on the environment in another Member State, Article 7 of Directive 85/337 requires the Member States in whose territory the project is intended to be carried out to include that other Member State in the environmental impact assessment procedure. However, that article applied only to projects situated entirely in the territory of one Member State and did not apply to transboundary projects.

30 Consequently, in the absence of any specific provision concerning transboundary projects in Directive 85/337, each Member State was required to assess, on the basis solely of its national law, whether a project was subject to Annex I of the Directive.

31 The Kärntner Landesregierung went on to state that the UVP-G 2000 did not contain any provision according to which the entire length of transboundary power line routes and other line-based projects was to be taken into consideration.

32 By application lodged at the Umweltsenat on 18 December 2007, the Environment ombudsman brought an action seeking the annulment of the contested decision.

33 It is against that background that the Umweltsenat decided to stay proceedings and refer the following question to the Court for a preliminary ruling:

‘Is Council Directive 85/337 ... to be interpreted as meaning that a Member State must provide for an obligation to carry out an assessment in the case of types of projects listed in Annex I to the directive, in particular in point 20 (construction of overhead electrical power lines with a voltage of 220 kV or more and a length of more than 15 km), where the proposed scheme is to extend over the territory of two or more Member States, even if the threshold giving rise to the obligation to carry out an assessment (here, a length of 15 km) is not reached or exceeded by the part of the scheme situated on its national territory but is reached or exceeded by adding the parts of the scheme proposed to be situated in a neighbouring State?’

Admissibility of the question referred

The status of the Umweltsenat as a court or tribunal

34 As a preliminary point, it must be established whether the Umweltsenat is a court or tribunal for the purposes of Article 234 EC and, therefore, whether its question is admissible.

35 According to settled case-law, in order to determine whether the body making a reference is a court or tribunal for the purposes of Article 234 EC, which is a question governed by Community law alone, the Court takes account of a number of factors, such as whether the body is established by law, whether it is permanent, whether its jurisdiction is compulsory, whether its procedure is inter parties, whether it applies rules of law and whether it is independent (Case 61/65 *Vaasen-Göbbels* [1966] ECR 261 at 273, and Case

C-195/06*Österreichischer Rundfunk* [2007] ECR I-8817, paragraph 19 and the case-law cited).

36 In that regard, it must be pointed out, first, that it is indisputably clear from the provisions of Articles 11(7), 20(2) and 133(4) of the BVG and of Paragraphs 1, 2, 4 and 5 of the USG 2000 that the Umweltsenat meets the criteria that it be established by law, be permanent and have compulsory jurisdiction, apply rules of law and be independent.

37 It must also be pointed out, as the Advocate General did in points 58 and 59 of his Opinion, that the procedure before the Umweltsenat ensures that the right of appeal rests with anyone who participated in the administrative proceedings and with the institutions referred to in the UVP-G 2000. The Umweltsenat may hold a hearing of its own motion or at the request of one of the parties and any party appearing may be represented by a lawyer. The Umweltsenat's decisions have the force of *res judicata*, they must state reasons and are delivered in open court.

38 It should also be noted that the provisions of the USG 2000 and the UVP-G 2000, read in combination with the provisions of Article 133(4) of the BVG, guarantee the inter parties nature of the proceedings before the Umweltsenat, which rules on the basis of the general provisions of the Law on administrative procedure (Verwaltungsverfahrensgesetz).

39 It is apparent from the foregoing that the Umweltsenat has to be considered to be a court or tribunal for the purposes of Article 234 EC and so its question is admissible.

The question referred

40 Alpe Adria argues that the questions of Community law which have been raised are purely hypothetical in the present case. They are not objectively necessary in order to settle the dispute in the main proceedings and bear no relation to the dispute before the national court.

41 In this respect, it must be recalled that, according to the settled case-law of the Court, it is solely for the national court before which the dispute has been brought, and which must assume responsibility for the subsequent judicial decision, to determine in the light of the particular circumstances of the case both the need for a preliminary ruling in order to enable it to deliver judgment and the relevance of the questions which it submits to the Court (Case C-545/07 *Apis-Hristovich* [2009] ECR I-0000, paragraph 28 and the case-law cited).

42 Consequently, where the questions submitted concern the interpretation of Community law, the Court is in principle bound to give a ruling (*Apis-Hristovich*, paragraph 29 and the case-law cited).

43 In the present case, the Court has been asked to provide the national court with criteria for interpreting Directive 85/337 so as to permit it to assess whether, under Community law, the project at issue is subject to the procedural obligations laid down in the Directive, notwithstanding the fact that national law does not lay down such procedural obligations for that project.

44 Under those circumstances, the reference for a preliminary ruling must be regarded as admissible.

Substance

45 By its question, the national court is asking, essentially, whether Articles 2(1) and 4(1) of Directive 85/337 are to be interpreted as meaning that the authorities of a Member State must make a project referred to in point 20 of Annex I to the Directive, such as the construction of overhead electrical power lines with a voltage of 220 kV or more and a length of more than 15 km, subject to the environmental impact assessment procedure even though the project is transboundary in nature and less than 15 km of it is located in the territory of that Member State.

46 First of all, it must be pointed out that a project which concerns the construction of a 220 kV electrical power line with a nominal power rating of 300 MVA and a length of 48.4 km is one of the projects covered by point 20 of Annex I to the Directive which are to be the subject of an obligatory environmental impact assessment pursuant to Articles 2(1) and 4(1) of the Directive.

47 Next, in order to answer the question put by the national court, it must be ascertained whether the Directive is to be interpreted as meaning that that obligation also applies to a transboundary project such as the one at issue in the main proceedings.

48 It must be borne in mind that, according to settled case-law, the terms used in a provision of Community law which makes no express reference to the law of the Member States for the purpose of determining its meaning and scope must be given throughout the Community an autonomous and uniform interpretation, which must take into account the context of the provision and the purpose of the legislation in question (Case C-287/98 *Linster* [2000] ECR I-6917, paragraph 43, and Case C-290/03 *Barker* [2006] ECR I-3949, paragraph 40).

49 In that regard, Article 2(1) of Directive 85/337 imposes an obligation on the Member States to require that projects likely to have significant effects on the environment by virtue, inter alia, of their nature, size or location are the subject of an assessment.

50 The Court has already held, in regard to the obligation to assess effects on the environment, that the wording of Directive 85/337 indicates that its scope is wide and its purpose very broad (Case C-72/95 *Kraaijeveld and Others* [1996] ECR I-5403, paragraphs 31 and 39).

51 It must also be pointed out that Directive 85/337 adopts an overall assessment of the effects of projects on the environment (Case C-142/07 *Ecologistas en Acción-CODA* [2008] ECR I-6097, paragraph 39 and the case-law cited) irrespective of whether the project might be transboundary in nature.

52 In addition, the Member States must implement Directive 85/337 in a manner which fully corresponds to its requirements, having regard to its fundamental objective which, as is clear from Article 2(1), is that, before consent is given, projects likely to have significant effects on the environment by virtue, inter alia, of their nature, size or location should be the subject of an assessment with regard to their effects (see, to that effect, *Ecologistas en Acción-CODA*, paragraph 33).

53 Moreover, the Court has held that the purpose of Directive 85/337 cannot be circumvented by the splitting of projects and that the failure to take account of the cumulative effect of several projects must not mean in practice that they all cease to be covered by the obligation to carry out an assessment, when, taken together, they are likely to have 'significant effects on the environment' within the meaning of Article 2(1) of Directive 85/337 (see, to that effect, *Ecologistas en Acción-CODA*, paragraph 44).

54 It follows that projects listed in Annex I to Directive 85/337 which extend to the territory of a number of Member States cannot be exempted from the application of the Directive solely on the ground that it does not contain any express provision in regard to them.

55 Such an exemption would seriously interfere with the objective of Directive 85/337. Its effectiveness would be seriously compromised if the competent authorities of a Member State could, when deciding whether a project must be the subject of an environmental impact assessment, leave out of consideration that part of the project which is located in another Member State (see, by analogy, Case C-227/01 *Commission* v *Spain* [2004] ECR I-8253, paragraph 53).

56 As the Advocate General pointed out in point 81 of his Opinion, that finding is strengthened by the terms of Article 7 of Directive 85/337, which provide for inter-State cooperation when a project is likely to have significant effects on the environment in another Member State.

57 It must be stated that the fact that the section located in Austria has a length of less than 15 km cannot, in itself, cause the project to be exempt from the assessment procedure laid down in Directive 85/337. The Member State concerned must carry out an environmental impact assessment of the project in its own territory which takes account of the specific effects of that project.

58 In the light of the foregoing, Articles 2(1) and 4(1) of Directive 85/337 are to be interpreted as meaning that the competent authorities of a Member State must make a project referred to in point 20 of Annex I to the Directive, such as the construction of overhead electrical power lines with a voltage of 220 kV or more and a length of more than 15 km, subject to the environmental impact assessment procedure even where the project is transboundary in nature and less than 15 km of it is situated on the territory of that Member State.

Costs

59 Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the national court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Second Chamber) hereby rules:

Articles 2(1) and 4(1) of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment, as amended by Directive 2003/35/EC of the European Parliament and of the Council of 26 May 2003, are to be interpreted as meaning that the competent authorities of a Member State must make a project referred to in point 20 of Annex I to the Directive, such as the construction of overhead electrical power lines with a voltage of 220 kV or more and a length of more than 15 km, subject to the environmental impact assessment procedure even where the project is transboundary in nature and less than 15 km of it is situated on the territory of that Member State.

JUDGMENT OF THE COURT (Second Chamber)

15 October 2009 (*)

(Directive 85/337/EEC – Public participation in environmental decision-making procedures – Right of access to a review procedure to challenge decisions authorising projects likely to have significant effects on the environment)

In Case C-263/08,

REFERENCE for a preliminary ruling under Article 234 EC from the Högsta domstolen (Sweden), made by decision of 29 May 2008, received at the Court on 19 June 2008, in the proceedings

Djurgården-Lilla Värtans Miljöskyddsförening

v

Stockholms kommun genom dess marknämnd,

THE COURT (Second Chamber),

composed of J.-C. Bonichot (Rapporteur), President of the Fourth Chamber, acting as President of the Second Chamber, C. Toader, C.W.A. Timmermans, K. Schiemann and L. Bay Larsen, Judges,

Advocate General: E. Sharpston,

Registrar: C. Strömholm, Administrator,

having regard to the written procedure and further to the hearing on 7 May 2009,

after considering the observations submitted on behalf of:

– Djurgården-Lilla Värtans Miljöskyddsförening, by P. Schönning and G. Högberg Björck, jur kand,

– the Swedish Government, by A. Falk, K. Petkovska, C. Meyer-Seitz and S. Johannesson, acting as Agents,

– the Commission of the European Communities, by J.-B. Laignelot and P. Dejmek, acting as Agents,

after hearing the Opinion of the Advocate General at the sitting on 2 July 2009,

gives the following

Judgment

1 This reference for a preliminary ruling concerns the interpretation of provisions of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40), as amended by Directive 2003/35/EC of the European Parliament and of the Council of 26 May 2003 (OJ 1985 L 156, p. 17) ('Directive 85/337').

2 The reference was made in the course of proceedings between the Djurgården-Lilla Värtans Miljöskyddsförening (the Djurgården-Lilla Värtans association for environmental protection) ('the Miljöskyddsförening') and Stockholms kommun genom dess marknämnd (Municipality of Stockholm).

Legal background

Community law

Directive 2003/35

3 Article 1 of Directive 2003/35 is worded as follows:

'The objective of this Directive is to contribute to the implementation of the obligations arising under the Århus Convention [on Access to Information, Public Participation in Decision-Making and Access to Justice in Environmental Matters, approved on behalf of the European Community by Council Decision 2005/370/EC of 17 February 2005 (OJ 2005 L 124, p. 1)], in particular by:

(a) providing for public participation in respect of the drawing up of certain plans and programmes relating to the environment;

(b) improving the public participation and providing for provisions on access to justice within Council Directives 85/337/EEC and 96/61/EC.'

Directive 85/337

4 Article 1(2) of Directive 85/337 provides:

'For the purposes of this Directive:

…

“the public” means:

one or more natural or legal persons and, in accordance with national legislation or practice, their associations, organisations or groups;

“the public concerned” means:

the public affected or likely to be affected by, or having an interest in, the environmental decision-making procedures referred to in Article 2(2); for the purposes of this definition, non-governmental organisations promoting environmental protection and meeting any requirements under national law shall be deemed to have an interest.’

5 Under Article 2 of Directive 85/337:

‘1. Member States shall adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment by virtue, inter alia, of their nature, size or location are made subject to a requirement for development consent and an assessment with regard to their effects. These projects are defined in Article 4.

2. The environmental impact assessment may be integrated into the existing procedures for consent to projects in the Member States, or, failing this, into other procedures or into procedures to be established to comply with the aims of this Directive.

…

3. Without prejudice to Article 7, Member States may, in exceptional cases, exempt a specific project in whole or in part from the provisions laid down in this Directive.

In this event, the Member States shall:

(a) consider whether another form of assessment would be appropriate;

(b) make available to the public concerned the information obtained under other forms of assessment referred to in point (a), the information relating to the exemption decision and the reasons for granting it.

…’

6 Article 4 of Directive 85/337 provides:

‘1. Subject to Article 2(3), projects listed in Annex I shall be made subject to an assessment in accordance with Articles 5 to 10.

2. Subject to Article 2(3), for projects listed in Annex II, the Member States shall determine through:

(a) a case-by-case examination,

or

(b) thresholds or criteria set by the Member State,

whether the project shall be made subject to an assessment in accordance with Articles 5 to 10.

Member States may decide to apply both procedures referred to in (a) and (b).

3. When a case-by-case examination is carried out or thresholds or criteria are set for the purpose of paragraph 2, the relevant selection criteria set out in Annex III shall be taken into account.

4. Member States shall ensure that the determination made by the competent authorities under paragraph 2 is made available to the public.'

7 Point 11 in Annex I to Directive 85/337 mentions '[g]roundwater abstraction or artificial groundwater recharge schemes where the annual volume of water abstracted or recharged is equivalent to or exceeds 10 million cubic metres'.

8 Point 10 of Annex II to the directive, entitled 'Infrastructure projects', mentions in subparagraph (l) '[g]roundwater abstraction and artificial groundwater recharge schemes not included in Annex I'.

9 Article 6 of Directive 85/337 is worded as follows:

'…

2. The public shall be informed, whether by public notices or other appropriate means such as electronic media where available, of the following matters early in the environmental decision-making procedures referred to in Article 2(2) and, at the latest, as soon as information can reasonably be provided:

(a) the request for development consent;

(b) the fact that the project is subject to an environmental impact assessment procedure and, where relevant, the fact that Article 7 applies;

(c) details of the competent authorities responsible for taking the decision, those from which relevant information can be obtained, those to which

comments or questions can be submitted, and details of the time schedule for transmitting comments or questions;

(d) the nature of possible decisions or, where there is one, the draft decision;

(e) an indication of the availability of the information gathered pursuant to Article 5;

(f) an indication of the times and places where and means by which the relevant information will be made available;

(g) details of the arrangements for public participation made pursuant to paragraph 5 of this Article.

3. Member States shall ensure that, within reasonable time-frames, the following is made available to the public concerned:

(a) any information gathered pursuant to Article 5;

(b) in accordance with national legislation, the main reports and advice issued to the competent authority or authorities at the time when the public concerned is informed in accordance with paragraph 2 of this Article;

(c) in accordance with the provisions of Directive 2003/4/EC of the European Parliament and of the Council of 28 January 2003 on public access to environmental information [OJ 2003 L 41, p. 26], information other than that referred to in paragraph 2 of this Article which is relevant for the decision in accordance with Article 8 and which only becomes available after the time the public concerned was informed in accordance with paragraph 2 of this Article.

4. The public concerned shall be given early and effective opportunities to participate in the environmental decision-making procedures referred to in Article 2(2) and shall, for that purpose, be entitled to express comments and opinions when all options are open to the competent authority or authorities before the decision on the request for development consent is taken.

5. The detailed arrangements for informing the public (for example by bill posting within a certain radius or publication in local newspapers) and for consulting the public concerned (for example by written submissions or by way of a public inquiry) shall be determined by the Member States.

6. Reasonable time-frames for the different phases shall be provided, allowing sufficient time for informing the public and for the public concerned

to prepare and participate effectively in environmental decision-making subject to the provisions of this Article.'

10 Article 10a of Directive 85/337 provides:

'Member States shall ensure that, in accordance with the relevant national legal system, members of the public concerned:

(a) having a sufficient interest, or alternatively,

(b) maintaining the impairment of a right, where administrative procedural law of a Member State requires this as a precondition,

have access to a review procedure before a court of law or another independent and impartial body established by law to challenge the substantive or procedural legality of decisions, acts or omissions subject to the public participation provisions of this Directive.

Member States shall determine at what stage the decisions, acts or omissions may be challenged.

What constitutes a sufficient interest and impairment of a right shall be determined by the Member States, consistently with the objective of giving the public concerned wide access to justice. To this end, the interest of any non-governmental organisation meeting the requirements referred to in Article 1(2), shall be deemed sufficient for the purpose of subparagraph (a) of this Article. Such organisations shall also be deemed to have rights capable of being impaired for the purpose of subparagraph (b) of this Article.

The provisions of this Article shall not exclude the possibility of a preliminary review procedure before an administrative authority and shall not affect the requirement of exhaustion of administrative review procedures prior to recourse to judicial review procedures, where such a requirement exists under national law.

Any such procedure shall be fair, equitable, timely and not prohibitively expensive.

In order to further the effectiveness of the provisions of this article, Member States shall ensure that practical information is made available to the public on access to administrative and judicial review procedures.'

National law

11 The drawing off of groundwater and supply of water to increase the amount of groundwater, and the construction of installations for that purpose, constitute water works requiring development consent under Paragraphs 2

and 9 of Chapter 11 of the Environment Act. At first instance, requests for development consent in this specific area are examined by Environmental Chambers in accordance with Paragraph 9(b) of that Act. The decisions of the Environmental Chambers may be appealed before the Environmental Appeal Chambers whose judgments may in turn be subject to appeal before the Högsta domstolen (Supreme Court), pursuant to Paragraphs 1 and 9 of Chapter 23 that act.

12 The provisions relating to environmental impact assessments appear in Chapter 6 of the Environment Act. They provide in particular that a party wishing to carry out works subject to development consent is to consult the länsstyrelsen (regional authority), the supervisory body, and individuals who may be assumed to be particularly affected. The regional authority is then required to take a position on whether the planned works are to be assumed to entail significant effects on the environment. If the regional authority decides that this is the case, works are to be assumed to entail such an effect, consultations are also to be held with other national authorities, municipalities, the public and organisations which may be assumed to be affected.

13 The right of appeal against judgments and decisions is governed by Paragraphs 12 and 13 of Chapter 16 of the Environment Act. The right of appeal for parties to an action and for certain organisations and authorities is covered in Paragraph 12 et seq. of Chapter 16. Paragraph 13 provides that a non-profit making association, on certain conditions set out in the provision, may appeal against judgments and decisions on development consent, approval and exemption under the Environment Act.

14 Paragraph 13 requires the association to fulfil three conditions, namely that the statutes of the association must state that its purpose is the protection of nature and the environment, the association must have been active in Sweden for at least three years and it must have at least 2 000 members.

The dispute in the main proceedings and the questions referred for a preliminary ruling

15 The Municipality of Stockholm concluded a contract with an electricity company for the construction of a tunnel approximately one kilometre in length through the hills between the areas of Hjorthagen and Fisksjöäng in North Djurgården in order to house electric cables replacing overground high tension cables.

16 The implementation of that project required, first, the abstraction of groundwater leaking into the power cable tunnel and access tunnel and,

second, the construction on certain sites in the area concerned of facilities designed to drain off water and recharge it into the ground or rock in order to counteract any reduction in the amount of groundwater.

17 By decision of 27 May 2004, the länsstyrelsen i Stockholms län (Stockholm Regional Authority), giving its decision after an examination under Chapter 6 of the Environment Act, concluded, on the basis of the environmental impact assessment carried out for that project, that the works concerned were likely to have significant effects on the environment particularly with respect to groundwater.

18 By judgment of 13 December 2006, the miljödomstolen vid Stockholms tingsrätt (Environmental Chamber of the District Court of Stockholm) granted the Municipality of Stockholm development consent to carry out the works at issue, pursuant to Chapter 11 of the Environment Act.

19 The Miljöskyddsförening appealed against that decision before the Miljööverdomstolen of the Svea Hovrätt (Environmental Appeal Chamber of the Svea Court of Appeal), but that appeal was held to be inadmissible on the ground that the Miljöskyddsförening had not fulfilled the condition laid down in Paragraph 13 of Chapter 16 of the Environmental Act that it must have at least 2 000 members to be entitled to appeal against judgments and decisions covered by that act.

20 The Miljöskyddsförening brought an appeal against that decision before the Högsta domstolen.

21 Before the Högsta domstolen, the question arose as to whether the project at issue fell within the scope of Directive 85/337 as a project included in Annex II, point 10(l) thereto, as that point might, in the Swedish version of the directive, be limited to the drawing off of groundwater for a profitable purpose. Furthermore, the question also arose as to the exact scope of the right of appeal provided for by the Aarhus Convention, and whether the conditions laid down by Swedish law from that point of view, were too restrictive.

22 Accordingly, the Högsta domstolen decided to stay the proceedings and to refer the following questions to the Court for a preliminary ruling:

‘(1) Is point 10 of Annex II to Directive 85/337 to be interpreted as meaning that it encompasses water-related works which involve the drawing-off from a tunnel for power cables of groundwater leaking into it and infiltration (supply) of water into the ground or hill to compensate for any reduction in the groundwater, and the construction and maintenance of installations for the drawing-off and infiltration?

(2) If the answer to Question 1 is affirmative: Does the provision in Article 10a of Directive 85/337 – that under certain circumstances the public concerned is to have access to a review procedure before a court of law or another independent and impartial body established by law to challenge the substantive or procedural legality of a decision – imply that there is also a requirement that the public concerned is to be entitled to challenge a decision of a court in planning consent proceedings in a case where the public concerned has had the opportunity of participating in the court's examination of the question of planning consent and of submitting its views to that court?

(3) If the answers to Questions 1 and 2 are affirmative: Are Articles 1(2), 6(4) and 10a of Directive 85/337 to be interpreted as meaning that different national requirements can be laid down with regard to the public concerned referred to in Articles 6(4) and 10a, with the result that small, locally established environmental protection associations have a right to participate in the decision-making procedures referred to in Article 6(4) in respect of projects which may have significant effects on the environment in the area where the association is active but do not have a right of appeal such as is referred to in Article 10a?'

The questions referred for a preliminary ruling

The first question

23 By its first question, the referring court asks essentially whether a project of the type at issue in the main proceedings must be regarded as being covered by 'groundwater abstraction and artificial groundwater recharge schemes not included in Annex I' to Directive 85/337 mentioned in point 10(l) of Annex II to that directive.

24 According to the referring court, the Swedish version of point 10(l) of Annex II may cover just projects for abstracting groundwater with a view to the subsequent use of that water.

25 It is clear from settled case-law that the need for an application, and hence a uniform interpretation, of the provisions of Community law requires that, in cases of doubt, the text of a provision must not be considered in isolation in one of its versions, but, on the contrary, should be interpreted and applied in the light of the versions existing in the other official languages (Case C-174/05 *Zuid-Hollandse Milieufederatie and Natuur en Milieu* [2006] ECR I-2443, paragraph 20, and Case C-311/06 *Consiglio Nazionale degli Ingegneri*[2009] ECR I-0000, paragraph 53).

26 Furthermore, the need for such an interpretation requires that in the case of divergence between the various language versions the provision in question must be interpreted by reference to the purpose and general scheme of the rules of which it forms part (see, to that effect, Case C-449/93 *Rockfon* [1995] ECR I-4291, paragraph 28).

27 As far as concerns point 10(l) of Annex II to Directive 85/337, it is clear from an examination of the various language versions and, in particular, the Dutch, English, Finnish, French, German, Italian, Polish, Portuguese and Spanish versions, that that provision covers groundwater abstraction and artificial groundwater recharge schemes not included in Annex I to that directive, irrespective of the purpose for which those works must be carried out and, in particular, of the subsequent use of the water thereby abstracted or recharged into the ground.

28 In addition, point 11 in Annex I to that directive does not mention any further criteria as regards groundwater abstraction or groundwater recharge schemes where the annual volume of water abstracted or recharged is equivalent to or exceeds 10 million cubic metres.

29 Finally, it is clear from settled case-law that the scope of Directive 85/337 is wide and its purpose very broad (see, Case C-2/07 *Abraham and Others* [2008] ECR I-1197, paragraph 32 and the case-law cited).

30 Consequently, the provisions of point 10(l) of Annex II to Directive 85/337 must be interpreted as meaning that they cover all groundwater abstraction and artificial groundwater recharge schemes not included in Annex I to that directive, irrespective of their purpose, which means that they also cover schemes which do not involve the subsequent use of that groundwater.

31 Having regard to the foregoing, the answer to the first question is that a project such as that at issue in the main proceedings, concerning abstraction of water leaking into a tunnel which houses electric cables and its recharging into the ground or rock in order to compensate for any reduction in the amount of groundwater, and the construction and maintenance of facilities for the abstraction and recharge, are covered by point 10(l) in Annex II to Directive 85/337, irrespective of the ultimate destination of the groundwater and, in particular, of whether or not it is put to a subsequent use.

The second question

32 By its second question, the referring court asks essentially whether Article 10a of Directive 85/337 implies that members of the public concerned are to have access to a review procedure to challenge a decision by which a body attached to a court of law of a Member State has given a ruling on a request

for development consent even where they had the opportunity to participate in the court's examination of the question of development consent and to express their views.

33 Article 10a of Directive 85/337, taking account of the amendments introduced by Directive 2003/35 which is intended to implement the Aarhus Convention, provides for members of the public concerned who fulfil certain conditions to have access to a review procedure before a court of law or another independent body in order to challenge the substantive or procedural legality of decisions, acts or omissions which fall within its scope.

34 Thus, according to the wording of that provision, persons who are members of the public concerned and either have sufficient interest, or if national law so requires, maintain that one of the projects covered by Directive 85/337 impairs their rights, are to have access to a review procedure.

35 It is also apparent therefrom that any non-governmental organisations which promote environmental protection and meet the conditions which may be required by national law satisfy the criteria, with respect to the public concerned who may bring an appeal, laid down in Article 1(2) of Directive 85/337 read in conjunction with Article 10a.

36 Furthermore, Article 6(4) of Directive 85/337 guarantees the public concerned effective participation in environmental decision-making procedures as regards projects likely to have significant effects on the environment.

37 The fact that development consent for housing electric cables and groundwater abstraction such as that at issue in the main proceedings, which is a decision within the meaning of Article 10a of Directive 85/337, is given by a court exercising administrative powers does not prevent an association fulfilling the conditions set out in paragraph 35 of this judgment, and in accordance with the detailed rules laid down by national law, from exercising its right of access to a review procedure in order to challenge that decision.

38 First, the right of access to a review procedure within the meaning of Article 10a of Directive 85/337 does not depend on whether the authority which adopted the decision or act at issue is an administrative body or a court of law. Second, participation in an environmental decision-making procedure under the conditions laid down in Articles 2(2) and 6(4) of Directive 85/337 is separate and has a different purpose from a legal review, since the latter may, where appropriate, be directed at a decision adopted at the end of that procedure. Therefore, participation in the decision-making procedure has no effect on the conditions for access to the review procedure.

39 Accordingly, the answer to the second question is that the members of the public concerned, within the meaning of Article 1(2) and 10a of Directive 85/337, must be able to have access to a review procedure to challenge the decision by which a body attached to a court of law of a Member State has given a ruling on a request for development consent, regardless of the role they might have played in the examination of that request by taking part in the procedure before that body and by expressing their views.

The third question

40 By its third question, the referring court asks essentially whether, in the context of the implementation of Articles 6(4) and 10a of Directive 85/337, Member States may provide that small, locally established environmental protection associations have a right to participate in the decision-making procedures referred to in Article 2(2) of that directive but no right of access to a review procedure to challenge the decision adopted at the end of that procedure.

41 It is clear from the order for reference, the file submitted to the Court, and the arguments put forward at the hearing, that the reason for that question is the existence in the relevant national legislation of the rule that only an association with at least 2 000 members may bring an appeal against a decision adopted on an environmental matter.

42 It is clear from Directive 85/337 that it distinguishes between the public concerned by one of the projects falling within its scope in a general manner and, on the other hand, a sub-group of natural or legal persons within the public concerned who, in view of their particular position vis-à-vis the project at issue, are, in accordance with Article 10a, to be entitled to challenge the decision which authorises it.

43 The directive leaves it to national law to determine the conditions for the admissibility of the action. Those conditions may be having ‘sufficient interest’ or ‘impairment of a right’, and national laws generally use one or other of those two concepts.

44 As regards non-governmental organisations which promote environmental protection, Article 1(2) of Directive 85/337, read in conjunction with Article 10a thereof, requires that those organisations ‘meeting any requirements under national law’ are to be regarded either as having ‘sufficient interest’ or as having a right which is capable of being impaired by projects falling within the scope of that directive.

45 While it is true that Article 10a of Directive 85/337, by its reference to Article 1(2) thereof, leaves to national legislatures the task of determining the

conditions which may be required in order for a non-governmental organisation which promotes environmental protection to have a right of appeal under the conditions set out above, the national rules thus established must, first, ensure 'wide access to justice' and, second, render effective the provisions of Directive 85/337 on judicial remedies. Accordingly, those national rules must not be liable to nullify Community provisions which provide that parties who have a sufficient interest to challenge a project and those whose rights it impairs, which include environmental protection associations, are to be entitled to bring actions before the competent courts.

46 From that point of view, a national law may require that such an association, which intends to challenge a project covered by Directive 85/337 through legal proceedings, has as its object the protection of nature and the environment.

47 Furthermore, it is conceivable that the condition that an environmental protection association must have a minimum number of members may be relevant in order to ensure that it does in fact exist and that it is active. However, the number of members required cannot be fixed by national law at such a level that it runs counter to the objectives of Directive 85/337 and in particular the objective of facilitating judicial review of projects which fall within its scope.

48 In that connection, it must be stated that, although Directive 85/337 provides that members of the public concerned who have a sufficient interest in challenging projects or have rights which may be impaired by projects are to have the right to challenge the decision which authorises it, that directive in no way permits access to review procedures to be limited on the ground that the persons concerned have already been able to express their views in the participatory phase of the decision-making procedure established by Article 6(4) thereof.

49 Thus, the fact relied on by the Kingdom of Sweden, that the national rules offer extensive opportunities to participate at an early stage in the procedure in drawing up the decision relating to a project is no justification for the fact that judicial remedies against the decision adopted at the end of that procedure are available only under very restrictive conditions.

50 Furthermore, Directive 85/337 does not exclusively concern projects on a regional or national scale, but also projects more limited in size which locally based associations are better placed to deal with. As the Advocate General notes, in point 78 of her Opinion, the rule of the Swedish legislation at issue is such as to deprive local associations of any judicial remedy.

51 The Swedish Government, which acknowledges that at present only two associations have at least 2 000 members and thereby satisfy the condition laid down in Paragraph 13 of Chapter 16 of the Environment Act, has in fact submitted that local associations could contact one of those two associations and ask them to bring an appeal. However, that possibility in itself is not capable of satisfying the requirements of Directive 85/337 as, first, the associations entitled to bring an appeal might not have the same interest in projects of limited size and, second, they would be likely to receive numerous requests of that kind which would have to be dealt with selectively on the basis of criteria which would not be subject to review. Finally, such a system would give rise, by its very nature, to a filtering of appeals directly contrary to the spirit of the directive which, as stated in paragraph 33 of this judgment, is intended to implement the Aarhus Convention.

52 Accordingly, the answer to the third question is that Article 10a of Directive 85/337 precludes a provision of national law which reserves the right to bring an appeal against a decision on projects which fall within the scope of that directive solely to environmental protection associations which have at least 2 000 members.

Costs

53 Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the national court, the decision on costs is a matter for that court. Costs incurred in submitting to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Second Chamber) hereby rules:

1. **A project such as that at issue in the main proceedings, concerning abstraction of water leaking into a tunnel which houses electric cables and its recharging into the ground or rock in order to compensate for any reduction in the amount of groundwater, and the construction and maintenance of facilities for the abstraction and recharging, are covered by point 10(l) in Annex II to Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment, as amended by Directive 2003/35/EC of the European Parliament and of the Council of 26 May 2003, irrespective of the ultimate destination of the groundwater and, in particular, of whether or not it is put to a subsequent use.**

2. **Members of the 'public concerned' within the meaning of Article 1(2) and 10a of Directive 85/337, as amended by Directive 2003/35,**

must be able to have access to a review procedure to challenge the decision by which a body attached to a court of law of a Member State has given a ruling on a request for development consent, regardless of the role they might have played in the examination of that request by taking part in the procedure before that body and by expressing their views.

3. **Article 10a of Directive 85/337, as amended by Directive 2003/35, precludes a provision of national law which reserves the right to bring an appeal against a decision on projects which fall within the scope of that directive, as amended, solely to environmental protection associations which have at least 2 000 members.**

JUDGMENT OF THE COURT (Fourth Chamber)

12 May 2011 (*)

(Directive 85/337/EEC – Environmental impact assessment – Aarhus Convention – Directive 2003/35/EC – Access to justice – Non-governmental organisations for the protection of the environment)

In Case C-115/09,

REFERENCE for a preliminary ruling under Article 234 EC, from the Oberverwaltungsgericht für das Land Nordrhein-Westfalen (Germany), made by decision of 5 March 2009, received at the Court on 27 March 2009, in the proceedings

Bund für Umwelt und Naturschutz Deutschland, Landesverband Nordrhein-Westfalen eV

v

Bezirksregierung Arnsberg,

intervening party:

Trianel Kohlekraftwerk Lünen GmbH & Co. KG,

THE COURT (Fourth Chamber),

composed of J.-C. Bonichot (Rapporteur), President of the Chamber, K. Schiemann, A. Arabadjiev, L. Bay Larsen, and C. Toader, Judges,

Advocate General: E. Sharpston,

Registrar: C. Strömholm, Administrator,

having regard to the written procedure and further to the hearing on 10 June 2010,

after considering the observations submitted on behalf of:

– the Bund für Umwelt und Naturschutz Deutschland, Landesverband Nordrhein-Westfalen eV, by D. Teßmer, and B.W. Wegener, Rechtsanwälte,

– the Bezirksregierung Arnsberg, by D. Bremecker, acting as Agent,

– Trianel Kohlekraftwerk Lünen GmbH & Co. KG, by C. Riese, and U. Karpenstein, Rechtsanwälte,

– the German Government, by M. Lumma and B. Klein, acting as Agents,

– the Greek Government, by G. Karipsiadis, acting as Agent,

– the Italian Government, by G. Palmieri, acting as Agent, and by M. Russo, avvocato dello Stato,

– the European Commission, by J.-B. Laignelot and G. Wilms, acting as Agents,

after hearing the Opinion of the Advocate General at the sitting on 16 December 2010,

gives the following

Judgment

1 This reference for a preliminary ruling concerns the interpretation of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40), as amended by Directive 2003/35/EC of the European Parliament and of the Council of 26 May 2003 (OJ 2003 L 156, p. 17) ('Directive 85/337').

2 The reference has been made in proceedings between the Bund für Umwelt und Naturschutz Deutschland, Landesverband Nordrhein-Westfalen eV (the Nordrhein-Westfalen branch of Friends of the Earth, Germany; 'Friends of the Earth') and the Bezirksregierung Arnsberg, concerning the authorisation granted by the latter to Trianel Kohlekraftwerk GmbH & Co. KG ('Trianel') for the construction and operation of a coal-fired power station in Lünen.

Legal context

International law

3 The Convention on Access to Information, Public Participation in Decision-making and Access to Justice in Environmental Matters, known as 'the Aarhus Convention', was signed on 25 June 1998 and approved on behalf of the European Community by Council Decision 2005/370/EC of 17 February 2005 on the conclusion, on behalf of the European Community, of the

Convention on access to information, public participation in decision-making and access to justice in environmental matters (OJ 2005 L 124, p. 1).

4 Article 9 of the Aarhus Convention provides:

‘…

2. Each Party shall, within the framework of its national legislation, ensure that members of the public concerned:

(a) having a sufficient interest or, alternatively,

(b) maintaining impairment of a right, where the administrative procedural law of a Party requires this as a precondition,

have access to a review procedure before a court of law and/or another independent and impartial body established by law, to challenge the substantive and procedural legality of any decision, act or omission subject to the provisions of Article 6 and, where so provided for under national law and without prejudice to paragraph 3 below, of other relevant provisions of this Convention.

What constitutes a sufficient interest and impairment of a right shall be determined in accordance with the requirements of national law and consistently with the objective of giving the public concerned wide access to justice within the scope of this Convention. To this end, the interest of any non-governmental organisation meeting the requirements referred to in Article 2(5) shall be deemed sufficient for the purpose of subparagraph (a) above. Such organisations shall also be deemed to have rights capable of being impaired for the purpose of subparagraph (b) above.

The provisions of this paragraph 2 shall not exclude the possibility of a preliminary review procedure before an administrative authority and shall not affect the requirement of exhaustion of administrative review procedures prior to recourse to judicial review procedures, where such a requirement exists under national law.

3. In addition and without prejudice to the review procedures referred to in paragraphs 1 and 2 above, each Party shall ensure that, where they meet the criteria, if any, laid down in its national law, members of the public have access to administrative or judicial procedures to challenge acts and omissions by private persons and public authorities which contravene provisions of its national law relating to the environment.

4. In addition and without prejudice to paragraph 1 above, the procedures referred to in paragraphs 1, 2 and 3 above shall provide adequate and effective remedies, including injunctive relief as appropriate, and be fair,

equitable, timely and not prohibitively expensive. Decisions under this article shall be given or recorded in writing. Decisions of courts, and whenever possible of other bodies, shall be publicly accessible.

European Union ('EU') law

Directive 2003/35

5 Recital 5 in the preamble to Directive 2003/35 states that Community law should be properly aligned with the Aarhus Convention with a view to the ratification of that Convention by the Community.

6 Recital 9 to Directive 2003/35 states:

'Article 9(2) and (4) of the Aarhus Convention provides for access to judicial or other procedures for challenging the substantive or procedural legality of decisions, acts or omissions subject to the public participation provisions of Article 6 of the Convention.'

7 Recital 11 to Directive 2003/35 states that Directive 85/337 should be amended to ensure that it is fully compatible with the provisions of the Aarhus Convention and, in particular, with Article 6 and Article 9(2) and (4) thereof.

8 Article 1 of Directive 2003/35 is worded as follows:

'The objective of this Directive is to contribute to the implementation of the obligations arising under the Aarhus Convention, in particular by:

…

(b) improving the public participation and providing for provisions on access to justice within Council Directives 85/337/EEC and 96/61/EC.'

Directive 85/337

9 Article 1(1) of Directive 85/337 provides:

'This Directive shall apply to the assessment of the environmental effects of those public and private projects which are likely to have significant effects on the environment.'

10 Article 1(2) of Directive 85/337 sets out the definitions added by Directive 2993/85 of the concepts of 'the public' and 'the public concerned':

‘For the purposes of this Directive:

…

‘the public’ means: one or more natural or legal persons and, in accordance with national legislation or practice, their associations, organisations or groups;

‘the public concerned’ means: the public affected or likely to be affected by, or having an interest in, the environmental decision-making procedures referred to in Article 2(2); for the purposes of this definition, non-governmental organisations promoting environmental protection and meeting any requirements under national law shall be deemed to have an interest.’

…’

11 Under Article 10a of Directive 85/337, also inserted by Directive 2003/35:

‘Member States shall ensure that, in accordance with the relevant national legal system, members of the public concerned:

(a) having a sufficient interest, or alternatively,

(b) maintaining the impairment of a right, where administrative procedural law of a Member State requires this as a precondition,

have access to a review procedure before a court of law or another independent and impartial body established by law to challenge the substantive or procedural legality of decisions, acts or omissions subject to the public participation provisions of this Directive.

…

What constitutes a sufficient interest and impairment of a right shall be determined by the Member States, consistently with the objective of giving the public concerned wide access to justice. To this end, the interest of any non-governmental organisation meeting the requirements referred to in Article 1(2) shall be deemed sufficient for the purpose of subparagraph (a) of this Article. Such organisations shall also be deemed to have rights capable of being impaired for the purpose of subparagraph (b) of this Article.

…’

Directive 92/43/EC

12 Article 6(3) of Council Directive 92/43/EC of 21 May 1992 on the conservation of natural habitats and of wild fauna and flora (OJ 1992 L 206,

p. 7), as amended by Directive 2006/105/EC of 20 November 2006 (OJ 2006 L 363, p. 368) ('the Habitats Directive') provides as follows:

'Any plan or project not directly connected with or necessary to the management of the site but likely to have a significant effect thereon, either individually or in combination with other plans or projects, shall be subject to appropriate assessment of its implications for the site in view of the site's conservation objectives. In the light of the conclusions of the assessment of the implications for the site and subject to the provisions of paragraph 4, the competent national authorities shall agree to the plan or project only after having ascertained that it will not adversely affect the integrity of the site concerned and, if appropriate, after having obtained the opinion of the general public.'

National law

13 Paragraph 42 of the Administrative Court Rules (Verwaltungsgerichtsordnung, BGBl. 1991 I, p. 686; 'the VwGO') lays down the following conditions for the admissibility of actions:

'1. An action can seek to have an administrative measure set aside (action for annulment) or to have the adoption of an administrative measure ordered in the event of a refusal or failure to act (action for enjoinder).

2. Except where otherwise provided by law, such an action is admissible only if the claimant asserts that his rights have been impaired by the administrative measure or by the refusal or failure to act.'

14 In addition, the first sentence of Paragraph 113(1) of the VwGO provides that:

1. 'In so far as the administrative measure is unlawful and the claimant's rights have thereby been impaired, the court shall set aside the administrative measure together with any internal appeal decision where appropriate'.

15 The first sentence of Paragraph 2(1) of the Law on environmental impact assessments (Gesetz über die Umweltverträglichkeitsprüfung, BGBl. 2005 I, p. 1757; 'the UVPG') provides that the environmental impact assessment is to form an integral part of administrative procedures aimed at reaching a decision as to whether a project can be authorised.

16 Paragraph 2(3)(1) of the UVPG provides that permits, planning approval decisions and other official decisions as to whether a project can be authorised, taken in the course of an administrative procedure, with the

exception of declarations, constitute decisions for the purposes of the first sentence of Paragraph 2(1).

17 Under Paragraph 1(1)(1)(a) of the Law on supplementary provisions governing actions in environmental matters under Directive 2003/35/EC (Umwelt-Rechtsbehelfsgesetz, BGBl. 2006 I, p. 2816; 'the UmwRG'), that law is to apply to actions which challenge decisions for the purposes of Paragraph 2(3) of the UVPG concerning projects in relation to which there may be, under the UVPG, an obligation to implement an environmental impact assessment.

18 Paragraph 2(1)(1) of the UmwRG provides that a domestic or foreign association recognised under Paragraph 3 of the UmwRG may, without being required to maintain an impairment of its own rights, bring an action in accordance with the VwGO to challenge such a decision or a failure to adopt such a decision, provided that the association asserts that the decision contravenes legislative provisions 'which seek to protect the environment, which confer individual rights and which may be relevant to the decision'.

19 Moreover, point (1) of the first sentence of Paragraph 2(5) of the UmwRG provides that such actions are to be deemed to be well founded if the decision infringes legislative provisions 'which seek to protect the environment, which confer individual rights and which are relevant to the decision' and if the infringement 'affects environmental protection concerns included in the objectives which the association, under its statutes, is committed to promote'.

20 Point (2) of the first sentence of Paragraph 5(1) of the Federal Law on protection against the harmful effects of air pollution, noise, vibrations and other types of nuisance on the environment – the Anti-Pollution Law (Bundes-Immissionsschutzgesetz, BGBl. 2002 I, p. 3830; 'the BImSchG') provides, inter alia, that for the purposes of ensuring high levels of 'environmental protection overall', installations subject to official approval are to be constructed and operated in a manner which ensures the prevention of effects harmful to the environment and other dangers, major disadvantages and major disturbances.

21 The first sentence of Paragraph 8(1) of the BImSchG provides that, on application, a permit may be granted for the construction of an installation or a part of an installation, or the construction and operation of a part of an installation, if: (i) there is a legitimate interest in the grant of a limited permit, (ii) the conditions for the grant of a permit in respect of the component for which a limited permit is sought are satisfied and (iii) a preliminary assessment indicates that no obstacles are present which are from the outset insuperable, thereby precluding the construction and operation of the installation as a whole.

22 Paragraph 9(1) of the BImSchG provides that, on application, a preliminary decision may be issued regarding specific permit conditions and regarding the installation site, provided that the effects of the planned installation can be adequately assessed and that there is a legitimate interest in the issuing of a preliminary decision.

23 Paragraph 61 of the Law on nature protection and countryside conservation (Bundesnaturschutzgesetz, BGBl. 2002 I, p. 1193) provides:

‘(1) Independently of any impairment of its own rights, a ... recognised association may bring actions in accordance with the [VwGO] challenging

1. Exemptions from prohibitions and requirements intended to protect nature conservation areas, national parks and other protected areas established under Paragraph 33(2) and

2. Planning approval decisions concerning projects which entail an encroachment on nature and the countryside, together with planning permits, where public participation is provided for

…

(2) Actions brought in accordance with subparagraph 1 are not admissible unless the association

1. claims that the adoption of one of the administrative measures mentioned in the first sentence of subparagraph 1 contravenes provisions of the present law, provisions which have been adopted or which continue to apply on the basis or within the framework of the present law, or other provisions which must be taken into account when adopting an administrative measure and whose objectives include concern for nature protection and countryside conservation;

2. is affected as regards a matter which, under its statutes, is within its ambit and in respect of which it is recognised …’

Background and questions referred

24 Trianel – the intervener in the main proceedings – intends to construct and operate a coal-fired power station in Lünen. The power station, which will deliver heat output to a maximum of 1 705 megawatts and 750 megawatts of electricity output, will enter service in 2012. Within eight kilometers of the project site, there are five areas designated as special areas of conservation within the meaning of the Habitats Directive.

25 On 6 May 2008, in the context of the environmental impact assessment of that project, the Bezirksregierung Arnsberg (Arnsberg District Administration) – the defendant in the main proceedings – issued Trianel with a preliminary decision and a partial permit for the project. The preliminary decision stated that there were no legal objections to the project.

26 On 16 June 2008, Friends of the Earth initiated proceedings for the annulment of those measures before the Oberverwaltungsgericht für das Land Nordrhein-Westfalen (Higher Administrative Court for the Nordrhein-Westfalen Land; 'the referring court'). Friends of the Earth relied, in particular, on an infringement of the provisions transposing into German law the Habitats Directive and, in particular, Article 6 thereof.

27 According to the referring court, those measures infringe Article 6(3) of the Habitats Directive inasmuch as the environmental impact assessment of the project at issue did not show that it was unlikely to have a significant effect on the special areas of conservation located nearby.

28 The referring court finds that, on the basis of domestic law, an environmental protection organisation is not entitled to rely on infringement of the law for the protection of water and nature or on the precautionary principle laid down in point (2) of the first sentence of Paragraph 5(1) of the BImSchG, as those provisions do not confer rights on individuals for the purposes of point (1) of Paragraph 2(1) and point (1) of Paragraph 2(5) of the UmwRG.

29 It states that, accordingly, the right of action accorded to non-governmental organisations is comparable with that provided for under the general rules of administrative procedural law governing actions for annulment and, in particular, under Paragraph 42(2) and the first sentence of Paragraph 113(1) of the VwGO, which provide that an action challenging an administrative measure will be admissible only if the administrative measure affects the claimant's rights, that is to say, his individual public law rights.

30 The referring court adds that the decisive criterion for establishing whether a provision of national law protects individual rights is the extent to which that provision adequately specifies and delimits the interest or right protected, envisages the way in which the right might be regarded as impaired and determines the class of persons protected.

31 The referring court finds in that regard that, in the field of anti-pollution law, point (2) of the first sentence of Paragraph 5(1) of the BImSchG – in the same way, moreover, as the law for the protection of water and nature – primarily concerns the general public and not the protection of individual rights.

32 In addition, the referring court notes that the project at issue does not come within the scope of Paragraph 61 of the Law on nature protection and countryside conservation, which permits, in certain cases, an exception to be made to that condition of admissibility for actions brought by recognised associations in the environmental field.

33 Since it considers that such a restriction on access to justice could nevertheless undermine the useful effect of Directive 85/337, the referring court wonders whether the action brought by Friends of the Earth ought not to be allowed on the basis of Article 10a of that directive.

34 In those circumstances, the Oberverwaltungsgericht für das Land Nordrhein Westfalen decided to stay the proceedings and to refer the following questions to the Court for a preliminary ruling:

‘(1) Does Article 10a of Directive 85/337 … require it to be possible, for non-governmental organisations wishing to bring an action before the courts of a Member State in which administrative procedural law requires an applicant to maintain the impairment of a right, to argue that there has been an infringement of any environmental provision relevant to the approval of a project, including provisions which are intended to serve the interests of the general public alone rather than those which, at least in part, protect the legal interests of individuals?

(2) Unless Question 1 is answered unreservedly in the affirmative:

Does Article 10a of Directive 85/337 … require it to be possible, for non-governmental organisations wishing to bring an action before the courts of a Member State in which administrative procedural law requires an applicant to maintain the impairment of a right, to base their argument on the infringement of environmental provisions relating to the approval of a project which are derived directly from Community law or which transpose Community environmental legislation into domestic law, including provisions intended to serve the interests of the general public alone, rather than those which, at least in part, protect the legal interests of individuals?

(a) If Question 2 calls, in principle, for an affirmative response:

Must provisions of Community environmental legislation satisfy any substantive conditions in order to be capable of forming the legal basis for an action?

(b) If Question 2(a) is answered in the affirmative:

What are the relevant substantive conditions (for example, direct effect, protection objective or aim of the legislation)?

(3) If either Question 1 or Question 2 is answered in the affirmative:

Does the directive directly entitle non-governmental organisations to a right of access to the courts which exceeds that provided for under the rules laid down in national law?'

The questions referred

Questions 1 and 2

35 By its first two questions, which it is appropriate to examine together, the referring court asks essentially whether Article 10a of Directive 85/337 precludes legislation which does not permit non-governmental organisations promoting environmental protection, as referred to in Article 1(2) of Directive 85/337 ('environmental protection organisations'), to rely before the courts, in an action contesting a decision authorising projects likely to have 'significant effects on the environment' for the purposes of Article 1(1) of Directive 85/337, on the infringement of a rule which protects only the interests of the general public and not the interests of individuals. The referring court also asks the Court whether Article 10a of Directive 85/337 precludes such legislation in general or only in so far as it does not permit an organisation of that nature to rely before the courts on particular provisions of environment law, whether of Community or purely national origin.

36 It emerges from the order for reference that the question is justified by the fact that the applicable national legislation makes the admissibility of an action such as that brought by the applicant in the main proceedings conditional upon the applicant showing that the administrative decision contested impairs an individual right which, under national law, can be categorised as an individual public-law right.

37 First of all, it should be noted that the first paragraph of Article 10a of Directive 85/337 provides that the decisions, acts or omissions referred to in that article must be actionable before a court of law through a review procedure 'to challenge [their] substantive or procedural legality', without in any way limiting the pleas that could be put forward in support of such an action.

38 With regard to the conditions for the admissibility of such actions, Article 10a of Directive 85/337 provides for two possibilities: the admissibility of an action may be conditional on 'a sufficient interest in bringing the action' or on the applicant alleging 'the impairment of a right', depending on which of those conditions is adopted in the national legislation.

39 The first sentence of the third paragraph of Article 10a of Directive 85/337 further states that what constitutes a sufficient interest and impairment of a right is to be determined by the Member States consistently with the objective of giving the public concerned 'wide access to justice'.

40 With regard to actions brought by environmental protection organisations, the second and third sentences of the third paragraph of Article 10a of Directive 85/337 add that, to that end, such organisations must be regarded as having either a sufficient interest or rights which may be impaired, depending on which of those conditions for admissibility is adopted in the national legislation.

41 Those various provisions must be interpreted in the light of, and having regard to, the objectives of the Aarhus Convention, with which – as is stated in recital 5 to Directive 2003/35 – EU law should be 'properly aligned'.

42 It follows that, whichever option a Member State chooses for the admissibility of an action, environmental protection organisations are entitled, pursuant to Article 10a of Directive 85/337, to have access to a review procedure before a court of law or another independent and impartial body established by law, to challenge the substantive or procedural legality of decisions, acts or omissions covered by that article.

43 Lastly, it should also be recalled that where, in the absence of EU rules governing the matter, it is for the legal system of each Member State to designate the courts and tribunals having jurisdiction and to lay down the detailed procedural rules governing actions for safeguarding rights which individuals derive from EU law, those detailed rules must not be less favourable than those governing similar domestic actions (principle of equivalence) and must not make it in practice impossible or excessively difficult to exercise rights conferred by EU law (principle of effectiveness).

44 Thus, although it is for the Member States to determine, when their legal system so requires and within the limits laid down in Article 10a of Directive 85/337, what rights can give rise, when infringed, to an action concerning the environment, they cannot, when making that determination, deprive environmental protection organisations which fulfil the conditions laid down in Article 1(2) of that directive of the opportunity of playing the role granted to them both by Directive 85/337 and by the Aarhus Convention.

45 With regard to legislation such as that at issue in the main proceedings, although the national legislature is entitled to confine to individual public-law rights the rights whose infringement may be relied on by an individual in legal proceedings contesting one of the decisions, acts or omissions referred to in Article 10a of Directive 85/337, such a limitation cannot be applied as

such to environmental protection organisations without disregarding the objectives of the last sentence of the third paragraph of Article 10a of Directive 85/337.

46 If, as is clear from that provision, those organisations must be able to rely on the same rights as individuals, it would be contrary to the objective of giving the public concerned wide access to justice and at odds with the principle of effectiveness if such organisations were not also allowed to rely on the impairment of rules of EU environment law solely on the ground that those rules protect the public interest. As the dispute in the main proceedings shows, that very largely deprives those organisations of the possibility of verifying compliance with the rules of that branch of law, which, for the most part, address the public interest and not merely the protection of the interests of individuals as such.

47 It follows first that the concept of 'impairment of a right' cannot depend on conditions which only other physical or legal persons can fulfil, such as the condition of being a more or less close neighbour of an installation or of suffering in one way or another the effects of the installation's operation.

48 It follows more generally that the last sentence of the third paragraph of Article 10a of Directive 85/337 must be read as meaning that the 'rights capable of being impaired' which the environmental protection organisations are supposed to enjoy must necessarily include the rules of national law implementing EU environment law and the rules of EU environment law having direct effect.

49 In that regard, in order to give the referring court the most useful answer possible, it should be pointed out that a plea raised against a contested decision which alleges infringement of the rules of national law flowing from Article 6 of the Habitats Directive must be capable of being relied on by an environmental protection organisation.

50 Consequently, the answer to Questions 1 and 2, read together, is that Article 10a of Directive 85/337 precludes legislation which does not permit non-governmental organisations promoting environmental protection, as referred to in Article 1(2) of that directive, to rely before the courts, in an action contesting a decision authorising projects 'likely to have significant effects on the environment' for the purposes of Article 1(1) of Directive 85/337, on the infringement of a rule flowing from EU environment law and intended to protect the environment, on the ground that that rule protects only the interests of the general public and not the interests of individuals.

Question 3

51 By its third question, the referring court asks the Court, essentially, whether an environmental protection association can derive, from the last sentence of the third paragraph of Article 10a of Directive 85/337, the right to rely before the courts, in an action contesting a decision authorising projects 'likely to have significant effects on the environment' for the purposes of Article 1(1) of Directive 85/337, on the infringement of the rules of national law flowing from Article 6 of the Habitats Directive, even where, on the ground that the rules relied on protect only the interests of the general public and not the interests of individuals, national procedural law does not permit this.

52 That question arises in the event that it would not be possible for the referring court to interpret national procedural law in a manner consistent with the requirements of EU law.

53 In that regard, it should first of all be borne in mind that the Member States' obligation under a directive to achieve the result envisaged by that directive and their duty to take all appropriate measures, whether general or particular, to ensure the fulfilment of that obligation are binding on all the authorities of the Member States, including, for matters within their jurisdiction, the courts (see, to that effect, Case C-555/07 *Kücükdeveci* [2010] ECR I-0000, paragraph 47 and the case-law cited).

54 The Court has held that whenever the provisions of a directive appear, so far as their subject-matter is concerned, to be unconditional and sufficiently precise, they may be relied on before the national courts by individuals against the State, where the latter has failed to implement the directive in domestic law by the end of the period prescribed or where it has failed to implement the directive correctly (see, inter alia, Case C-138/07 *Cobelfret* [2009] ECR I-731, paragraph 58).

55 It should be noted in that regard that, taken as a whole, Article 10a of Directive 85/337 leaves the Member States a significant discretion both to determine what constitutes impairment of a right and, in particular, to determine the conditions for the admissibility of actions and the bodies before which such actions may be brought.

56 The same is not true, however, of the provisions laid down in the last two sentences of the third paragraph of Article 10a of Directive 85/337.

57 By providing that the interest of any non-governmental organisation meeting the requirements referred to in Article 1(2) of Directive 85/337 are to be deemed sufficient and that such organisations are also to be deemed to have rights capable of being impaired, those provisions lay down rules which are precise and not subject to other conditions.

58 In addition, as was stated above, the rights which environmental protection organisations may rely on in judicial proceedings pursuant to Article 10a of Directive 85/337 include the rules of EU environment law and, in particular, the rules of national law flowing from Article 6 of the Habitats Directive.

59 The answer to Question 3 is therefore that non-governmental organisations promoting environmental protection, as referred to in Article 1(2) of that directive, can derive from the last sentence of the third paragraph of Article 10a of Directive 85/337 a right to rely before the courts, in an action contesting a decision authorising projects 'likely to have significant effects on the environment' for the purposes of Article 1(1) of Directive 85/337, on the infringement of the rules of national law flowing from Article 6 of the Habitats Directive, even where, on the ground that the rules relied on protect only the interests of the general public and not the interests of individuals, national procedural law does not permit this.

Costs

60 Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the national court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Fourth Chamber) hereby rules:

1. **Article 10a of Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment, as amended by Directive 2003/35/EC of the European Parliament and of the Council of 26 May 2003, precludes legislation which does not permit non-governmental organisations promoting environmental protection, as referred to in Article 1(2) of that directive, to rely before the courts, in an action contesting a decision authorising projects 'likely to have significant effects on the environment' for the purposes of Article 1(1) of Directive 85/337, on the infringement of a rule flowing from the environment law of the European Union and intended to protect the environment, on the ground that that rule protects only the interests of the general public and not the interests of individuals.**

2. **Such a non-governmental organisation can derive, from the last sentence of the third paragraph of Article 10a of Directive 85/337, as amended by Directive 2003/35, the right to rely before the courts, in an action contesting a decision authorising projects 'likely to have significant effects on the environment' for the purposes of Article**

1(1) of Directive 85/337, as amended, on the infringement of the rules of national law flowing from Article 6 of Directive 92/43/EC of 21 May 1992 on the conservation of natural habitats and of wild fauna and flora, as amended by Directive 2006/105/EC of 20 November 2006, even where, on the ground that the rules relied on protect only the interests of the general public and not the interests of individuals, national procedural law does not permit this.

JUDGMENT OF THE COURT (Fourth Chamber)

14 March 2013 (*)

(Environment – Directive 85/337/EEC – Assessment of the effects of certain public and private projects on the environment – Consent for such a project without an appropriate assessment – Objectives of that assessment – Conditions to which the existence of a right to compensation are subject – Whether protection of individuals against pecuniary damage is included)

In Case C-420/11,

REQUEST for a preliminary ruling under Article 267 TFEU from the Oberster Gerichtshof (Austria), made by decision of 21 July 2011, received at the Court on 10 August 2011, in the proceedings

Jutta Leth

v

Republik Österreich,

***Land* Niederösterreich,**

THE COURT (Fourth Chamber),

composed of L. Bay Larsen, (Rapporteur), President of the Chamber, J. Malenovský, U. Lõhmus, M. Safjan and A. Prechal, Judges,

Advocate General: J. Kokott,

Registrar: V. Tourrès, Administrator,

having regard to the written procedure and further to the hearing on 17 October 2012,

after considering the observations submitted on behalf of:

– Ms Leth, by W. Proksch, Rechtsanwalt,

– Republik Österreich, by C. Pesendorfer and P. Cede, acting as Agents,

– *Land* Niederösterreich, by C. Lind, Rechtsanwalt,

– the Czech Government, by D. Hadroušek and M. Smolek, acting as Agents,

– Ireland, by D. O'Hagan, acting as Agent, assisted by E. Fitzsimons, SC,

– the Greek Government, by G. Karipsiades, acting as Agent,

– the Italian Government, by G. Palmieri, acting as Agent, assisted by S. Varone, avvocato dello Stato,

– the Latvian Government, by I. Kalniņš and A. Nikolajeva, acting as Agents,

– the United Kingdom Government, by J. Beeko and L. Seeboruth, acting as Agents, assisted by E. Dixon, Barrister,

– the European Commission, by P. Oliver and G. Wilms, acting as Agents,

after hearing the Opinion of the Advocate General at the sitting on 8 November 2012,

gives the following

Judgment

1 This request for a preliminary ruling concerns the interpretation of Article 3 of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40), as amended by Council Directive 97/11/EC of 3 March 1997 (OJ 1997 L 73, p. 5) and by Directive 2003/35/EC of the European Parliament and of the Council of 26 May 2003 (OJ 2003 L 156, p. 17) ('Directive 85/337').

2 The request has been made in the course of proceedings between Ms Leth, on the one hand, and Republik Österreich (Republic of Austria) and *Land* Niederösterreich (State of Lower Austria), on the other, regarding her application for (i) compensation for the pecuniary damage which she claims to have sustained as a result of the decrease in the value of her home following the extension of Vienna-Schwechat airport (Austria) and (ii) a declaration that the defendants in the main proceedings will be liable for any future damage.

Legal context

European Union law

Directive 85/337

3 The first, third, sixth and eleventh recitals in the preamble to Directive 85/337 are worded as follows:

‘… the … action programmes of the European Communities on the environment … stress that the best environmental policy consists in preventing the creation of pollution or nuisances at source, rather than subsequently trying to counteract their effects; … they affirm the need to take effects on the environment into account at the earliest possible stage in all the technical-planning and decision-making processes; … to that end, they provide for the implementation of procedures to evaluate such effects;

…

… in addition, it is necessary to achieve one of the Community’s objectives in the sphere of the protection of the environment and the quality of life;

…

… general principles for the assessment of environmental effects should be introduced with a view to supplementing and coordinating development consent procedures governing public and private projects likely to have a major effect on the environment;

… development consent for public and private projects which are likely to have significant effects on the environment should be granted only after prior assessment of the likely significant environmental effects of these projects has been carried out; … this assessment must be conducted on the basis of the appropriate information supplied by the developer, which may be supplemented by the authorities and by the people who may be concerned by the project in question;

…

… the effects of a project on the environment must be assessed in order to take account of concerns to protect human health, to contribute by means of a better environment to the quality of life, to ensure maintenance of the diversity of species and to maintain the reproductive capacity of the ecosystem as a basic resource for life’.

4 Article 1 of Directive 85/337 states:

‘1. This Directive shall apply to the assessment of the environmental effects of those public and private projects which are likely to have significant effects on the environment.

2. For the purposes of this Directive:

"project" means:

– the execution of construction works or of other installations or schemes,

– other interventions in the natural surroundings and landscape including those involving the extraction of mineral resources;

…'

5 Article 2(1) of Directive 85/337 provides:

'Member States shall adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment by virtue, inter alia, of their nature, size or location are made subject to a requirement for development consent and an assessment with regard to their effects. These projects are defined in Article 4.'

6 Article 3 of Directive 85/337 states:

'The environmental impact assessment shall identify, describe and assess in an appropriate manner, in the light of each individual case and in accordance with Articles 4 to 11, the direct and indirect effects of a project on the following factors:

– human beings, fauna and flora;

– soil, water, air, climate and the landscape;

– material assets and the cultural heritage;

– the interaction between the factors mentioned in the first, second and third indents.'

7 Under Article 4, paragraphs 1 to 3, of Directive 85/337:

'1. Subject to Article 2(3), projects listed in Annex I shall be made subject to an assessment in accordance with Articles 5 to 10.

2. Subject to Article 2(3), for projects listed in Annex II, the Member States shall determine through:

(a) a case-by-case examination,

or

(b) thresholds or criteria set by the Member State,

whether the project shall be made subject to an assessment in accordance with Articles 5 to 10.

Member States may decide to apply both procedures referred to in (a) and (b).

3. When a case-by-case examination is carried out or thresholds or criteria are set for the purpose of paragraph 2, the relevant selection criteria set out in Annex III shall be taken into account.'

8 Article 5(1) and (3) of the Directive provides:

'1. In the case of projects which, pursuant to Article 4, must be subjected to an environmental impact assessment in accordance with Articles 5 to 10, Member States shall adopt the necessary measures to ensure that the developer supplies in an appropriate form the information specified in Annex IV …

3. The information to be provided by the developer in accordance with paragraph 1 shall include at least:

…

– the data required to identify and assess the main effects which the project is likely to have on the environment,

…'

9 Among the projects referred to in Article 4(1) of Directive 85/337 are, according to Annex I, paragraphs 7(a) and 22, the '[c]onstruction of lines for long-distance railway traffic and of airports with a basic runway length of 2 100 m or more' and '[a]ny change to or extension of projects listed in this Annex where such a change or extension in itself meets the thresholds, if any, set out in this Annex.'

10 The first indent of paragraph 13 of Annex II to Directive 85/337 includes, among the projects referred to in Article 4(2) of that directive, '[a]ny change or extension of projects listed in Annex I …, already authorised, executed or in the process of being executed, which may have significant adverse effects on the environment (change or extension not included in Annex I)'.

11 Annex IV to the directive, entitled 'Information referred to in Article 5(1)' states, in paragraphs 3 to 5:

'3. A description of the aspects of the environment likely to be significantly affected by the proposed project, including, in particular,

population, fauna, flora, soil, water, air, climatic factors, material assets, including the architectural and archaeological heritage, landscape and the inter-relationship between the above factors.

4. A description … of the likely significant effects of the proposed project on the environment resulting from:

   – the existence of the project,

   – the use of natural resources,

   – the emission of pollutants, the creation of nuisances and the elimination of waste,

   and the description by the developer of the forecasting methods used to assess the effects on the environment.

5. A description of the measures envisaged to prevent, reduce and, where possible, offset any significant adverse effects on the environment.'

Austrian law

12 Directive 85/337 was transposed into Austrian law by the Law of 1993 on the environmental impact assessment (Umweltverträglichkeitsprüfungsgesetz 1993; 'UVP-G 1993'), which was in force from 1 July 1994 until the entry into force, on 11 August 2000, of the Law of 2000 on the environmental impact assessment (Umweltverträglichkeitsprüfungsgesetz 2000), which was designed to transpose Directive 97/11.

The dispute in the main proceedings and the questions referred for a preliminary ruling

13 Since 1997, Ms Leth, the applicant in the main proceedings, has been the owner of a property situated within the security zone of Vienna-Schwechat airport. She lives in the house built on that property.

14 Since the accession of the Republic of Austria to the European Union, on 1 January 1995, the authorities of the defendants in the main proceedings have, without carrying out environmental impact assessments, consented to and completed several projects relating to the development and extension of Vienna-Schwechat airport. By decision of 21 August 2001, the Minister-President of *Land* Niederösterreich expressly stated that no environmental impact assessment procedure was necessary in relation to the continued development and certain extensions of that airport.

15 In 2009, Ms Leth brought an action before the Landesgericht für Zivilrechtssachen Wien (Regional Civil Court, Vienna) against the two defendants in the main proceedings, in which she sought payment by them of EUR 120 000 in respect of the decrease in the value of her property, in particular as a result of aircraft noise, and a declaration that the defendants will be liable for any future damage, including damage to her health, arising from the late and incomplete transposition of Directive 85/337, Directive 97/11, and Directive 2003/35, and from the failure to carry out an environmental impact assessment before giving the various consents relating to the development of Vienna-Schwechat airport. The defendants in the main proceedings have contended that their authorities acted lawfully and without negligence, and that the claim brought is time-barred.

16 The Landesgericht für Zivilrechtssachen Wien dismissed the action in its entirety on the ground that the rights relied upon were time-barred. By way of a part-judgment on the appeal, the Oberlandesgericht Wien (Higher Regional Court, Vienna) confirmed the dismissal of the claim for payment of EUR 120 000, but set aside the dismissal of the claim in relation to the application for a declaration that the defendants in the main proceedings would be liable for future damage, referring the case back to the first-instance court in order for it to rule afresh on that latter application. In that respect, the Oberlandesgericht Wien found that the claim for payment of EUR 120 000 related only to purely pecuniary damage, which did not come within the objective of protection pursued by the provisions of European Union law, in particular those of the relevant directives, and by national law. As regards the application for a declaration of liability in respect of future damage, that court found that that application was not time-barred. Subsequently, an appeal on a point of law (‘Revision’) against the dismissal of the claim for that payment and an appeal against the referral back of the application for a declaration of liability were brought before the referring court.

17 The referring court takes the view that the decision on those claims, which are in any event not time-barred in their entirety, depends on whether the duty of the competent authorities of the Member State concerned to carry out an environmental impact assessment, laid down in both European Union law and national law, is liable to protect the individuals concerned against purely pecuniary damage caused by a project in respect of which such an assessment has not been carried out.

18 It is in that context that the Oberster Gerichtshof (Supreme Court, Austria) decided to stay the proceedings and to refer the following questions to the Court of Justice for a preliminary ruling:

‘Is Article 3 of Directive 85/337 …, as amended by Directive 97/11 … and by Directive 2003/35 …, to be interpreted as meaning that:

1. the term ‘material assets’ covers only their substance or also their value;

2. the environmental impact assessment serves also to protect an individual against pecuniary damage as a result of a decrease in the value of his property?’

Procedure before the Court

19 By letter of 21 December 2012, the applicant in the main proceedings requested the reopening of the oral procedure, claiming, first, that, in examining – in her Opinion delivered on 8 November 2012 – the issue of whether the environmental impact assessment under Article 3 of Directive 85/337 includes the assessment of the effects of the project under examination on the value of material assets, the Advocate General introduced a new question which had not been posed by the referring court and which had not been the subject of an exchange of views between the interested persons referred to in Article 23 of the Statute of the Court of Justice of the European Union, and, as a consequence, the first question as posed by the referring court was not answered. Secondly, she claims that those interested persons did not have the opportunity to exchange views on the consequences to be drawn from the fact that the public concerned was not informed of the projects at issue and could not, therefore, participate in the decision-making process.

20 In that respect, it must be pointed out that, under Article 83 of its Rules of Procedure, the Court may at any time, after hearing the Advocate General, order the reopening of the oral part of the procedure, in particular if it considers that it lacks sufficient information or where the case has to be decided on the basis of an argument which has not been debated between the parties or the interested persons referred to in Article 23 of the Statute.

21 In the present case, the Court considers that the request for a preliminary ruling does not need to be examined on the basis of an argument that has not yet been debated before it and that it has all the information necessary to deal with the request for a preliminary ruling.

22 The request by the applicant in the main proceedings that a new hearing be held and her alternative application for leave to submit additional written observations must therefore be dismissed.

The questions referred to the Court

23 By its questions, the referring court asks, in essence, whether Article 3 of Directive 85/337 must be interpreted as meaning, first, that the environmental

impact assessment, as provided for in that article, includes the assessment of the effects of the project under examination on the value of material assets and, secondly, that the fact that an environmental impact assessment has not been carried out, in breach of Directive 85/337, confers on an individual a right to compensation for pecuniary damage caused by a decrease in the value of his property resulting from the environmental effects of the project under examination.

24 As regards the term ‘material assets’ within the meaning of Article 3 of Directive 85/337, it must be recalled that, according to settled case-law, it follows from the need for a uniform application of European Union law that the terms of a provision of European Union law which makes no express reference to the law of the Member States for the purpose of determining its meaning and scope must normally be given an independent and uniform interpretation throughout the European Union, having regard to the context of the provision and the objective pursued by the legislation in question (see Case C-287/98 *Linster* [2000] ECR I-6917, paragraph 43, and Case C-497/10 PPU *Mercredi* [2010] ECR I-14309, paragraph 45).

25 Pursuant to Article 3 of Directive 85/337, it is necessary to examine the direct and indirect effects of a project on, inter alia, human beings and material assets and, in accordance with the fourth indent of that article, it is also necessary to examine such effects on the interaction between those two factors. Therefore, it is necessary to examine, in particular, the effects of a project on the use of material assets by human beings.

26 It follows that, in the assessment of projects such as those at issue in the main proceedings, which are liable to result in increased aircraft noise, it is necessary to assess the effects of the latter on the use of buildings by human beings.

27 However, as has correctly been pointed out by *Land* Niederösterreich and by several of the governments which have submitted observations to the Court, an extension of the environmental assessment to the pecuniary value of material assets cannot be inferred from the wording of Article 3 of Directive 85/337 and would also not be in accordance with the purpose of that directive.

28 It follows from Article 1(1) of, and from the first, third, fifth and sixth recitals in the preamble to, Directive 85/337 that the purpose of that directive is an assessment of the effects of public and private projects on the environment in order to attain one of the Community’s objectives in the sphere of the protection of the environment and the quality of life. The information which must be supplied by the developer in accordance with Article 5(1) of, and Annex IV to, Directive 85/337, as well as the criteria which enable Member States to determine whether small-scale projects,

meeting the characteristics laid down in Annex III to that directive, require a environmental assessment, also relate to that purpose.

29 Consequently, it is necessary to take into account only those effects on material assets which, by their very nature, are also likely to have an impact on the environment. Accordingly, pursuant to Article 3 of that directive, an environmental impact assessment carried out in accordance with that article is one which identifies, describes and assesses the direct and indirect effects of noise on human beings in the event of use of a property affected by a project such as that at issue in the main proceedings.

30 It must therefore be held that the environmental impact assessment, as provided for in Article 3 of Directive 85/337, does not include the assessment of the effects which the project under examination has on the value of material assets.

31 That finding, however, does not necessarily imply that Article 3 of Directive 85/337 must be interpreted as meaning that the fact that an environmental impact assessment has not been carried out, contrary to the requirements of that directive, in particular an assessment of the effects on one or more of the factors set out in that provision other than that of material assets, does not entitle an individual to any compensation for pecuniary damage which is attributable to a decrease in the value of his material assets.

32 It must be recalled, from the outset, that the Court has already ruled that an individual may, where appropriate, rely on the duty to carry out an environmental impact assessment under Article 2(1) of Directive 85/337, read in conjunction with Articles 1(2) and 4 thereof (see Case C-201/02 *Wells* [2004] ECR I-723, paragraph 61). That directive thus confers on the individuals concerned a right to have the environmental effects of the project under examination assessed by the competent services and to be consulted in that respect.

33 Accordingly, it is necessary to examine whether Article 3 of Directive 85/337, read in conjunction with Article 2 thereof, is intended, in the event of an omission to carry out an environmental impact assessment, to confer on individuals a right to compensation for pecuniary damage such as that invoked by Ms Leth.

34 In that respect, it follows from the third and eleventh recitals in the preamble to Directive 85/337 that the purpose of that directive is to achieve one of the European Union’s objectives in the sphere of the protection of the environment and the quality of life and that the effects of a project on the environment must be assessed in order to take account of the concerns to contribute by means of a better environment to the quality of life.

35 In circumstances where exposure to noise resulting from a project covered by Article 4 of Directive 85/337 has significant effects on individuals, in the sense that a home affected by that noise is rendered less capable of fulfilling its function and the individuals' environment, quality of life and, potentially, health are affected, a decrease in the pecuniary value of that house may indeed be a direct economic consequence of such effects on the environment, this being a matter which must be examined on a case-by-case basis.

36 It must therefore be concluded that the prevention of pecuniary damage, in so far as that damage is the direct economic consequence of the environmental effects of a public or private project, is covered by the objective of protection pursued by Directive 85/337. As such economic damage is a direct consequence of such effects, it must be distinguished from economic damage which does not have its direct source in the environmental effects and which, therefore, is not covered by the objective of protection pursued by that directive, such as, inter alia, certain competitive disadvantages.

37 As regards a right to compensation for such pecuniary damage, it follows from the Court's settled case-law that, under the principle of sincere cooperation laid down in Article 4(3) TEU, Member States are required to nullify the unlawful consequences of a breach of European Union law. In that regard, the Court has already held that, in order to remedy the failure to carry out an environmental impact assessment of a project within the meaning of Article 2(1) of Directive 85/337, it is for the national court to determine whether it is possible under national law for a consent already granted to be revoked or suspended in order to subject the project in question to an assessment of its environmental impacts, in accordance with the requirements of Directive 85/337, or alternatively, if the individual so agrees, whether it is possible for the latter to claim compensation for the harm suffered (see *Wells*, paragraphs 66 to 69).

38 The detailed procedural rules that are applicable are a matter for the domestic legal order of each Member State, under the principle of procedural autonomy of the Member States, provided that they are not less favourable than those governing similar domestic situations (principle of equivalence) and that they do not render impossible in practice or excessively difficult the exercise of rights conferred by the European Union legal order (principle of effectiveness) (see *Wells*, paragraph 67).

39 Thus, it is on the basis of the rules of national law on liability that the Member State must make reparation for the consequences of the loss or damage caused, provided that the conditions for reparation of that loss or damage laid down by national law ensure compliance with the principles of equivalence and effectiveness recalled in the previous paragraph (see Joined

Cases C-46/93 and C-48/93 *Brasserie du Pêcheur and Factortame* [1996] ECR I-1029, paragraph 67).

40 It must, however, be pointed out that European Union law confers on individuals, under certain conditions, a right to compensation for damage caused by breaches of European Union law. According to the Court's settled case-law, the principle of State liability for loss or damage caused to individuals as a result of breaches of European Union law for which the State can be held responsible is inherent in the system of the treaties on which the European Union is based (see Case C-429/09 *Fuß* [2010] ECR I-12167, paragraph 45 and the case-law cited).

41 In that respect, the Court has repeatedly held that individuals who have been harmed have a right to reparation if three conditions are met: the rule of European Union law infringed must be intended to confer rights on them; the breach of that rule must be sufficiently serious; and there must be a direct causal link between that breach and the loss or damage sustained by the individuals (see, *Fuß*, paragraph 47, and Case C-568/08 *Combinatie Spijker Infrabouw-De Jonge Konstruktie and Others* [2010] ECR I-12655, paragraph 87 and the case-law cited).

42 Those three conditions are necessary and sufficient to found a right in individuals to obtain redress on the basis of European Union law directly, although this does not mean that the Member State concerned cannot incur liability under less strict conditions on the basis of national law (see *Brasserie du Pêcheur and Factortame*, paragraph 66).

43 It is, in principle, for the national courts to apply the criteria, directly on the basis of European Union law, for establishing the liability of Member States for damage caused to individuals by breaches of European Union law, in accordance with the guidelines laid down by the Court for the application of those criteria (see Case C-446/04 *Test Claimants in the FII Group Litigation* [2006] ECR I-11753, paragraph 210 and the case-law cited).

44 In that regard, it has already been established, in paragraphs 32 and 36 of the present judgment, that Directive 85/337 confers on the individuals concerned a right to have the effects on the environment of the project under examination assessed by the competent services, and that pecuniary damage, in so far as it is a direct economic consequence of the environmental effects of a public or private project, is covered by the objective of protection pursued by Directive 85/337.

45 However, as indicated in paragraph 41 of the present judgment, the existence of a direct causal link between the breach in question and the damage sustained by the individuals is, in addition to the determination that

the breach of European Union law is sufficiently serious, an indispensable condition governing the right to compensation. The existence of that direct causal link is also a matter for the national courts to ascertain, in accordance with the guidelines laid down by the Court.

46 To that end, the nature of the rule breached must be taken into account. In the present case, that rule prescribes an assessment of the environmental impact of a public or private project, but does not lay down the substantive rules in relation to the balancing of the environmental effects with other factors or prohibit the completion of projects which are liable to have negative effects on the environment. Those characteristics suggest that the breach of Article 3 of Directive 85/337, that is to say, in the present case, the failure to carry out the assessment prescribed by that article, does not, in principle, by itself constitute the reason for the decrease in the value of a property.

47 Consequently, it appears that, in accordance with European Union law, the fact that an environmental impact assessment was not carried out, in breach of the requirements of Directive 85/337, does not, in principle, by itself confer on an individual a right to compensation for purely pecuniary damage caused by the decrease in the value of his property as a result of environmental effects. However, it is ultimately for the national court, which alone has jurisdiction to assess the facts of the dispute before it, to determine whether the requirements of European Union law applicable to the right to compensation, in particular the existence of a direct causal link between the breach alleged and the damage sustained, have been satisfied.

48 The answer to the questions referred is therefore that Article 3 of Directive 85/337 must be interpreted as meaning that the environmental impact assessment, as provided for in that article, does not include the assessment of the effects which the project under examination has on the value of material assets. However, pecuniary damage, in so far as it is the direct economic consequence of the effects on the environment of a public or private project, is covered by the objective of protection pursued by Directive 85/337. The fact that an environmental impact assessment has not been carried out, in breach of the requirements of that directive, does not, in principle, by itself, according to European Union law, and without prejudice to rules of national law which are less restrictive as regards State liability, confer on an individual a right to compensation for purely pecuniary damage caused by the decrease in the value of his property as a result of the environmental effects of that project. However, it is for the national court to determine whether the requirements of European Union law applicable to the right to compensation, including the existence of a direct causal link between the breach alleged and the damage sustained, have been satisfied.

Costs

49 Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the national court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Fourth Chamber) hereby rules:

Article 3 of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment, as amended by Council Directive 97/11/EC of 3 March 1997 and by Directive 2003/35/EC of the European Parliament and of the Council of 26 May 2003, must be interpreted as meaning that the environmental impact assessment, as provided for in that article, does not include the assessment of the effects which the project under examination has on the value of material assets. However, pecuniary damage, in so far as it is the direct economic consequence of the effects on the environment of a public or private project, is covered by the objective of protection pursued by Directive 85/337.

The fact that an environmental impact assessment has not been carried out, in breach of the requirements of that directive, does not, in principle, by itself, according to European Union law, and without prejudice to rules of national law which are less restrictive as regards State liability, confer on an individual a right to compensation for purely pecuniary damage caused by the decrease in the value of his property as a result of the environmental effects of that project. However, it is for the national court to determine whether the requirements of European Union law applicable to the right to compensation, including the existence of a direct causal link between the breach alleged and the damage sustained, have been satisfied.

JUDGMENT OF THE COURT (Fifth Chamber)

21 March 2013 (*)

(Assessment of the effects of certain projects on the environment – Directive 85/337/EEC– Articles 2(1) and 4(2) – Projects listed in Annex II – Extension works to the infrastructure of an airport – Examination on the basis of thresholds or criteria – Article 4(3) – Selection criteria – Annex III, point 2(g) – Densely populated areas)

In Case C-244/12,

REQUEST for a preliminary ruling under Article 267 TFEU, from the Verwaltungsgerichtshof (Austria), made by decision of 19 April 2012, received at the Court on 21 May 2012, in the proceedings

Salzburger Flughafen GmbH

v

Umweltsenat,

intervening parties:

Landesumweltanwaltschaft Salzburg,

Bundesministerin für Verkehr, Innovation und Technologie,

THE COURT (Fifth Chamber),

composed of T. von Danwitz, President of the Chamber, A. Rosas, E. Juhász (Rapporteur), D. Šváby and C. Vajda, Judges,

Advocate General: N. Wahl,

Registrar: A. Calot Escobar,

having regard to the written procedure,

after considering the observations submitted on behalf of:

– Salzburger Flughafen GmbH, by G. Lebitsch, Rechtsanwalt,

– Landesumweltanwaltschaft Salzburg, by W. Wiener, Landesumweltanwalt,

– the Austrian Government, by C. Pesendorfer, acting as Agent,

– the European Commission, by P. Oliver and D. Düsterhaus, acting as Agents,

having decided, after hearing the Advocate General, to proceed to judgment without an Opinion,

gives the following

Judgment

1 This request for a preliminary ruling concerns the interpretation of the relevant provisions of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment (OJ 1985 L 175, p. 40), as amended by Council Directive 97/11/EC of 3 March 1997 (OJ 1997 L 73, p. 5) ('Directive 85/337').

2 The request has been made in proceedings between Salzburger Flughafen GmbH ('Salzburger Flughafen') and the Umweltsenat (Administrative Chamber for Environmental Matters) concerning the obligation to subject certain projects which expand the infrastructure of the airport of Salzburg (Austria) to an environmental impact assessment.

Legal context

European Union law

3 Article 1 of Directive 85/337 provides:

'1. This Directive shall apply to the assessment of the environmental effects of those public and private projects which are likely to have significant effects on the environment.

2. For the purposes of this Directive:

"project" means:

– the execution of construction works or of other installations or schemes,

– other interventions in the natural surroundings and landscape including those involving the extraction of mineral resources;

…'

4 Article 2(1) of that directive provides:

‘Member States shall adopt all measures necessary to ensure that, before consent is given, projects likely to have significant effects on the environment by virtue, inter alia, of their nature, size or location are made subject to a requirement for development consent and an assessment with regard to their effects. These projects are defined in Article 4.’

5 Under Article 3 of that directive:

‘The environmental impact assessment will identify, describe and assess in an appropriate manner, in the light of each individual case and in accordance with the Articles 4 to 11, the direct and indirect effects of a project on the following factors:

– human beings, fauna and flora,

– soil, water, air, climate and the landscape,

– material assets and the cultural heritage,

– the interaction between the factors mentioned in the first, second and third indents.’

6 Article 4 of that directive is drafted as follows:

‘1. Subject to Article 2(3), projects listed in Annex I shall be made subject to an assessment in accordance with Articles 5 to 10.

2. Subject to Article 2(3), for projects listed in Annex II, the Member States shall determine through:

(a) a case-by-case examination,

or

(b) thresholds or criteria set by the Member State

whether the project shall be made subject to an assessment in accordance with Articles 5 to 10.

Member States may decide to apply both procedures referred to in (a) and (b).

3. When a case-by-case examination is carried out or thresholds or criteria are set for the purpose of paragraph 2, the relevant selection criteria set out in Annex III shall be taken into account.

…’

7 Annex I to Directive 85/337 lists the projects referred to in Article 4(1) of the directive, which must undergo a compulsory environmental assessment. Point 7(a) of Annex I to the directive refers to the '[c]onstruction … of airports … with a basic runway length of 2 100 m or more'.

8 Annex II to that directive lists the projects referred to in Article 4(2) thereof, in respect of which the Member States retain their discretion, in accordance with the conditions laid down in that article, as regards carrying out an environmental assessment. Point 10(d) of that annex concerns the '[c]onstruction of airfields (projects not included in Annex I)' and the first indent of point 13 of that annex refers to '[a]ny change or extension of projects listed in Annex I or Annex II, already authorised, executed or in the process of being executed, which may have significant adverse effects on the environment'.

9 Annex III to Directive 85/337, which refers to the selection criteria set out in Article 4(3) thereof, provides in point 2, entitled 'Location of projects':

'The environmental sensitivity of geographical areas likely to be affected by projects must be considered, having regard, in particular, to:

…

– the absorption capacity of the natural environment, paying particular attention to the following areas:

…

(g) densely populated areas;

…'

Austrian law

10 Directive 85/337 was transposed into Austrian law by the Environmental Impact Assessment Act 2000 (Umweltverträglichkeitsprüfungsgesetz 2000), in the version applicable to the facts in the main proceedings (BGBl. I, 50/2002; 'the UVPG 2000').

11 Articles 1, 3 and 3a of the UVPG 2000 contain provisions concerning the object and content of environmental impact assessments, the principle in accordance with which the projects listed in Annex I to that Law must be subject to such an assessment, the procedure and the conditions to be followed in that regard and the persons or entities authorised to request an assessment.

12 Thus, the projects which require an assessment are listed in Annex I to the UVPG 2000, in accordance with the principle stated in the provisions referred to above. Where there are changes to those projects, there must be an examination on a case-by-case basis above a certain threshold, with a view to carrying out an assessment. Column 1 of that annex, in point 14(d), refers, in that regard, to the following projects:

'Modification of airports, if this is expected to increase the number of aircraft movements (motor aircrafts, power gliders in powered flight or helicopters) by 20,000 or more per year…'

13 Operation of a civilian airport and all modifications to the extent of the operation limited by the licence require a 'civil airport licence' in accordance with Paragraph 68(1) of the Aviation Law (Luftfahrtgesetz) and an 'operating licence' under Paragraph 73(1) of that Law. In addition, the construction, use and substantial modification of civilian ground installations require a licence in accordance with Paragraph 78(1) of that Law.

The dispute in the main proceedings and the questions referred for a preliminary ruling

14 Salzburger Flughafen operates Salzburg Airport, which has a runway of over 2 100 metres in length. On 30 July 2002, it applied for a permit to construct an additional terminal, which it justified on the ground that, in the light of the requirement to ensure full checks on hold luggage, the existing passenger handling facilities were no longer capable of handling peak volumes of passengers. By decision of 2 April 2003, the Landeshauptfrau von Salzburg (Head of Government of the Province of Salzburg), the competent administrative authority, issued the construction permit. The additional terminal was built in 2003/2004. It has been operational ever since.

15 In 2004, Salzburger Flughafen made further applications for expansion of the airport. They concerned, firstly, an area of approximately 90 000 m2 in the south-western part of the present airport site for the construction of ancillary buildings, in particular warehouses, and the extension of vehicle parking areas and aircraft standing areas. Secondly, it applied to incorporate in that expansion further areas of almost 120 000 m2 to the north west of the airport primarily for general aviation, the construction of hangars and vehicle parking and aircraft standing areas. It also sought authorisation to alter taxiways. The application did not involve any changes to the runway itself.

16 The fact that the airport is sited in an urban area, with, in addition, a high level of air pollution, and the expected effects on the environment led the Landesumweltanwaltschaft Salzburg (Provincial Legal Office for the Environment), on 13 March 2006, to request the Amt der Salzburger

Landesregierung (Office of the Salzburg Federal Government; 'the Amt') to lay down a requirement for an environmental assessment covering both the additional terminal and the expansion works to the airport infrastructure. Since the Amt rejected that request, the Landesumweltanwaltschaft Salzburg appealed against that decision to the Umweltsenat (Environmental Tribunal).

17 In its decision, the Umweltsenat found that both the extension of the airport infrastructure already in existence, following the construction and putting into operation of the additional terminal, and the expansion proposed in the permit applications require an environmental impact assessment, in accordance with the relevant provisions of the UVPG 2000, read in conjunction with Directive 85/337.

18 To justify its decision, that authority noted that if, in the context of the dispute in the main proceedings, the national legislation does not require any environmental impact assessment, since the threshold established, namely an increase in the number of aircraft movements of at least 20 000 per year, is not exceeded, that legislation only imperfectly transposes Directive 85/337. The UVPG 2000 establishes too high a threshold, so that changes to the infrastructure of small or medium-sized airports ought never, in practice, to give rise to an environmental impact assessment. In addition, the Umweltsenat noted that the national legislation at issue does not list sites requiring specific protection, whereas Directive 85/337 requires, under Annex III(2)(g) thereto, that special attention be paid to densely populated areas. The airport under consideration is near to the city of Salzburg.

19 The Umweltsenat therefore took the view that it was necessary to apply Directive 85/337 directly, because of the fact that the changes to the airport infrastructure can be regarded, in particular by reason of their nature, size and characteristics, as a modification of the airport itself, likely to increase its activity and aircraft traffic.

20 An appeal has been brought against that decision by Salzburger Flughafen before the Verwaltungsgerichtshof (Supreme Administrative Court).

21 The referring court notes that, in accordance with the case-law of the Court following from Cases C-2/07 *Abraham and Others* [2008] ECR I-1197 and C-275/09 *Brussels Hoofdstedelijk Gewest and Others* [2011] ECR I-1753, the relevant provisions of Annex II to Directive 85/337, read in conjunction with those of Annex I thereto, also encompass works to change the infrastructure of an existing airport. Furthermore, in order to avoid misuse of the European Union rules by splitting projects which, taken together, are likely to have significant effects on the environment, it is necessary to take into account the cumulative effect of such projects which have an objective and chronological link between them. The Verwaltungsgerichtshof is therefore of

the opinion that the assessment of the environmental impact of the later project, namely the expansion of the airport area, must also take into account the impact of the earlier project, the construction of the additional terminal.

22 As regards the fact that the project at issue in the main proceedings, taken as a whole, appears to require an environmental impact assessment pursuant to the provisions of Directive 85/337 while the national legislation does not require such an assessment, the Verwaltungsgerichtshof observes that, in accordance with the case-law of the Court, the measure of discretion conferred on Member States by Article 4(2) of Directive 85/337 is limited by the obligation set out in Article 2(1) of the directive to make projects likely to have significant effects on the environment, by virtue, inter alia, of their nature, size or location, subject to an impact assessment. Thus, a Member State which establishes criteria or thresholds without taking into consideration the location of projects or which establishes them at a level which, in practice, means that all of a particular type of projects will be removed in advance from the obligation of carrying out an impact assessment exceeds the discretion which it has (*Abraham and Others*, paragraph 37; Case C-72/95 *Kraaijeveld and Others*[1996] ECR I-5403, paragraph 53 and Case C-435/97 *WWF and Others* [1999] ECR I-5613, paragraph 38).

23 As regards the monitoring of compliance with that discretion and the consequences if it is exceeded, the referring court points out that, in accordance with the case-law of the Court, where that discretion is exceeded by the legislative or administrative authorities of a Member State, individuals may rely on Articles 2(1) and 4(2) of Directive 85/337 before the courts of a Member State against the national authorities and thus obtain an order that the national rules or measures which are incompatible with those provisions be set aside. In such a case, it follows from the judgments in *Kraaijeveld and Others* (paragraphs 59 to 61) and *WWF and Others* (paragraph 5 of the operative part) that it is for the authorities of a Member State to adopt, according to their respective powers, to take all the general or particular measures necessary to ensure that projects are examined in order to determine whether they are likely to have significant effects on the environment and, if so, to ensure that they are subject to an impact assessment.

24 With regard to the direct effect of the relevant provisions of Directive 85/337, the referring court is of the opinion that, from the point of view of their content, those provisions are unconditional. As regards whether they are also sufficiently precise to be capable of direct application, it notes that the selection criteria laid down in Annex III to Directive 85/337 in any event state the limits of the discretion of the Member States under Article 4(2) of that directive. The rules at issue in the main proceedings do not take account of the criterion of location of the projects provided for in point 2(g) of Annex III to Directive 85/337. In addition, the threshold established in those rules

means that it is, in practice, highly unlikely that there would be an environmental assessment for medium-sized or small airports. Thus, according to the referring court, not only does the legislation at issue in the main proceedings fail fully to transpose Directive 85/337, but, in addition, it manifestly fails to take account of the clear and sufficiently precise criteria laid down in Annex III to that directive.

25 Having regard to those considerations and to the fact that it rules at final instance, the Verwaltungsgerichtshof decided to stay the proceedings and to refer the following questions to the Court of Justice for a preliminary ruling:

‘1. Does … Directive 85/337/EEC … preclude a national rule by which it is established that an environmental impact assessment for infrastructure works (not concerning the runway) at an airport, that is the construction of a terminal and the extension of the airport site to construct further facilities (in particular hangars, equipment buildings and parking areas), shall only be carried out if the annual number of aircraft movements is anticipated to increase by no less than 20 000?

In the event that Question 1 is answered in the affirmative:

2. In the absence of relevant national provisions, does Directive 85/337 require and allow for the direct application of its provisions to assess (taking due account of the objectives thereby pursued and the criteria set out in Annex III thereto) the environmental impact of a project – specified in Question 1 – which is covered by Annex II?’

Consideration of the questions referred

The first question

26 By its first question, the referring court asks, in essence, whether the provisions of Directive 85/337 preclude national legislation which makes projects which change the infrastructure of an airport and fall within the scope of Annex II to that directive subject to an environmental impact assessment only if those projects are likely to increase the number of aircraft movements by at least 20 000 per year.

27 In order to respond to that question, it is necessary to note that, as follows from the combined provisions of Article 4(2) of Directive 85/337 and the first indent of point 13 of Annex II thereto, any change or extension of projects listed in Annex I or Annex II, already authorised, executed or in the process of being executed, which may have significant adverse effects on the environment, the Member States must determine on the basis of a case-by-

case examination or of thresholds or criteria which they establish, whether such a project must be made subject to an environmental impact assessment.

28 In that regard, it must be borne in mind that, in accordance with the settled case-law of the Court, works to change the infrastructure of an existing airport, without extension of the runway, are likely to be covered by point 13 of Annex II to Directive 85/337, where they may be regarded, in particular because of their nature, extent and characteristics, as an alteration of the airport itself (see, to that effect, *Brussels Hoofdstedelijk Gewest*, paragraph 35 and the case-law cited).

29 As regards the establishment of thresholds or criteria to determine whether such a project must be made subject to an environmental impact assessment, it must be borne in mind that, indeed, Article 4(2)(b) of Directive 85/337 confers a measure of discretion on the Member States in that regard. However, that discretion is limited by the obligation set out in Article 2(1) of the directive to make projects likely, by virtue inter alia of their nature, size or location, to have significant effects on the environment subject to an impact assessment (see, to that effect, *WWF and Others*, paragraph 36 and the case-law cited).

30 Thus, the criteria and/or thresholds mentioned in Article 4(2)(b) of Directive 85/337 are designed to facilitate examination of the actual characteristics of any given project in order to determine whether it is subject to the requirement to carry out an assessment, and not to exempt in advance from that obligation certain whole classes of projects listed in Annex II to that directive which may be envisaged on the territory of a Member State (see, to that effect,*WWF and Others*, paragraph 37 and the case-law cited).

31 The Court has already held that a Member State which established criteria or thresholds at a level such that, in practice, an entire class of projects would be exempted in advance from the requirement of an impact assessment would exceed the limits of its discretion under Articles 2(1) and 4(2) of Directive 85/337 unless all projects excluded could, when viewed as a whole, be regarded as not being likely to have significant effects on the environment (see, to that effect, *WWF and Others*, paragraph 38 and the case-law cited).

32 Finally, it is apparent from Article 4(3) of Directive 85/337 that for the establishment of thresholds or criteria under Article 4(2)(b), regard must be had to the relevant selection criteria established in Annex III to the directive. Those criteria include the absorption capacity of the natural environment and, in that regard, particular attention must be paid to densely populated areas.

33 It must be noted that a threshold such as that at issue in the main proceedings is incompatible with the general obligation laid down in Article

2(1) of that directive for the purposes of correct identification of projects likely to have significant effects on the environment.

34 As the referring court points out, the establishment of such a high threshold means that changes to the infrastructure of small or medium-sized airports can never, in practice, give rise to an environmental impact assessment, despite the fact, as the observation from the European Commission pertinently states, it cannot be excluded that such works may have significant effects on the environment.

35 Furthermore, by establishing such a threshold in order to decide on the need for an environmental assessment of projects such as those at issue in the main proceedings, the national legislation concerned, despite the obligation placed on Member States by Article 4(3) of Directive 85/337, takes into consideration only the quantitative aspect of the consequences of a project, without taking account of the other selection criteria in Annex III to that directive, particularly that laid down in point 2(g) of that annex, namely the population density of the area affected by the project. It is not in dispute that the airport whose infrastructure is affected by the changes at issue in the main proceedings is located near to the city of Salzburg.

36 Moreover, the referring court observes that, in the circumstances of the main proceedings, with a view to deciding whether an environmental assessment must be carried out, it is necessary to take account of the effects on the environment of both the earlier project concerning the construction of the additional terminal and the later project concerning the expansion of the airport area.

37 In that regard, in accordance with the case-law of the Court, it can be necessary to take account of the cumulative effect of projects in order to avoid a circumvention of the objective of the European Union legislation by the splitting of projects which, taken together, are likely to have significant effects on the environment (see, to that effect, *Brussels Hoofdstedelijk Gewest and Others*, paragraph 36 and the case-law cited). It is for the referring court to examine, in the light of that case-law, whether and to what extent the effects on the environment of the projects referred to in paragraph 15 of this judgment and the projects already carried out during 2003 and 2004 must be assessed as a whole.

38 Consequently, the answer to the first question is that Articles 2(1) and 4(2)(b) and (3) of Directive 85/337 preclude national legislation which makes projects which change the infrastructure of an airport and fall within the scope of Annex II to that directive subject to an environmental impact assessment only if those projects are likely to increase the number of aircraft movements by at least 20 000 per year.

The second question

39 By its second question, the referring court asks, in essence, whether, when a Member State makes an incorrect transposition of Directive 85/337, that directive requires an environmental impact assessment of projects such as those at issue in the main proceedings, which fall within the scope of Annex II thereto.

40 The question referred must be understood as asking whether, when a Member State, pursuant to Article 4(2)(b) of Directive 85/337, with regard to projects falling within the scope of Annex II thereto, establishes a threshold which is incompatible with the obligations laid down in Articles 2(1) and 4(3) of that directive, the provisions of Articles 2(1) and 4(2)(a) and (3) of the directive have direct effect, which means that the competent national authorities must ensure that it is first examined whether the projects concerned are likely to have significant effects on the environment and, if so, that an assessment of those effects is then undertaken.

41 In accordance with the case-law of the Court, if the discretion conferred on Member States by Article 4(2) of Directive 85/337, read in conjunction with Article 2(1) thereof has been exceeded, it is for the authorities of the Member State to take, according to their relevant powers, all the general or particular measures necessary to ensure that projects are examined in order to determine whether they are likely to have significant effects on the environment and, if so, to ensure that they are subject to an impact assessment (see, to that effect,*Kraaijeveld and Others*, paragraph 61, and *WWF and Others*, paragraphs 70 and 71).

42 The same conclusion applies to a situation such as that of the main proceedings, equivalent from the point of view of its effects to that described in the preceding paragraph of this judgment, in which the threshold established by the national legislation results in an incorrect transposition of Article 4(2)(b), read in conjunction with Articles 2(1) and 4(3) of Directive 85/337.

43 Consequently, in a situation such as that of the main proceedings, as the Commission rightly points out, when a Member State, on the basis of Article 4(2)(b) of Directive 85/337, has established a threshold which is likely to exempt in advance entire classes of projects from an environmental assessment, the national authorities are obliged to ensure, in accordance with Article 2(1) and Article 4(2)(a) and (3) of that directive, that it is determined, in each individual case, whether such an assessment must be undertaken and if so, to undertake that assessment.

44 However, the Austrian Government and Salzburger Flughafen dispute that conclusion, referring to Case C-201/02 *Wells* [2004] ECR I-723, in accordance with which the principle of legal certainty preludes an individual from relying on a directive against a Member State where it is a matter of a State obligation directly linked to the performance of another obligation falling, pursuant to that directive, on a third party.

45 That objection cannot be accepted.

46 In the case which gave rise to the *Wells* judgment, the Court held, firstly, that it had to be recognised that it is possible for an individual to rely on the provisions of Directive 85/337 and, secondly, that the owners of the land at issue had to bear the consequences of the belated performance of the obligations of the Member State concerned which follow from that directive.

47 Thus, in the main proceedings, in the event that a decision finds that an environmental study is necessary, Salzburger Flughafen, as the user of the land in question, must also bear the consequences of such a decision.

48 Accordingly, the answer to the second question is that, when a Member State, pursuant to Article 4(2)(b) of Directive 85/337, with regard to projects falling within the scope of Annex II thereto, establishes a threshold which is incompatible with the obligations laid down in Articles 2(1) and 4(3) of that directive, the provisions of Articles 2(1) and 4(2)(a) and (3) of the directive have direct effect, which means that the competent national authorities must ensure that it is first examined whether the projects concerned are likely to have significant effects on the environment and, if so, that an assessment of those effects is then undertaken.

Costs

49 Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the referring court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Fifth Chamber) hereby rules:

1. **Articles 2(1) and 4(2)(b) and (3) of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment, as amended by Council Directive 97/11/EC of 3 March 1997, preclude national legislation which makes projects which change the infrastructure of an airport and fall within the scope of Annex II to that directive subject to an**

environmental impact assessment only if those projects are likely to increase the number of aircraft movements by at least 20 000 per year;

2. **When a Member State, pursuant to Article 4(2)(b) of Directive 85/337, as amended by Directive 97/11, with regard to projects falling within the scope of Annex II thereto, establishes a threshold which is incompatible with the obligations laid down in Articles 2(1) and 4(3) of that directive, the provisions of Articles 2(1) and 4(2)(a) and (3) of the directive have direct effect, which means that the competent national authorities must ensure that it is first examined whether the projects concerned are likely to have significant effects on the environment and, if so, that an assessment of those effects is then undertaken.**

AFFAIRE RELATIVE À DES USINES DE PÂTE À PAPIER SUR LE FLEUVE URUGUAY

(ARGENTINE c. URUGUAY)

Cadre juridique et faits de l'espèce.

Traité de Montevideo de 1961 — Statut du fleuve Uruguay de 1975 — Etablissement de la commission administrative du fleuve Uruguay (CARU) — Projet d'usine de pâte à papier CMB (ENCE) — Projet d'usine de pâte à papier Orion (Botnia) — Terminal portuaire de Nueva Palmira — Objet du différend.

*

Etendue de la compétence de la Cour.

Clause compromissoire (article 60 du statut de 1975) — Dispositions du statut de 1975 et compétence ratione materiae *— Incompétence de la Cour pour connaître d'allégations relatives à la pollution sonore et visuelle ou aux mauvaises odeurs (article 36 du statut de 1975) — Pollution atmosphérique et atteinte à la qualité des eaux du fleuve examinées dans le cadre des obligations de fond.*

Article premier du statut de 1975 — Définition du but du statut de 1975 — Mécanismes communs nécessaires à l'utilisation rationnelle et optimale du fleuve — Portée de la référence aux « droits et obligations découlant des traités et autres engagements internationaux en vigueur à l'égard de l'une ou l'autre des parties » — Texte original espagnol — Statut adopté par les parties dans le respect de leurs engagements internationaux respectifs.

Alinéa a) *de l'article 41 du statut de 1975 — Texte original espagnol — Absence de « clause de renvoi » ayant pour effet d'incorporer dans le champ d'application du statut les obligations des parties découlant des accords internationaux et autres normes qui y sont visées — Obligation des parties d'exercer leurs pouvoirs de réglementation en conformité avec les accords internationaux applicables aux fins de la protection et de la préservation du milieu aquatique du fleuve Uruguay — Règles d'interprétation du statut de 1975 — Article 31 de la convention*

INTERNATIONAL COURT OF JUSTICE

YEAR 2010

2010
20 April
General List
No. 135

20 April 2010

CASE CONCERNING PULP MILLS ON THE RIVER URUGUAY

(ARGENTINA *v.* URUGUAY)

Legal framework and facts of the case.
1961 Treaty of Montevideo — 1975 Statute of the River Uruguay — Establishment of the Administrative Commission of the River Uruguay (CARU) — CMB (ENCE) pulp mill project — Orion (Botnia) pulp mill project — Port terminal at Nueva Palmira — Subject of the dispute.

*

Scope of the Court's jurisdiction.
Compromissory clause (Article 60 of the 1975 Statute) — Provisions of the 1975 Statute and jurisdiction ratione materiae *— Lack of jurisdiction for the Court to consider allegations concerning noise and visual pollution or bad odours (Article 36 of the 1975 Statute) — Air pollution and impact on the quality of the waters of the river addressed under substantive obligations.*

Article 1 of the 1975 Statute — Definition of the purpose of the 1975 Statute — Joint machinery necessary for the optimum and rational utilization of the river — Significance of the reference to the "rights and obligations arising from treaties and other international agreements in force for each of the parties" — Original Spanish text — Statute adopted by the parties in observance of their respective international commitments.
Article 41 (a) *of the 1975 Statute — Original Spanish text — Absence of a "referral clause" having the effect of incorporating within the ambit of the Statute the obligations of the parties under international agreements and other norms envisaged in the Statute — Obligation for the parties to exercise their regulatory powers, in conformity with applicable international agreements, for the protection and preservation of the aquatic environment of the River Uruguay — Rules for interpreting the 1975 Statute — Article 31 of the Vienna*

de Vienne sur le droit des traités — Distinction entre la prise en considération d'autres règles internationales lors de l'interprétation du statut de 1975 et l'étendue de la compétence de la Cour en vertu de son article 60.

*

Violation alléguée des obligations de nature procédurale.

Question des liens entre les obligations de nature procédurale et les obligations de fond — Objet et but du statut de 1975 — Utilisation rationnelle et optimale du fleuve Uruguay — Développement durable — Coopération entre les parties pour la gestion commune des risques de dommages à l'environnement — Existence d'un lien fonctionnel, relatif à la prévention, entre les obligations de nature procédurale et les obligations de fond — Responsabilité en cas de violation des unes ou des autres.

Articulation des différentes obligations de nature procédurale prévues par les articles 7 à 12 du statut de 1975 — Texte original espagnol de l'article 7 — Obligation d'informer, de notifier et de négocier comme moyen approprié de parvenir à l'objectif d'utilisation rationnelle et optimale du fleuve en tant que ressource partagée — Personnalité juridique de la CARU — Rôle central de la CARU dans la gestion commune du fleuve et l'obligation de coopérer entre les parties.

Obligation d'informer la CARU (premier alinéa de l'article 7 du statut de 1975) — Ouvrages soumis à cette obligation — Lien entre l'obligation d'informer la CARU, la coopération entre les parties et l'obligation de prévention — Détermination sommaire par la CARU d'un risque de préjudice sensible à l'autre partie — Contenu de l'information devant être transmise à la CARU — Obligation d'informer la CARU avant la délivrance de l'autorisation environnementale préalable — L'information de la CARU par des opérateurs privés ne peut tenir lieu de l'obligation d'informer prévue par le statut de 1975 — Violation par l'Uruguay de l'obligation d'informer la CARU.

Obligation de notifier les projets à l'autre partie (deuxième et troisième alinéas de l'article 7 du statut de 1975) — Nécessité de disposer d'une évaluation de l'impact sur l'environnement (EIE) complète — Notification de l'EIE à l'autre partie par l'intermédiaire de la CARU avant toute décision relative à la viabilité environnementale du projet — Violation par l'Uruguay de l'obligation de notifier les projets à l'Argentine.

Question de l'éventuelle dérogation aux obligations de nature procédurale convenue entre les Parties — « Arrangement » du 2 mars 2004 — Contenu et portée — L'Uruguay ne s'y étant pas conformé, l'« arrangement » ne peut être considéré comme ayant eu pour effet de le dispenser du respect des obligations de nature procédurale — Accord créant le Groupe technique de haut niveau (GTAN) — Saisine de la Cour sur la base de l'article 12 ou de l'article 60 du statut de 1975 : distinction sans incidence — L'accord créant le GTAN a eu pour but de permettre aux négociations prévues à l'article 12 du statut de 1975 d'avoir lieu, mais il n'a pas dérogé à d'autres obligations de nature procédurale — En acceptant la création du GTAN, l'Argentine n'a renoncé ni aux droits de nature procédurale que lui reconnaît le statut, ni à invoquer la responsabilité de l'Uruguay ; l'Argentine n'a pas davantage consenti à suspendre l'application des dispositions procédurales du statut (article 57 de la convention de Vienne sur le droit des traités) — Obligation de négocier de bonne foi — Obligation de « non-construction » durant la période de négociation — Travaux préliminaires autorisés par l'Uruguay — Violation par l'Uruguay de l'obligation de négocier prévue à l'article 12 du statut de 1975.

Convention on the Law of Treaties — Distinction between taking account of other international rules in the interpretation of the 1975 Statute and the scope of the jurisdiction of the Court under Article 60 of the latter.

*

Alleged breach of procedural obligations.

Question of links between the procedural obligations and the substantive obligations — Object and purpose of the 1975 Statute — Optimum and rational utilization of the River Uruguay — Sustainable development — Co-operation between the parties in jointly managing the risks of damage to the environment — Existence of a functional link, in regard to prevention, between the procedural obligations and the substantive obligations — Responsibility in the event of breaches of either category.

Interrelation of the various procedural obligations laid down by Articles 7 to 12 of the 1975 Statute — Original Spanish text of Article 7 — Obligation to inform, notify and negotiate as an appropriate means of achieving the objective of optimum and rational utilization of the river as a shared resource — Legal personality of CARU — Central role of CARU in the joint management of the river and obligation of the parties to co-operate.

Obligation to inform CARU (Article 7, first paragraph, of the 1975 Statute) — Works subject to this obligation — Link between the obligation to inform CARU, co-operation between the parties and the obligation of prevention — Determination by CARU on a preliminary basis of whether there is a risk of significant damage to the other party — Content of the information to be transmitted to CARU — Obligation to inform CARU before issuing of the initial environmental authorization — Provision of information to CARU by private operators cannot substitute for the obligation to inform laid down by the 1975 Statute — Breach by Uruguay of the obligation to inform CARU.

Obligation to notify the plans to the other party (Article 7, second and third paragraphs, of the 1975 Statute) — Need for a full environmental impact assessment (EIA) — Notification of the EIA to the other party, through CARU, before any decision on the environmental viability of the plan — Breach by Uruguay of the obligation to notify the plans to Argentina.

Question of whether the Parties agreed to derogate from the procedural obligations — "Understanding" of 2 March 2004 — Content and scope — Since Uruguay did not comply with it, the "understanding" cannot be regarded as having had the effect of exempting Uruguay from compliance with the procedural obligations — Agreement setting up the High-Level Technical Group (GTAN) — Referral to the Court on the basis of Article 12 or Article 60 of the 1975 Statute: no practical distinction — The agreement to set up the GTAN had the aim of enabling the negotiations provided for in Article 12 of the 1975 Statute to take place, but did not derogate from other procedural obligations — In accepting the creation of the GTAN, Argentina did not give up the procedural rights belonging to it by virtue of the Statute, nor the possibility of invoking Uruguay's responsibility; nor did Argentina consent to suspending the operation of the procedural provisions of the Statute (Article 57 of the Vienna Convention on the Law of Treaties) — Obligation to negotiate in good faith — "No construction obligation" during the negotiation period — Preliminary work approved by Uruguay — Breach by Uruguay of the obligation to negotiate laid down by Article 12 of the 1975 Statute.

Obligations de l'Uruguay après l'expiration de la période de négociation — Portée de l'article 12 du statut de 1975 — Absence d'obligation de « non-construction » après l'expiration de la période de négociation et pendant la phase de règlement judiciaire.

*

Violations alléguées des obligations de fond.

Charge de la preuve — Approche de précaution et absence de renversement de la charge de la preuve — Preuve par expertise — Rapports établis à la demande des Parties — Indépendance des experts — Appréciation des faits par la Cour — Experts intervenus à l'audience en qualité de conseils — Question des témoins, experts et témoins-experts.

Utilisation rationnelle et optimale du fleuve Uruguay — Définissant le but du statut de 1975, l'article premier ne crée pas de droits ou obligations spécifiques — Obligation de se conformer aux obligations prescrites par le statut aux fins de la protection de l'environnement et de la gestion conjointe du fleuve — Fonction réglementaire de la CARU — Lien étroit entre l'utilisation équitable et raisonnable du fleuve comme ressource partagée et la nécessité, qui est au cœur du développement durable, de concilier le développement économique et la protection de l'environnement (article 27 du statut de 1975).

Obligation de veiller à ce que la gestion du sol et des forêts ne cause pas un préjudice au régime du fleuve ou à la qualité de ses eaux (article 35 du statut de 1975) — Allégations de l'Argentine non établies.

Obligation de coordonner les mesures propres à éviter une modification de l'équilibre écologique (article 36 du statut de 1975) — Exigence d'une action individuelle de chaque partie et d'une action concertée par l'intermédiaire de la CARU — Obligation de diligence requise (« due diligence ») — L'Argentine n'a pas démontré de manière convaincante que l'Uruguay a refusé de prendre part aux efforts de coordination prévus par l'article 36 du statut de 1975.

Obligation d'empêcher la pollution et de préserver le milieu aquatique — Contenu normatif de l'article 41 du statut de 1975 — Obligation pour chaque partie d'adopter des normes et mesures destinées à protéger et préserver le milieu aquatique et, en particulier, à empêcher la pollution — Les normes et mesures adoptées par chaque partie doivent être conformes aux accords internationaux applicables et, le cas échéant, en harmonie avec les directives et recommandations des organismes techniques internationaux — Obligation de diligence requise (« due diligence ») d'adopter des normes et mesures et de les mettre en œuvre — Définition de la pollution selon l'article 40 du statut de 1975 — Activité réglementaire de la CARU (article 56 du statut de 1975), complémentaire à celle de chaque partie — Digeste de la CARU — Règles à l'aune desquelles l'existence d'effets nocifs doit s'apprécier : statut de 1975, digeste de la CARU, droit interne de chacune des parties dans la mesure exigée par le statut de 1975.

Evaluation de l'impact sur l'environnement (EIE) — Obligation de procéder à une EIE — Portée et contenu de l'EIE — Renvoi au droit interne — Question du choix du site des usines comme élément de l'EIE — La Cour n'est pas convaincue par l'argument de l'Argentine selon lequel une évaluation des différents sites possibles n'a pas eu lieu — Capacité de réception des eaux du fleuve à Fray Bentos et inversions de courant — Les normes de la CARU relatives à la qualité des eaux tiennent compte des caractéristiques géomorphologiques et

Obligations of Uruguay following the end of the negotiation period — Scope of Article 12 of the 1975 Statute — Absence of a "no construction obligation" following the end of the negotiation period and during the judicial settlement phase.

*

Alleged breaches of substantive obligations.

Burden of proof — Precautionary approach without reversal of the burden of proof — Expert evidence — Reports commissioned by the Parties — Independence of experts — Consideration of the facts by the Court — Experts appearing as counsel at the hearings — Question of witnesses, experts and expert witnesses.

Optimum and rational utilization of the River Uruguay — Article 1 of the 1975 Statute sets out the purpose of the instrument and does not lay down specific rights and obligations — Obligation to comply with the obligations prescribed by the Statute for the protection of the environment and the joint management of the river — Regulatory function of CARU — Interconnectedness between equitable and reasonable utilization of the river as a shared resource and the balance between economic development and environmental protection that is the essence of sustainable development (Article 27 of the 1975 Statute).

Obligation to ensure that the management of the soil and woodland does not impair the régime of the river or the quality of its waters (Article 35 of the 1975 Statute) — Contentions of Argentina not established.

Obligation to co-ordinate measures to avoid changes to the ecological balance (Article 36 of the 1975 Statute) — Requirement of individual action by each party and co-ordination through CARU — Obligation of due diligence — Argentina has not convincingly demonstrated that Uruguay has refused to engage in the co-ordination envisaged by Article 36 of the 1975 Statute.

Obligation to prevent pollution and preserve the aquatic environment — Normative content of Article 41 of the 1975 Statute — Obligation for each party to adopt rules and measures to protect and preserve the aquatic environment and, in particular, to prevent pollution — The rules and measures prescribed by each party must be in accordance with applicable international agreements and in keeping, where relevant, with the guidelines and recommendations of international technical bodies — Due diligence obligation to prescribe rules and measures and to apply them — Definition of pollution given in Article 40 of the 1975 Statute — Regulatory action of CARU (Article 56 of the 1975 Statute), complementing that of each party — CARU Digest — Rules by which the existence of any harmful effects is to be determined: 1975 Statute, CARU Digest, domestic law of each party within the limits prescribed by the 1975 Statute.

Environmental impact assessment (EIA) — Obligation to conduct an EIA — Scope and content of the EIA — Referral to domestic law — Question of the choice of mill site as part of the EIA — The Court is not convinced by Argentina's argument that an assessment of possible sites was not carried out — Receiving capacity of the river at Fray Bentos and reverse flows — The CARU water quality standards take account of the geomorphological and hydrological characteristics of the river and the receiving capacity of its waters — Question

hydrologiques du fleuve et de la capacité de réception de ses eaux — Question de la consultation des populations concernées comme élément de l'EIE — Aucune obligation juridique de consulter les populations concernées ne découle des instruments invoqués par l'Argentine — Une consultation par l'Uruguay des populations concernées a bien eu lieu.

Techniques de production utilisées à l'usine Orion (Botnia) — Aucun élément ne vient à l'appui de la prétention de l'Argentine selon laquelle l'usine Orion (Botnia) n'appliquerait pas les meilleures techniques disponibles en matière de rejets d'effluents par tonne de pâte à papier produite — Il ne ressort pas des données réunies après la mise en service de l'usine Orion (Botnia) que ses rejets ont excédé les limites autorisées.

Impact des rejets de l'usine sur la qualité des eaux du fleuve — Contrôle et suivi postopérationnel — Oxygène dissous — Phosphore — Prolifération d'algues — Substances phénoliques — Présence de nonylphénols dans le milieu aquatique — Dioxines et furanes — Violations alléguées non établies.

Effets sur la diversité biologique — Eléments de preuve insuffisants pour conclure que l'Uruguay n'a pas respecté l'obligation de protéger le milieu aquatique, y compris la faune et la flore.

Pollution atmosphérique — Pollution indirecte par dépôt dans le milieu aquatique — Eléments de preuve insuffisants.

Sur la base des preuves présentées, absence de violation de l'article 41 du statut de 1975 par l'Uruguay.

Obligations continues : suivi et contrôle — Obligation des Parties de veiller à ce que la CARU puisse continûment exercer ses pouvoirs au titre du statut de 1975 — Obligation de l'Uruguay de poursuivre le contrôle et le suivi du fonctionnement de l'usine Orion (Botnia) — Obligation des Parties de poursuivre leur coopération par l'intermédiaire de la CARU.

*

Demandes présentées par les Parties dans leurs conclusions finales.

Demandes de l'Argentine — Violation des obligations de nature procédurale — Constat d'illicéité et satisfaction — Formes de réparation autres que l'indemnisation non exclues par le statut de 1975 — Restitution en tant que forme de réparation du préjudice — Définition — Limites — Caractère approprié de la forme de réparation par rapport au préjudice subi, compte tenu du fait illicite — Caractère inapproprié de la restitution sous la forme du démantèlement de l'usine Orion (Botnia) dans le cas d'une violation des seules obligations de nature procédurale — Absence de violation des obligations de fond et rejet des autres réclamations présentées par l'Argentine — Absence de circonstances spéciales requérant d'ordonner des assurances et garanties de non-répétition.

Demande de l'Uruguay visant à confirmer son droit de poursuivre l'exploitation de l'usine Orion (Botnia) — Absence de portée utile.

*

Obligation des Parties de coopérer entre elles selon les modalités prévues par le statut de 1975 afin d'assurer la réalisation de son objet et de son but — Action conjointe des Parties au sein de la CARU et établissement d'une réelle communauté d'intérêts et de droits dans la gestion du fleuve Uruguay et dans la protection de son environnement.

of consultation of the affected populations as part of the EIA — No legal obligation to consult the affected populations arises from the instruments invoked by Argentina — Consultation by Uruguay of the affected populations did indeed take place.

Production technology used in the Orion (Botnia) mill — No evidence to support Argentina's claim that the Orion (Botnia) mill is not BAT-compliant in terms of the discharges of effluent for each tonne of pulp produced — From the data collected after the start-up of the Orion (Botnia) mill, it does not appear that the discharges from it have exceeded the prescribed limits.

Impact of the discharges on the quality of the waters of the river — Post-operational monitoring — Dissolved oxygen — Phosphorus — Algal blooms — Phenolic substances — Presence of nonylphenols in the river environment — Dioxins and furans — Alleged breaches not established.

Effects on biodiversity — Insufficient evidence to conclude that Uruguay breached the obligation to protect the aquatic environment, including its fauna and flora.

Air pollution — Indirect pollution from deposits into the aquatic environment — Insufficient evidence.

On the basis of the evidence submitted, no breach by Uruguay of Article 41 of the 1975 Statute.

Continuing obligations: monitoring — Obligation of the Parties to enable CARU to exercise on a continuous basis the powers conferred on it by the 1975 Statute — Obligation of Uruguay to continue monitoring the operation of the Orion (Botnia) plant — Obligation of the Parties to continue their co-operation through CARU.

*

Claims made by the Parties in their final submissions.

Claims of Argentina — Breach of procedural obligations — Finding of wrongful conduct and satisfaction — Forms of reparation other than compensation not excluded by the 1975 Statute — Restitution as a form of reparation for injury — Definition — Limits — Form of reparation appropriate to the injury suffered, taking into account the nature of the wrongful act — Restitution in the form of the dismantling of the Orion (Botnia) mill not appropriate where only breaches of procedural obligations have occurred — No breach of substantive obligations and rejection of Argentina's other claims — No special circumstances requiring the ordering of assurances and guarantees of non-repetition.

Uruguay's request for confirmation of its right to continue operating the Orion (Botnia) plant — No practical significance.

*

Obligation of the Parties to co-operate with each other, on the terms set out in the 1975 Statute, to ensure the achievement of its object and purpose — Joint action of the Parties through CARU and establishment of a real community of interests and rights in the management of the River Uruguay and in the protection of its environment.

ARRÊT

Présents : M. TOMKA, *vice-président, faisant fonction de président en l'affaire* ; MM. KOROMA, AL-KHASAWNEH, SIMMA, ABRAHAM, KEITH, SEPÚLVEDA-AMOR, BENNOUNA, SKOTNIKOV, CANÇADO TRINDADE, YUSUF, GREENWOOD, *juges* ; MM. TORRES BERNÁRDEZ, VINUESA, *juges* ad hoc ; M. COUVREUR, *greffier*.

comme conseillers scientifiques et experts,

LA COUR,

ainsi composée,

après délibéré en chambre du conseil,

rend l'arrêt suivant :

1. Le 4 mai 2006, la République argentine (ci-après dénommée l'« Argentine ») a déposé au Greffe de la Cour une requête introduisant une instance contre la République orientale de l'Uruguay (ci-après dénommée l'« Uruguay ») au sujet d'un différend relatif à la violation, qu'aurait commise l'Uruguay, d'obligations découlant du statut du fleuve Uruguay (*Recueil des traités des Nations Unies (RTNU)*, vol. 1295, n° I-21425, p. 348), traité signé par l'Argentine et l'Uruguay à Salto (Uruguay) le 26 février 1975 et entré en vigueur le 18 septembre 1976 (ci-après le « statut de 1975 »); selon la requête, cette violation résulte de « l'autorisation de construction, [de] la construction et [de] l'éventuelle mise en service de deux usines de pâte à papier sur le fleuve Uruguay », l'Argentine invoquant plus particulièrement les « effets desdites activités sur la qualité des eaux du fleuve Uruguay et sa zone d'influence ».

Dans sa requête, l'Argentine, se référant au paragraphe 1 de l'article 36 du Statut de la Cour, entend fonder la compétence de celle-ci sur le premier paragraphe de l'article 60 du statut de 1975.

2. Conformément au paragraphe 2 de l'article 40 du Statut de la Cour, la requête a été immédiatement communiquée au Gouvernement uruguayen par le greffier. Conformément au paragraphe 3 de cet article, le Secrétaire général de l'Organisation des Nations Unies a été informé du dépôt de ladite requête.

3. Le 4 mai 2006, immédiatement après le dépôt de sa requête, l'Argentine a en outre présenté une demande en indication de mesures conservatoires sur la base de l'article 41 du Statut de la Cour et de l'article 73 de son Règlement. Conformément au paragraphe 2 de l'article 73 du Règlement, le greffier a immédiatement transmis au Gouvernement uruguayen une copie certifiée conforme de cette demande.

4. Le 2 juin 2006, l'Uruguay a fait tenir à la Cour un CD-ROM contenant la version électronique de deux volumes de documents relatifs à la demande en indication de mesures conservatoires présentée par l'Argentine, intitulés « Observations de l'Uruguay » (dont des exemplaires sous forme papier ont ensuite été reçus); copie de ces documents a immédiatement été transmise à l'Argentine.

5. Le 2 juin 2006, l'Argentine a fait parvenir à la Cour divers documents, dont un enregistrement vidéo, et, le 6 juin 2006, elle lui en a fait parvenir de nouveaux; copie de chaque série de documents a immédiatement été transmise à l'Uruguay.

6. Les 6 et 7 juin 2006, diverses communications ont été reçues des Parties,

Ms Raquel Piaggio, State Agency for Sanitary Works (OSE), Technical Consultant for the National Directorate for the Environment, Ministry of Housing, Land Use Planning and Environmental Affairs,

Mr. Charles A. Menzie, Ph.D., Principal Scientist and Director of the Eco-Sciences Practice at Exponent, Inc., Alexandria, Virginia,
Mr. Neil McCubbin, Eng., B.Sc. (Eng.), 1st Class Honours, Glasgow, Associate of the Royal College of Science and Technology, Glasgow,

as Scientific Advisers and Experts,

THE COURT,

composed as above,

after deliberation,

delivers the following Judgment:

1. On 4 May 2006, the Argentine Republic (hereinafter "Argentina") filed in the Registry of the Court an Application instituting proceedings against the Eastern Republic of Uruguay (hereinafter "Uruguay") in respect of a dispute concerning the breach, allegedly committed by Uruguay, of obligations under the Statute of the River Uruguay (United Nations, *Treaty Series (UNTS)*, Vol. 1295, No. I-21425, p. 340), a treaty signed by Argentina and Uruguay at Salto (Uruguay) on 26 February 1975 and having entered into force on 18 September 1976 (hereinafter the "1975 Statute"); in the Application, Argentina stated that this breach arose out of "the authorization, construction and future commissioning of two pulp mills on the River Uruguay", with reference in particular to "the effects of such activities on the quality of the waters of the River Uruguay and on the areas affected by the river".

In its Application, Argentina, referring to Article 36, paragraph 1, of the Statute of the Court, seeks to found the jurisdiction of the Court on Article 60, paragraph 1, of the 1975 Statute.

2. Pursuant to Article 40, paragraph 2, of the Statute of the Court, the Registrar communicated the Application forthwith to the Government of Uruguay. In accordance with paragraph 3 of that Article, the Secretary-General of the United Nations was notified of the filing of the Application.

3. On 4 May 2006, immediately after the filing of the Application, Argentina also submitted a request for the indication of provisional measures based on Article 41 of the Statute and Article 73 of the Rules of Court. In accordance with Article 73, paragraph 2, of the Rules of Court, the Registrar transmitted a certified copy of this request forthwith to the Government of Uruguay.

4. On 2 June 2006, Uruguay transmitted to the Court a CD-ROM containing the electronic version of two volumes of documents relating to the Argentine request for the indication of provisional measures, entitled "Observations of Uruguay" (of which paper copies were subsequently received); a copy of these documents was immediately sent to Argentina.

5. On 2 June 2006, Argentina transmitted to the Court various documents, including a video recording, and, on 6 June 2006, it transmitted further documents; copies of each series of documents were immediately sent to Uruguay.

6. On 6 and 7 June 2006, various communications were received from the

par lesquelles chacune a présenté à la Cour certaines observations sur les documents déposés par l'autre. L'Uruguay a fait objection à la présentation de l'enregistrement vidéo déposé par l'Argentine. La Cour a décidé de ne pas autoriser la présentation de cet enregistrement à l'audience.

7. La Cour ne comptant sur le siège aucun juge de la nationalité des Parties, chacune d'elles s'est prévalue du droit que lui confère le paragraphe 3 de l'article 31 du Statut de procéder à la désignation d'un juge *ad hoc* pour siéger en l'affaire. L'Argentine a désigné M. Raúl Emilio Vinuesa, et l'Uruguay M. Santiago Torres Bernárdez.

8. Par ordonnance du 13 juillet 2006, la Cour, après avoir entendu les Parties, a conclu «que les circonstances, telles qu'elles se présent[ai]ent [alors] à [elle], n['étaient] pas de nature à exiger l'exercice de son pouvoir d'indiquer des mesures conservatoires en vertu de l'article 41 du Statut».

9. Par une autre ordonnance du même jour, la Cour, compte tenu des vues des Parties, a fixé au 15 janvier 2007 et au 20 juillet 2007, respectivement, les dates d'expiration des délais pour le dépôt d'un mémoire de l'Argentine et d'un contre-mémoire de l'Uruguay; ces pièces ont été dûment déposées dans les délais ainsi prescrits.

10. Le 29 novembre 2006, l'Uruguay, invoquant l'article 41 du Statut et l'article 73 du Règlement, a présenté à son tour une demande en indication de mesures conservatoires. Conformément au paragraphe 2 de l'article 73 du Règlement, le greffier a immédiatement fait tenir au Gouvernement argentin une copie certifiée conforme de cette demande.

11. Le 14 décembre 2006, l'Uruguay a fait parvenir à la Cour un volume de documents relatifs à la demande en indication de mesures conservatoires, intitulé «Observations de l'Uruguay»; copie de ces documents a immédiatement été transmise à l'Argentine.

12. Le 18 décembre 2006, avant l'ouverture de la procédure orale, l'Argentine a fait parvenir à la Cour un volume de documents relatifs à la demande en indication de mesures conservatoires présentée par l'Uruguay; le greffier a immédiatement transmis au Gouvernement uruguayen une copie de ces documents.

13. Par ordonnance du 23 janvier 2007, la Cour, après avoir entendu les Parties, a conclu «que les circonstances, telles qu'elles se présent[ai]ent [alors] à [elle], n['étaient] pas de nature à exiger l'exercice de son pouvoir d'indiquer des mesures conservatoires en vertu de l'article 41 du Statut».

14. Par ordonnance du 14 septembre 2007, la Cour, compte tenu de l'accord des Parties et des circonstances de l'espèce, a autorisé la présentation d'une réplique par l'Argentine et d'une duplique par l'Uruguay, et fixé respectivement au 29 janvier 2008 et au 29 juillet 2008 les dates d'expiration des délais pour le dépôt de ces pièces. La réplique de l'Argentine et la duplique de l'Uruguay ont été dûment déposées dans les délais ainsi prescrits.

15. Par lettres datées respectivement du 16 juin 2009 et du 17 juin 2009, les Gouvernements de l'Uruguay et de l'Argentine ont fait connaître à la Cour qu'ils étaient parvenus à un accord à l'effet de produire des documents nouveaux en application de l'article 56 du Règlement. Par lettres du 23 juin 2009, le greffier a informé les Parties que la Cour avait décidé de les autoriser à procéder comme elles en étaient convenues. Ces nouveaux documents ont été dûment déposés dans le délai convenu.

16. Le 15 juillet 2009, chacune des Parties a, conformément à l'accord intervenu entre elles et avec l'autorisation de la Cour, présenté certaines observations sur les documents nouveaux déposés par la Partie adverse. Chaque Partie a également déposé certains documents à l'appui desdites observations.

Parties, whereby each Party presented the Court with certain observations on the documents submitted by the other Party. Uruguay objected to the production of the video recording submitted by Argentina. The Court decided not to authorize the production of that recording at the hearings.

7. Since the Court included upon the Bench no judge of the nationality of the Parties, each of them exercised its right under Article 31, paragraph 3, of the Statute to choose a judge *ad hoc* to sit in the case. Argentina chose Mr. Raúl Emilio Vinuesa, and Uruguay chose Mr. Santiago Torres Bernárdez.

8. By an Order of 13 July 2006, the Court, having heard the Parties, found "that the circumstances, as they [then] present[ed] themselves to [it], [we]re not such as to require the exercise of its power under Article 41 of the Statute to indicate provisional measures".

9. By another Order of the same date, the Court, taking account of the views of the Parties, fixed 15 January 2007 and 20 July 2007, respectively, as the time-limits for the filing of a Memorial by Argentina and a Counter-Memorial by Uruguay; those pleadings were duly filed within the time-limits so prescribed.

10. On 29 November 2006, Uruguay, invoking Article 41 of the Statute and Article 73 of the Rules of Court, in turn submitted a request for the indication of provisional measures. In accordance with Article 73, paragraph 2, of the Rules of Court, the Registrar transmitted a certified copy of this request forthwith to the Argentine Government.

11. On 14 December 2006, Uruguay transmitted to the Court a volume of documents concerning the request for the indication of provisional measures, entitled "Observations of Uruguay"; a copy of these documents was immediately sent to Argentina.

12. On 18 December 2006, before the opening of the oral proceedings, Argentina transmitted to the Court a volume of documents concerning Uruguay's request for the indication of provisional measures; the Registrar immediately sent a copy of these documents to the Government of Uruguay.

13. By an Order of 23 January 2007, the Court, having heard the Parties, found "that the circumstances, as they [then] present[ed] themselves to [it], [we]re not such as to require the exercise of its power under Article 41 of the Statute to indicate provisional measures".

14. By an Order of 14 September 2007, the Court, taking account of the agreement of the Parties and of the circumstances of the case, authorized the submission of a Reply by Argentina and a Rejoinder by Uruguay, and fixed 29 January 2008 and 29 July 2008 as the respective time-limits for the filing of those pleadings. The Reply of Argentina and the Rejoinder of Uruguay were duly filed within the time-limits so prescribed.

15. By letters dated 16 June 2009 and 17 June 2009 respectively, the Governments of Uruguay and Argentina notified the Court that they had come to an agreement for the purpose of producing new documents pursuant to Article 56 of the Rules of Court. By letters of 23 June 2009, the Registrar informed the Parties that the Court had decided to authorize them to proceed as they had agreed. The new documents were duly filed within the agreed time-limit.

16. On 15 July 2009, each of the Parties, as provided for in the agreement between them and with the authorization of the Court, submitted comments on the new documents produced by the other Party. Each Party also filed documents in support of these comments.

17. Conformément au paragraphe 2 de l'article 53 de son Règlement, la Cour, après s'être renseignée auprès des Parties, a décidé que des exemplaires des pièces de procédure et des documents annexés seraient rendus accessibles au public à l'ouverture de la procédure orale.

18. Par lettre du 15 septembre 2009, l'Uruguay, se référant au paragraphe 4 de l'article 56 du Règlement et à l'Instruction de procédure IX *bis*, a communiqué à la Cour des documents faisant partie de publications facilement accessibles sur lesquels il entendait s'appuyer au cours de la procédure orale. L'Argentine n'a formulé aucune objection au sujet de ces documents.

19. Par lettre du 25 septembre 2009, le Gouvernement argentin, se référant à l'article 56 du Règlement et au paragraphe 2 de l'Instruction de procédure IX, a adressé au Greffe des documents nouveaux qu'il souhaitait produire. Par lettre du 28 septembre 2009, le Gouvernement uruguayen a informé la Cour qu'il s'opposait à la production desdits documents. Il a indiqué en outre que si, néanmoins, la Cour autorisait que les documents en question soient versés au dossier de l'affaire, il présenterait des observations à leur sujet et soumettrait certains documents à l'appui de ces observations. Par lettres en date du 28 septembre 2009, le greffier a porté à la connaissance des Parties que la Cour n'avait pas estimé que la production des documents nouveaux présentés par le Gouvernement argentin était nécessaire, au sens du paragraphe 2 de l'article 56 du Règlement, et qu'elle n'avait par ailleurs pas identifié de circonstance exceptionnelle (Instruction de procédure IX, paragraphe 3) qui eût justifié leur production à ce stade de la procédure.

20. Des audiences publiques ont été tenues entre le 14 septembre 2009 et le 2 octobre 2009, au cours desquelles ont été entendus en leurs plaidoiries et réponses:

Pour l'Argentine: S. Exc. Mme Susana Ruiz Cerutti,
M. Alain Pellet,
M. Philippe Sands,
M. Howard Wheater,
Mme Laurence Boisson de Chazournes,
M. Marcelo Kohen,
M. Alan Béraud,
M. Juan Carlos Colombo,
M. Daniel Müller.

Pour l'Uruguay: S. Exc. M. Carlos Gianelli,
M. Alan Boyle,
M. Paul S. Reichler,
M. Neil McCubbin,
M. Stephen C. McCaffrey,
M. Lawrence H. Martin,
M. Luigi Condorelli.

21. A l'audience, des questions ont été posées aux Parties par des membres de la Cour, auxquelles il a été répondu oralement et par écrit conformément au paragraphe 4 de l'article 61 du Règlement. Conformément à l'article 72 du Règlement, l'une des Parties a présenté des observations écrites sur une réponse fournie par écrit par l'autre Partie et reçue après la clôture de la procédure orale.

*

17. In accordance with Article 53, paragraph 2, of the Rules of Court, the Court decided, after ascertaining the views of the Parties, that copies of the pleadings and documents annexed would be made available to the public as from the opening of the oral proceedings.

18. By letter of 15 September 2009, Uruguay, referring to Article 56, paragraph 4, of the Rules of Court and to Practice Direction IX*bis*, communicated documents to the Court, forming part of publications readily available, on which it intended to rely during the oral proceedings. Argentina made no objection with regard to these documents.

19. By letter of 25 September 2009, the Argentine Government, referring to Article 56 of the Rules of Court and to Practice Direction IX, paragraph 2, sent new documents to the Registry which it wished to produce. By letter of 28 September 2009, the Government of Uruguay informed the Court that it was opposed to the production of these documents. It further indicated that if, nevertheless, the Court decided to admit the documents in question into the record of the case, it would present comments on them and submit documents in support of those comments. By letters dated 28 September 2009, the Registrar informed the Parties that the Court did not consider the production of the new documents submitted by the Argentine Government to be necessary within the meaning of Article 56, paragraph 2, of the Rules of Court, and that it had not moreover identified any exceptional circumstance (Practice Direction IX, paragraph 3) which justified their production at that stage of the proceedings.

20. Public hearings were held between 14 September 2009 and 2 October 2009, at which the Court heard the oral arguments and replies of:

For Argentina: H.E. Ms Susana Ruiz Cerutti,
Mr. Alain Pellet,
Mr. Philippe Sands,
Mr. Howard Wheater,
Ms Laurence Boisson de Chazournes,
Mr. Marcelo Kohen,
Mr. Alan Béraud,
Mr. Juan Carlos Colombo,
Mr. Daniel Müller.

For Uruguay: H.E. Mr. Carlos Gianelli,
Mr. Alan Boyle,
Mr. Paul S. Reichler,
Mr. Neil McCubbin,
Mr. Stephen C. McCaffrey,
Mr. Lawrence H. Martin,
Mr. Luigi Condorelli.

21. At the hearings, Members of the Court put questions to the Parties, to which replies were given orally and in writing, in accordance with Article 61, paragraph 4, of the Rules of Court. Pursuant to Article 72 of the Rules of Court, one of the Parties submitted written comments on a written reply provided by the other and received after the closure of the oral proceedings.

*

22. Dans la requête, les demandes ci-après ont été formulées par l'Argentine :

« Sur la base de l'exposé des faits et des moyens juridiques qui précèdent, l'Argentine, tout en se réservant le droit de compléter, d'amender ou de modifier la présente requête pendant la suite de la procédure, prie la Cour de dire et juger :

1. que l'Uruguay a manqué aux obligations lui incombant en vertu du statut de 1975 et des autres règles de droit international auxquelles ce statut renvoie, y compris mais pas exclusivement :
   a) l'obligation de prendre toute mesure nécessaire à l'utilisation rationnelle et optimale du fleuve Uruguay ;
   b) l'obligation d'informer préalablement la CARU et l'Argentine ;
   c) l'obligation de se conformer aux procédures prévues par le chapitre II du statut de 1975 ;
   d) l'obligation de prendre toutes mesures nécessaires pour préserver le milieu aquatique et d'empêcher la pollution et l'obligation de protéger la biodiversité et les pêcheries, y compris l'obligation de procéder à une étude d'impact sur l'environnement, complète et objective ;
   e) les obligations de coopération en matière de prévention de la pollution et de la protection de la biodiversité et des pêcheries ; et
2. que, par son comportement, l'Uruguay a engagé sa responsabilité internationale à l'égard de l'Argentine ;
3. que l'Uruguay est tenu de cesser son comportement illicite et de respecter scrupuleusement à l'avenir les obligations lui incombant ; et
4. que l'Uruguay est tenu de réparer intégralement le préjudice causé par le non-respect des obligations lui incombant.

L'Argentine se réserve le droit de préciser ou modifier les présentes demandes dans une étape ultérieure de la procédure. »

23. Au cours de la procédure écrite, les conclusions ci-après ont été présentées par les Parties :

Au nom du Gouvernement de l'Argentine,

dans le mémoire :

« Pour l'ensemble des raisons exposées dans le présent mémoire, la République argentine prie la Cour internationale de Justice de bien vouloir :

1. constater que, en autorisant unilatéralement la construction des usines de pâte à papier CMB et Orion et les installations annexes de celle-ci sur la rive gauche du fleuve Uruguay en violation des obligations découlant du statut du 26 février 1975, la République orientale de l'Uruguay a commis les faits internationalement illicites énumérés aux chapitres IV et V du présent mémoire, qui engagent sa responsabilité internationale ;
2. dire et juger que, en conséquence, la République orientale de l'Uruguay doit :
   i) immédiatement cesser les faits internationalement illicites mentionnés ci-dessus ;
   ii) reprendre une stricte application de ses obligations découlant du statut du fleuve Uruguay de 1975 ;

22. In its Application, the following claims were made by Argentina:

"On the basis of the foregoing statement of facts and law, Argentina, while reserving the right to supplement, amend or modify the present Application in the course of the subsequent procedure, requests the Court to adjudge and declare:

1. that Uruguay has breached the obligations incumbent upon it under the 1975 Statute and the other rules of international law to which that instrument refers, including but not limited to:
   (a) the obligation to take all necessary measures for the optimum and rational utilization of the River Uruguay;
   (b) the obligation of prior notification to CARU and to Argentina;
   (c) the obligation to comply with the procedures prescribed in Chapter II of the 1975 Statute;
   (d) the obligation to take all necessary measures to preserve the aquatic environment and prevent pollution and the obligation to protect biodiversity and fisheries, including the obligation to prepare a full and objective environmental impact study;
   (e) the obligation to co-operate in the prevention of pollution and the protection of biodiversity and of fisheries; and
2. that, by its conduct, Uruguay has engaged its international responsibility to Argentina;
3. that Uruguay shall cease its wrongful conduct and comply scrupulously in future with the obligations incumbent upon it; and
4. that Uruguay shall make full reparation for the injury caused by its breach of the obligations incumbent upon it.

Argentina reserves the right to amplify or amend these requests at a subsequent stage of the proceedings."

23. In the written proceedings, the following submissions were presented by the Parties:

On behalf of the Government of Argentina,

in the Memorial:

"For all the reasons described in this Memorial, the Argentine Republic requests the International Court of Justice:

1. to find that by unilaterally authorizing the construction of the CMB and Orion pulp mills and the facilities associated with the latter on the left bank of the River Uruguay, in breach of the obligations resulting from the Statute of 26 February 1975, the Eastern Republic of Uruguay has committed the internationally wrongful acts set out in Chapters IV and V of this Memorial, which entail its international responsibility;
2. to adjudge and declare that, as a result, the Eastern Republic of Uruguay must:
   (i) cease immediately the internationally wrongful acts referred to above;
   (ii) resume strict compliance with its obligations under the Statute of the River Uruguay of 1975;

iii) rétablir sur le terrain et au plan juridique la situation qui existait avant la perpétration des faits internationalement illicites mentionnés ci-dessus;

iv) verser à la République argentine une indemnité pour les dommages occasionnés par ces faits internationalement illicites qui ne seraient pas réparés par cette remise en état, dont le montant sera déterminé par la Cour dans une phase ultérieure de la présente instance;

v) donner des garanties adéquates qu'elle s'abstiendra à l'avenir d'empêcher l'application du statut du fleuve Uruguay de 1975 et, en particulier, du mécanisme de consultation institué par le chapitre II de ce traité.

La République argentine se réserve la possibilité de compléter et amender le cas échéant les présentes conclusions, notamment en fonction de l'évolution de la situation. Il en irait ainsi tout spécialement si l'Uruguay aggravait le différend[1], notamment si l'usine Orion devait être mise en service avant la fin de la présente procédure.

---

[1] Voir l'ordonnance de la Cour du 13 juillet 2006 sur la demande en indication de mesures conservatoires de l'Argentine, par. 82.»

dans la réplique:

«Pour l'ensemble des raisons exposées dans son mémoire, qu'elle maintient intégralement, et dans la présente réplique, la République argentine prie la Cour internationale de Justice de bien vouloir:

1) constater qu'en autorisant

— la construction de l'usine CMB,
— la construction et la mise en service de l'usine Orion et de ses installations connexes sur la rive gauche du fleuve Uruguay,

la République orientale de l'Uruguay a violé les obligations lui incombant en vertu du statut du fleuve Uruguay du 26 février 1975 et engagé sa responsabilité internationale;

2) dire et juger que, en conséquence, la République orientale de l'Uruguay doit:

i) reprendre une stricte application de ses obligations découlant du statut du fleuve Uruguay de 1975;
ii) immédiatement cesser les faits internationalement illicites par lesquels elle a engagé sa responsabilité;
iii) rétablir sur le terrain et au plan juridique la situation qui existait avant la perpétration de ces faits internationalement illicites;
iv) verser à la République argentine une indemnité pour les dommages occasionnés par ces faits internationalement illicites qui ne seraient pas réparés par cette remise en état, dont le montant sera déterminé par la Cour dans une phase ultérieure de la présente instance;

v) donner des garanties adéquates qu'elle s'abstiendra à l'avenir d'empêcher l'application du statut du fleuve Uruguay de 1975 et, en particulier, du mécanisme de consultation institué par le chapitre II de ce traité.

(iii) re-establish on the ground and in legal terms the situation that existed before the internationally wrongful acts referred to above were committed;

(iv) pay compensation to the Argentine Republic for the damage caused by these internationally wrongful acts that would not be remedied by that situation being restored, of an amount to be determined by the Court at a subsequent stage of these proceedings;

(v) provide adequate guarantees that it will refrain in future from preventing the Statute of the River Uruguay of 1975 from being applied, in particular the consultation procedure established by Chapter II of that Treaty.

The Argentine Republic reserves the right to supplement or amend these submissions should the need arise, in the light of the development of the situation. This would in particular apply if Uruguay were to aggravate the dispute[1], for example if the Orion mill were to be commissioned before the end of these proceedings.

---

[1] See the Order of the Court of 13 July 2006 on Argentina's request for the indication of provisional measures, para. 82."

in the Reply:

"For all the reasons described in its Memorial, which it fully stands by, and in the present Reply, the Argentine Republic requests the International Court of Justice:

1. to find that by authorizing

   — the construction of the CMB mill;
   — the construction and commissioning of the Orion mill and its associated facilities on the left bank of the River Uruguay,

   the Eastern Republic of Uruguay has violated the obligations incumbent on it under the Statute of the River Uruguay of 26 February 1975 and has engaged its international responsibility;

2. to adjudge and declare that, as a result, the Eastern Republic of Uruguay must:

   (i) resume strict compliance with its obligations under the Statute of the River Uruguay of 1975;

   (ii) cease immediately the internationally wrongful acts by which it has engaged its responsibility;

   (iii) re-establish on the ground and in legal terms the situation that existed before these internationally wrongful acts were committed;

   (iv) pay compensation to the Argentine Republic for the damage caused by these internationally wrongful acts that would not be remedied by that situation being restored, of an amount to be determined by the Court at a subsequent stage of these proceedings;

   (v) provide adequate guarantees that it will refrain in future from preventing the Statute of the River Uruguay of 1975 from being applied, in particular the consultation procedure established by Chapter II of that Treaty.

La République argentine se réserve la possibilité de compléter et amender le cas échéant les présentes conclusions au vu des développements ultérieurs de l'affaire.»

Au nom du Gouvernement de l'Uruguay,

dans le contre-mémoire:

«Sur la base des faits et arguments exposés ci-dessus, et se réservant le droit de compléter ou de modifier les présentes conclusions, l'Uruguay prie la Cour de rejeter les demandes de l'Argentine.»

dans la duplique:

«Compte tenu de tout ce qui précède, il y a lieu de conclure que:

a) l'Argentine n'a établi l'existence, pour le fleuve ou son écosystème, d'aucun préjudice, ou risque de préjudice, qui résulterait des violations qu'aurait commises l'Uruguay des obligations de fond lui incombant en vertu du statut de 1975 et suffirait à justifier le démantèlement de l'usine Botnia;

b) un tel démantèlement causerait à l'économie uruguayenne un préjudice considérable sous forme de pertes d'emplois et de revenus;

c) à la lumière des points *a)* et *b)*, le remède consistant à démolir l'usine se traduirait donc par des coûts disproportionnellement élevés et ne doit pas être accordé;

d) si la Cour estime, nonobstant toutes les preuves contraires, que l'Uruguay a violé les obligations procédurales lui incombant envers l'Argentine, elle peut rendre un jugement déclaratoire à cet effet, qui constituerait une forme de satisfaction adéquate;

e) si la Cour estime, nonobstant toutes les preuves contraires, que l'usine ne satisfait pas pleinement à l'obligation incombant à l'Uruguay de protéger le fleuve ou son milieu aquatique, elle peut ordonner à l'Uruguay de prendre toute autre mesure de protection nécessaire pour faire en sorte que l'usine réponde aux obligations de fond imposées par le statut;

f) si la Cour estime, nonobstant toutes les preuves contraires, que l'Uruguay a effectivement causé un dommage au fleuve ou à l'Argentine, elle peut condamner l'Uruguay à indemniser cette dernière au titre des articles 42 et 43 du statut; et

g) la Cour doit faire une déclaration énonçant clairement que les Parties sont tenues de veiller au plein respect de tous les droits en litige en l'espèce, y compris celui de l'Uruguay de continuer à exploiter l'usine Botnia conformément aux dispositions du statut de 1975.

Conclusions

Sur la base des faits et arguments exposés ci-dessus, et se réservant le droit de compléter ou de modifier les présentes conclusions, l'Uruguay prie la Cour de rejeter les demandes de l'Argentine et de lui reconnaître le droit de continuer à exploiter l'usine Botnia conformément aux dispositions du statut de 1975.»

24. Au cours de la procédure orale, les conclusions finales ci-après ont été présentées par les Parties:

The Argentine Republic reserves the right to supplement or amend these submissions should the need arise, in the light of subsequent developments in the case."

On behalf of the Government of Uruguay,

in the Counter-Memorial:

"On the basis of the facts and arguments set out above, and reserving its right to supplement or amend these Submissions, Uruguay requests that the Court adjudge and declare that the claims of Argentina are rejected."

In the Rejoinder:

"Based on all the above, it can be concluded that:

(a) Argentina has not demonstrated any harm, or risk of harm, to the river or its ecosystem resulting from Uruguay's alleged violations of its substantive obligations under the 1975 Statute that would be sufficient to warrant the dismantling of the Botnia plant;

(b) the harm to the Uruguayan economy in terms of lost jobs and revenue would be substantial;

(c) in light of points *(a)* and *(b)*, the remedy of tearing the plant down would therefore be disproportionately onerous, and should not be granted;

(d) if the Court finds, notwithstanding all the evidence to the contrary, that Uruguay has violated its procedural obligations to Argentina, it can issue a declaratory judgment to that effect, which would constitute an adequate form of satisfaction;

(e) if the Court finds, notwithstanding all the evidence to the contrary, that the plant is not in complete compliance with Uruguay's obligation to protect the river or its aquatic environment, the Court can order Uruguay to take whatever additional protective measures are necessary to ensure that the plant conforms to the Statute's substantive requirements;

(f) if the Court finds, notwithstanding all the evidence to the contrary, that Uruguay has actually caused damage to the river or to Argentina, it can order Uruguay to pay Argentina monetary compensation under Articles 42 and 43 of the Statute; and

(g) the Court should issue a declaration making clear the Parties are obligated to ensure full respect for all the rights in dispute in this case, including Uruguay's right to continue operating the Botnia plant in conformity with the provisions of the 1975 Statute.

Submissions

On the basis of the facts and arguments set out above, and reserving its right to supplement or amend these Submissions, Uruguay requests that the Court adjudge and declare that the claims of Argentina are rejected, and Uruguay's right to continue operating the Botnia plant in conformity with the provisions of the 1975 Statute is affirmed."

24. At the oral proceedings, the following final submissions were presented by the Parties:

Au nom du Gouvernement de l'Argentine,

à l'audience du 29 septembre 2009 :

« Pour l'ensemble des raisons exposées dans son mémoire, dans sa réplique et lors de la procédure orale, qu'elle maintient intégralement, la République argentine prie la Cour internationale de Justice de bien vouloir :

1) constater qu'en autorisant

— la construction de l'usine ENCE,
— la construction et la mise en service de l'usine Botnia et de ses installations connexes sur la rive gauche du fleuve Uruguay,

la République orientale de l'Uruguay a violé les obligations lui incombant en vertu du statut du fleuve Uruguay du 26 février 1975 et engagé sa responsabilité internationale ;

2) dire et juger que, en conséquence, la République orientale de l'Uruguay doit :

i) reprendre une stricte application de ses obligations découlant du statut du fleuve Uruguay de 1975 ;
ii) immédiatement cesser les faits internationalement illicites par lesquels elle a engagé sa responsabilité ;
iii) rétablir sur le terrain et au plan juridique la situation qui existait avant la perpétration de ces faits internationalement illicites ;
iv) verser à la République argentine une indemnité pour les dommages occasionnés par ces faits internationalement illicites qui ne seraient pas réparés par cette remise en état, dont le montant sera déterminé par la Cour dans une phase ultérieure de la présente instance ;

v) donner des garanties adéquates qu'elle s'abstiendra à l'avenir d'empêcher l'application du statut du fleuve Uruguay de 1975 et, en particulier, du mécanisme de consultation institué par le chapitre II de ce traité. »

Au nom du Gouvernement de l'Uruguay,

à l'audience du 2 octobre 2009 :

« Sur la base des faits et arguments exposés dans le contre-mémoire de l'Uruguay, dans sa duplique et au cours de la procédure orale, l'Uruguay prie la Cour de rejeter les demandes de l'Argentine et de confirmer le droit de l'Uruguay de poursuivre l'exploitation de l'usine Botnia conformément aux dispositions du statut de 1975. »

* * *

I. Cadre juridique et faits de l'espèce

25. Le différend soumis à la Cour se rapporte au projet de construction, autorisé par l'Uruguay, d'une usine de pâte à papier, ainsi qu'à la construction et à la mise en service, également autorisées par

On behalf of the Government of Argentina,

at the hearing of 29 September 2009:

"For all the reasons described in its Memorial, in its Reply and in the oral proceedings, which it fully stands by, the Argentine Republic requests the International Court of Justice:

1. to find that by authorizing
   — the construction of the ENCE mill;
   — the construction and commissioning of the Botnia mill and its associated facilities on the left bank of the River Uruguay,

   the Eastern Republic of Uruguay has violated the obligations incumbent on it under the Statute of the River Uruguay of 26 February 1975 and has engaged its international responsibility;
2. to adjudge and declare that, as a result, the Eastern Republic of Uruguay must:
   (i) resume strict compliance with its obligations under the Statute of the River Uruguay of 1975;
   (ii) cease immediately the internationally wrongful acts by which it has engaged its responsibility;
   (iii) re-establish on the ground and in legal terms the situation that existed before these internationally wrongful acts were committed;
   (iv) pay compensation to the Argentine Republic for the damage caused by these internationally wrongful acts that would not be remedied by that situation being restored, of an amount to be determined by the Court at a subsequent stage of these proceedings;
   (v) provide adequate guarantees that it will refrain in future from preventing the Statute of the River Uruguay of 1975 from being applied, in particular the consultation procedure established by Chapter II of that Treaty."

On behalf of the Government of Uruguay,

at the hearing of 2 October 2009:

"On the basis of the facts and arguments set out in Uruguay's Counter-Memorial, Rejoinder and during the oral proceedings, Uruguay requests that the Court adjudge and declare that the claims of Argentina are rejected, and Uruguay's right to continue operating the Botnia plant in conformity with the provisions of the 1975 Statute is affirmed."

* * *

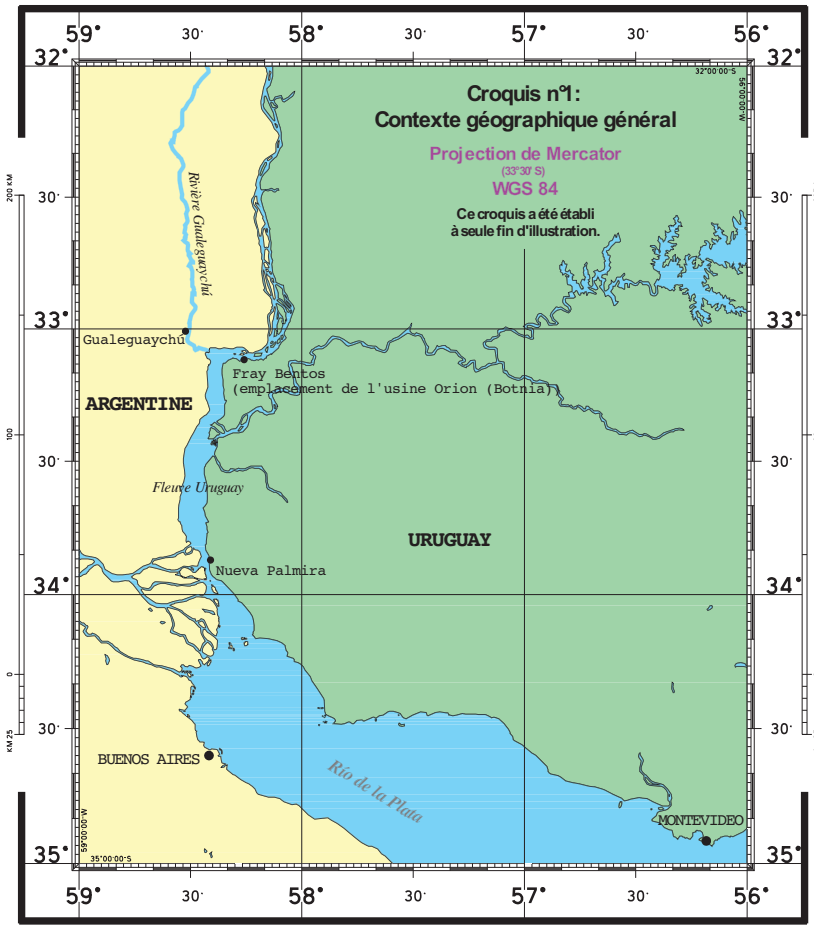
I. Legal Framework and Facts of the Case

25. The dispute before the Court has arisen in connection with the planned construction authorized by Uruguay of one pulp mill and the construction and commissioning of another, also authorized by Uruguay,

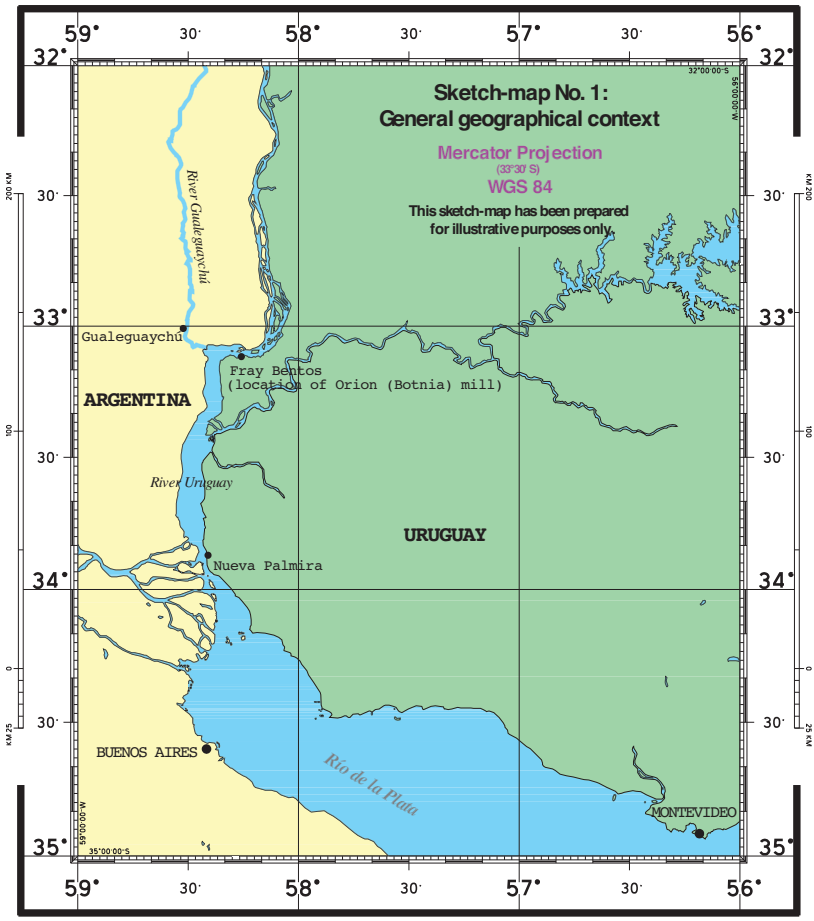
l'Uruguay, d'une autre usine de pâte à papier, le long du fleuve Uruguay (voir croquis n° 1, p. 33, pour le contexte géographique général). Après avoir présenté les instruments juridiques relatifs au fleuve Uruguay qui lient les Parties, la Cour rappellera les principaux faits de l'espèce.

A. Cadre juridique

26. La frontière entre l'Argentine et l'Uruguay sur le fleuve Uruguay est définie par le traité bilatéral conclu à cet effet à Montevideo le 7 avril 1961 (*RTNU*, vol. 635, n° 9074, p. 99). Les articles premier à 4 de ce traité délimitent la frontière des Etats contractants sur le fleuve et leur attribuent certains îles et îlots qui occupent son lit. Les articles 5 et 6 sont relatifs au régime de navigation sur le fleuve. L'article 7 envisage la conclusion par les parties d'un «code de l'utilisation du fleuve» portant sur différents éléments, dont la conservation des ressources biologiques et la prévention de la pollution des eaux du fleuve. Les articles 8 à 10 prévoient certaines obligations relatives aux îles et îlots ainsi qu'à leurs habitants.



27. Le «code de l'utilisation du fleuve» envisagé par l'article 7 du traité de 1961 a été institué par le statut de 1975 (voir paragraphe 1 ci-dessus). L'article premier du statut de 1975 précise que les parties l'adoptent «à l'effet d'établir les mécanismes communs nécessaires à l'utilisation rationnelle et optimale du fleuve Uruguay, dans le strict respect des droits et obligations découlant des traités et autres engagements internationaux en vigueur à l'égard de l'une ou l'autre des parties». Après avoir ainsi défini son but (article premier) et aussi précisé la portée de certains de ses termes (article 2), le statut de 1975 énonce des règles relatives à la navigation et aux ouvrages sur le fleuve (chapitre II, articles 3 à 13), au pilotage (chapitre III, articles 14 à 16), aux facilités portuaires, au chargement et au déchargement de marchandises (chapitre IV, articles 17 et 18), au sauvetage de la vie humaine (chapitre V, articles 19 à 23) et de biens matériels (chapitre VI, articles 24 à 26), à l'utilisation des eaux du fleuve (chapitre VII, articles 27 à 29), aux ressources du lit et du sous-sol (chapitre VIII, articles 30 à 34), à la conservation, l'utilisation et l'exploitation d'autres ressources naturelles (chapitre IX, articles 35 à 39), à la pollution (chapitre X, articles 40 à 43), à la recherche scientifique (chapitre XI, articles 44 et 45), ainsi qu'aux différentes compétences des parties sur le fleuve et sur les navires l'empruntant (chapitre XII, articles 46 à 48). Le statut de 1975 institue la commission administrative du fleuve Uruguay (ci-après la «CARU», selon l'acronyme espagnol de «Comisión Administradora del Río Uruguay») (chapitre XIII, articles 49 à 57), avant de prévoir une procédure de conciliation (chapitre XIV, articles 58 et 59) et de règlement judiciaire des différends (chapitre XV, article 60). Le statut de 1975 contient enfin des dispositions transitoires (chapitre XVI, articles 61 et 62) et finales (chapitre XVII, article 63).



on the River Uruguay (see sketch-map No. 1 on p. 33 for the general geographical context). After identifying the legal instruments concerning the River Uruguay by which the Parties are bound, the Court will set out the main facts of the case.

A. Legal Framework

26. The boundary between Argentina and Uruguay in the River Uruguay is defined by the bilateral Treaty entered into for that purpose at Montevideo on 7 April 1961 (*UNTS*, Vol. 635, No. 9074, p. 98). Articles 1 to 4 of the Treaty delimit the boundary between the Contracting States in the river and attribute certain islands and islets in it to them. Articles 5 and 6 concern the régime for navigation on the river. Article 7 provides for the establishment by the parties of a "régime for the use of the river" covering various subjects, including the conservation of living resources and the prevention of water pollution of the river. Articles 8 to 10 lay down certain obligations concerning the islands and islets and their inhabitants.

27. The "régime for the use of the river" contemplated in Article 7 of the 1961 Treaty was established through the 1975 Statute (see paragraph 1 above). Article 1 of the 1975 Statute states that the parties adopted it "in order to establish the joint machinery necessary for the optimum and rational utilization of the River Uruguay, in strict observance of the rights and obligations arising from treaties and other international agreements in force for each of the parties". After having thus defined its purpose (Article 1) and having also made clear the meaning of certain terms used therein (Article 2), the 1975 Statute lays down rules governing navigation and works on the river (Chapter II, Articles 3 to 13), pilotage (Chapter III, Articles 14 to 16), port facilities, unloading and additional loading (Chapter IV, Articles 17 to 18), the safeguarding of human life (Chapter V, Articles 19 to 23) and the salvaging of property (Chapter VI, Articles 24 to 26), use of the waters of the river (Chapter VII, Articles 27 to 29), resources of the bed and subsoil (Chapter VIII, Articles 30 to 34), the conservation, utilization and development of other natural resources (Chapter IX, Articles 35 to 39), pollution (Chapter X, Articles 40 to 43), scientific research (Chapter XI, Articles 44 to 45), and various powers of the parties over the river and vessels sailing on it (Chapter XII, Articles 46 to 48). The 1975 Statute sets up the Administrative Commission of the River Uruguay (hereinafter "CARU", from the Spanish acronym for "Comisión Administradora del Río Uruguay") (Chapter XIII, Articles 49 to 57), and then establishes procedures for conciliation (Chapter XIV, Articles 58 to 59) and judicial settlement of disputes (Chapter XV, Article 60). Lastly, the 1975 Statute contains transitional (Chapter XVI, Articles 61 to 62) and final (Chapter XVII, Article 63) provisions.

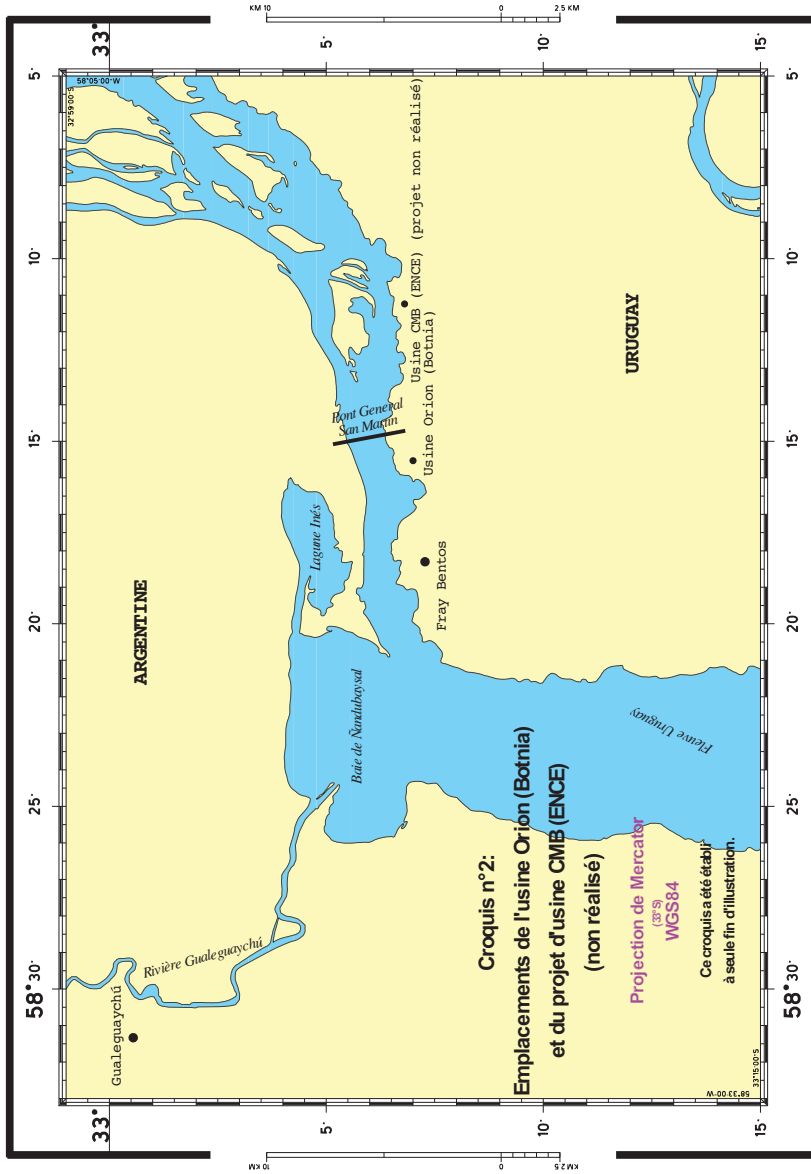
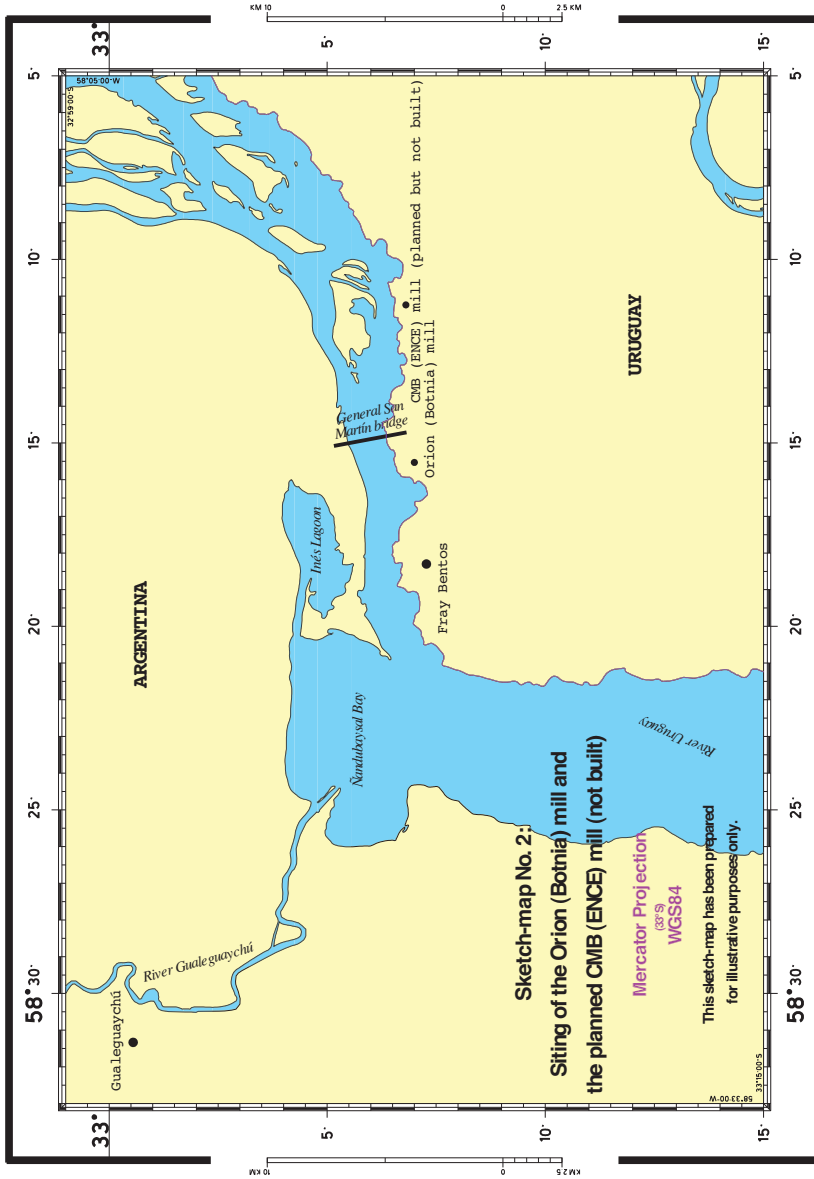
B. Le projet CMB (ENCE)

28. La première usine de pâte à papier à l'origine du différend a été projetée par la société « Celulosas de M'Bopicuá S.A. » (ci-après « CMB »), créée à l'initiative de la société espagnole ENCE (acronyme espagnol de « Empresa Nacional de Celulosas de España », ci-après « ENCE »). Cette usine, ci-après l'usine « CMB (ENCE) », devait être construite sur la rive gauche du fleuve Uruguay, dans le département uruguayen de Río Negro, en face de la région argentine de Gualeguaychú, plus précisément à l'est de la ville de Fray Bentos, près du pont international « General San Martín » (voir croquis n° 2, p. 35).

29. Le 22 juillet 2002, les promoteurs de ce projet industriel entreprirent des démarches auprès des autorités uruguayennes et présentèrent à la direction nationale de l'environnement de l'Uruguay (ci-après la « DINAMA », selon l'acronyme espagnol de « Dirección Nacional de Medio Ambiente ») une évaluation de l'impact sur l'environnement (« EIE », selon l'abréviation utilisée par les Parties) s'y rapportant. A la même époque, les représentants de CMB, société spécialement créée afin de construire l'usine CMB (ENCE), informèrent le président de la CARU de ce projet. Le président de la CARU écrivit le 17 octobre 2002 au ministre uruguayen de l'environnement afin d'obtenir copie de l'évaluation de l'impact sur l'environnement concernant le projet CMB (ENCE) soumise par les promoteurs de ce projet industriel. Cette demande fut réitérée le 21 avril 2003. Le 14 mai 2003, l'Uruguay remit à la CARU un document intitulé « Etude de l'impact sur l'environnement, Celulosas de M'Bopicuá. Résumé de diffusion ». Un mois plus tard, la sous-commission de la CARU chargée de la qualité des eaux et de la prévention de la pollution prit connaissance du document transmis par l'Uruguay et suggéra d'en remettre copie à ses conseillers techniques en sollicitant leur opinion. Des copies furent également remises aux délégations des Parties.



30. Une séance publique de discussion relative à la demande d'autorisation environnementale présentée par CMB eut lieu le 21 juillet 2003 dans la ville de Fray Bentos, en présence du conseiller juridique et du secrétaire technique de la CARU. Le 15 août 2003, la CARU pria l'Uruguay de lui transmettre des informations complémentaires sur différents points au sujet de l'usine CMB (ENCE) en projet. Cette demande fut réitérée le 12 septembre 2003. Le 2 octobre 2003, la DINAMA soumit son rapport d'évaluation au ministère uruguayen du logement, de l'aménagement du territoire et de l'environnement (ci-après le « MVOTMA », selon l'abréviation espagnole de « Ministerio de Vivienda, Ordenamiento Territorial y Medio Ambiente »), et lui recommanda d'accorder à CMB l'autorisation environnementale préalable (« AAP », selon l'abréviation espagnole d'« Autorización Ambiental Previa »), sous certaines conditions. Le 8 octobre 2003, la CARU fut informée par la délégation uruguayenne que la DINAMA devait incessamment lui adresser un rapport sur le projet CMB (ENCE).



B. CMB (ENCE) Project

28. The first pulp mill at the root of the dispute was planned by "Celulosas de M'Bopicuá S.A." (hereinafter "CMB"), a company formed by the Spanish company ENCE (from the Spanish acronym for "Empresa Nacional de Celulosas de España", hereinafter "ENCE"). This mill, hereinafter referred to as the "CMB (ENCE)" mill, was to have been built on the left bank of the River Uruguay in the Uruguayan department of Río Negro opposite the Argentine region of Gualeguaychú, more specifically to the east of the city of Fray Bentos, near the "General San Martín" international bridge (see sketch-map No. 2 on p. 35).

29. On 22 July 2002, the promoters of this industrial project approached the Uruguayan authorities and submitted an environmental impact assessment ("EIA" according to the abbreviation used by the Parties) of the plan to Uruguay's National Directorate for the Environment (hereinafter "DINAMA", from the Spanish acronym for "Dirección Nacional de Medio Ambiente"). During the same period, representatives of CMB, which had been specially formed to build the CMB (ENCE) mill, informed the President of CARU of the project. The President of CARU wrote to the Uruguayan Minister of the Environment on 17 October 2002 seeking a copy of the environmental impact assessment of the CMB (ENCE) project submitted by the promoters of this industrial project. This request was reiterated on 21 April 2003. On 14 May 2003, Uruguay submitted to CARU a document entitled "Environmental Impact Study, Celulosas de M'Bopicuá. Summary for public release". One month later, the CARU Subcommittee on Water Quality and Pollution Control took notice of the document transmitted by Uruguay and suggested that a copy thereof be sent to its technical advisers for their opinions. Copies were also provided to the Parties' delegations.

30. A public hearing, attended by CARU's Legal Adviser and its technical secretary, was held on 21 July 2003 in the city of Fray Bentos concerning CMB's application for an environmental authorization. On 15 August 2003, CARU asked Uruguay for further information on various points concerning the planned CMB (ENCE) mill. This request was reiterated on 12 September 2003. On 2 October 2003, DINAMA submitted its assessment report to the Uruguayan Ministry of Housing, Land Use Planning and Environmental Affairs (hereinafter "MVOTMA", from the Spanish abbreviation for "Ministerio de Vivienda Ordenamiento Territorial y Medio Ambiente"), recommending that CMB be granted an initial environmental authorization ("AAP" according to the Spanish abbreviation for "Autorización Ambiental Previa") subject to certain conditions. On 8 October 2003, CARU was informed by the Uruguayan delegation that DINAMA would very shortly send CARU a report on the CMB (ENCE) project.

31. Le 9 octobre 2003, le MVOTMA délivra une autorisation environnementale préalable à CMB en vue de la construction de l'usine CMB (ENCE). Le même jour, les présidents de l'Argentine et de l'Uruguay se rencontrèrent à Anchorena (Colonia, Uruguay). L'Argentine soutient que le président de l'Uruguay, M. Jorge Battle, aurait à cette occasion promis à son homologue argentin, M. Néstor Kirchner, qu'aucune autorisation ne serait délivrée tant qu'il n'aurait pas été répondu aux préoccupations environnementales de l'Argentine. L'Uruguay conteste cette présentation des faits et affirme qu'à l'occasion de cette réunion les Parties seraient convenues de traiter du projet CMB (ENCE) en dehors de la procédure prévue aux articles 7 à 12 du statut de 1975, tandis que l'Argentine aurait indiqué ne pas s'opposer au projet en lui-même. L'Argentine conteste ces affirmations.

32. Le lendemain de la rencontre entre les chefs d'Etat de l'Argentine et de l'Uruguay, la CARU se déclara prête à reprendre les analyses techniques relatives au projet CMB (ENCE) dès que l'Uruguay aurait transmis les documents en attente. Le 17 octobre 2003, la CARU tint une séance plénière extraordinaire à la demande de l'Argentine; celle-ci s'y plaignit de la délivrance par l'Uruguay, le 9 octobre 2003, de l'autorisation environnementale préalable. A la suite de cette réunion extraordinaire, la CARU suspendit ses activités durant plus de six mois, faute d'accord entre les Parties sur la mise en œuvre du mécanisme de consultation prévu par le statut de 1975.

33. Le 27 octobre 2003, l'Uruguay transmit à l'Argentine des copies de l'évaluation de l'impact sur l'environnement déposée par ENCE le 22 juillet 2002, du rapport final d'évaluation de la DINAMA du 2 octobre 2003 et de l'autorisation environnementale préalable du 9 octobre 2003. L'Argentine réagit à cet envoi en indiquant que, selon elle, l'article 7 du statut de 1975 n'avait pas été respecté et que les documents transmis semblaient être insuffisants pour pouvoir émettre un avis technique sur l'impact sur l'environnement du projet. Le 7 novembre 2003, comme suite à une demande du ministère des relations extérieures de l'Argentine, l'Uruguay communiqua à l'Argentine une copie de l'ensemble du dossier du ministère uruguayen de l'environnement relatif au projet CMB (ENCE). Le 23 février 2004, l'Argentine transmit l'ensemble de ces documents uruguayens à la CARU.

34. Le 2 mars 2004, les ministres des affaires étrangères des deux Parties se rencontrèrent à Buenos Aires. Le 15 mai 2004, la CARU reprit ses travaux à l'occasion d'une séance plénière extraordinaire au cours de laquelle elle prit acte de l'«arrangement» ministériel intervenu le 2 mars 2004. Les Parties divergent toutefois quant au contenu de cet «arrangement». La Cour ne manquera pas d'y revenir lorsqu'elle se penchera sur les allégations de l'Argentine concernant la méconnaissance par l'Uruguay de ses obligations de nature procédurale aux termes du statut de 1975 (voir paragraphes 67 à 158).

35. Donnant suite à la réunion extraordinaire de la CARU du 15 mai 2004, sa sous-commission en charge de la qualité des eaux et de la

31. On 9 October 2003, MVOTMA issued an initial environmental authorization to CMB for the construction of the CMB (ENCE) mill. On the same date the Presidents of Argentina and Uruguay met at Anchorena (Colonia, Uruguay). Argentina maintains that the President of Uruguay, Jorge Battle, then promised his Argentine counterpart, Néstor Kirchner, that no authorization would be issued before Argentina's environmental concerns had been addressed. Uruguay challenges this version of the facts and contends that the Parties agreed at that meeting to deal with the CMB (ENCE) project otherwise than through the procedure under Articles 7 to 12 of the 1975 Statute and that Argentina let it be known that it was not opposed to the project per se. Argentina disputes these assertions.

32. The day after the meeting between the Heads of State of Argentina and Uruguay, CARU declared its willingness to resume the technical analyses of the CMB (ENCE) project as soon as Uruguay transmitted the awaited documents. On 17 October 2003, CARU held an extraordinary plenary meeting at the request of Argentina, at which Argentina complained of Uruguay's granting on 9 October 2003 of the initial environmental authorization. Following the extraordinary meeting CARU suspended work for more than six months, as the Parties could not agree on how to implement the consultation mechanism established by the 1975 Statute.

33. On 27 October 2003, Uruguay transmitted to Argentina copies of the environmental impact assessment submitted by ENCE on 22 July 2002, of DINAMA's final assessment report dated 2 October 2003 and of the initial environmental authorization of 9 October 2003. Argentina reacted by expressing its view that Article 7 of the 1975 Statute had not been observed and that the transmitted documents did not appear adequate to allow for a technical opinion to be expressed on the environmental impact of the project. On 7 November 2003, further to a request from the Ministry of Foreign Affairs of Argentina, Uruguay provided Argentina with a copy of the Uruguayan Ministry of the Environment's entire file on the CMB (ENCE) project. On 23 February 2004, Argentina forwarded all of this documentation received from Uruguay to CARU.

34. On 2 March 2004, the Parties' Ministers for Foreign Affairs met in Buenos Aires. On 15 May 2004, CARU resumed its work at an extraordinary plenary meeting during which it took note of the ministerial "understanding" which was reached on 2 March 2004. The Parties are at odds over the content of this "understanding". The Court will return to this when it considers Argentina's claims as to Uruguay's breach of its procedural obligations under the 1975 Statute (see paragraphs 67 to 158).

35. Following up on CARU's extraordinary meeting of 15 May 2004, the CARU Subcommittee on Water Quality and Pollution Control pre-

prévention de la pollution prépara un plan de contrôle et de suivi (monitoring) de la qualité des eaux dans la zone des usines de pâte à papier (ci-après plan «PROCEL», selon l'acronyme espagnol de «Plan de Monitoreo de la Calidad Ambiental del Río Uruguay en Areas de Plantas Celulósicas»). Ce plan fut approuvé par la CARU le 12 novembre 2004.

36. Le 28 novembre 2005, l'Uruguay autorisa le commencement des travaux préparatoires en vue de la construction de l'usine CMB (ENCE) (nivellement du terrain). Le 28 mars 2006, les promoteurs de ce projet industriel décidèrent de suspendre ces travaux durant quatre-vingt-dix jours. Ils annoncèrent, le 21 septembre 2006, leur intention de ne pas construire l'usine projetée à l'emplacement envisagé sur la rive du fleuve Uruguay.

C. L'usine Orion (Botnia)

37. Le deuxième projet industriel à l'origine du différend porté devant la Cour est dû à l'initiative des sociétés de droit uruguayen «Botnia S.A.» et «Botnia Fray Bentos S.A.» (ci-après «Botnia»), lesquelles ont été spécialement créées à cette fin dès 2003 par la société finlandaise Oy Metsä-Botnia AB. Dénommée «Orion», cette seconde usine de pâte à papier (ci-après l'usine «Orion (Botnia)») a été construite sur la rive gauche du fleuve Uruguay, à quelques kilomètres en aval de l'emplacement prévu pour l'usine CMB (ENCE), également à proximité de la ville de Fray Bentos (voir croquis n° 2, p. 35). Elle est exploitée et en fonctionnement depuis le 9 novembre 2007.

38. Ayant, à la fin de l'année 2003, informé les autorités uruguayennes de leur projet industriel, les promoteurs les saisirent, le 31 mars 2004, d'une demande d'autorisation environnementale préalable, qu'ils complétèrent le 7 avril 2004. Quelques semaines plus tard, les 29 et 30 avril 2004, une rencontre officieuse eut lieu entre des membres de la CARU et des représentants de la société Botnia. A la suite de cette réunion, la sous-commission chargée de la qualité des eaux et de la prévention de la pollution de la CARU suggéra, le 18 juin 2004, que Botnia complète les informations fournies lors de cette réunion. Le 19 octobre 2004, lors d'une autre réunion avec les représentants de Botnia, la CARU jugea à nouveau nécessaire d'obtenir un complément d'information au sujet de la demande d'autorisation environnementale préalable déposée par Botnia auprès de la DINAMA. Le 12 novembre 2004, en même temps que d'approuver le plan de contrôle et de suivi de la qualité des eaux proposé par sa sous-commission en charge de la qualité des eaux et de la prévention de la pollution (voir paragraphe 35 ci-dessus), la CARU décida, sur proposition de la même sous-commission, de demander à l'Uruguay un complément d'information sur la demande d'autorisation environnementale préalable. Cette demande d'information complémentaire fut transmise à l'Uruguay par une note de la CARU en date du 16 novembre 2004.

39. La DINAMA organisa le 21 décembre 2004 une séance publique

pared a plan for monitoring water quality in the area of the pulp mills (hereinafter the "PROCEL" plan from the Spanish acronym for "Plan de Monitoreo de la Calidad Ambiental del Río Uruguay en Areas de Plantas Celulósicas"). CARU approved the plan on 12 November 2004.

36. On 28 November 2005, Uruguay authorized preparatory work to begin for the construction of the CMB (ENCE) mill (ground clearing). On 28 March 2006, the project's promoters decided to halt the work for 90 days. On 21 September 2006, they announced their intention not to build the mill at the planned site on the bank of the River Uruguay.

C. Orion (Botnia) Mill

37. The second industrial project at the root of the dispute before the Court was undertaken by "Botnia S.A." and "Botnia Fray Bentos S.A." (hereinafter "Botnia"), companies formed under Uruguayan law in 2003 specially for the purpose by Oy Metsä-Botnia AB, a Finnish company. This second pulp mill, called "Orion" (hereinafter the "Orion (Botnia)" mill), has been built on the left bank of the River Uruguay, a few kilometres downstream of the site planned for the CMB (ENCE) mill, and also near the city of Fray Bentos (see sketch-map No. 2 on p. 35). It has been operational and functioning since 9 November 2007.

38. After informing the Uruguayan authorities of this industrial project in late 2003, the project promoters submitted an application to them for an initial environmental authorization on 31 March 2004 and supplemented it on 7 April 2004. Several weeks later, on 29 and 30 April 2004, CARU members and Botnia representatives met informally. Following that meeting, CARU's Subcommittee on Water Quality and Pollution Control suggested on 18 June 2004 that Botnia expand on the information provided at the meeting. On 19 October 2004, CARU held another meeting with Botnia representatives and again expressed the need for further information on Botnia's application to DINAMA for an initial environmental authorization. On 12 November 2004, when approving the water quality monitoring plan put forward by the CARU Subcommittee on Water Quality and Pollution Control (see paragraph 35 above), CARU decided, on the proposal of that subcommittee, to ask Uruguay to provide further information on the application for an initial environmental authorization. CARU transmitted this request for further information to Uruguay by note dated 16 November 2004.

39. On 21 December 2004 DINAMA held a public hearing, attended

de discussion à Fray Bentos sur le projet Orion (Botnia), en présence d'un conseiller de la CARU. Le 11 février 2005, la DINAMA adopta son évaluation de l'impact sur l'environnement relative à l'usine Orion (Botnia) en projet et recommanda l'octroi de l'autorisation environnementale préalable, moyennant certaines conditions. Cette autorisation préalable fut délivrée à la société Botnia le 14 février 2005 par le MVOTMA, en vue de la construction de l'usine Orion (Botnia) et d'un terminal portuaire adjacent. Le 11 mars 2005, lors d'une réunion de la CARU, l'Argentine contesta le bien-fondé de la délivrance de l'autorisation environnementale préalable au regard des obligations de nature procédurale prévues par le statut de 1975. L'Argentine réitéra cette position lors de la réunion de la CARU du 6 mai 2005. Le 12 avril 2005, l'Uruguay avait entre-temps autorisé le défrichement du futur site de l'usine et le nivellement de ce terrain.

40. Le 31 mai 2005, donnant suite à un accord intervenu le 5 mai 2005 entre les présidents des deux Parties, les ministres des affaires étrangères des deux Etats procédèrent à la création d'un groupe technique de haut niveau (ci-après le «GTAN», selon l'abréviation espagnole de «Grupo Técnico de Alto Nivel»). Ce groupe fut chargé de résoudre les différends relatifs aux usines CMB (ENCE) et Orion (Botnia) dans un délai de cent quatre-vingts jours. Le GTAN tint douze réunions entre le 3 août 2005 et le 30 janvier 2006, les Parties s'échangeant différents documents dans le cadre de ce processus bilatéral. Le 31 janvier 2006, l'Uruguay constata l'échec des négociations entreprises dans le cadre du GTAN; l'Argentine fit de même le 3 février 2006. La Cour reviendra plus loin sur la portée de ce processus convenu entre les Parties (voir paragraphes 132 à 149).

41. Le 26 juin 2005, l'Argentine s'adressa au président de la Banque internationale pour la reconstruction et le développement pour lui exprimer sa préoccupation face à la possibilité de voir la Société financière internationale (ci-après la «SFI») contribuer au financement des usines de pâte à papier en projet. La SFI décida néanmoins d'apporter son soutien financier à l'usine Orion (Botnia), non sans avoir chargé la société EcoMetrix, spécialisée en expertises environnementales et industrielles, de lui présenter différents rapports techniques sur l'usine en projet et l'évaluation de son impact sur l'environnement. EcoMetrix fut également chargée par la SFI d'assurer pour son compte le suivi environnemental de l'usine dès sa mise en service.

42. Le 5 juillet 2005, l'Uruguay autorisa la société Botnia à construire un port adjacent à l'usine Orion (Botnia). Cette autorisation fut transmise à la CARU le 15 août 2005. Le 22 août 2005, l'Uruguay autorisa la construction d'une cheminée et des fondations en béton de l'usine Orion (Botnia). D'autres autorisations furent accordées à mesure de l'avancement de la construction de cette usine, notamment en ce qui concerne les installations de traitement des déchets. Le 13 octobre 2005, l'Uruguay transmit à la CARU des documents complémentaires au sujet du terminal portuaire adjacent à l'usine Orion (Botnia).

by a CARU adviser, on the Orion (Botnia) project in Fray Bentos. DINAMA adopted its environmental impact study of the planned Orion (Botnia) mill on 11 February 2005 and recommended that the initial environmental authorization be granted, subject to certain conditions. MVOTMA issued the initial authorization to Botnia on 14 February 2005 for the construction of the Orion (Botnia) mill and an adjacent port terminal. At a CARU meeting on 11 March 2005, Argentina questioned whether the granting of the initial environmental authorization was well-founded in view of the procedural obligations laid down in the 1975 Statute. Argentina reiterated this position at the CARU meeting on 6 May 2005. On 12 April 2005, Uruguay had in the meantime authorized the clearance of the future mill site and the associated groundworks.

40. On 31 May 2005, in pursuance of an agreement made on 5 May 2005 by the Presidents of the two Parties, their Ministers for Foreign Affairs created a High-Level Technical Group (hereinafter the "GTAN", from the Spanish abbreviation for "Grupo Técnico de Alto Nivel"), which was given responsibility for resolving the disputes over the CMB (ENCE) and Orion (Botnia) mills within 180 days. The GTAN held twelve meetings between 3 August 2005 and 30 January 2006, with the Parties exchanging various documents in the context of this bilateral process. On 31 January 2006, Uruguay determined that the negotiations undertaken within the GTAN had failed; Argentina did likewise on 3 February 2006. The Court will return later to the significance of this process agreed on by the Parties (see paragraphs 132 to 149).

41. On 26 June 2005, Argentina wrote to the President of the International Bank for Reconstruction and Development to express its concern at the possibility of the International Finance Corporation (hereinafter the "IFC") contributing to the financing of the planned pulp mills. The IFC nevertheless decided to provide financial support for the Orion (Botnia) mill, but did commission EcoMetrix, a consultancy specializing in environmental and industrial matters, to prepare various technical reports on the planned mill and an environmental impact assessment of it. EcoMetrix was also engaged by the IFC to carry out environmental monitoring on the IFC's behalf of the plant once it had been placed in service.

42. On 5 July 2005, Uruguay authorized Botnia to build a port adjacent to the Orion (Botnia) mill. This authorization was transmitted to CARU on 15 August 2005. On 22 August 2005, Uruguay authorized the construction of a chimney and concrete foundations for the Orion (Botnia) mill. Further authorizations were granted as the construction of this mill proceeded, for example in respect of the waste treatment installations. On 13 October 2005, Uruguay transmitted additional documentation to CARU concerning the port terminal adjacent to the Orion (Botnia) mill.

A plusieurs reprises, et notamment lors de réunions de la CARU, l'Argentine demanda la suspension des premiers travaux relatifs à l'usine Orion (Botnia), ainsi que de ceux relatifs à l'usine CMB (ENCE). A l'occasion d'une rencontre entre les chefs d'Etat des Parties à Santiago du Chili le 11 mars 2006, le président uruguayen demanda aux sociétés ENCE et Botnia de suspendre la construction des usines. ENCE suspendit les travaux durant quatre-vingt-dix jours (voir paragraphe 36 ci-dessus); Botnia, durant dix jours.

43. L'Argentine a saisi la Cour du présent différend par une requête en date du 4 mai 2006. Le 24 août 2006, l'Uruguay autorisa la mise en service du terminal portuaire adjacent à l'usine Orion (Botnia), ce dont il informa la CARU le 4 septembre 2006. Le 12 septembre 2006, l'Uruguay autorisa la société Botnia à prélever et utiliser les eaux du fleuve à des fins industrielles et notifia officiellement cette autorisation à la CARU le 17 octobre 2006. En novembre 2006, à l'occasion du sommet des chefs d'Etat et de gouvernement des pays ibéro-américains qui se tint à Montevideo, le roi d'Espagne fut sollicité afin de tenter de rapprocher les positions des Parties; une issue négociée au différend ne put toutefois être trouvée dans ce cadre. Le 8 novembre 2007, l'Uruguay autorisa la mise en service de l'usine Orion (Botnia), qui devint opérationnelle le lendemain. En décembre 2009, la société Oy Metsä-Botnia AB transféra à une autre société finlandaise, UPM, sa participation dans l'usine Orion (Botnia).

*

44. L'Uruguay a par ailleurs autorisé la société Ontur International S.A. à construire et à exploiter un terminal portuaire à Nueva Palmira. Celui-ci a été inauguré en août 2007, l'Uruguay ayant transmis à la CARU, le 16 novembre 2007, la copie de l'autorisation de mise en service du terminal portuaire.

45. Dans leurs écritures, les Parties se sont opposées au sujet de la régularité de la délivrance des autorisations uruguayennes relatives à ce terminal portuaire au regard des obligations de nature procédurale prévues par le statut de 1975. La Cour n'estime toutefois pas nécessaire de retracer précisément les faits ayant conduit à la construction du terminal de Nueva Palmira, considérant que ce complexe portuaire ne fait pas partie de l'objet du différend porté devant elle. L'Argentine n'a en effet à aucun moment visé explicitement le terminal portuaire de Nueva Palmira dans les demandes formulées dans sa requête, ni dans les conclusions de son mémoire ou de sa réplique (voir paragraphes 22 et 23 ci-dessus). Dans ses conclusions finales présentées à l'audience du 29 septembre 2009, l'Argentine a à nouveau limité l'objet de ses demandes à l'autorisation de construction de l'usine CMB (ENCE), ainsi qu'aux autorisations de construction et de mise en service de «l'usine Botnia et ... ses installations connexes sur la rive gauche du fleuve Uruguay». La Cour ne saurait considérer le terminal portuaire de Nueva Palmira, situé à une centaine

Argentina repeatedly asked, including at CARU meetings, that the initial work connected with the Orion (Botnia) mill and the CMB (ENCE) mill should be suspended. At a meeting between the Heads of State of the Parties at Santiago de Chile on 11 March 2006, Uruguay's President asked ENCE and Botnia to suspend construction of the mills. ENCE suspended work for 90 days (see paragraph 36 above), Botnia for ten.

43. Argentina referred the present dispute to the Court by Application dated 4 May 2006. On 24 August 2006, Uruguay authorized the commissioning of the port terminal adjacent to the Orion (Botnia) mill and gave CARU notice of this on 4 September 2006. On 12 September 2006, Uruguay authorized Botnia to extract and use water from the river for industrial purposes and formally notified CARU of its authorization on 17 October 2006. At the summit of Heads of State and Government of the Ibero-American countries held in Montevideo in November 2006, the King of Spain was asked to endeavour to reconcile the positions of the Parties; a negotiated resolution of the dispute did not however result. On 8 November 2007, Uruguay authorized the commissioning of the Orion (Botnia) mill and it began operating the next day. In December 2009, Oy Metsä-Botnia AB transferred its interest in the Orion (Botnia) mill to UPM, another Finnish company.

*

44. In addition, Uruguay authorized Ontur International S.A. to build and operate a port terminal at Nueva Palmira. The terminal was inaugurated in August 2007 and, on 16 November 2007, Uruguay transmitted to CARU a copy of the authorization for its commissioning.

45. In their written pleadings the Parties have debated whether, in light of the procedural obligations laid down in the 1975 Statute, the authorizations for the port terminal were properly issued by Uruguay. The Court deems it unnecessary to review the detailed facts leading up to the construction of the Nueva Palmira terminal, being of the view that these port facilities do not fall within the scope of the subject of the dispute before it. Indeed, nowhere in the claims asserted in its Application or in the submissions in its Memorial or Reply (see paragraphs 22 and 23 above) did Argentina explicitly refer to the port terminal at Nueva Palmira. In its final submissions presented at the hearing on 29 September 2009, Argentina again limited the subject-matter of its claims to the authorization of the construction of the CMB (ENCE) mill and the authorization of the construction and commissioning of "the Botnia mill and its associated facilities on the left bank of the River Uruguay". The Court does not consider the port terminal at Nueva Palmira, which lies some 100 km south of Fray Bentos, downstream of the Orion (Botnia)

de kilomètres au sud de Fray Bentos, en aval de l'usine Orion (Botnia) (voir croquis n° 1, p. 33), et également utilisé par d'autres opérateurs économiques, comme constituant une installation «connexe» à cette dernière.

46. Le différend soumis à la Cour concerne l'interprétation et l'application du statut de 1975. Il porte, en particulier, sur la question de savoir, d'une part, si l'Uruguay s'est conformé aux obligations de nature procédurale qui sont les siennes en vertu du statut de 1975 en accordant des autorisations en vue de la construction de l'usine CMB (ENCE) ainsi que de la construction et de la mise en service de l'usine Orion (Botnia) et du port qui lui est adjacent, et, d'autre part, si l'Uruguay s'est acquitté des obligations de fond lui incombant en vertu du statut de 1975 depuis la mise en service de l'usine Orion (Botnia) au mois de novembre 2007.

* *

47. Ayant ainsi rappelé le contexte dans lequel s'inscrit le différend entre les Parties, la Cour se penchera sur le fondement et l'étendue de sa compétence, y compris sur les questions relatives au droit applicable au présent différend (voir paragraphes 48 à 66). Elle examinera ensuite les allégations de l'Argentine relatives à la violation par l'Uruguay des obligations de nature procédurale (voir paragraphes 67 à 158) et de fond (voir paragraphes 159 à 266) prévues par le statut de 1975. La Cour répondra enfin aux demandes présentées par les Parties dans leurs conclusions finales (voir paragraphes 267 à 280).

* *

II. Étendue de la compétence de la Cour

48. Les Parties s'accordent pour fonder la compétence de la Cour sur le paragraphe 1 de l'article 36 du Statut de la Cour et sur le premier paragraphe de l'article 60 du statut du fleuve Uruguay de 1975. Celui-ci se lit comme suit: «Tout différend concernant l'interprétation ou l'application du traité[1] et du statut qui ne pourrait être réglé par négociation directe peut être soumis par l'une ou l'autre des parties à la Cour internationale de Justice.» Elles divergent sur la question de savoir si toutes les demandes de l'Argentine entrent dans les prévisions de cette clause.

49. L'Uruguay reconnaît que la compétence de la Cour au titre de la clause compromissoire s'étend aux demandes concernant toute pollution ou tout type de dommage causé, en violation du statut de 1975, au fleuve Uruguay ou aux organismes qu'il abrite. L'Uruguay reconnaît également que les demandes relatives à l'effet allégué de l'exploitation de l'usine de

[1] Il s'agit du traité de Montevideo relatif à la frontière sur l'Uruguay du 7 avril 1961 (*RTNU*, vol. 635, n° 9074, p. 99; note de bas de page ajoutée).

mill (see sketch-map No. 1 on p. 33), and is used by other economic operators as well, to be a facility "associated" with the mill.

46. The dispute submitted to the Court concerns the interpretation and application of the 1975 Statute, namely, on the one hand whether Uruguay complied with its procedural obligations under the 1975 Statute in issuing authorizations for the construction of the CMB (ENCE) mill as well as for the construction and the commissioning of the Orion (Botnia) mill and its adjacent port; and on the other hand whether Uruguay has complied with its substantive obligations under the 1975 Statute since the commissioning of the Orion (Botnia) mill in November 2007.

* *

47. Having thus related the circumstances surrounding the dispute between the Parties, the Court will consider the basis and scope of its jurisdiction, including questions relating to the law applicable to the present dispute (see paragraphs 48 to 66). It will then examine Argentina's allegations of breaches by Uruguay of procedural obligations (see paragraphs 67 to 158) and substantive obligations (see paragraphs 159 to 266) laid down in the 1975 Statute. Lastly, the Court will respond to the claims presented by the Parties in their final submissions (see paragraphs 267 to 280).

* *

II. Scope of the Court's Jurisdiction

48. The Parties are in agreement that the Court's jurisdiction is based on Article 36, paragraph 1, of the Statute of the Court and Article 60, paragraph 1, of the 1975 Statute. The latter reads: "Any dispute concerning the interpretation or application of the Treaty[1] and the Statute which cannot be settled by direct negotiations may be submitted by either party to the International Court of Justice." The Parties differ as to whether all the claims advanced by Argentina fall within the ambit of the compromissory clause.

49. Uruguay acknowledges that the Court's jurisdiction under the compromissory clause extends to claims concerning any pollution or type of harm caused to the River Uruguay, or to organisms living there, in violation of the 1975 Statute. Uruguay also acknowledges that claims concerning the alleged impact of the operation of the pulp mill on the

[1] The Montevideo Treaty of 7 April 1961, concerning the boundary constituted by the River Uruguay (*UNTS*, Vol. 635, No. 9074, p. 98; footnote added).

pâte à papier sur la qualité des eaux du fleuve sont couvertes par la clause compromissoire. Il estime en revanche que cette clause ne permet pas à l'Argentine de présenter des demandes portant sur tout type de dommage environnemental. L'Uruguay affirme en outre que les allégations argentines visant la pollution atmosphérique, les nuisances sonores, visuelles et autres prétendument causées par l'usine Orion (Botnia), ainsi que les effets spécifiques que celle-ci aurait eus sur le secteur du tourisme, ne concernent pas l'interprétation ou l'application du statut de 1975, la Cour étant dès lors sans compétence pour en connaître.

L'Uruguay concède néanmoins qu'une pollution atmosphérique qui aurait des effets préjudiciables sur la qualité des eaux du fleuve ou sur le milieu aquatique entrerait dans le champ de compétence de la Cour.

50. L'Argentine soutient que la position de l'Uruguay quant à l'étendue de la compétence de la Cour est trop restrictive. Elle affirme que le statut de 1975 a été conclu pour protéger non seulement la qualité des eaux du fleuve, mais plus généralement le «régime» et les zones d'influence de celui-ci. Se fondant sur l'article 36 du statut de 1975, qui fait obligation aux parties de coordonner les mesures propres à éviter une modification de l'équilibre écologique et contenir les facteurs nocifs sur le fleuve et dans ses zones d'influence, l'Argentine argue que la Cour est également compétente pour connaître de demandes relatives à la pollution atmosphérique, et même à la pollution sonore et «visuelle». Elle prétend en outre que les mauvaises odeurs produites par l'usine Orion (Botnia) ont un impact sur les utilisations récréatives du fleuve, en particulier à la station balnéaire de Gualeguaychú, située sur sa rive. Cette demande, selon l'Argentine, relève également de la compétence de la Cour.

51. La Cour, lorsqu'elle examinera les différentes allégations ou demandes avancées par l'Argentine, devra déterminer si celles-ci concernent «l'interprétation ou l'application» du statut de 1975, sa compétence couvrant, aux termes de l'article 60 dudit statut, «[t]out différend concernant l'interprétation ou l'application du traité [de 1961] et du statut [de 1975]» et l'Argentine n'ayant, par ailleurs, pas prétendu que l'Uruguay ait violé des obligations découlant du traité de 1961.

52. Pour déterminer si l'Uruguay a violé les obligations lui incombant en vertu du statut de 1975, comme le soutient l'Argentine, la Cour devra interpréter les dispositions de ce statut et en déterminer le champ d'application *ratione materiae*.

Seules les demandes que l'Argentine a formulées en se fondant sur les dispositions du statut de 1975 relèvent de la compétence de la Cour *ratione materiae* en vertu de la clause compromissoire contenue à l'article 60. Bien que l'Argentine, à l'appui de ses demandes relatives à la pollution sonore et «visuelle» qu'aurait causée l'usine de pâte à papier, ait invoqué la disposition contenue à l'article 36 du statut de 1975, la Cour ne voit rien dans celle-ci qui puisse venir fonder lesdites demandes. Le libellé clair de l'article 36, qui prévoit que «[l]es parties coordonnent, par l'intermédiaire de la commission, les mesures propres à éviter une modification de l'équilibre écologique et à contenir les fléaux et autres facteurs

quality of the waters of the river fall within the compromissory clause. On the other hand, Uruguay takes the position that Argentina cannot rely on the compromissory clause to submit claims regarding every type of environmental damage. Uruguay further argues that Argentina's contentions concerning air pollution, noise, visual and general nuisance, as well as the specific impact on the tourism sector, allegedly caused by the Orion (Botnia) mill, do not concern the interpretation or the application of the 1975 Statute, and the Court therefore lacks jurisdiction over them.

Uruguay nevertheless does concede that air pollution which has harmful effects on the quality of the waters of the river or on the aquatic environment would fall within the jurisdiction of the Court.

50. Argentina maintains that Uruguay's position on the scope of the Court's jurisdiction is too narrow. It contends that the 1975 Statute was entered into with a view to protect not only the quality of the waters of the river but more generally its "régime" and the areas affected by it. Relying on Article 36 of the 1975 Statute, which lays out the obligation of the parties to co-ordinate measures to avoid any change in the ecological balance and to control harmful factors in the river and the areas affected by it, Argentina asserts that the Court has jurisdiction also with respect to claims concerning air pollution and even noise and "visual" pollution. Moreover, Argentina contends that bad odours caused by the Orion (Botnia) mill negatively affect the use of the river for recreational purposes, particularly in the Gualeguaychú resort on its bank of the river. This claim, according to Argentina, also falls within the Court's jurisdiction.

51. The Court, when addressing various allegations or claims advanced by Argentina, will have to determine whether they concern "the interpretation or application" of the 1975 Statute, as its jurisdiction under Article 60 thereof covers "[a]ny dispute concerning the interpretation or application of the [1961] Treaty and the [1975] Statute". Argentina has made no claim to the effect that Uruguay violated obligations under the 1961 Treaty.

52. In order to determine whether Uruguay has breached its obligations under the 1975 Statute, as alleged by Argentina, the Court will have to interpret its provisions and to determine their scope *ratione materiae*.

Only those claims advanced by Argentina which are based on the provisions of the 1975 Statute fall within the Court's jurisdiction *ratione materiae* under the compromissory clause contained in Article 60. Although Argentina, when making claims concerning noise and "visual" pollution allegedly caused by the pulp mill, invokes the provision of Article 36 of the 1975 Statute, the Court sees no basis in it for such claims. The plain language of Article 36, which provides that "[t]he parties shall co-ordinate, through the Commission, the necessary measures to avoid any change in the ecological balance and to control pests and other harmful factors in the river and the areas affected by it", leaves no doubt

nocifs sur le fleuve et dans ses zones d'influence», ne laisse aucun doute sur le fait que, contrairement à ce qu'affirme l'Argentine, cette pollution sonore et visuelle n'est pas couverte par la disposition. La Cour ne voit en outre dans le statut aucune autre disposition qui puisse venir fonder de telles demandes; dès lors, les demandes relatives à la pollution sonore et visuelle ne relèvent manifestement pas de la compétence que lui confère l'article 60.

De même, aucune disposition du statut de 1975 ne traite de la question des «mauvaises odeurs» dont tire grief l'Argentine. En conséquence, et pour les mêmes raisons, la demande relative à l'impact qu'auraient ces odeurs sur le tourisme en Argentine échappe également à la compétence de la Cour. Celle-ci note que, quand bien même de telles odeurs entreraient dans le cadre de la pollution atmosphérique, qu'elle examinera aux paragraphes 263 et 264 ci-dessous, l'Argentine n'a fourni aucun élément de preuve quant à la relation qui existerait entre les mauvaises odeurs alléguées et le milieu aquatique du fleuve.

53. Qualifiant les articles premier et 41 du statut de 1975 de «clauses de renvoi», l'Argentine estime que de telles clauses ont pour effet d'incorporer dans cet instrument les obligations que les Parties tiennent du droit international général et d'un certain nombre de conventions multilatérales relatives à la protection de l'environnement. Dès lors, estime-t-elle, la Cour a compétence pour déterminer si l'Uruguay s'est conformé aux obligations lui incombant en vertu de certaines conventions internationales.

54. La Cour se penchera donc maintenant sur la question de savoir si la compétence que lui confère l'article 60 du statut de 1975 couvre également les obligations des Parties découlant d'accords internationaux et du droit international général invoqués par l'Argentine, et sur le rôle de ces accords et du droit international général dans le contexte de la présente affaire.

55. L'Argentine affirme que le droit applicable au différend dont la Cour est saisie est le statut de 1975, complété pour son application et son interprétation par divers principes coutumiers et traités en vigueur entre les Parties, auxquels le statut renvoie. Se fondant sur la règle d'interprétation des traités énoncée à l'article 31, paragraphe 3, alinéa *c)*, de la convention de Vienne sur le droit des traités, l'Argentine soutient notamment que le statut de 1975 doit être interprété à la lumière des principes qui règlent le droit des cours d'eau internationaux et des principes du droit international assurant la protection de l'environnement. Elle affirme que l'interprétation du statut de 1975 doit tenir compte de toute «règle pertinente» de droit international applicable dans les relations entre les Parties, pour rester d'actualité et refléter l'évolution des normes environnementales. L'Argentine mentionne à ce titre les principes de l'utilisation équitable, raisonnable et non dommageable des cours d'eau internationaux, les principes de développement durable, de prévention et de précaution, et la nécessité de conduire une évaluation de l'impact sur l'environnement. Elle soutient que ces règles et principes servent à l'interpréta-

that it does not address the alleged noise and visual pollution as claimed by Argentina. Nor does the Court see any other basis in the 1975 Statute for such claims; therefore, the claims relating to noise and visual pollution are manifestly outside the jurisdiction of the Court conferred upon it under Article 60.

Similarly, no provision of the 1975 Statute addresses the issue of "bad odours" complained of by Argentina. Consequently, for the same reason, the claim regarding the impact of bad odours on tourism in Argentina also falls outside the Court's jurisdiction. Even if bad odours were to be subsumed under the issue of air pollution, which will be addressed in paragraphs 263 and 264 below, the Court notes that Argentina has submitted no evidence as to any relationship between the alleged bad odours and the aquatic environment of the river.

53. Characterizing the provisions of Articles 1 and 41 of the 1975 Statute as "referral clauses", Argentina ascribes to them the effect of incorporating into the Statute the obligations of the Parties under general international law and a number of multilateral conventions pertaining to the protection of the environment. Consequently, in the view of Argentina, the Court has jurisdiction to determine whether Uruguay has complied with its obligations under certain international conventions.

54. The Court now therefore turns its attention to the issue whether its jurisdiction under Article 60 of the 1975 Statute also encompasses obligations of the Parties under international agreements and general international law invoked by Argentina and to the role of such agreements and general international law in the context of the present case.

55. Argentina asserts that the 1975 Statute constitutes the law applicable to the dispute before the Court, as supplemented so far as its application and interpretation are concerned, by various customary principles and treaties in force between the Parties and referred to in the Statute. Relying on the rule of treaty interpretation set out in Article 31, paragraph 3 *(c)* of the Vienna Convention on the Law of Treaties, Argentina contends notably that the 1975 Statute must be interpreted in the light of principles governing the law of international watercourses and principles of international law ensuring protection of the environment. It asserts that the 1975 Statute must be interpreted so as to take account of all "relevant rules" of international law applicable in the relations between the Parties, so that the Statute's interpretation remains current and evolves in accordance with changes in environmental standards. In this connection Argentina refers to the principles of equitable, reasonable and non-injurious use of international watercourses, the principles of sustainable development, prevention, precaution and the need to carry out an environmental impact assessment. It contends that these rules and principles

tion dynamique du statut de 1975, bien qu'ils ne viennent pas se substituer à celui-ci ni en amoindrir la portée.

56. L'Argentine considère de plus que la Cour doit faire respecter les obligations conventionnelles liant les Parties auxquelles renvoient les articles premier et 41, alinéa *a)*, du statut de 1975. Elle soutient que les «clauses de renvoi» contenues dans ces articles permettent l'incorporation et l'application d'obligations découlant d'autres traités et engagements internationaux liant les Parties. A cet effet, l'Argentine mentionne la convention de 1973 sur le commerce international des espèces de faune et de flore sauvages menacées d'extinction (ci-après dénommée la «convention CITES»), la convention de Ramsar de 1971 sur les zones humides d'importance internationale (ci-après dénommée la «convention de Ramsar»), la convention des Nations Unies de 1992 sur la diversité biologique (ci-après dénommée la «convention sur la diversité biologique») et la convention de Stockholm de 2001 sur les polluants organiques persistants (ci-après dénommée la «convention POP»). Selon elle, ces obligations conventionnelles s'ajoutent aux droits et obligations découlant du statut de 1975, et il convient, lors de l'examen de l'application de celui-ci, de s'assurer qu'elles ont bien été respectées. L'Argentine soutient que ce n'est qu'en cas de «dispositions plus précises du statut [de 1975] *(lex specialis)*» y dérogeant que les instruments auxquels le statut renvoie ne devraient pas être appliqués.

57. L'Uruguay considère de même que l'interprétation du statut de 1975 doit se faire à la lumière du droit international général, et constate l'accord des Parties à cet égard. Il soutient toutefois que l'interprétation qu'il développe est conforme aux différents principes généraux du droit des cours d'eau internationaux et du droit de l'environnement, même s'il a de ces principes une compréhension qui n'est pas tout à fait la même que celle de l'Argentine. L'Uruguay estime que la question de savoir si les articles premier et 41, alinéa *a)*, du statut de 1975 peuvent être compris comme renvoyant à d'autres traités en vigueur entre les Parties est dépourvue de pertinence en l'espèce, soit que les conventions invoquées par l'Argentine seraient sans pertinence, soit qu'aucune violation d'autres obligations conventionnelles ne pourrait lui être reprochée. En tout état de cause, la Cour serait sans compétence pour statuer sur des allégations de violations d'obligations internationales non prévues par le statut de 1975.

58. La Cour examinera d'abord la question de savoir si les articles premier et 41, alinéa *a)*, peuvent être interprétés comme incorporant dans le statut de 1975 les obligations incombant aux Parties en vertu des différents traités multilatéraux sur lesquels l'Argentine fait fond.

59. L'article premier du statut de 1975 se lit comme suit:

> «Les parties adoptent le présent statut, conformément aux dispositions de l'article 7 du traité relatif à la frontière sur l'Uruguay du 7 avril 1961, à l'effet d'établir les mécanismes communs nécessaires à l'utilisation rationnelle et optimale du fleuve Uruguay, dans le strict

are applicable in giving the 1975 Statute a dynamic interpretation, although they neither replace it nor restrict its scope.

56. Argentina further considers that the Court must require compliance with the Parties' treaty obligations referred to in Articles 1 and 41 *(a)* of the 1975 Statute. Argentina maintains that the "referral clauses" contained in these articles make it possible to incorporate and apply obligations arising from other treaties and international agreements binding on the Parties. To this end, Argentina refers to the 1973 Convention on International Trade in Endangered Species of Wild Fauna and Flora (hereinafter the "CITES Convention"), the 1971 Ramsar Convention on Wetlands of International Importance (hereinafter the "Ramsar Convention"), the 1992 United Nations Convention on Biological Diversity (hereinafter the "Biodiversity Convention"), and the 2001 Stockholm Convention on Persistent Organic Pollutants (hereinafter the "POPs Convention"). It asserts that these conventional obligations are in addition to the obligations arising under the 1975 Statute, and observance of them should be ensured when application of the Statute is being considered. Argentina maintains that it is only where "more specific rules of the [1975] Statute *(lex specialis)*" derogate from them that the instruments to which the Statute refers should not be applied.

57. Uruguay likewise considers that the 1975 Statute must be interpreted in the light of general international law and it observes that the Parties concur on this point. It maintains however that its interpretation of the 1975 Statute accords with the various general principles of the law of international watercourses and of international environmental law, even if its understanding of these principles does not entirely correspond to that of Argentina. Uruguay considers that whether Articles 1 and 41 *(a)* of the 1975 Statute can be read as a referral to other treaties in force between the Parties has no bearing in the present case, because conventions relied on by Argentina are either irrelevant, or Uruguay cannot be found to have violated any other conventional obligations. In any event, the Court would lack jurisdiction to rule on alleged breaches of international obligations which are not contained in the 1975 Statute.

58. The Court will first address the issue whether Articles 1 and 41 *(a)* can be read as incorporating into the 1975 Statute the obligations of the Parties under the various multilateral conventions relied upon by Argentina.

59. Article 1 of the 1975 Statute reads as follows:

> "The parties agree on this Statute, in implementation of the provisions of Article 7 of the Treaty concerning the Boundary Constituted by the River Uruguay of 7 April 1961, in order to establish the joint machinery necessary for the optimum and rational utilization

> respect des droits et obligations découlant des traités et autres engagements internationaux en vigueur à l'égard de l'une ou l'autre des parties.» (*RTNU*, vol. 1295, nº I-21425, p. 348; note de bas de page omise.)

L'article premier définit le but du statut de 1975: les Parties l'ont conclu à l'effet d'établir les mécanismes communs nécessaires à l'utilisation rationnelle et optimale du fleuve Uruguay. L'article contient certes une référence aux «droits et obligations découlant des traités et autres engagements internationaux en vigueur à l'égard de l'une ou l'autre des parties», mais l'on ne saurait en déduire que les Parties cherchaient à faire du respect des obligations qu'elles tenaient d'autres traités l'un des devoirs leur incombant en vertu du statut de 1975; la référence à d'autres traités met plutôt l'accent sur le fait que l'adoption du statut intervient conformément aux dispositions de l'article 7 du traité de 1961 *et* «*dans le strict respect* des droits et obligations découlant des traités et autres engagements internationaux en vigueur à l'égard de l'une ou l'autre des parties» (les italiques sont de la Cour). Si la conjonction «et» n'apparaît pas dans les traductions anglaise et française du statut de 1975, telles que publiées dans le *Recueil des traités des Nations Unies* (*ibid.*, p. 340 et 348), elle figure dans la version espagnole, qui est celle faisant foi. Le texte espagnol se lit comme suit:

> «Las partes acuerdan el presente Estatuto, en cumplimiento de lo dispuesto en el Artículo 7 del Tratado de Límites en el Río Uruguay, de 7 de Abril de 1961 con el fin de establecer los mecanismos comunes necesarios para el óptimo y racional aprovechamiento del Río Uruguay, *y* en estricta observancia de los derechos y obligaciones emergentes de los tratados y demás compromisos internacionales vigentes para cualquiera de las partes.» (*Ibid.*, p. 332; les italiques sont de la Cour.)

La présence de la conjonction dans le texte espagnol donne à penser que la clause relative au «strict respect des droits et obligations découlant des traités et autres engagements internationaux en vigueur à l'égard de l'une ou l'autre des parties» est liée, et doit être rattachée, à la première partie de l'article premier («[l]es parties adoptent le présent statut, conformément aux dispositions de l'article 7 du traité relatif à la frontière sur l'Uruguay»).

60. Une autre observation s'impose en ce qui concerne le texte de l'article premier du statut de 1975. Celui-ci mentionne les «traités et autres engagements internationaux en vigueur à l'égard de *l'une ou l'autre* des parties» («tratados y demás compromisos internacionales vigentes para *cualquiera* de las partes» dans l'original espagnol; les italiques sont de la Cour). Dans sa traduction anglaise, ce passage se lit «treaties and other international agreements in force for *each* of the parties» (les italiques sont de la Cour).

Le fait que l'article premier n'exige pas que les «traités et autres enga-

> of the River Uruguay, in strict observance of the rights and obligations arising from treaties and other international agreements in force for each of the parties." (*UNTS*, Vol. 1295, No. I-21425, p. 340; footnote omitted.)

Article 1 sets out the purpose of the 1975 Statute. The Parties concluded it in order to establish the joint machinery necessary for the rational and optimum utilization of the River Uruguay. It is true that this article contains a reference to "the rights and obligations arising from treaties and other international agreements in force for each of the parties". This reference, however, does not suggest that the Parties sought to make compliance with their obligations under other treaties one of their duties under the 1975 Statute; rather, the reference to other treaties emphasizes that the agreement of the Parties on the Statute is reached in implementation of the provisions of Article 7 of the 1961 Treaty *and* "*in strict observance* of the rights and obligations arising from treaties and other international agreements in force for each of the parties" (emphasis added). While the conjunction "and" is missing from the English and French translations of the 1975 Statute, as published in the *United Nations Treaty Series* (*ibid.*, p. 340 and p. 348), it is contained in the Spanish text of the Statute, which is the authentic text and reads as follows:

> "Las partes acuerdan el presente Estatuto, en cumplimiento de lo dispuesto en el Artículo 7 del Tratado de Límites en el Río Uruguay, de 7 de Abril de 1961 con el fin de establecer los mecanismos comunes necesarios para el óptimo y racional aprovechamiento del Río Uruguay, *y* en estricta observancia de los derechos y obligaciones emergentes de los tratados y demás compromisos internacionales vigentes para cualquiera de las partes." (*Ibid.*, p. 332; emphasis added.)

The presence of the conjunction in the Spanish text suggests that the clause "in strict observance of the rights and obligations arising from treaties and other international agreements in force for each of the parties" is linked to and is to be read with the first part of Article 1, i.e., "[t]he parties agree on this Statute, in implementation of the provisions of Article 7 of the Treaty concerning the Boundary Constituted by the River Uruguay".

60. There is one additional element in the language of Article 1 of the 1975 Statute which should be noted. It mentions "treaties and other international agreements in force for *each* of the parties" (in Spanish original "tratados y demás compromisos internacionales vigentes para *cualquiera* de las partes"; emphasis added). In the French translation, this part of Article 1 reads "traités et autres engagements internationaux en vigueur à l'égard de *l'une ou l'autre* des parties" (emphasis added).

The fact that Article 1 does not require that the "treaties and other

gements internationaux» soient en vigueur entre les *deux* parties indique ainsi clairement que le statut de 1975 tient compte des engagements antérieurs pertinents de chacune des parties.

61. L'article 41 du statut de 1975, dont l'alinéa *a)* constitue, pour l'Argentine, une autre «clause de renvoi» incorporant dans le statut les obligations découlant d'engagements internationaux, se lit comme suit:

> «Sans préjudice des fonctions assignées à la commission en la matière, les parties s'obligent:
>
> *a)* à protéger et à préserver le milieu aquatique et, en particulier, à en empêcher la pollution *en établissant [l]es normes et en adoptant les mesures appropriées, conformément* aux accords internationaux applicables et, le cas échéant, en harmonie avec les directives et les recommandations des organismes techniques internationaux;
>
> *b)* à ne pas abaisser, dans leurs systèmes juridiques respectifs:
>
> 1) les normes techniques en vigueur pour prévenir la pollution des eaux, et
> 2) les pénalités établies pour les infractions;
>
> *c)* à s'informer mutuellement des normes qu'elles se proposent d'établir en matière de pollution des eaux, en vue d'établir des normes équivalentes dans leurs systèmes juridiques respectifs.» (Les italiques sont de la Cour.)

62. La Cour fait observer que les mots «adoptant ... appropriées» [«adopting appropriate»] ne figurent pas dans la version anglaise, alors qu'ils sont présents dans le texte original espagnol («dictando las normas y adoptando las medidas apropiadas»). Pour la Cour, qui s'appuie sur le texte original espagnol, il est difficile de voir comment cette disposition pourrait être interprétée comme une clause de renvoi ayant pour effet d'incorporer dans le champ d'application du statut de 1975 les obligations des parties découlant des accords internationaux et autres normes visées.

La clause figurant à l'alinéa *a)* de l'article 41 a pour but la protection et la préservation du milieu aquatique, chacune des parties devant à cet effet édicter des normes et adopter des mesures appropriées. L'alinéa *a)* de l'article 41 distingue entre les accords internationaux applicables, d'une part, et les directives et recommandations des organismes techniques internationaux, d'autre part. Les premiers sont juridiquement contraignants et, par conséquent, les normes et réglementations édictées en droit interne et les mesures adoptées par les Etats doivent leur être conformes; les secondes, qui ne lient pas formellement les Etats, doivent être prises en compte par ces derniers, pour autant qu'elles sont pertinentes, de manière que les mesures, les normes et les réglementations internes adoptées soient compatibles («con adecuación») avec ces directives et recommandations. L'article 41, toutefois, n'incorpore pas dans le statut de 1975 les accords internationaux en tant que tels, mais impose aux

international agreements" should be in force between the *two* parties thus clearly indicates that the 1975 Statute takes account of the prior commitments of each of the parties which have a bearing on it.

61. Article 41 of the 1975 Statute, paragraph *(a)* of which Argentina considers as constituting another "referral clause" incorporating the obligations under international agreements into the Statute, reads as follows:

> "Without prejudice to the functions assigned to the Commission in this respect, the parties undertake:
>
> *(a)* to protect and preserve the aquatic environment and, in particular, to prevent its pollution, *by prescribing appropriate rules and [adopting appropriate] measures in accordance* with applicable international agreements and in keeping, where relevant, with the guidelines and recommendations of international technical bodies;
>
> *(b)* not to reduce in their respective legal systems:
>
> 1) the technical requirements in force for preventing water pollution, and
> 2) the severity of the penalties established for violations;
>
> *(c)* to inform one another of any rules which they plan to prescribe with regard to water pollution in order to establish equivalent rules in their respective legal systems." (Emphasis added.)

62. The Court observes that the words "adopting appropriate" do not appear in the English translation while they appear in the original Spanish text ("dictando las normas y adoptando las medidas apropiadas"). Basing itself on the original Spanish text, it is difficult for the Court to see how this provision could be construed as a "referral clause" having the effect of incorporating the obligations of the parties under international agreements and other norms envisaged within the ambit of the 1975 Statute.

The purpose of the provision in Article 41 *(a)* is to protect and preserve the aquatic environment by requiring each of the parties to enact rules and to adopt appropriate measures. Article 41 *(a)* distinguishes between applicable international agreements and the guidelines and recommendations of international technical bodies. While the former are legally binding and therefore the domestic rules and regulations enacted and the measures adopted by the State have to comply with them, the latter, not being formally binding, are, to the extent they are relevant, to be taken into account by the State so that the domestic rules and regulations and the measures it adopts are compatible ("con adecuación") with those guidelines and recommendations. However, Article 41 does not incorporate international agreements as such into the 1975 Statute but rather sets obligations for the parties to exercise their regulatory powers, in conformity with applicable international agreements, for the protection and

parties l'obligation d'exercer leurs pouvoirs de réglementation, en conformité avec les accords internationaux applicables, aux fins de la protection et de la préservation du milieu aquatique du fleuve Uruguay. Aux termes de l'alinéa *b)* de l'article 41, les normes mises en place pour prévenir la pollution des eaux et la sévérité des «pénalités» ne doivent pas être abaissées. Enfin, l'alinéa *c)* de l'article 41 concerne l'obligation faite à chacune des parties d'informer l'autre des normes qu'elle se propose d'établir en matière de pollution des eaux.

63. La Cour en conclut que rien, dans le texte de l'article 41 du statut de 1975, ne vient étayer la thèse selon laquelle cet article constituerait une «clause de renvoi». En conséquence, les différentes conventions multilatérales invoquées par l'Argentine ne sont pas, comme telles, incorporées dans le statut de 1975. Pour cette raison, elles ne relèvent pas de la clause compromissoire et la Cour n'a pas compétence pour trancher la question de savoir si l'Uruguay a rempli les obligations lui incombant en vertu de ces instruments.

64. La Cour examinera ensuite brièvement comment le statut de 1975 doit être interprété. Si les vues des Parties concordent en ce qui concerne l'origine du statut et le contexte historique dans lequel il s'insère, elles divergent quant à sa nature et à son économie générale ainsi que quant aux obligations de nature procédurale et de fond qu'il énonce.

Les Parties conviennent cependant que le statut de 1975 doit être interprété conformément aux règles de droit international coutumier relatives à l'interprétation des traités, telles que codifiées à l'article 31 de la convention de Vienne sur le droit des traités.

65. La Cour s'est référée à ces règles lorsqu'elle a été appelée à interpréter les dispositions de traités et d'accords internationaux conclus avant l'entrée en vigueur de la convention de Vienne en 1980 (voir, par exemple, les affaires du *Différend territorial (Jamahiriya arabe libyenne/Tchad), arrêt, C.I.J. Recueil 1994*, p. 21, par. 41, et de l'*Ile de Kasikili/Sedudu (Botswana/Namibie), arrêt, C.I.J. Recueil 1999 (II)*, p. 1059, par. 18).

Le statut de 1975 est lui aussi un traité antérieur à l'entrée en vigueur de la convention de Vienne sur le droit des traités. Pour en interpréter les termes, la Cour se référera aux règles coutumières d'interprétation des traités telles qu'elles ressortent de l'article 31 de la convention de Vienne. Le statut de 1975 doit donc être «interprété de bonne foi suivant le sens ordinaire à attribuer [à ses] termes ... dans leur contexte et à la lumière de son objet et de son but». L'interprétation prendra aussi en compte, outre le contexte, «toute règle pertinente de droit international applicable dans les relations entre les parties».

66. La prise en considération, aux fins de l'interprétation du statut de 1975, des règles pertinentes de droit international applicables dans les relations entre les Parties, qu'il s'agisse de règles de droit international général ou de règles contenues dans les conventions multilatérales auxquelles les deux Etats sont parties, est toutefois sans incidence sur l'éten-

preservation of the aquatic environment of the River Uruguay. Under Article 41 *(b)* the existing requirements for preventing water pollution and the severity of the penalties are not to be reduced. Finally, paragraph *(c)* of Article 41 concerns the obligation to inform the other party of plans to prescribe rules on water pollution.

63. The Court concludes that there is no basis in the text of Article 41 of the 1975 Statute for the contention that it constitutes a "referral clause". Consequently, the various multilateral conventions relied on by Argentina are not, as such, incorporated in the 1975 Statute. For that reason, they do not fall within the scope of the compromissory clause and therefore the Court has no jurisdiction to rule whether Uruguay has complied with its obligations thereunder.

64. The Court next briefly turns to the issue of how the 1975 Statute is to be interpreted. The Parties concur as to the 1975 Statute's origin and historical context, although they differ as to the nature and general tenor of the Statute and the procedural and substantive obligations therein.

The Parties nevertheless are in agreement that the 1975 Statute is to be interpreted in accordance with rules of customary international law on treaty interpretation, as codified in Article 31 of the Vienna Convention on the Law of Treaties.

65. The Court has had recourse to these rules when it has had to interpret the provisions of treaties and international agreements concluded before the entry into force of the Vienna Convention on the Law of Treaties in 1980 (see, e.g., *Territorial Dispute (Libyan Arab Jamahiriya/Chad), Judgment, I.C.J. Reports 1994*, p. 21, para. 41; *Kasikili/Sedudu Island (Botswana/Namibia), Judgment, I.C.J. Reports 1999 (II)*, p. 1059, para. 18).

The 1975 Statute is also a treaty which predates the entry into force of the Vienna Convention on the Law of Treaties. In interpreting the terms of the 1975 Statute, the Court will have recourse to the customary rules on treaty interpretation as reflected in Article 31 of the Vienna Convention. Accordingly the 1975 Statute is to be "interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the [Statute] in their context and in light of its object and purpose". That interpretation will also take into account, together with the context, "any relevant rules of international law applicable in the relations between the parties".

66. In the interpretation of the 1975 Statute, taking account of relevant rules of international law applicable in the relations between the Parties, whether these are rules of general international law or contained in multilateral conventions to which the two States are parties, nevertheless has no bearing on the scope of the jurisdiction conferred on the

due de la compétence conférée à la Cour en vertu de l'article 60 du statut de 1975, qui demeure circonscrite aux différends concernant l'interprétation ou l'application du statut.

* *

III. La violation alléguée des obligations de nature procédurale

67. La requête déposée par l'Argentine le 4 mai 2006 porte sur la violation alléguée par l'Uruguay des obligations tant de nature procédurale que de fond prévues par le statut de 1975. La Cour commencera par examiner la violation alléguée des obligations de nature procédurale prévues par les articles 7 à 12 du statut de 1975 au sujet des projets relatifs aux usines CMB (ENCE) et Orion (Botnia), ainsi qu'aux installations connexes de cette dernière, sur la rive gauche du fleuve Uruguay, près de la ville de Fray Bentos.

68. L'Argentine considère que les obligations de nature procédurale sont intrinsèquement liées aux obligations de fond prévues par le statut de 1975, et qu'un manquement aux premières entraîne un manquement aux secondes.

S'agissant des obligations de nature procédurale, elles constitueraient, selon l'Argentine, un ensemble intégré et indissociable, au sein duquel la CARU jouerait, en tant qu'organisation, un rôle essentiel.

Il en découlerait, selon l'Argentine, que l'Uruguay ne pourrait invoquer d'autres arrangements procéduraux pour déroger aux obligations de nature procédurale prévues par le statut de 1975, en dehors du consentement des deux Parties.

69. A l'issue du mécanisme procédural prévu par ce statut, et faute d'accord entre les Parties, celles-ci n'auraient, selon l'Argentine, d'autre choix que de saisir la Cour, aux termes des articles 12 et 60 du statut, l'Uruguay ne pouvant procéder à la construction des usines projetées tant que la Cour n'aurait pas rendu son arrêt.

70. Dans le fil de l'argumentation avancée par le demandeur, la Cour examinera successivement les quatre points suivants : les liens entre les obligations de nature procédurale et les obligations de fond (A), les obligations de nature procédurale et leur articulation (B), la question de savoir si les Parties sont convenues de déroger aux obligations de nature procédurale prévues par le statut de 1975 (C) et les obligations de l'Uruguay au terme de la période de négociation (D).

A. Les liens entre les obligations de nature procédurale et les obligations de fond

71. L'Argentine soutient que les dispositions de nature procédurale, prévues aux articles 7 à 12 du statut de 1975, ont pour objectif d'assurer

Court under Article 60 of the 1975 Statute, which remains confined to disputes concerning the interpretation or application of the Statute.

* *

III. The Alleged Breach of Procedural Obligations

67. The Application filed by Argentina on 4 May 2006 concerns the alleged breach by Uruguay of both procedural and substantive obligations laid down in the 1975 Statute. The Court will start by considering the alleged breach of procedural obligations under Articles 7 to 12 of the 1975 Statute, in relation to the (CMB) ENCE and Orion (Botnia) mill projects and the facilities associated with the latter, on the left bank of the River Uruguay near the city of Fray Bentos.

68. Argentina takes the view that the procedural obligations were intrinsically linked to the substantive obligations laid down by the 1975 Statute, and that a breach of the former entailed a breach of the latter.

With regard to the procedural obligations, these are said by Argentina to constitute an integrated and indivisible whole in which CARU, as an organization, plays an essential role.

Consequently, according to Argentina, Uruguay could not invoke other procedural arrangements so as to derogate from the procedural obligations laid down by the 1975 Statute, except by mutual consent.

69. Argentina argues that, at the end of the procedural mechanism provided for by the 1975 Statute, and in the absence of agreement between the Parties, the latter have no choice but to submit the matter to the Court under the terms of Articles 12 and 60 of the Statute, with Uruguay being unable to proceed with the construction of the planned mills until the Court has delivered its Judgment.

70. Following the lines of the argument put forward by the Applicant, the Court will examine in turn the following four points: the links between the procedural obligations and the substantive obligations (A); the procedural obligations and their interrelation with each other (B); whether the Parties agreed to derogate from the procedural obligations set out in the 1975 Statute (C); and Uruguay's obligations at the end of the negotiation period (D).

A. The Links between the Procedural Obligations and the Substantive Obligations

71. Argentina maintains that the procedural provisions laid down in Articles 7 to 12 of the 1975 Statute are aimed at ensuring "the optimum

«l'utilisation rationnelle et optimale du fleuve» (article premier), au même titre que les dispositions relatives à l'utilisation des eaux, à la conservation, à l'utilisation et à l'exploitation d'autres ressources naturelles, à la pollution et à la recherche. L'objectif serait également d'empêcher que les Parties ne puissent agir unilatéralement et sans égard aux utilisations antérieures ou actuelles du fleuve. Toute méconnaissance de ces mécanismes entraînerait dès lors, selon l'Argentine, une atteinte à l'objet et au but du statut de 1975; en effet, «l'utilisation rationnelle et optimale du fleuve» ne serait pas assurée, car celle-ci ne pourrait se réaliser que conformément aux procédures établies par le statut.

72. Il s'ensuivrait, selon l'Argentine, qu'une violation des obligations de nature procédurale entraînerait automatiquement celle des obligations de fond, dans la mesure où les deux catégories d'obligations sont indivisibles. Une telle position trouverait un appui dans l'ordonnance de la Cour du 13 juillet 2006, selon laquelle le statut de 1975 a créé «un régime complet».

73. L'Uruguay considère également que les obligations de nature procédurale sont destinées à faciliter la mise en œuvre des obligations de fond car les premières constituent un moyen et non une fin. Il souligne, de même, que l'article premier du statut de 1975 définit l'objet et le but de celui-ci.

74. Mais l'Uruguay rejette, comme artificielle, l'argumentation de l'Argentine, en ce qu'elle tend à confondre les questions de procédure et de fond dans le but de faire croire que la violation des obligations de nature procédurale se traduirait nécessairement par celle des obligations de fond. Il appartiendrait à la Cour, selon l'Uruguay, d'apprécier la violation, en elle-même, de chacune de ces catégories d'obligations et d'en tirer les conséquences qui s'imposent dans chaque cas en matière de responsabilité et de réparation.

75. La Cour relève que l'objet et le but du statut de 1975, inscrits à l'article premier, consistent, pour les Parties, à parvenir à «l'utilisation rationnelle et optimale du fleuve Uruguay» au moyen des «mécanismes communs» de coopération, constitués aussi bien par la CARU que par les dispositions de nature procédurale des articles 7 à 12 du statut.

La Cour a souligné à ce propos, dans son ordonnance du 13 juillet 2006, qu'une telle utilisation devrait permettre un développement durable qui tienne compte «de la nécessité de garantir la protection continue de l'environnement du fleuve ainsi que le droit au développement économique des Etats riverains» (*Usines de pâte à papier sur le fleuve Uruguay (Argentine c. Uruguay), mesures conservatoires, ordonnance du 13 juillet 2006, C.I.J. Recueil 2006*, p. 133, par. 80).

76. Dans l'affaire *Gabčíkovo-Nagymaros*, la Cour, après avoir rappelé que «[l]e concept de développement durable traduit bien cette nécessité de concilier développement économique et protection de l'environnement», a ajouté que «[c]e sont les Parties elles-mêmes qui doivent trouver d'un commun accord une solution qui tienne compte des objectifs du

and rational utilization of the [r]iver" (Article 1), just as are the provisions concerning use of water, the conservation, utilization and development of other natural resources, pollution and research. The aim is also said to be to prevent the Parties from acting unilaterally and without regard for earlier or current uses of the river. According to Argentina, any disregarding of this machinery would therefore undermine the object and purpose of the 1975 Statute; indeed the "optimum and rational utilization of the [r]iver" would not be ensured, as this could only be achieved in accordance with the procedures laid down under the Statute.

72. It follows, according to Argentina, that a breach of the procedural obligations automatically entails a breach of the substantive obligations, since the two categories of obligations are indivisible. Such a position is said to be supported by the Order of the Court of 13 July 2006, according to which the 1975 Statute created "a comprehensive régime".

73. Uruguay similarly takes the view that the procedural obligations are intended to facilitate the performance of the substantive obligations, the former being a means rather than an end. It too points out that Article 1 of the 1975 Statute defines its object and purpose.

74. However, Uruguay rejects Argentina's argument as artificial, since it appears to mix procedural and substantive questions with the aim of creating the belief that the breach of procedural obligations necessarily entails the breach of substantive ones. According to Uruguay, it is for the Court to determine the breach, in itself, of each of these categories of obligations, and to draw the necessary conclusions in each case in terms of responsibility and reparation.

75. The Court notes that the object and purpose of the 1975 Statute, set forth in Article 1, is for the Parties to achieve "the optimum and rational utilization of the River Uruguay" by means of the "joint machinery" for co-operation, which consists of both CARU and the procedural provisions contained in Articles 7 to 12 of the Statute.

The Court has observed in this respect, in its Order of 13 July 2006, that such use should allow for sustainable development which takes account of "the need to safeguard the continued conservation of the river environment and the rights of economic development of the riparian States" (*Pulp Mills on the River Uruguay (Argentina* v. *Uruguay), Provisional Measures, Order of 13 July 2006, I.C.J. Reports 2006*, p. 133, para. 80).

76. In the *Gabčikovo-Nagymaros* case, the Court, after recalling that "[t]his need to reconcile economic development with protection of the environment is aptly expressed in the concept of sustainable development", added that "[i]t is for the Parties themselves to find an agreed solution that takes account of the objectives of the Treaty" (*Gabčíkovo-*

traité» (*Projet Gabčíkovo-Nagymaros (Hongrie/Slovaquie), arrêt, C.I.J. Recueil 1997*, p. 78, par. 140 et 141).

77. La Cour estime que c'est en coopérant que les Etats concernés peuvent gérer en commun les risques de dommages à l'environnement qui pourraient être générés par les projets initiés par l'un ou l'autre d'entre eux, de manière à prévenir les dommages en question, à travers la mise en œuvre des obligations tant de nature procédurale que de fond prévues par le statut de 1975. Cependant, alors que les obligations de fond sont libellées le plus souvent en termes généraux, les obligations de nature procédurale sont plus circonscrites et précises afin de faciliter la mise en œuvre du statut à travers une concertation permanente entre les parties concernées. La Cour a qualifié le régime institué par le statut de 1975 de «régime complet et novateur» (*Usines de pâte à papier sur le fleuve Uruguay (Argentine c. Uruguay), mesures conservatoires, ordonnance du 13 juillet 2006, C.I.J. Recueil 2006*, p. 133, par. 81), dans la mesure où les deux catégories d'obligations susmentionnées se complètent parfaitement, afin que les parties puissent réaliser l'objet du statut tel qu'elles l'ont fixé en son article premier.

78. La Cour note que le statut de 1975 a créé la CARU et mis en place des procédures en liaison avec cette institution, afin que les parties puissent s'acquitter de leurs obligations de fond. Mais le statut n'indique nulle part qu'une partie pourrait s'acquitter de ses obligations de fond en respectant seulement ses obligations de nature procédurale, ni qu'une violation des obligations de nature procédurale emporterait automatiquement celle des obligations de fond.

De même, ce n'est pas parce que les parties auraient respecté leurs obligations de fond qu'elles seraient censées avoir respecté *ipso facto* leurs obligations de nature procédurale, ou qu'elles seraient dispensées de le faire. D'ailleurs, le lien entre ces deux catégories d'obligations peut être rompu, dans les faits, lorsqu'une partie qui n'aurait pas respecté ses obligations de nature procédurale renoncerait ensuite à la réalisation de l'activité projetée.

79. La Cour considère, en conséquence de ce qui précède, qu'il existe certes un lien fonctionnel, relatif à la prévention, entre les deux catégories d'obligations prévues par le statut de 1975, mais que ce lien n'empêche pas que les Etats parties soient appelés à répondre séparément des unes et des autres, selon leur contenu propre, et à assumer, s'il y a lieu, la responsabilité qui découlerait, selon le cas, de leur violation.

B. Les obligations de nature procédurale et leur articulation

80. Le statut de 1975 prévoit à la charge de la partie qui projette certaines activités, énumérées au premier alinéa de l'article 7, des obligations de nature procédurale dont le contenu, l'articulation et les délais sont précisés aux articles 7 à 12 comme suit :

Nagymaros Project (Hungary/Slovakia), Judgment, I.C.J. Reports 1997, p. 78, paras. 140-141).

77. The Court observes that it is by co-operating that the States concerned can jointly manage the risks of damage to the environment that might be created by the plans initiated by one or other of them, so as to prevent the damage in question, through the performance of both the procedural and the substantive obligations laid down by the 1975 Statute. However, whereas the substantive obligations are frequently worded in broad terms, the procedural obligations are narrower and more specific, so as to facilitate the implementation of the 1975 Statute through a process of continuous consultation between the parties concerned. The Court has described the régime put in place by the 1975 Statute as a "comprehensive and progressive régime" (*Pulp Mills on the River Uruguay (Argentina* v. *Uruguay), Provisional Measures, Order of 13 July 2006, I.C.J. Reports 2006*, p. 133, para. 81), since the two categories of obligations mentioned above complement one another perfectly, enabling the parties to achieve the object of the Statute which they set themselves in Article 1.

78. The Court notes that the 1975 Statute created CARU and established procedures in connection with that institution, so as to enable the parties to fulfil their substantive obligations. However, nowhere does the 1975 Statute indicate that a party may fulfil its substantive obligations by complying solely with its procedural obligations, nor that a breach of procedural obligations automatically entails the breach of substantive ones.

Likewise, the fact that the parties have complied with their substantive obligations does not mean that they are deemed to have complied *ipso facto* with their procedural obligations, or are excused from doing so. Moreover, the link between these two categories of obligations can also be broken, in fact, when a party which has not complied with its procedural obligations subsequently abandons the implementation of its planned activity.

79. The Court considers, as a result of the above, that there is indeed a functional link, in regard to prevention, between the two categories of obligations laid down by the 1975 Statute, but that link does not prevent the States parties from being required to answer for those obligations separately, according to their specific content, and to assume, if necessary, the responsibility resulting from the breach of them, according to the circumstances.

B. The Procedural Obligations and Their Interrelation

80. The 1975 Statute imposes on a party which is planning certain activities, set out in Article 7, first paragraph, procedural obligations whose content, interrelation and time-limits are specified as follows in Articles 7 to 12:

« *Article 7*

La partie qui projette de construire de nouveaux chenaux, de modifier ou d'altérer de manière significative les chenaux existants ou de réaliser tous autres ouvrages suffisamment importants pour affecter la navigation, le régime du fleuve ou la qualité de ses eaux, en informe la commission administrative, laquelle détermine sommairement, dans un délai maximum de 30 jours, si le projet peut causer un préjudice sensible à l'autre partie.

S'il en est ainsi décidé ou si une décision n'intervient pas à cet égard, la partie intéressée notifie le projet à l'autre partie par l'intermédiaire de la commission.

La notification énonce les aspects essentiels de l'ouvrage et, le cas échéant, son mode de fonctionnement et les autres données techniques permettant à la partie à laquelle la notification est adressée d'évaluer l'effet probable que l'ouvrage aura sur la navigation, sur le régime du fleuve ou sur la qualité de ses eaux.

Article 8

La partie notifiée dispose d'un délai de 180 jours pour se prononcer sur le projet, à compter du jour où sa délégation à la commission a reçu la notification.

Au cas où la notification mentionnée à l'article 7 serait incomplète, la partie notifiée disposera de 30 jours pour le faire savoir, par l'intermédiaire de la commission, à la partie qui projette de construire l'ouvrage.

Le délai de 180 jours susmentionné commence à courir à partir du jour où la délégation de la partie notifiée a reçu la documentation complète.

Ce délai peut être prorogé de façon raisonnable par la commission si la complexité du projet l'exige.

Article 9

Si la partie notifiée ne formule pas d'objections ou ne répond pas dans le délai prévu à l'article 8, l'autre partie peut construire ou autoriser la construction de l'ouvrage projeté.

Article 10

La partie notifiée a le droit d'inspecter les ouvrages en construction pour vérifier s'ils sont conformes au projet présenté.

Article 11

Si la partie notifiée aboutit à la conclusion que l'exécution de l'ouvrage ou le programme d'opérations peut causer un préjudice sensible à la navigation, au régime du fleuve ou à la qualité de ses eaux, elle en informe l'autre partie par l'intermédiaire de la commission dans le délai de 180 jours fixé à l'article 8.

La communication précise quels sont les aspects de l'ouvrage ou

"*Article 7*

If one party plans to construct new channels, substantially modify or alter existing ones or carry out any other works which are liable to affect navigation, the régime of the river or the quality of its waters, it shall notify the Commission, which shall determine on a preliminary basis and within a maximum period of 30 days whether the plan might cause significant damage to the other party.

If the Commission finds this to be the case or if a decision cannot be reached in that regard, the party concerned shall notify the other party of the plan through the said Commission.

Such notification shall describe the main aspects of the work and, where appropriate, how it is to be carried out and shall include any other technical data that will enable the notified party to assess the probable impact of such works on navigation, the régime of the river or the quality of its waters.

Article 8

The notified party shall have a period of 180 days in which to respond in connection with the plan, starting from the date on which its delegation to the Commission receives the notification.

Should the documentation referred to in Article 7 be incomplete, the notified party shall have 30 days in which to so inform, through the Commission, the party which plans to carry out the work.

The period of 180 days mentioned above shall begin on the date on which the delegation of the notified party receives the full documentation.

This period may be extended at the discretion of the Commission if the complexity of the plan so requires.

Article 9

If the notified party raises no objections or does not respond within the period established in Article 8, the other party may carry out or authorize the work planned.

Article 10

The notified party shall have the right to inspect the works being carried out in order to determine whether they conform to the plan submitted.

Article 11

Should the notified party come to the conclusion that the execution of the work or the programme of operations might significantly impair navigation, the régime of the river or the quality of its waters, it shall so notify the other party, through the Commission, within the period of 180 days established in Article 8.

Such notification shall specify which aspects of the work or the

du programme d'opérations qui peuvent causer un préjudice sensible à la navigation, au régime du fleuve ou à la qualité de ses eaux, les raisons techniques qui permettent d'arriver à cette conclusion et les modifications qu'elle suggère d'apporter au projet ou au programme d'opérations.

Article 12

Si les parties n'aboutissent pas à un accord dans un délai de 180 jours à compter de la communication visée à l'article 11, la procédure indiquée au chapitre XV est applicable.»

81. L'original espagnol de l'article 7 du statut de 1975 se lit ainsi:

«La parte que proyecte la construcción de nuevos canales, la modificación o alteración significativa de los ya existentes o la realización de cualesquiera otras obras de entidad suficiente para afectar la navegación, el régimen del Río o la calidad de sus aguas, deberá comunicarlo a la Comisión, la cual determinará sumariamente, y en un plazo máximo de treinta días, si el proyecto puede producir perjuicio sensible a la otra parte.

Si así se resolviere o no se llegare a una decisión al respecto, la parte interesada deberá notificar el proyecto a la otra parte a través de la misma Comisión.

En la notificación deberán figurar los aspectos esenciales de la obra y, si fuere el caso, el modo de su operación y los demás datos técnicos que permitan a la parte notificada hacer una evaluación del efecto probable que la obra ocasionará a la navegación, al régimen del Río o a la calidad de sus aguas.»

La Cour relève que, comme l'original espagnol, la traduction française de cet article (voir paragraphe 80 ci-dessus) distingue l'obligation d'informer («comunicar») la CARU au sujet des projets entrant dans son champ d'application (premier alinéa) de celle de les notifier («notificar») à l'autre partie (deuxième alinéa). En revanche, la traduction anglaise utilise indistinctement le verbe «notify» au sujet de ces deux obligations. Afin de se conformer au texte original espagnol, la Cour utilisera dans les deux versions linguistiques du présent arrêt le verbe «informer» pour l'obligation prescrite par le premier alinéa de l'article 7 et le verbe «notifier» pour celle des deuxième et troisième alinéas.

La Cour considère que les obligations d'informer, de notifier et de négocier constituent un moyen approprié, accepté par les Parties, de parvenir à l'objectif qu'elles se sont fixé à l'article premier du statut de 1975. Ces obligations s'avèrent d'autant plus indispensables lorsqu'il s'agit, comme dans le cas du fleuve Uruguay, d'une ressource partagée qui ne peut être protégée que par le biais d'une coopération étroite et continue entre les riverains.

82. Selon l'Argentine, en ne respectant pas la première obligation (premier alinéa de l'article 7 du statut) de saisine de la CARU, l'Uruguay a

programme of operations might significantly impair navigation, the régime of the river or the quality of its waters, the technical reasons on which this conclusion is based and the changes suggested to the plan or programme of operations.

Article 12

Should the parties fail to reach agreement within 180 days following the notification referred to in Article 11, the procedure indicated in Chapter XV shall be followed."

81. The original Spanish text of Article 7 of the 1975 Statute reads as follows:

"La parte que proyecte la construcción de nuevos canales, la modificación o alteración significativa de los ya existentes o la realización de cualesquiera otras obras de entidad suficiente para afectar la navegación, el régimen del Río o la calidad de sus aguas, deberá comunicarlo a la Comisión, la cual determinará sumariamente, y en un plazo máximo de treinta días, si el proyecto puede producir perjuicio sensible a la otra parte.

Si así se resolviere o no se llegare a una decisión al respecto, la parte interesada deberá notificar el proyecto a la otra parte a través de la misma Comisión.

En la notificación deberán figurar los aspectos esenciales de la obra y, si fuere el caso, el modo de su operación y los demás datos técnicos que permitan a la parte notificada hacer una evaluación del efecto probable que la obra ocasionará a la navegación, al régimen del Río o a la calidad de sus aguas."

The Court notes that, just as the original Spanish text, the French translation of this Article (see paragraph 80 above) distinguishes between the obligation to inform ("comunicar") CARU of any plan falling within its purview (first paragraph) and the obligation to notify ("notificar") the other party (second paragraph). By contrast, the English translation uses the same verb "notify" in respect of both obligations. In order to conform to the original Spanish text, the Court will use in both linguistic versions of this Judgment the verb "inform" for the obligation set out in the first paragraph of Article 7 and the verb "notify" for the obligation set out in the second and third paragraphs.

The Court considers that the procedural obligations of informing, notifying and negotiating constitute an appropriate means, accepted by the Parties, of achieving the objective which they set themselves in Article 1 of the 1975 Statute. These obligations are all the more vital when a shared resource is at issue, as in the case of the River Uruguay, which can only be protected through close and continuous co-operation between the riparian States.

82. According to Argentina, by failing to comply with the initial obligation (Article 7, first paragraph, of the 1975 Statute) to refer the matter

mis en échec l'ensemble des procédures prévues aux articles 7 à 12 du statut. Par ailleurs, en ne lui notifiant pas les projets des usines CMB (ENCE) et Orion (Botnia), par l'intermédiaire de la CARU, avec toute la documentation nécessaire, l'Uruguay n'aurait pas respecté les deuxième et troisième alinéas de l'article 7. L'Argentine ajoute que des contacts informels qu'elle-même ou la CARU ont pu avoir avec les sociétés concernées ne peuvent tenir lieu de saisine de la CARU et de notification des projets par l'intermédiaire de cette commission. L'Argentine en conclut que l'Uruguay a violé l'ensemble des obligations de nature procédurale lui incombant en vertu des articles 7 à 12 du statut.

L'Uruguay, de son côté, considère que la saisine de la CARU n'est pas aussi contraignante que le soutient l'Argentine et que les parties peuvent convenir, d'un commun accord, d'emprunter d'autres voies, en recourant à d'autres arrangements de nature procédurale, pour engager la coopération entre elles. Il en déduit qu'il n'a pas enfreint les obligations de nature procédurale prévues par le statut, même s'il s'en est acquitté sans suivre à la lettre le processus formel qui y est décrit.

83. La Cour examinera d'abord la nature et le rôle de la CARU, puis se penchera sur la question de savoir si l'Uruguay a respecté son obligation d'informer la CARU de ses projets et celle de les notifier à l'Argentine.

1. La nature et le rôle de la CARU

84. L'Uruguay estime que la CARU, au même titre que les autres commissions fluviales, n'est pas un organisme doté d'une volonté autonome, mais plutôt un mécanisme établi pour faciliter la coopération entre les Parties. Il ajoute que les Etats qui ont créé ces commissions fluviales sont libres de s'écarter du mécanisme commun, lorsque cela sert leurs objectifs, et qu'ils le font souvent. Selon l'Uruguay, dès lors que la CARU n'est pas habilitée à agir en dehors de la volonté des Parties, celles-ci sont libres de faire directement ce qu'elles avaient décidé de faire par l'intermédiaire de cette commission, et elles peuvent convenir notamment de ne pas l'informer ainsi que cela est prévu à l'article 7 du statut de 1975. L'Uruguay affirme que c'est précisément ce qui s'est passé dans le cas d'espèce : les deux Etats se sont entendus pour se dispenser de l'examen sommaire de la CARU et passer immédiatement à des entretiens directs.

85. Pour l'Argentine, en revanche, le statut de 1975 n'est pas un simple traité bilatéral imposant des obligations synallagmatiques aux parties ; il institutionnalise une coopération permanente et étroite, dont la CARU est l'élément central et incontournable. La CARU constitue, de l'avis de l'Argentine, l'organe clef de coordination entre les parties dans à peu près tous les domaines couverts par le statut. En ne s'acquittant pas de ses obligations à cet égard, l'Uruguay remettrait profondément en question le statut de 1975.

86. La Cour rappelle qu'elle a déjà qualifié la CARU de

to CARU, Uruguay frustrated all the procedures laid down in Articles 7 to 12 of the Statute. In addition, by failing to notify Argentina of the plans for the CMB (ENCE) and Orion (Botnia) mills, through CARU, with all the necessary documentation, Uruguay is said not to have complied with Article 7, second and third paragraphs. Argentina adds that informal contacts which it or CARU may have had with the companies in question cannot serve as a substitute for Uruguay referring the matter to CARU and notifying Argentina of the projects through the Commission. Argentina concludes that Uruguay has breached all of its procedural obligations under the terms of Articles 7 to 12 of the 1975 Statute.

Uruguay, for its part, considers that referring the matter to CARU does not impose so great a constraint as Argentina contends and that the parties may agree, by mutual consent, to use different channels by employing other procedural arrangements in order to engage in co-operation. It concludes from this that it has not breached the procedural obligations laid down by the 1975 Statute, even if it has performed them without following to the letter the formal process set out therein.

83. The Court will first examine the nature and role of CARU, and then consider whether Uruguay has complied with its obligations to inform CARU and to notify Argentina of its plans.

1. The nature and role of CARU

84. Uruguay takes the view that CARU, like other river commissions, is not a body with autonomous powers, but rather a mechanism established to facilitate co-operation between the Parties. It adds that the States which have created these river commissions are free to go outside the joint mechanism when it suits their purposes, and that they often do so. According to Uruguay, since CARU is not empowered to act outside the will of the Parties, the latter are free to do directly what they have decided to do through the Commission, and in particular may agree not to inform it in the manner provided for in Article 7 of the 1975 Statute. Uruguay maintains that that is precisely what happened in the present case: the two States agreed to dispense with the preliminary review by CARU and to proceed immediately to direct negotiations.

85. For Argentina, on the other hand, the 1975 Statute is not merely a bilateral treaty imposing reciprocal obligations on the parties; it establishes an institutional framework for close and ongoing co-operation, the core and essence of which is CARU. For Argentina, CARU is the key body for co-ordination between the Parties in virtually all areas covered by the 1975 Statute. By failing to fulfil its obligations in this respect, Uruguay is said to be calling the 1975 Statute fundamentally into question.

86. The Court recalls that it has already described CARU as

> «mécanisme commun doté de fonctions réglementaires, administratives, techniques, de gestion et de conciliation…, à laquelle a été confiée la bonne application des dispositions du statut de 1975 régissant la gestion des ressources fluviales partagées, ... mécanisme ... [qui] occupe une place très importante dans le régime de ce traité» (*Usines de pâte à papier sur le fleuve Uruguay (Argentine c. Uruguay), mesures conservatoires, ordonnance du 13 juillet 2006, C.I.J. Recueil 2006*, p. 133-134, par. 81).

87. La Cour relève tout d'abord que, conformément à l'article 50 du statut de 1975, la CARU «jouit de la personnalité juridique dans l'accomplissement de son mandat» et que les parties audit statut se sont engagées à lui attribuer «les ressources nécessaires, ainsi que tous les éléments et facilités indispensables à son fonctionnement». Il en découle que, loin d'être une simple courroie de transmission entre les parties, la CARU a une existence propre et permanente; elle exerce des droits et est tenue à des devoirs pour s'acquitter des fonctions qui lui sont conférées par le statut de 1975.

88. Certes, les décisions de la commission doivent être adoptées d'un commun accord par les deux riverains (article 55), mais leur préparation et leur mise en œuvre relèvent d'un secrétariat dont les fonctionnaires jouissent de privilèges et d'immunités. D'autre part, la CARU peut décentraliser ses différentes fonctions en créant les organes subsidiaires qui lui sont nécessaires (article 52).

89. La Cour observe que, comme toute organisation internationale dotée de la personnalité juridique, la CARU est habilitée à exercer les compétences qui lui sont reconnues par le statut de 1975 et qui sont nécessaires à la réalisation de l'objet et du but de celui-ci, soit «l'utilisation rationnelle et optimale du fleuve» (article premier). Ainsi que la Cour l'a souligné,

> «[l]es organisations internationales sont régies par «le principe de spécialité», c'est-à-dire dotées par les Etats qui les créent de compétences d'attribution dont les limites sont fonction des intérêts communs que ceux-ci leur donnent pour mission de promouvoir» (*Licéité de l'utilisation des armes nucléaires par un Etat dans un conflit armé, avis consultatif, C.I.J. Recueil 1996 (I)*, p. 78, par. 25).

Cela est naturellement vrai aussi pour les organisations qui, comme la CARU, ne comportent que deux Etats membres.

90. La CARU servant de cadre de concertation entre les parties, notamment pour les projets d'ouvrages envisagés au premier alinéa de l'article 7 du statut de 1975, aucune d'entre elles ne peut sortir unilatéralement et au moment qu'elle juge opportun de ce cadre et lui substituer d'autres canaux de communication. En créant la CARU et en la dotant de tous les moyens nécessaires à son fonctionnement, les parties ont entendu donner les meilleures garanties de stabilité, de continuité et

> "a joint mechanism with regulatory, executive, administrative, technical and conciliatory functions, entrusted with the proper implementation of the rules contained in the 1975 Statute governing the management of the shared river resource; . . . [a] mechanism [which] constitutes a very important part of that treaty régime" (*Pulp Mills on the River Uruguay (Argentina* v. *Uruguay), Provisional Measures, Order of 13 July 2006, I.C.J. Reports 2006*, pp. 133-134, para. 81).

87. The Court notes, first, that CARU, in accordance with Article 50 of the 1975 Statute, was endowed with legal personality "in order to perform its functions" and that the parties to the 1975 Statute undertook to provide it with "the necessary resources and all the information and facilities essential to its operations". Consequently, far from being merely a transmission mechanism between the parties, CARU has a permanent existence of its own; it exercises rights and also bears duties in carrying out the functions attributed to it by the 1975 Statute.

88. While the decisions of the Commission must be adopted by common accord between the riparian States (Article 55), these are prepared and implemented by a secretariat whose staff enjoy privileges and immunities. Moreover, CARU is able to decentralize its various functions by setting up whatever subsidiary bodies it deems necessary (Article 52).

89. The Court observes that, like any international organization with legal personality, CARU is entitled to exercise the powers assigned to it by the 1975 Statute and which are necessary to achieve the object and purpose of the latter, namely, "the optimum and rational utilization of the River Uruguay" (Article 1). As the Court has pointed out,

> "[i]nternational organizations are governed by the 'principle of speciality', that is to say, they are invested by the States which create them with powers, the limits of which are a function of the common interests whose promotion those States entrust to them" (*Legality of the Use by a State of Nuclear Weapons in Armed Conflict, Advisory Opinion, I.C.J. Reports 1996 (I)*, p. 78, para. 25).

This also applies of course to organizations, which like CARU, only have two member States.

90. Since CARU serves as a framework for consultation between the parties, particularly in the case of the planned works contemplated in Article 7, first paragraph, of the 1975 Statute, neither of them may depart from that framework unilaterally, as they see fit, and put other channels of communication in its place. By creating CARU and investing it with all the resources necessary for its operation, the parties have sought to provide the best possible guarantees of stability, continuity and effective-

d'efficacité à leur volonté de coopérer à «l'utilisation rationnelle et optimale du fleuve».

91. C'est pour cette raison que la CARU joue un rôle central dans le statut de 1975 et ne peut être réduite à un simple mécanisme facultatif mis à la disposition des parties que chacune d'entre elles pourrait utiliser à sa guise. La CARU intervient à tous les niveaux de l'utilisation du fleuve, qu'il s'agisse de la prévention des dommages transfrontières susceptibles de découler des activités projetées; de l'utilisation des eaux, au sujet de laquelle elle reçoit les rapports des parties et vérifie si la somme des utilisations ne cause pas un préjudice sensible (articles 27 et 28); de la prévention de la modification de l'équilibre écologique (article 36); des études et des recherches de caractère scientifique effectuées par une partie dans la juridiction de l'autre (article 44); de l'exercice du droit de police (article 46) et du droit de navigation (article 48).

92. Par ailleurs, la CARU a reçu comme fonction d'édicter des normes réglementaires dans un grand nombre de domaines liés à la gestion commune du fleuve et énumérés à l'article 56 du statut de 1975. Enfin, la commission peut servir d'instance de conciliation pour tout litige né entre les parties, sur proposition de l'une d'entre elles (article 58).

93. Dès lors, la Cour considère que, de par l'ampleur et la diversité des fonctions qu'elles ont confiées à la CARU, les Parties ont entendu faire de cette organisation internationale un élément central dans l'accomplissement de leurs obligations de coopérer édictées par le statut de 1975.

2. L'obligation de l'Uruguay d'informer la CARU

94. La Cour note que l'obligation de l'Etat d'origine de l'activité projetée d'informer la CARU constitue la première étape de l'ensemble du mécanisme procédural qui permet aux deux parties de réaliser l'objet du statut de 1975, à savoir «l'utilisation rationnelle et optimale du fleuve Uruguay». Cette étape, prévue au premier alinéa de l'article 7, consiste, pour l'Etat d'origine de l'activité projetée, à en informer la CARU pour que celle-ci puisse déterminer «sommairement», dans un délai maximum de trente jours, si le projet peut causer un préjudice sensible à l'autre partie.

95. Pour que le reste de la procédure puisse se poursuivre, les deux parties ont posé comme conditions alternatives, dans le statut de 1975, que l'activité projetée par l'une soit susceptible, selon la CARU, de causer un préjudice sensible à l'autre, faisant naître à la charge de la première une obligation de prévention, afin d'éliminer ou de réduire au minimum le risque, en consultation avec la seconde; ou que la CARU, dûment informée, ne prenne pas de décision à ce sujet dans le délai prescrit.

96. La Cour constate que les deux Parties s'accordent à considérer que les deux usines projetées étaient des ouvrages suffisamment importants pour entrer dans le champ d'application de l'article 7 du statut de 1975

ness for their desire to co-operate in ensuring "the optimum and rational utilization of the River Uruguay".

91. That is why CARU plays a central role in the 1975 Statute and cannot be reduced to merely an optional mechanism available to the parties which each may use or not, as it pleases. CARU operates at all levels of utilization of the river, whether concerning the prevention of transboundary harm that may result from planned activities; the use of water, on which it receives reports from the parties and verifies whether the developments taken together are liable to cause significant damage (Articles 27 and 28); the avoidance of any change in the ecological balance (Article 36); scientific studies and research carried out by one party within the jurisdiction of the other (Article 44); the exercise of the right of law enforcement (Article 46); or the right of navigation (Article 48).

92. Furthermore, CARU has been given the function of drawing up rules in many areas associated with the joint management of the river and listed in Article 56 of the 1975 Statute. Lastly, at the proposal of either party, the Commission can act as a conciliation body in any dispute which may arise between the parties (Article 58).

93. Consequently, the Court considers that, because of the scale and diversity of the functions they have assigned to CARU, the Parties intended to make that international organization a central component in the fulfilment of their obligations to co-operate as laid down by the 1975 Statute.

2. Uruguay's obligation to inform CARU

94. The Court notes that the obligation of the State initiating the planned activity to inform CARU constitutes the first stage in the procedural mechanism as a whole which allows the two parties to achieve the object of the 1975 Statute, namely, the optimum and rational utilization of the River Uruguay". This stage, provided for in Article 7, first paragraph, involves the State which is initiating the planned activity informing CARU thereof, so that the latter can determine "on a preliminary basis" and within a maximum period of 30 days whether the plan might cause significant damage to the other party.

95. To enable the remainder of the procedure to take its course, the parties have included alternative conditions in the 1975 Statute: either that the activity planned by one party should be liable, in CARU's opinion, to cause significant damage to the other, creating an obligation of prevention for the first party to eliminate or minimize the risk, in consultation with the other party; or that CARU, having been duly informed, should not have reached a decision in that regard within the prescribed period.

96. The Court notes that the Parties are agreed in considering that the two planned mills were works of sufficient importance to fall within the scope of Article 7 of the 1975 Statute, and thus for CARU to have been

et, partant, pour que la CARU dût en être informée. Il en est de même pour le projet de construction du terminal portuaire de Fray Bentos à l'usage exclusif de l'usine Orion (Botnia), qui incluait des opérations de dragage et d'utilisation du lit du fleuve.

97. La Cour relève cependant que les Parties sont en désaccord sur l'existence d'une obligation d'informer la CARU au sujet du prélèvement et de l'utilisation, par l'usine Orion (Botnia), de l'eau du fleuve à des fins industrielles. L'Argentine estime que l'autorisation octroyée par le ministère du transport et des travaux publics uruguayen, le 12 septembre 2006, concerne une activité suffisamment importante («entidad suficiente») pour affecter le régime du fleuve ou la qualité de ses eaux, et que l'Uruguay aurait dû suivre, à ce sujet, la procédure prévue aux articles 7 à 12 du statut de 1975. Pour sa part, l'Uruguay soutient que cette activité fait partie intégrante de l'ensemble du projet de l'usine Orion (Botnia) et que le statut n'exige pas d'informer la CARU à chaque étape de l'avancement de l'ouvrage projeté.

98. La Cour relève que, si les Parties s'accordent pour reconnaître que la CARU devait être informée des deux projets d'usines et du projet de construction du terminal portuaire de Fray Bentos, elles s'opposent néanmoins quant au contenu de l'information qui devait être adressée à la CARU et quant au moment auquel elle devait avoir lieu.

99. L'Argentine a soutenu que le contenu de l'obligation d'information doit être déterminé à la lumière de l'objectif de celle-ci, soit la prévention des atteintes à la navigation, au régime du fleuve ou à la qualité des eaux. Le projet dont la CARU doit être informée peut, selon l'Argentine, n'être pas très avancé car il s'agit seulement de permettre à la commission de «déterminer sommairement» dans un délai très bref de trente jours si ce projet «peut causer un préjudice sensible à l'autre partie». Ce serait seulement dans la phase procédurale suivante que l'obligation d'informer serait plus complète. L'information de la CARU doit cependant, de l'avis de l'Argentine, intervenir préalablement à l'autorisation et à la construction d'un projet sur le fleuve Uruguay.

100. Reprenant les termes du premier alinéa de l'article 7 du statut de 1975, l'Uruguay en donne une autre interprétation, estimant que l'information prévue par cette disposition ne peut être transmise à la CARU aux tout premiers stades de la planification, car la commission ne pourrait disposer des éléments suffisants pour déterminer si le projet est susceptible ou non de causer un préjudice sensible à l'autre Etat. Pour cela, il faudrait, selon l'Uruguay, que le projet ait atteint un stade où l'on dispose à son sujet de toutes les informations techniques. L'Uruguay tend, comme la Cour y reviendra plus loin, à lier le contenu de l'information au moment où elle devrait être fournie, soit même après l'octroi par l'Etat concerné de l'autorisation environnementale préalable.

101. La Cour observe que le principe de prévention, en tant que règle coutumière, trouve son origine dans la diligence requise («due diligence») de l'Etat sur son territoire. Il s'agit de «l'obligation, pour tout Etat, de ne pas laisser utiliser son territoire aux fins d'actes contraires aux droits

informed of them. The same applies to the plan to construct a port terminal at Fray Bentos for the exclusive use of the Orion (Botnia) mill, which included dredging work and use of the river bed.

97. However, the Court observes that the Parties disagree on whether there is an obligation to inform CARU in respect of the extraction and use of water from the river for industrial purposes by the Orion (Botnia) mill. Argentina takes the view that the authorization granted by the Uruguayan Ministry of Transport and Public Works on 12 September 2006 concerns an activity of sufficient importance ("entidad suficiente") to affect the régime of the river or the quality of its waters and that, in this matter, Uruguay should have followed the procedure laid down in Articles 7 to 12 of the 1975 Statute. For its part, Uruguay maintains that this activity forms an integral part of the Orion (Botnia) mill project as a whole, and that the 1975 Statute does not require CARU to be informed of each step in furtherance of the planned works.

98. The Court points out that while the Parties are agreed in recognizing that CARU should have been informed of the two planned mills and the plan to construct the port terminal at Fray Bentos, they nonetheless differ as regards the content of the information which should be provided to CARU and as to when this should take place.

99. Argentina has argued that the content of the obligation to inform must be determined in the light of its objective, which is to prevent threats to navigation, the régime of the river or the quality of the waters. According to Argentina, the plan which CARU must be informed of may be at a very early stage, since it is simply a matter of allowing the Commission to "determine on a preliminary basis", within a very short period of 30 days, whether the plan "might cause significant damage to the other party". It is only in the following phase of the procedure that the substance of the obligation to inform is said to become more extensive. In Argentina's view, however, CARU must be informed prior to the authorization or implementation of a project on the River Uruguay.

100. Citing the terms of Article 7, first paragraph, of the 1975 Statute, Uruguay gives a different interpretation of it, taking the view that the requirement to inform CARU specified by this provision cannot occur in the very early stages of planning, because there could not be sufficient information available to the Commission for it to determine whether or not the plan might cause significant damage to the other State. For that, according to Uruguay, the project would have to have reached a stage where all the technical data on it are available. As the Court will consider further below, Uruguay seeks to link the content of the information to the time when it should be provided, which may even be after the State concerned has granted an initial environmental authorization.

101. The Court points out that the principle of prevention, as a customary rule, has its origins in the due diligence that is required of a State in its territory. It is "every State's obligation not to allow knowingly its territory to be used for acts contrary to the rights of other States" (*Corfu*

d'autres Etats» (*Détroit de Corfou (Royaume-Uni c. Albanie), fond, arrêt, C.I.J. Recueil 1949*, p. 22). En effet, l'Etat est tenu de mettre en œuvre tous les moyens à sa disposition pour éviter que les activités qui se déroulent sur son territoire, ou sur tout espace relevant de sa juridiction, ne causent un préjudice sensible à l'environnement d'un autre Etat. La Cour a établi que cette obligation «fait maintenant partie du corps de règles du droit international de l'environnement» (*Licéité de la menace ou de l'emploi d'armes nucléaires, avis consultatif, C.I.J. Recueil 1996 (I)*, p. 242, par. 29).

102. L'obligation d'informer la CARU permet, selon la Cour, de déclencher la coopération entre les Parties, nécessaire pour la mise en œuvre de l'obligation de prévention. Cette première étape procédurale a pour conséquence de soustraire à l'application du statut de 1975 les activités qui apparaîtraient ne causer un dommage qu'à l'Etat sur le territoire duquel elles s'exercent.

103. La Cour observe qu'en ce qui concerne le fleuve Uruguay, qui constitue une ressource partagée, le «préjudice sensible à l'autre partie» (premier alinéa de l'article 7 du statut de 1975) peut résulter d'une atteinte à la navigation, au régime du fleuve ou à la qualité de ses eaux. D'ailleurs, l'article 27 du statut de 1975 souligne que

> «[l]e droit de chaque partie d'utiliser les eaux du fleuve, à l'intérieur de sa juridiction, à des fins ménagères, sanitaires, industrielles et agricoles, s'exerce sans préjudice de l'application de la procédure prévue aux articles 7 à 12 lorsque cette utilisation est suffisamment importante pour affecter le régime du fleuve ou la qualité de ses eaux».

104. La Cour note que, conformément aux termes du premier alinéa de l'article 7 du statut de 1975, l'information qui doit être adressée à la CARU, à ce premier stade de la procédure, doit lui permettre de déterminer sommairement et rapidement si le projet peut causer un préjudice sensible à l'autre partie. Il s'agit à ce stade, pour la CARU, de décider si le projet relève ou non de la procédure de coopération prévue par le statut et non de se prononcer sur son impact réel sur le fleuve et la qualité des eaux. C'est ce qui explique, de l'avis de la Cour, la différence entre la terminologie du premier alinéa de l'article 7, relative à l'obligation d'informer la CARU, et celle du troisième alinéa de cet article, qui concerne le contenu de la notification qui doit être adressée à un stade ultérieur à l'autre partie et est destinée à «évaluer l'effet probable que l'ouvrage aura sur la navigation, sur le régime du fleuve ou sur la qualité de ses eaux».

105. La Cour considère que l'Etat qui projette les activités visées à l'article 7 du statut est tenu d'en informer la CARU dès qu'il est en possession d'un projet suffisamment élaboré pour permettre à la commission de déterminer sommairement, en application du premier alinéa de cette disposition, si cette activité risque de causer un préjudice sensible à l'autre partie. A ce stade, l'information fournie ne consistera pas nécessairement

Channel (United Kingdom v. *Albania), Merits, Judgment, I.C.J. Reports 1949*, p. 22). A State is thus obliged to use all the means at its disposal in order to avoid activities which take place in its territory, or in any area under its jurisdiction, causing significant damage to the environment of another State. This Court has established that this obligation "is now part of the corpus of international law relating to the environment" (*Legality of the Threat or Use of Nuclear Weapons, Advisory Opinion, I.C.J. Reports 1996 (I)*, p. 242, para. 29).

102. In the view of the Court, the obligation to inform CARU allows for the initiation of co-operation between the Parties which is necessary in order to fulfil the obligation of prevention. This first procedural stage results in the 1975 Statute not being applied to activities which would appear to cause damage only to the State in whose territory they are carried out.

103. The Court observes that with regard to the River Uruguay, which constitutes a shared resource, "significant damage to the other party" (Article 7, first paragraph, of the 1975 Statute) may result from impairment of navigation, the régime of the river or the quality of its waters. Moreover, Article 27 of the 1975 Statute stipulates that:

> "[t]he right of each party to use the waters of the river, within its jurisdiction, for domestic, sanitary, industrial and agricultural purposes shall be exercised without prejudice to the application of the procedure laid down in Articles 7 to 12 when the use is liable to affect the régime of the river or the quality of its waters".

104. The Court notes that, in accordance with the terms of Article 7, first paragraph, the information which must be provided to CARU, at this initial stage of the procedure, has to enable it to determine swiftly and on a preliminary basis whether the plan might cause significant damage to the other party. For CARU, at this stage, it is a question of deciding whether or not the plan falls under the co-operation procedure laid down by the 1975 Statute, and not of pronouncing on its actual impact on the river and the quality of its waters. This explains, in the opinion of the Court, the difference between the terminology of the first paragraph of Article 7, concerning the requirement to inform CARU, and that of the third paragraph, concerning the content of the notification to be addressed to the other party at a later stage, enabling it "to assess the probable impact of such works on navigation, the régime of the river or the quality of its waters".

105. The Court considers that the State planning activities referred to in Article 7 of the Statute is required to inform CARU as soon as it is in possession of a plan which is sufficiently developed to enable CARU to make the preliminary assessment (required by paragraph 1 of that provision) of whether the proposed works might cause significant damage to the other party. At that stage, the information provided will not neces-

en une évaluation complète de l'impact sur l'environnement du projet, qui exige souvent davantage de temps et de moyens. Cela étant, si une information plus complète est disponible, elle doit bien entendu être transmise à la CARU, afin que celle-ci puisse procéder dans les meilleures conditions à son examen sommaire. En tout état de cause, l'obligation d'informer la CARU intervient à un stade où l'autorité compétente a été saisie du projet en vue de la délivrance de l'autorisation environnementale préalable, et avant la délivrance de ladite autorisation.

106. La Cour relève que, dans le cas d'espèce, l'Uruguay n'a pas transmis à la CARU l'information requise par le premier alinéa de l'article 7, concernant les usines CMB (ENCE) et Orion (Botnia), malgré les demandes qui lui avaient été adressées à plusieurs reprises par la commission, en particulier les 17 octobre 2002 et 21 avril 2003, au sujet de l'usine CMB (ENCE), et le 16 novembre 2004, au sujet de l'usine Orion (Botnia). L'Uruguay s'est contenté d'adresser à la CARU, le 14 mai 2003, un résumé de diffusion de l'évaluation de l'impact sur l'environnement concernant l'usine CMB (ENCE). La CARU a estimé ce document insuffisant et a demandé à nouveau à l'Uruguay, les 15 août 2003 et 12 septembre 2003, un complément d'information. Par ailleurs, aucun document n'a été transmis à la CARU par l'Uruguay au sujet de l'usine Orion (Botnia). Ainsi, les autorisations environnementales préalables ont été délivrées par l'Uruguay le 9 octobre 2003 à CMB et le 14 février 2005 à Botnia, sans respecter la procédure prévue au premier alinéa de l'article 7. L'Uruguay s'est donc prononcé sur l'impact sur l'environnement des projets sans associer la CARU, se limitant ainsi à donner effet au troisième alinéa de l'article 17 du décret uruguayen n° 435/994, du 21 septembre 1994, portant règlement d'évaluation de l'impact sur l'environnement, selon lequel le ministère du logement, de l'aménagement du territoire et de l'environnement peut accorder l'autorisation environnementale préalable pour autant que les impacts négatifs du projet sur l'environnement restent dans des limites acceptables.

107. La Cour relève en outre que l'Uruguay a accordé, le 12 avril 2005, une autorisation à la société Botnia pour la première phase de construction du projet d'usine Orion et, le 5 juillet 2005, un permis pour construire un port à son usage exclusif et utiliser le lit du fleuve à des fins industrielles, sans avoir préalablement informé la CARU de ces projets.

108. En ce qui concerne le prélèvement et l'utilisation de l'eau du fleuve qui auraient dû, selon l'Argentine, donner lieu à une information préalable de la CARU, la Cour estime qu'il s'agit là d'une activité qui fait partie intégrante de la mise en service de l'usine Orion (Botnia), et qui ne nécessitait donc pas une saisine distincte de la CARU.

109. L'Uruguay soutient cependant que la CARU avait parfaitement connaissance des projets d'usines avant la délivrance des autorisations environnementales préalables, par le biais des représentants d'ENCE, le 8 juillet 2002, et au plus tard le 29 avril 2004, par ceux de Botnia. L'Argentine estime, pour sa part, que ces prétendus agissements privés,

sarily consist of a full assessment of the environmental impact of the project, which will often require further time and resources, although, where more complete information is available, this should, of course, be transmitted to CARU to give it the best possible basis on which to make its preliminary assessment. In any event, the duty to inform CARU will become applicable at the stage when the relevant authority has had the project referred to it with the aim of obtaining initial environmental authorization and before the granting of that authorization.

106. The Court observes that, in the present case, Uruguay did not transmit to CARU the information required by Article 7, first paragraph, in respect of the CMB (ENCE) and Orion (Botnia) mills, despite the requests made to it by the Commission to that effect on several occasions, in particular on 17 October 2002 and 21 April 2003 with regard to the CMB (ENCE) mill, and on 16 November 2004 with regard to the Orion (Botnia) mill. Uruguay merely sent CARU, on 14 May 2003, a summary for public release of the environmental impact assessment for the CMB (ENCE) mill. CARU considered this document to be inadequate and again requested further information from Uruguay on 15 August 2003 and 12 September 2003. Moreover, Uruguay did not transmit any document to CARU regarding the Orion (Botnia) mill. Consequently, Uruguay issued the initial environmental authorizations to CMB on 9 October 2003 and to Botnia on 14 February 2005 without complying with the procedure laid down in Article 7, first paragraph. Uruguay therefore came to a decision on the environmental impact of the projects without involving CARU, thereby simply giving effect to Article 17, third paragraph, of Uruguayan Decree No. 435/994 of 21 September 1994, Environmental Impact Assessment Regulation, according to which the Ministry of Housing, Land Use Planning and Environmental Affairs may grant the initial environmental authorization provided that the adverse environmental impacts of the project remain within acceptable limits.

107. The Court further notes that on 12 April 2005 Uruguay granted an authorization to Botnia for the first phase of the construction of the Orion (Botnia) mill and, on 5 July 2005, an authorization to construct a port terminal for its exclusive use and to utilize the river bed for industrial purposes, without informing CARU of these projects in advance.

108. With regard to the extraction and use of water from the river, of which CARU should have first been informed, according to Argentina, the Court takes the view that this is an activity which forms an integral part of the commissioning of the Orion (Botnia) mill and therefore did not require a separate referral to CARU.

109. However, Uruguay maintains that CARU was made aware of the plans for the mills by representatives of ENCE on 8 July 2002, and no later than 29 April 2004 by representatives of Botnia, before the initial environmental authorizations were issued. Argentina, for its part, considers that these so-called private dealings, whatever form they may have

quels qu'ils soient, ne constituent pas l'exécution de l'obligation imposée aux Parties par le premier alinéa de l'article 7.

110. La Cour considère que les informations sur les projets d'usines parvenues à la CARU de la part des entreprises concernées ou d'autres sources non gouvernementales ne peuvent tenir lieu de l'obligation d'informer, prévue au premier alinéa de l'article 7 du statut de 1975, qui est à la charge de la partie qui projette de construire les ouvrages visés par cette disposition. De la même manière, dans l'affaire relative à *Certaines questions concernant l'entraide judiciaire en matière pénale (Djibouti c. France)*, la Cour a observé que

> «[s]i Djibouti a certes pu disposer en fin de compte de certaines informations à travers la presse, un tel mode de diffusion d'informations ne saurait être pris en compte aux fins de l'application de l'article 17 [de la convention d'entraide judiciaire entre les deux pays prévoyant que «tout refus d'entraide judiciaire sera motivé»]» (*arrêt, C.I.J. Recueil 2008*, p. 231, par. 150).

111. En conséquence, la Cour conclut de ce qui précède que l'Uruguay, en n'informant pas la CARU des travaux projetés avant la délivrance de l'autorisation environnementale préalable pour chacune des usines et pour le terminal portuaire adjacent à l'usine Orion (Botnia), n'a pas respecté l'obligation que lui impose le premier alinéa de l'article 7 du statut de 1975.

3. L'obligation de l'Uruguay de notifier les projets à l'autre partie

112. La Cour note qu'aux termes du deuxième alinéa de l'article 7 du statut de 1975, au cas où la CARU décide que le projet peut causer un préjudice sensible à l'autre partie ou si une décision n'intervient pas à cet égard, «la partie intéressée notifie le projet à l'autre partie par l'intermédiaire de la commission».

Le troisième alinéa de l'article 7 du statut détaille le contenu de cette notification qui

> «énonce les aspects essentiels de l'ouvrage et ... les autres données techniques permettant à la partie à laquelle la notification est adressée d'évaluer l'effet probable que l'ouvrage aura sur la navigation, sur le régime du fleuve ou sur la qualité de ses eaux».

113. L'obligation de notifier est destinée, selon la Cour, à créer les conditions d'une coopération fructueuse entre les parties leur permettant, sur la base d'une information aussi complète que possible, d'évaluer l'impact du projet sur le fleuve et, s'il y a lieu, de négocier les aménagements nécessaires pour prévenir les préjudices éventuels qu'il pourrait causer.

114. L'article 8 prévoit un délai de cent quatre-vingts jours, qui peut être prorogé par la commission, pour que la partie qui a reçu la notifica-

taken, do not constitute performance of the obligation imposed on the Parties by Article 7, first paragraph.

110. The Court considers that the information on the plans for the mills which reached CARU via the companies concerned or from other non-governmental sources cannot substitute for the obligation to inform laid down in Article 7, first paragraph, of the 1975 Statute, which is borne by the party planning to construct the works referred to in that provision. Similarly, in the case concerning *Certain Questions of Mutual Assistance in Criminal Matters (Djibouti* v. *France)*, the Court observed that

> "[i]f the information eventually came to Djibouti through the press, the information disseminated in this way could not be taken into account for the purposes of the application of Article 17 [of the Convention on Mutual Assistance in Criminal Matters between the two countries, providing that '[r]easons shall be given for any refusal of mutual assistance']" (*Judgment, I.C.J. Reports 2008*, p. 231, para. 150).

111. Consequently, the Court concludes from the above that Uruguay, by not informing CARU of the planned works before the issuing of the initial environmental authorizations for each of the mills and for the port terminal adjacent to the Orion (Botnia) mill, has failed to comply with the obligation imposed on it by Article 7, first paragraph, of the 1975 Statute.

3. Uruguay's obligation to notify the plans to the other party

112. The Court notes that, under the terms of Article 7, second paragraph, of the 1975 Statute, if CARU decides that the plan might cause significant damage to the other party or if a decision cannot be reached in that regard, "the party concerned shall notify the other party of this plan through the said Commission".

Article 7, third paragraph, of the 1975 Statute sets out in detail the content of this notification, which

> "shall describe the main aspects of the work and . . . any other technical data that will enable the notified party to assess the probable impact of such works on navigation, the régime of the river or the quality of its waters".

113. In the opinion of the Court, the obligation to notify is intended to create the conditions for successful co-operation between the parties, enabling them to assess the plan's impact on the river on the basis of the fullest possible information and, if necessary, to negotiate the adjustments needed to avoid the potential damage that it might cause.

114. Article 8 stipulates a period of 180 days, which may be extended by the Commission, for the notified party to respond in connection with

tion puisse se prononcer sur le projet, à charge pour elle de demander à l'autre partie, par l'intermédiaire de la commission, de compléter au besoin la documentation qu'elle lui a adressée.

Faute d'objection de la part de la partie destinataire de la notification, l'autre partie peut procéder à la construction de l'ouvrage ou l'autoriser (article 9). Dans le cas contraire, la première informe la seconde des aspects de l'ouvrage qui peuvent lui causer préjudice et des modifications qu'elle suggère (article 11), ouvrant ainsi une période de négociation, avec un nouveau délai de cent quatre-vingts jours pour parvenir à un accord (article 12).

115. L'obligation de notifier est donc essentielle dans le processus qui doit mener les parties à se concerter pour évaluer les risques du projet et négocier les modifications éventuelles susceptibles de les éliminer ou d'en limiter au minimum les effets.

116. Les Parties conviennent de la nécessité de disposer d'une évaluation de l'impact sur l'environnement complète pour apprécier le préjudice sensible qui pourrait être causé par un projet.

117. L'Uruguay considère que de telles évaluations sont intervenues conformément à sa législation (décret n° 435/994, du 21 septembre 1994, portant règlement d'évaluation de l'impact sur l'environnement), qu'elles ont été soumises à l'appréciation de la DINAMA et qu'elles ont été transmises à l'Argentine le 7 novembre 2003 pour le projet CMB (ENCE) et le 19 août 2005 pour le projet Orion (Botnia). Selon l'Uruguay, la DINAMA a demandé aux entreprises concernées tous les suppléments d'information nécessaires pour compléter les évaluations de l'impact sur l'environnement initiales qui lui ont été soumises, et ce n'est que quand elle a été satisfaite qu'elle a proposé au ministère de l'environnement de délivrer les autorisations environnementales préalables demandées, qui l'ont été à CMB le 9 octobre 2003 et à Botnia le 14 février 2005.

L'Uruguay soutient qu'il n'était pas tenu de transmettre à l'Argentine les évaluations de l'impact sur l'environnement avant de délivrer aux entreprises les autorisations environnementales préalables, celles-ci ayant été établies sur la base de sa législation en la matière.

118. L'Argentine, pour sa part, souligne tout d'abord que les évaluations de l'impact sur l'environnement qui lui ont été transmises par l'Uruguay étaient incomplètes, notamment en ce qu'elles ne prévoyaient pas de sites alternatifs pour l'implantation des usines et qu'elles ne contenaient pas de consultation des populations concernées. La Cour reviendra plus loin sur les conditions de fond auxquelles doivent satisfaire les évaluations de l'impact sur l'environnement (voir paragraphes 203 à 219).

D'autre part, sur le plan procédural, l'Argentine estime que les autorisations environnementales préalables n'auraient pas dû être accordées aux entreprises avant qu'elle n'ait reçu les évaluations de l'impact sur l'environnement complètes et qu'elle n'ait pu exercer les droits qui lui sont reconnus à ce sujet par les articles 7 à 11 du statut de 1975.

119. La Cour relève que les évaluations de l'impact sur l'environnement, nécessaires pour se prononcer sur tout projet susceptible de causer

the plan, subject to it requesting the other party, through the Commission, to supplement as necessary the documentation it has provided.

If the notified party raises no objections, the other party may carry out or authorize the work (Article 9). Otherwise, the former must notify the latter of those aspects of the work which may cause it damage and of the suggested changes (Article 11), thereby opening a further 180-day period of negotiation in which to reach an agreement (Article 12).

115. The obligation to notify is therefore an essential part of the process leading the parties to consult in order to assess the risks of the plan and to negotiate possible changes which may eliminate those risks or minimize their effects.

116. The Parties agree on the need for a full environmental impact assessment in order to assess any significant damage which might be caused by a plan.

117. Uruguay takes the view that such assessments were carried out in accordance with its legislation (Decree No. 435/994 of 21 September 1994, Environmental Impact Assessment Regulation), submitted to DINAMA for consideration and transmitted to Argentina on 7 November 2003 in the case of the CMB (ENCE) project and on 19 August 2005 for the Orion (Botnia) project. According to Uruguay, DINAMA asked the companies concerned for all the additional information that was required to supplement the original environmental impact assessments submitted to it, and only when it was satisfied did it propose to the Ministry of the Environment that the initial environmental authorizations requested should be issued, which they were to CMB on 9 October 2003 and to Botnia on 14 February 2005.

Uruguay maintains that it was not required to transmit the environmental impact assessments to Argentina before issuing the initial environmental authorizations to the companies, these authorizations having been adopted on the basis of its legislation on the subject.

118. Argentina, for its part, first points out that the environmental impact assessments transmitted to it by Uruguay were incomplete, particularly in that they made no provision for alternative sites for the mills and failed to include any consultation of the affected populations. The Court will return later in the Judgment to the substantive conditions which must be met by environmental impact assessments (see paragraphs 203 to 219).

Furthermore, in procedural terms, Argentina considers that the initial environmental authorizations should not have been granted to the companies before it had received the complete environmental impact assessments, and that it was unable to exercise its rights in this context under Articles 7 to 11 of the 1975 Statute.

119. The Court notes that the environmental impact assessments which are necessary to reach a decision on any plan that is liable to cause sig-

des préjudices sensibles transfrontières à un autre Etat, doivent être notifiées, selon les deuxième et troisième alinéas de l'article 7 du statut de 1975, par la partie concernée à l'autre partie, par l'intermédiaire de la CARU. Cette notification est destinée à permettre à la partie qui en est le destinataire de participer au processus visant à s'assurer que l'évaluation est complète, pour qu'elle puisse ensuite apprécier, en toute connaissance de cause, le projet et ses effets (article 8 du statut de 1975).

120. La Cour observe que cette notification doit intervenir avant que l'Etat intéressé ne décide de la viabilité environnementale du projet, compte dûment tenu de l'évaluation de l'impact sur l'environnement qui lui a été présentée.

121. Dans le cas d'espèce, la Cour relève que les notifications à l'Argentine des évaluations de l'impact sur l'environnement relatives aux usines CMB (ENCE) et Orion (Botnia) n'ont pas eu lieu par l'intermédiaire de la CARU, et que l'Uruguay n'a transmis à l'Argentine ces évaluations qu'après avoir délivré les autorisations environnementales préalables pour les deux usines concernées. Ainsi, en ce qui concerne l'usine CMB (ENCE), la notification du dossier à l'Argentine est intervenue les 27 octobre et 7 novembre 2003, alors que l'autorisation environnementale préalable avait déjà été délivrée le 9 octobre 2003. En ce qui concerne l'usine Orion (Botnia), le dossier a été transmis à l'Argentine entre août 2005 et janvier 2006, alors que l'autorisation environnementale préalable avait été octroyée le 14 février 2005. L'Uruguay n'aurait pas dû, avant la notification, délivrer les autorisations environnementales préalables et les permis de construction sur la base des évaluations de l'impact sur l'environnement présentées à la DINAMA. En effet, ce faisant, l'Uruguay a donné la priorité à sa propre législation sur les obligations de nature procédurale qu'il tenait du statut de 1975 et a méconnu la règle coutumière bien établie, reflétée à l'article 27 de la convention de Vienne sur le droit des traités, aux termes duquel «[u]ne partie ne peut invoquer les dispositions de son droit interne comme justifiant la non-exécution d'un traité».

122. La Cour conclut de ce qui précède que l'Uruguay n'a pas respecté l'obligation de notifier les projets à l'Argentine au travers de la CARU, prévue aux deuxième et troisième alinéas de l'article 7 du statut de 1975.

C. Les Parties sont-elles convenues de déroger aux obligations de nature procédurale prévues dans le statut de 1975?

123. Ayant ainsi examiné les obligations de nature procédurale établies par le statut de 1975, la Cour se penchera à présent sur le point de savoir si les Parties sont convenues, par accord entre elles, d'y déroger, comme le prétend l'Uruguay.

124. Les Parties se réfèrent à cet égard aux deux «accords» intervenus le 2 mars 2004 et le 5 mai 2005. Elles développent cependant des positions divergentes quant à leur contenu et à leur portée.

nificant transboundary harm to another State must be notified by the party concerned to the other party, through CARU, pursuant to Article 7, second and third paragraphs, of the 1975 Statute. This notification is intended to enable the notified party to participate in the process of ensuring that the assessment is complete, so that it can then consider the plan and its effects with a full knowledge of the facts (Article 8 of the 1975 Statute).

120. The Court observes that this notification must take place before the State concerned decides on the environmental viability of the plan, taking due account of the environmental impact assessment submitted to it.

121. In the present case, the Court observes that the notification to Argentina of the environmental impact assessments for the CMB (ENCE) and Orion (Botnia) mills did not take place through CARU, and that Uruguay only transmitted those assessments to Argentina after having issued the initial environmental authorizations for the two mills in question. Thus in the case of CMB (ENCE), the matter was notified to Argentina on 27 October and 7 November 2003, whereas the initial environmental authorization had already been issued on 9 October 2003. In the case of Orion (Botnia), the file was transmitted to Argentina between August 2005 and January 2006, whereas the initial environmental authorization had been granted on 14 February 2005. Uruguay ought not, prior to notification, to have issued the initial environmental authorizations and the authorizations for construction on the basis of the environmental impact assessments submitted to DINAMA. Indeed by doing so, Uruguay gave priority to its own legislation over its procedural obligations under the 1975 Statute and disregarded the well-established customary rule reflected in Article 27 of the Vienna Convention on the Law of Treaties, according to which "[a] party may not invoke the provisions of its internal law as justification for its failure to perform a treaty".

122. The Court concludes from the above that Uruguay failed to comply with its obligation to notify the plans to Argentina through CARU under Article 7, second and third paragraphs, of the 1975 Statute.

C. Whether the Parties Agreed to Derogate from the Procedural Obligations Set Out in the 1975 Statute

123. Having thus examined the procedural obligations laid down by the 1975 Statute, the Court now turns to the question of whether the Parties agreed, by mutual consent, to derogate from them, as alleged by Uruguay.

124. In this respect the Parties refer to two "agreements" reached on 2 March 2004 and 5 May 2005; however, they hold divergent views regarding their scope and content.

1. L'« arrangement » du 2 mars 2004 entre l'Argentine et l'Uruguay

125. La Cour rappelle que, à la suite de la délivrance par l'Uruguay de l'autorisation environnementale préalable à CMB, sans que la CARU ait pu exercer, à cet égard, les fonctions qui lui sont attribuées par le statut de 1975, les ministres des affaires étrangères des Parties se sont mis d'accord, le 2 mars 2004, sur la procédure à suivre, ainsi que cela est reflété dans le procès-verbal de la séance extraordinaire de la CARU en date du 15 mai 2004. L'extrait pertinent de ce procès-verbal se lit comme suit en espagnol :

> «II) En fecha 2 de marzo de 2004 los Cancilleres de Argentina y Uruguay llegaron a un entendimiento con relación al curso de acción que se dará al tema, esto es, facilitar por parte del gobierno uruguayo, la información relativa a la construcción de la planta y, en relación a la fase operativa, proceder a realizar el monitoreo, por parte de CARU, de la calidad de las aguas conforme a su Estatuto.
>
> . . . . . .
>
> I) Ambas delegaciones reafirmaron el compromiso de los Ministros de Relaciones Exteriores de la República Argentina y de la República Oriental del Uruguay de fecha 2 de marzo de 2004 por el cual el Uruguay comunicará la información relativa a la construcción de la planta incluyendo el Plan de Gestión Ambiental. En tal sentido, *la CARU recibirá* los Planes de Gestión Ambiental para la construcción y operación de la planta que presente la empresa al gobierno uruguayo una vez que le sean remitidos por la delegación uruguaya.» (Les italiques sont dans l'original.)

L'Argentine et l'Uruguay ont respectivement fourni à la Cour une traduction française et une traduction anglaise de ce procès-verbal. Compte tenu des divergences existant entre ces deux traductions, la Cour utilisera la traduction suivante :

> «II) Le 2 mars 2004, les ministres des affaires étrangères de l'Argentine et de l'Uruguay se sont entendus quant à la façon de procéder en la matière, à savoir que le Gouvernement uruguayen fournira l'information relative à la construction de l'usine et que, s'agissant de la phase opérationnelle, la CARU procédera au suivi de la qualité des eaux conformément à son statut.
>
> . . . . . .
>
> I) Les deux délégations ont réaffirmé l'arrangement auquel étaient parvenus les ministres des affaires étrangères de la République argentine et de la République orientale de l'Uruguay le 2 mars 2004, en vertu duquel l'Uruguay communiquera les informations relatives à la construction de l'usine, parmi lesquelles le plan de gestion environnementale. Il s'ensuit que *la CARU recevra* les plans de gestion envi-

1. The "understanding" of 2 March 2004 between Argentina and Uruguay

125. The Court recalls that, after the issuing of the initial environmental authorization to CMB by Uruguay, without CARU having been able to carry out the functions assigned to it in this context by the 1975 Statute, the Foreign Ministers of the Parties agreed on 2 March 2004 on the procedure to be followed, as described in the minutes of the extraordinary meeting of CARU of 15 May 2004. The relevant extract from those minutes reads as follows in Spanish:

> "II) En fecha 2 de marzo de 2004 los Cancilleres de Argentina y Uruguay llegaron a un entendimiento con relación al curso de acción que se dará al tema, esto es, facilitar por parte del gobierno uruguayo, la información relativa a la construcción de la planta y, en relación a la fase operativa, proceder a realizar el monitoreo, por parte de CARU, de la calidad de las aguas conforme a su Estatuto.
>
> . . . . . .
>
> I) Ambas delegaciones reafirmaron el compromiso de los Ministros de Relaciones Exteriores de la República Argentina y de la República Oriental del Uruguay de fecha 2 de marzo de 2004 por el cual el Uruguay comunicará la información relativa a la construcción de la planta incluyendo el Plan de Gestión Ambiental. En tal sentido, *la CARU recibirá* los Planes de Gestión Ambiental para la construcción y operación de la planta que presente la empresa al gobierno uruguayo una vez que le sean remitidos por la delegación uruguaya." (Emphasis in the original.)

Argentina and Uruguay have provided the Court, respectively, with French and English translations of these minutes. In view of the discrepancies between those two translations, the Court will use the following translation:

> "(II) On 2 March 2004, the Foreign Ministers of Argentina and Uruguay reached an understanding on how to proceed in the matter, namely, that the Uruguayan Government would provide information on the construction of the mill and that, in terms of the operational phase, CARU would carry out monitoring of water quality in accordance with its Statute.
>
> . . . . . .
>
> (I) Both delegations reaffirmed the arrangement which had been come to by the Foreign Ministers of the Republic of Argentina and the Eastern Republic of Uruguay on 2 March 2004, whereby Uruguay would communicate information on the construction of the mill, including the environmental management plan. As a result, *CARU would receive* the environmental management plans for the

ronnementale relatifs à la construction et à l'exploitation de l'usine soumis par l'entreprise au Gouvernement uruguayen, une fois qu'ils auront été transmis à la CARU par la délégation uruguayenne.» (Les italiques sont dans l'original.) *[Traduction de la Cour.]*

126. L'Uruguay considère que, en vertu de cet «arrangement», les Parties sont convenues de la marche à suivre, concernant le projet CMB (ENCE), en dehors de la CARU, et que rien, que ce soit d'un point de vue juridique ou logique, ne les empêchait de déroger, dans le cadre d'un accord bilatéral approprié, aux procédures énoncées par le statut de 1975.

Un tel «arrangement», selon l'Uruguay, se limitait à la transmission à la CARU des plans de gestion environnementale relatifs à la construction et à l'exploitation de l'usine CMB (ENCE). Il aurait mis un terme, de la sorte, à tout différend avec l'Argentine concernant la procédure prévue à l'article 7 du statut de 1975. Enfin, l'Uruguay soutient que l'«arrangement» du 2 mars 2004 sur le projet CMB (ENCE) a été par la suite étendu au projet Orion (Botnia) dans la mesure où le plan PROCEL, établi par la sous-commission chargée de la qualité des eaux de la CARU et mettant en œuvre cet accord, était relatif à l'activité des «deux usines», CMB (ENCE) et Orion (Botnia), le pluriel étant utilisé dans le titre du rapport de la sous-commission et dans son texte.

127. L'Argentine, de son côté, soutient que l'«arrangement» intervenu entre les deux ministres, le 2 mars 2004, était destiné à faire respecter la procédure prévue par le statut de 1975 et à réintroduire ainsi le projet CMB (ENCE) au sein de la CARU, mettant fin au différend relatif à la compétence de la CARU pour connaître du projet. L'Argentine aurait réitéré devant les instances de la CARU n'avoir pas renoncé aux droits qu'elle tenait de l'article 7, même si elle a accepté que le différend qui l'opposait à ce sujet à l'Uruguay aurait pu s'éteindre si la procédure envisagée dans l'«arrangement» du 2 mars 2004 avait été menée à son terme.

Or, selon l'Argentine, l'Uruguay n'a jamais transmis à la CARU les informations requises, comme il s'y était engagé dans l'«arrangement» du 2 mars 2004. Elle a rejeté par ailleurs l'extension de l'«arrangement» du 2 mars 2004 à l'usine Orion (Botnia); la mention des deux futures usines par le plan PROCEL ne signifierait nullement, selon elle, la renonciation au respect de la procédure prévue par le statut de 1975.

128. La Cour relève tout d'abord que, si l'existence de l'«arrangement» du 2 mars 2004, consigné au procès-verbal de la CARU, n'a pas été contestée par les Parties, celles-ci s'opposent, en revanche, sur son contenu et sa portée. Quels que soient sa dénomination particulière et l'instrument dans lequel il est consigné (le procès-verbal de la commission), cet «arrangement» liait les Parties dans la mesure où elles y avaient consenti, et elles devaient s'y conformer de bonne foi. Celles-ci étaient habilitées à s'écarter des procédures prévues par le statut de 1975, à l'occasion d'un projet donné, par l'effet d'un accord bilatéral approprié.

construction and operation of the mill provided by the company to the Uruguayan Government, when these were forwarded to it by the Uruguayan delegation." (Emphasis in the original.) *[Translation by the Court.]*

126. Uruguay considers that, under the terms of this "understanding", the Parties agreed on the approach to be followed in respect of the CMB (ENCE) project, outside CARU, and that there was no reason in law or logic to prevent them derogating from the procedures outlined in the 1975 Statute pursuant to an appropriate bilateral agreement.

The said "understanding", according to Uruguay, only covered the transmission to CARU of the Environmental Management Plans for the construction and operation of the (CMB) ENCE mill. It supposedly thereby puts an end to any dispute with Argentina regarding the procedure laid down in Article 7 of the 1975 Statute. Lastly, Uruguay maintains that the "understanding" of 2 March 2004 on the (CMB) ENCE project was later extended to include the Orion (Botnia) project, since the PROCEL water quality monitoring plan put in place by CARU's Subcommittee on Water Quality to implement that "understanding" related to the activity of "both plants", the CMB (ENCE) and Orion (Botnia) mills, the plural having been used in the title and text of the Subcommittee's report.

127. Argentina, for its part, maintains that the "understanding" between the two Ministers of 2 March 2004 was intended to ensure compliance with the procedure laid down by the 1975 Statute and thus to reintroduce the CMB (ENCE) project within CARU, ending the dispute on CARU's jurisdiction to deal with the project. Argentina claims that it reiterated to the organs within CARU that it had not given up its rights under Article 7, although it accepted that the dispute between itself and Uruguay in this respect could have been resolved if the procedure contemplated in the "understanding" of 2 March 2004 had been brought to a conclusion.

According to Argentina, however, Uruguay never transmitted the required information to CARU as it undertook to do in the "understanding" of 2 March 2004. Argentina also denies that the "understanding" of 2 March 2004 was extended to the Orion (Botnia) mill; the reference to both future plants in the PROCEL plan does not in any way signify, in its view, the renunciation of the procedure laid down by the 1975 Statute.

128. The Court first notes that while the existence of the "understanding" of 2 March 2004, as minuted by CARU, has not been contested by the Parties, they differ as to its content and scope. Whatever its specific designation and in whatever instrument it may have been recorded (the CARU minutes), this "understanding" is binding on the Parties, to the extent that they have consented to it and must be observed by them in good faith. They are entitled to depart from the procedures laid down by the 1975 Statute, in respect of a given project pursuant to an appropriate bilateral agreement. The Court recalls that the Parties disagree on whether

La Cour rappelle que les Parties divergent sur la question de savoir si la procédure pour la communication de l'information prévue par l'«arrangement» devait, si elle était appliquée, se substituer à celle prévue par le statut de 1975. Quoi qu'il en soit, une telle substitution était conditionnée par le respect, de la part de l'Uruguay, de la nouvelle procédure prévue par l'«arrangement».

129. La Cour constate que l'information que l'Uruguay avait accepté de communiquer à la CARU dans l'«arrangement» du 2 mars 2004 ne l'a jamais été. Par conséquent, la Cour ne saurait accueillir la prétention de l'Uruguay selon laquelle l'«arrangement» aurait mis un terme au différend relatif à l'usine CMB (ENCE) qui l'opposait à l'Argentine, concernant la mise en œuvre de la procédure prévue à l'article 7 du statut de 1975.

130. Par ailleurs, la Cour observe que, lorsque cet «arrangement» est intervenu, il n'était question que du projet CMB (ENCE) et que, dès lors, il ne peut s'étendre, comme l'a prétendu l'Uruguay, au projet Orion (Botnia). Les deux usines n'ont été mentionnées qu'à partir de juillet 2004, dans le cadre du plan PROCEL. Or, ce plan ne concerne que les mesures de suivi et de contrôle de la qualité environnementale des eaux du fleuve dans les zones des usines de pâte à papier, mais non les procédures de l'article 7 du statut de 1975.

131. La Cour conclut que l'«arrangement» du 2 mars 2004 n'aurait eu pour effet d'exonérer l'Uruguay des obligations lui incombant en vertu de l'article 7 du statut de 1975, si tel était l'objectif de cet «arrangement», que si l'Uruguay s'y était conformé. De l'avis de la Cour, tel n'a pas été le cas. En conséquence, cet «arrangement» ne peut être considéré comme ayant eu pour effet de dispenser l'Uruguay du respect des obligations de nature procédurale prévues par le statut de 1975.

2. L'accord créant le Groupe technique de haut niveau (GTAN)

132. La Cour note que, donnant suite à l'accord intervenu le 5 mai 2005 entre les présidents de l'Argentine et de l'Uruguay (voir paragraphe 40 ci-dessus), les ministères des affaires étrangères des deux Etats ont publié le 31 mai 2005 un communiqué de presse annonçant la création du Groupe technique de haut niveau, que les Parties désignent sous l'abréviation «GTAN». Aux termes de ce communiqué:

> «Suivant ce qui a été convenu entre MM. les Présidents de la République argentine et de la République orientale de l'Uruguay, les ministères des affaires étrangères des deux pays constituent, sous leur supervision, un groupe de techniciens, pour complément d'études et d'analyses, d'échanges d'information et de suivi des conséquences qu'aura, sur l'écosystème du fleuve qu'ils partagent, le fonctionnement des usines de pâte à papier que l'on construit dans la République orientale de l'Uruguay.

the procedure for communicating information provided for by the "understanding" would, if applied, replace that provided for by the 1975 Statute. Be that as it may, such replacement was dependent on Uruguay complying with the procedure laid down in the "understanding".

129. The Court finds that the information which Uruguay agreed to transmit to CARU in the "understanding" of 2 March 2004 was never transmitted. Consequently, the Court cannot accept Uruguay's contention that the "understanding" put an end to its dispute with Argentina in respect of the CMB (ENCE) mill, concerning implementation of the procedure laid down by Article 7 of the 1975 Statute.

130. Further, the Court observes that, when this "understanding" was reached, only the CMB (ENCE) project was in question, and that it therefore cannot be extended to the Orion (Botnia) project, as Uruguay claims. The reference to both mills is made only as from July 2004, in the context of the PROCEL plan. However, this plan only concerns the measures to monitor and control the environmental quality of the river waters in the areas of the pulp mills, and not the procedures under Article 7 of the 1975 Statute.

131. The Court concludes that the "understanding" of 2 March 2004 would have had the effect of relieving Uruguay of its obligations under Article 7 of the 1975 Statute, if that was the purpose of the "understanding", only if Uruguay had complied with the terms of the "understanding". In the view of the Court, it did not do so. Therefore the "understanding" cannot be regarded as having had the effect of exempting Uruguay from compliance with the procedural obligations laid down by the 1975 Statute.

2. The agreement setting up the High-Level Technical Group (the GTAN)

132. The Court notes that, in furtherance of the agreement reached on 5 May 2005 between the Presidents of Argentina and Uruguay (see paragraph 40 above), the Foreign Ministries of the two States issued a press release on 31 May 2005 announcing the creation of the High-Level Technical Group, referred to by the Parties as the GTAN. According to this communiqué:

> "In conformity with what was agreed to by the Presidents of Argentina and Uruguay, the Foreign Ministries of both of our countries constitute, under their supervision, a Group of Technical Experts for complementary studies and analysis, exchange of information and follow-up on the effects that the operation of the cellulose plants that are being constructed in the Eastern Republic of Uruguay will have on the ecosystem of the shared Uruguay River.

Le Groupe mentionné ... doit produire un premier rapport dans un délai de 180 jours.»

133. L'Uruguay considère ce communiqué de presse comme un accord liant les deux Etats, par lequel ils ont décidé de faire du GTAN l'organe au sein duquel se tiendraient les négociations directes entre les Parties, prévues par l'article 12 du statut de 1975, puisqu'il est destiné à l'analyse des effets sur l'environnement du «fonctionnement des usines de pâte à papier que l'on construit dans la République orientale de l'Uruguay». L'Uruguay en déduit que les Parties étaient d'accord sur la construction des usines et qu'elles avaient circonscrit le litige, entre elles, aux risques environnementaux engendrés par leur fonctionnement. L'Uruguay en veut pour preuve la saisine de la Cour sur la base de l'article 12 du statut, qui permet à chacune des Parties de s'adresser à la Cour au cas où les négociations, au terme du délai de cent quatre-vingts jours, n'aboutissent pas.

Ainsi, selon l'Uruguay, l'accord contenu dans le communiqué de presse du 31 mai 2005, en ouvrant la voie aux négociations directes prévues à l'article 12, a couvert toutes les irrégularités éventuelles de procédure relatives aux articles 7 et suivants du statut de 1975. L'Uruguay rappelle qu'il a communiqué à l'Argentine, au cours des douze réunions que le GTAN a tenues, toutes les informations nécessaires, et qu'il a transmis le projet portuaire d'Orion (Botnia) à la CARU, comme convenu par les Parties lors de la première réunion du GTAN.

134. L'Uruguay fait observer, par ailleurs, que le statut de 1975 est silencieux sur le point de savoir si l'Etat d'origine du projet peut ou non le mettre en œuvre alors que les négociations sont en cours. Il admet qu'en vertu du droit international l'Etat d'origine doit s'abstenir de le faire au cours de cette période de négociation, mais il estime que cela ne concerne pas tous les travaux et qu'en particulier les travaux préparatoires sont autorisés. L'Uruguay admet avoir procédé à de tels travaux, notamment à la construction des fondations de l'usine Orion (Botnia), mais il ne s'agirait pas, selon lui, de faits accomplis empêchant les négociations d'aboutir. L'Uruguay considère, au demeurant, qu'il n'avait aucune obligation juridique de suspendre ne serait-ce qu'une partie des travaux du port.

135. L'Argentine estime qu'il ne peut être déduit des termes du communiqué de presse du 31 mai 2005 une quelconque acceptation, de sa part, de la construction des usines litigieuses. Elle affirme qu'en créant le GTAN les Parties n'ont pas décidé de le substituer à la CARU, mais l'ont conçu comme une enceinte de négociation coexistant avec celle-ci.

Contrairement à l'Uruguay, l'Argentine soutient que la Cour est saisie en cette affaire sur la base de l'article 60 et non de l'article 12 du statut de 1975, parce que l'Uruguay, par son comportement, a empêché qu'elle puisse l'être sur ce dernier fondement, dans la mesure où il aurait ignoré toute la procédure du chapitre II du statut. Il appartiendrait ainsi à la

This Group . . . is to produce an initial report within a period of 180 days."

133. Uruguay regards this press release as an agreement that binds the two States, whereby they decided to make the GTAN the body within which the direct negotiations between the Parties provided for by Article 12 of the 1975 Statute would take place, since its purpose was to analyse the effects on the environment of the "operation of the cellulose plants that are being constructed in the Eastern Republic of Uruguay". Uruguay infers from this that the Parties were agreed on the construction of the mills and that they had limited the extent of the dispute between them to the environmental risks caused by their operation. Uruguay sees proof of this in the referral to the Court on the basis of Article 12 of the 1975 Statute, which allows either Party to apply to the Court in the event of the negotiations failing to produce an agreement within the period of 180 days.

According to Uruguay, therefore, the agreement contained in the press release of 31 May 2005, by paving the way for the direct negotiations provided for in Article 12, covered any possible procedural irregularities in relation to Articles 7 *et seq.* of the 1975 Statute. Uruguay points out that it communicated all the necessary information to Argentina during the 12 meetings held by the GTAN and that it transmitted the Orion (Botnia) port project to CARU, as agreed by the Parties at the first meeting of the GTAN.

134. Uruguay further notes that the 1975 Statute is silent as to whether the notifying State may or may not implement a project while negotiations are ongoing. It acknowledges that, under international law, the initiating State must refrain from doing so during the period of negotiation, but takes the view that this does not apply to all work and, in particular, that preparatory work is permitted. Uruguay acknowledges that it carried out such work, for example construction of the foundations for the Orion (Botnia) mill, but in its view this did not involve faits accomplis which prevented the negotiations from reaching a conclusion. Uruguay also considers that it had no legal obligation to suspend any and all work on the port.

135. Argentina considers that no acceptance on its part of the construction of the disputed mills can be inferred from the terms of the press release of 31 May 2005. It submits that in creating the GTAN, the Parties did not decide to substitute it for CARU, but regarded it as a means of negotiation that would co-exist with the latter.

Contrary to Uruguay, Argentina takes the view that this matter has been submitted to the Court on the basis of Article 60 of the 1975 Statute and not of Article 12, since Uruguay, by its conduct, has prevented the latter from being used as a basis, having allegedly disregarded the entire procedure laid down in Chapter II of the Statute. Argentina therefore

Cour, selon l'Argentine, de se prononcer sur l'ensemble des violations du statut de 1975, y compris, mais pas seulement, sur l'autorisation de construction des usines litigieuses.

136. L'Argentine soutient que l'Uruguay, par son comportement, a fait avorter les procédures prévues aux articles 7 à 9 du statut de 1975 et qu'il a, au cours de la période de négociation ouverte au sein du GTAN, poursuivi les travaux de construction de l'usine Orion (Botnia) et commencé la construction du terminal portuaire. Pendant le même temps, l'Argentine réitérait, au sein de la CARU, la nécessité pour l'Uruguay de s'acquitter des obligations de nature procédurale lui incombant en vertu des articles 7 à 12 du statut, et de suspendre les travaux.

L'Argentine rejette enfin l'allégation de l'Uruguay selon laquelle les travaux sur les fondations de l'usine Orion (Botnia), la cheminée et le port n'auraient eu qu'un caractère préliminaire et ne pouvaient être considérés comme étant le commencement des travaux de construction au sens propre. Pour l'Argentine, une telle distinction n'a pas lieu d'être et ne peut être justifiée par la nature des travaux entrepris.

137. La Cour souligne tout d'abord qu'il n'y a pas lieu de distinguer, comme l'ont fait respectivement l'Uruguay et l'Argentine pour les besoins de leur cause, entre sa saisine sur la base de l'article 12 et sa saisine sur la base de l'article 60 du statut de 1975. Certes, l'article 12 prévoit le recours à la procédure prévue au chapitre XV au cas où les négociations n'aboutissent pas dans le délai de cent quatre-vingts jours, mais sa fonction s'arrête là. L'article 60 prend ensuite le relais, en particulier son premier alinéa, qui permet à l'une ou l'autre Partie de soumettre à la Cour tout différend concernant l'interprétation ou l'application du statut qui ne pourrait être réglé par la négociation directe. Cette formulation couvre aussi bien un différend portant sur l'application et l'interprétation de l'article 12 que sur toute autre disposition du statut de 1975.

138. La Cour note que le communiqué de presse du 31 mai 2005 est l'expression d'un accord entre les deux Etats pour créer un cadre de négociation, le GTAN, afin d'étudier, analyser et échanger les informations sur les effets que le fonctionnement des usines de pâte à papier que l'on construisait dans la République orientale de l'Uruguay pouvait avoir sur l'écosystème du fleuve partagé, «le groupe [devant] produire un premier rapport dans un délai de 180 jours».

139. La Cour admet que le GTAN a été créé dans le but de permettre aux négociations prévues, également pour une durée de cent quatre-vingts jours, à l'article 12 du statut de 1975 d'avoir lieu. Ces négociations entre les parties, pour parvenir à un accord, interviennent une fois que la partie destinataire de la notification a adressé, conformément à l'article 11, une communication à l'autre partie, par l'intermédiaire de la commission, précisant

> «quels sont les aspects de l'ouvrage ou du programme d'opérations qui peuvent causer un préjudice sensible à la navigation, au régime

sees it as for the Court to pronounce on all the breaches of the 1975 Statute, including and not limited to the authorization for the construction of the disputed mills.

136. Argentina submits that Uruguay, by its conduct, frustrated the procedures laid down in Articles 7 to 9 of the 1975 Statute and that, during the period of negotiation within the GTAN, Uruguay continued the construction work on the Orion (Botnia) mill and began building the port terminal. During that same period, Argentina reiterated, within CARU, the need for Uruguay to comply with its procedural obligations under Articles 7 to 12 of the 1975 Statute and to suspend the works.

Lastly, Argentina rejects Uruguay's claim that the work on the foundations of the Orion (Botnia) mill, its chimney and the port was merely preliminary in nature and cannot be regarded as the beginning of construction work as such. For Argentina, such a distinction is groundless and cannot be justified by the nature of the work carried out.

137. The Court first points out that there is no reason to distinguish, as Uruguay and Argentina have both done for the purpose of their respective cases, between referral on the basis of Article 12 and of Article 60 of the 1975 Statute. While it is true that Article 12 provides for recourse to the procedure indicated in Chapter XV, should the negotiations fail to produce an agreement within the 180-day period, its purpose ends there. Article 60 then takes over, in particular its first paragraph, which enables either Party to submit to the Court any dispute concerning the interpretation or application of the Statute which cannot be settled by direct negotiations. This wording also covers a dispute relating to the interpretation or application of Article 12, like any other provision of the 1975 Statute.

138. The Court notes that the press release of 31 May 2005 sets out an agreement between the two States to create a negotiating framework, the GTAN, in order to study, analyse and exchange information on the effects that the operation of the cellulose plants that were being constructed in the Eastern Republic of Uruguay could have on the ecosystem of the shared Uruguay River, with "the group [having] to produce an initial report within a period of 180 days".

139. The Court recognizes that the GTAN was created with the aim of enabling the negotiations provided for in Article 12 of the 1975 Statute, also for a 180-day period, to take place. Under Article 11, these negotiations between the parties with a view to reaching an agreement are to be held once the notified party has sent a communication to the other party, through the Commission, specifying

> "which aspects of the work or the programme of operations might significantly impair navigation, the régime of the river or the quality

du fleuve ou à la qualité de ses eaux, les raisons techniques qui permettent d'arriver à cette conclusion et les modifications qu'elle suggère d'apporter au projet ou au programme d'opérations».

La Cour est consciente de ce que la négociation prévue à l'article 12 du statut de 1975 s'intègre dans l'ensemble de la procédure prévue aux articles 7 à 12, qui est articulée de telle manière que les parties, en relation avec la CARU, soient en mesure, au terme du processus, de s'acquitter de leur obligation de prévenir tout préjudice sensible transfrontière susceptible d'être généré par des activités potentiellement nocives projetées par l'une d'elles.

140. La Cour considère, en conséquence, que l'accord créant le GTAN, s'il établit effectivement une instance de négociation à même de permettre aux Parties de poursuivre le même objectif que celui prévu à l'article 12 du statut de 1975, ne peut être interprété comme exprimant l'accord des Parties pour déroger à d'autres obligations de nature procédurale prévues par le statut.

141. Dès lors, selon la Cour, l'Argentine, en acceptant la création du GTAN, n'a pas renoncé, comme le prétend l'Uruguay, aux autres droits de nature procédurale que lui reconnaît le statut de 1975, ni à invoquer la responsabilité de l'Uruguay du fait de leur violation éventuelle. En effet, l'Argentine n'a pas renoncé, dans l'accord créant le GTAN, aux droits qu'elle tient du statut, «de manière claire et non équivoque» (*Certaines terres à phosphates à Nauru (Nauru c. Australie), exceptions préliminaires, arrêt, C.I.J. Recueil 1992*, p. 247, par. 13). Elle n'a pas non plus consenti à suspendre l'application des dispositions procédurales du statut. En effet, selon l'article 57 de la convention de Vienne du 23 mai 1969 sur le droit des traités, relatif à la «suspension de l'application d'un traité», y compris, selon le commentaire de la Commission du droit international, «la suspension de l'application de certaines de ses dispositions» (*Annuaire de la Commission du droit international*, 1966, vol. II, p. 274), la suspension n'est possible que «conformément à une disposition du traité» ou «par consentement des parties».

142. La Cour observe, d'autre part, que l'accord créant le GTAN, en se référant aux «usines de pâte à papier que l'on construit dans la République orientale de l'Uruguay», constate un simple fait et ne peut être interprété, ainsi que le prétend l'Uruguay, comme une acceptation de cette construction par l'Argentine.

143. La Cour considère que l'Uruguay n'avait le droit, pendant toute la période de consultation et de négociation prévue aux articles 7 à 12 du statut de 1975, ni d'autoriser la construction ni de construire les usines projetées et le terminal portuaire. En effet, il serait contraire à l'objet et au but du statut de 1975 de procéder aux activités litigieuses avant d'avoir appliqué les procédures prévues par les «mécanismes communs nécessaires à l'utilisation rationnelle et optimale du fleuve» (article premier). L'article 9 prévoit cependant que, «[s]i la partie notifiée ne formule pas d'objections ou ne répond pas dans le délai prévu à l'article 8

of its waters, the technical reasons on which this conclusion is based and the changes suggested to the plan or programme of operations".

The Court is aware that the negotiation provided for in Article 12 of the 1975 Statute forms part of the overall procedure laid down in Articles 7 to 12, which is structured in such a way that the parties, in association with CARU, are able, at the end of the process, to fulfil their obligation to prevent any significant transboundary harm which might be caused by potentially harmful activities planned by either one of them.

140. The Court therefore considers that the agreement to set up the GTAN, while indeed creating a negotiating body capable of enabling the Parties to pursue the same objective as that laid down in Article 12 of the 1975 Statute, cannot be interpreted as expressing the agreement of the Parties to derogate from other procedural obligations laid down by the Statute.

141. Consequently, the Court finds that Argentina, in accepting the creation of the GTAN, did not give up, as Uruguay claims, the other procedural rights belonging to it by virtue of the 1975 Statute, nor the possibility of invoking Uruguay's responsibility for any breach of those rights. Argentina did not, in the agreement to set up the GTAN, "effect a clear and unequivocal waiver" of its rights under the 1975 Statute (*Certain Phosphate Lands in Nauru (Nauru* v. *Australia), Preliminary Objections, Judgment, I.C.J. Reports 1992*, p. 247, para. 13). Nor did it consent to suspending the operation of the procedural provisions of the 1975 Statute. Indeed, under Article 57 of the Vienna Convention on the Law of Treaties of 23 May 1969, concerning "[s]uspension of the operation of a treaty", including, according to the International Law Commission's commentary, suspension of "the operation of . . . some of its provisions" (*Yearbook of the International Law Commission*, 1966, Vol. II, p. 251), suspension is only possible "in conformity with the provisions of the treaty" or "by consent of all the parties".

142. The Court further observes that the agreement to set up the GTAN, in referring to "the cellulose plants that are being constructed in the Eastern Republic of Uruguay", is stating a simple fact and cannot be interpreted, as Uruguay claims, as an acceptance of their construction by Argentina.

143. The Court finds that Uruguay was not entitled, for the duration of the period of consultation and negotiation provided for in Articles 7 to 12 of the 1975 Statute, either to construct or to authorize the construction of the planned mills and the port terminal. It would be contrary to the object and purpose of the 1975 Statute to embark on disputed activities before having applied the procedures laid down by the "joint machinery necessary for the optimum and rational utilization of the [r]iver" (Article 1). However, Article 9 provides that: "[i]f the notified party raises no objections or does not respond within the period established in Arti-

[cent quatre-vingts jours], l'autre partie peut construire ou autoriser la construction de l'ouvrage projeté».

144. Il en découle, selon la Cour, que, tant que se déroule le mécanisme de coopération entre les parties pour prévenir un préjudice sensible au détriment de l'une d'elles, l'Etat d'origine de l'activité projetée est tenu de ne pas autoriser sa construction et *a fortiori* de ne pas y procéder.

145. La Cour relève, en outre, que le statut de 1975 s'inscrit parfaitement dans le cadre des exigences du droit international en la matière, dès lors que le mécanisme de coopération entre Etats est régi par le principe de la bonne foi. En effet, selon le droit international coutumier, reflété à l'article 26 de la convention de Vienne de 1969 sur le droit des traités, «[t]out traité en vigueur lie les parties et doit être exécuté par elles de bonne foi». Cela s'applique à toutes les obligations établies par un traité, y compris les obligations de nature procédurale, essentielles à la coopération entre Etats. La Cour a rappelé, dans les affaires des *Essais nucléaires (Australie c. France) (Nouvelle-Zélande c. France)*, ce qui suit:

> «L'un des principes de base qui président à la création et à l'exécution d'obligations juridiques, quelle qu'en soit la source, est celui de la bonne foi. La confiance réciproque est une condition inhérente de la coopération internationale...» (*Arrêts, C.I.J. Recueil 1974*, p. 268, par. 46, et p. 473, par. 49; voir également *Actions armées frontalières et transfrontalières (Nicaragua c. Honduras), compétence et recevabilité, arrêt, C.I.J. Recueil 1988*, p. 105, par. 94.)

146. La Cour a par ailleurs eu l'occasion de mettre l'accent sur les caractéristiques de l'obligation de négocier et sur le comportement qu'elle prescrit aux Etats concernés: «les parties ont l'obligation de se comporter de telle manière que la négociation ait un sens» (*Plateau continental de la mer du Nord (République fédérale d'Allemagne/Danemark; République fédérale d'Allemagne/Pays-Bas), arrêt, C.I.J. Recueil 1969*, p. 47, par. 85).

147. Le mécanisme de coopération prévu par les articles 7 à 12 du statut de 1975 n'aurait pas de sens, de l'avis de la Cour, si la partie d'origine de l'activité projetée autorisait celle-ci ou la mettait en œuvre sans attendre que ce mécanisme soit mené à son terme. En effet, si tel était le cas, les négociations entre les parties n'auraient plus d'objet.

148. A cet égard, les travaux préliminaires des usines de pâte à papier sur des sites approuvés uniquement par l'Uruguay ne font pas exception, contrairement à ce que prétend cet Etat. Ces travaux font en effet partie intégrante de la construction des usines projetées (voir paragraphes 39 et 42 ci-dessus).

149. La Cour conclut de ce qui précède que l'accord créant le GTAN n'a pas permis à l'Uruguay de déroger à ses obligations d'informer et de notifier, conformément à l'article 7 du statut de 1975, et que, en autorisant la construction des usines ainsi que du terminal portuaire de

cle 8 [180 days], the other party may carry out or authorize the work planned".

144. Consequently, in the opinion of the Court, as long as the procedural mechanism for co-operation between the parties to prevent significant damage to one of them is taking its course, the State initiating the planned activity is obliged not to authorize such work and, *a fortiori*, not to carry it out.

145. The Court notes, moreover, that the 1975 Statute is perfectly in keeping with the requirements of international law on the subject, since the mechanism for co-operation between States is governed by the principle of good faith. Indeed, according to customary international law, as reflected in Article 26 of the 1969 Vienna Convention on the Law of Treaties, "[e]very treaty in force is binding upon the parties to it and must be performed by them in good faith". That applies to all obligations established by a treaty, including procedural obligations which are essential to co-operation between States. The Court recalled in the cases concerning *Nuclear Tests (Australia* v. *France) (New Zealand* v. *France)*:

> "One of the basic principles governing the creation and performance of legal obligations, whatever their source, is the principle of good faith. Trust and confidence are inherent in international co-operation . . ." (*Judgments, I.C.J. Reports 1974*, p. 268, para. 46, and p. 473, para. 49; see also *Border and Transborder Armed Actions (Nicaragua* v. *Honduras), Jurisdiction and Admissibility, Judgment, I.C.J. Reports 1988*, p. 105, para. 94.)

146. The Court has also had occasion to draw attention to the characteristics of the obligation to negotiate and to the conduct which this imposes on the States concerned: "[the Parties] are under an obligation so to conduct themselves that the negotiations are meaningful" (*North Sea Continental Shelf (Federal Republic of Germany/Denmark; Federal Republic of Germany/Netherlands), Judgment, I.C.J. Reports 1969*, p. 47, para. 85).

147. In the view of the Court, there would be no point to the co-operation mechanism provided for by Articles 7 to 12 of the 1975 Statute if the party initiating the planned activity were to authorize or implement it without waiting for that mechanism to be brought to a conclusion. Indeed, if that were the case, the negotiations between the parties would no longer have any purpose.

148. In this respect, contrary to what Uruguay claims, the preliminary work on the pulp mills on sites approved by Uruguay alone does not constitute an exception. This work does in fact form an integral part of the construction of the planned mills (see paragraphs 39 and 42 above).

149. The Court concludes from the above that the agreement to set up the GTAN did not permit Uruguay to derogate from its obligations of information and notification under Article 7 of the 1975 Statute, and that by authorizing the construction of the mills and the port terminal at

Fray Bentos avant la fin de la période de négociation, l'Uruguay n'a pas respecté l'obligation de négocier prévue à l'article 12 du statut. Il en résulte que l'Uruguay a méconnu l'ensemble du mécanisme de coopération prévu par les articles 7 à 12 du statut de 1975.

150. Etant donné que «l'engagement de négocier n'implique pas celui de s'entendre» (*Trafic ferroviaire entre la Lithuanie et la Pologne, avis consultatif, 1931, C.P.J.I. série A/B n° 42*, p. 116), il reste à la Cour à examiner si l'Etat d'origine du projet est tenu à certaines obligations après l'expiration de la période de négociation prévue à l'article 12.

D. Les obligations de l'Uruguay après l'expiration de la période de négociation

151. L'article 12 renvoie les Parties, dans l'hypothèse où elles n'aboutissent pas à un accord dans un délai de cent quatre-vingts jours, à l'application de la procédure indiquée au chapitre XV.

Le chapitre XV comporte un article unique, l'article 60, selon lequel:

> «Tout différend concernant l'interprétation ou l'application du traité et du statut qui ne pourrait être réglé par négociation directe peut être soumis par l'une ou l'autre des parties à la Cour internationale de Justice.
>
> Dans les cas visés aux articles 58 et 59, l'une ou l'autre des parties peut soumettre tout différend sur l'interprétation ou l'application du traité et du statut à la Cour internationale de Justice lorsque ledit différend n'a pas pu être réglé dans un délai de 180 jours à compter de la notification prévue à l'article 59.»

152. Le statut de 1975, selon l'Uruguay, ne reconnaît pas à l'une des parties un «droit de veto» sur les projets initiés par l'autre. L'Uruguay estime qu'il n'existe aucune «obligation de non-construction» qui pèserait sur l'Etat d'origine des projets jusqu'à ce que la Cour, une fois saisie, se soit prononcée. L'existence d'une telle obligation, souligne l'Uruguay, permettrait à une partie de bloquer un projet vital pour le développement durable de l'autre partie, ce qui serait incompatible avec «l'utilisation rationnelle et optimale du fleuve». Au contraire, pour l'Uruguay, en l'absence de disposition particulière dans le statut, il convient d'en revenir au droit international général, que refléterait le projet d'articles de la Commission du droit international de 2001 sur la prévention des dommages transfrontières résultant d'activités dangereuses (*Annuaire de la Commission du droit international*, 2001, vol. II, deuxième partie), en particulier l'alinéa 3 de l'article 9 de ce projet, relatif aux «consultations sur les mesures préventives», selon lequel «si les consultations ... ne permettent pas d'aboutir à une solution concertée, l'Etat d'origine tient néanmoins compte des intérêts de l'Etat susceptible d'être affecté s'il décide d'autoriser la poursuite de l'activité...».

Fray Bentos before the expiration of the period of negotiation, Uruguay failed to comply with the obligation to negotiate laid down by Article 12 of the Statute. Consequently, Uruguay disregarded the whole of the co-operation mechanism provided for in Articles 7 to 12 of the 1975 Statute.

150. Given that "an obligation to negotiate does not imply an obligation to reach an agreement" (*Railway Traffic between Lithuania and Poland, Advisory Opinion, 1931, P.C.I.J., Series A/B, No. 42*, p. 116), it remains for the Court to examine whether the State initiating the plan is under certain obligations following the end of the negotiation period provided for in Article 12.

D. Uruguay's Obligations Following the End of the Negotiation Period

151. Article 12 refers the Parties, should they fail to reach an agreement within 180 days, to the procedure indicated in Chapter XV.

Chapter XV contains a single article, Article 60, according to which:

> "Any dispute concerning the interpretation or application of the Treaty and the Statute which cannot be settled by direct negotiations may be submitted by either party to the International Court of Justice.
>
> In the cases referred to in Articles 58 and 59, either party may submit any dispute concerning the interpretation or application of the Treaty and the Statute to the International Court of Justice, when it has not been possible to settle the dispute within 180 days following the notification referred to in Article 59."

152. According to Uruguay, the 1975 Statute does not give one party a "right of veto" over the projects initiated by the other. It does not consider there to be a "no construction obligation" borne by the State initiating the projects until such time as the Court has ruled on the dispute. Uruguay points out that the existence of such an obligation would enable one party to block a project that was essential for the sustainable development of the other, something that would be incompatible with the "optimum and rational utilization of the [r]iver". On the contrary, for Uruguay, in the absence of any specific provision in the 1975 Statute, reference should be made to general international law, as reflected in the 2001 draft Articles of the International Law Commission on Prevention of Transboundary Harm from Hazardous Activities (*Yearbook of the International Law Commission*, 2001, Vol. II, Part Two); in particular, draft Article 9, paragraph 3, concerning "Consultations on preventive measures", states that "[i]f the consultations . . . fail to produce an agreed solution, the State of origin shall nevertheless take into account the interests of the State likely to be affected in case it decides to authorize the activity to be pursued . . .".

153. L'Argentine, au contraire, soutient que l'article 12 du statut de 1975 fait de la Cour le décideur final lorsque les parties n'aboutissent pas à un accord dans le délai de cent quatre-vingts jours à compter de la communication visée à l'article 11. Il résulterait de l'article 9 du statut, interprété à la lumière des articles 11 et 12, et compte tenu de son objet et de son but, que, si la partie à laquelle la notification est adressée formule une objection, l'autre partie ne pourrait ni construire l'ouvrage en question ni autoriser sa construction, aussi longtemps que la procédure prévue aux articles 7 à 12 n'aurait pas été achevée et que la Cour ne se serait pas prononcée sur le projet. L'Argentine considère ainsi que, pendant la procédure de règlement du différend devant la Cour, l'Etat qui projette de construire l'ouvrage ne peut mettre l'autre Partie devant le fait accompli de sa construction.

En ce qui concerne la question du «veto», elle serait, selon l'Argentine, mal posée par l'Uruguay, car ni l'une ni l'autre des parties ne pourrait imposer sa position sur la construction et il reviendrait en définitive à la Cour de trancher, en cas de désaccord, par une décision revêtue de l'autorité de la chose jugée. En quelque sorte, l'Uruguay n'aurait d'autre choix, selon l'Argentine, que de parvenir à un accord avec elle ou d'attendre le règlement du différend. En poursuivant la construction et la mise en service de l'usine et du port d'Orion (Botnia), l'Uruguay commet, selon l'Argentine, une violation continue des obligations de nature procédurale résultant du chapitre II du statut de 1975.

154. La Cour observe que la prétendue «obligation de non-construction», qui pèserait sur l'Uruguay entre la fin de la période de négociation et la décision de la Cour, ne figure pas expressément dans le statut de 1975 et ne découle pas davantage de ses dispositions. L'article 9 ne prévoit une telle obligation que pendant la mise en œuvre de la procédure prévue aux articles 7 à 12 du statut.

En outre, le statut ne prévoit pas que, en cas de désaccord persistant entre les parties sur l'activité projetée au terme de la période de négociation, il reviendrait à la Cour, saisie par l'Etat concerné, comme le prétend l'Argentine, d'autoriser ou non l'activité en question. La Cour souligne que, si le statut de 1975 lui confère compétence pour le règlement de tout différend relatif à son application et à son interprétation, il ne l'investit pas pour autant de la fonction d'autoriser ou non en dernier ressort les activités projetées. Par conséquent, l'Etat d'origine du projet peut, à la fin de la période de négociation, procéder à la construction à ses propres risques.

La Cour ne peut retenir l'interprétation de l'article 9 selon laquelle toute construction serait interdite jusqu'à ce qu'elle se soit prononcée en vertu des articles 12 et 60.

155. L'article 12 ne met pas à la charge des parties une obligation de saisir la Cour mais leur donne plutôt la possibilité de le faire, après l'expiration de la période de négociation. Ainsi, l'article 12 n'est pas susceptible de modifier les droits et obligations de la partie intéressée, tant que la Cour n'a pas statué définitivement à leur sujet. Selon la Cour, parmi ces

153. Argentina, on the other hand, maintains that Article 12 of the 1975 Statute makes the Court the final decision-maker where the parties have failed to reach agreement within 180 days following the notification referred to in Article 11. It is said to follow from Article 9 of the Statute, interpreted in the light of Articles 11 and 12 and taking account of its object and purpose, that if the notified party raises an objection, the other party may neither carry out nor authorize the work in question until the procedure laid down in Articles 7 to 12 has been completed and the Court has ruled on the project. Argentina therefore considers that, during the dispute settlement proceedings before the Court, the State which is envisaging carrying out the work cannot confront the other Party with the fait accompli of having carried it out.

Argentina argues that the question of the "veto" raised by Uruguay is inappropriate, since neither of the parties can impose its position in respect of the construction works and it will ultimately be for the Court to settle the dispute, if the parties disagree, by a decision that will have the force of *res judicata*. It could be said, according to Argentina, that Uruguay has no choice but to come to an agreement with it or to await the settlement of the dispute. Argentina contends that, by pursuing the construction and commissioning of the Orion (Botnia) mill and port, Uruguay has committed a continuing violation of the procedural obligations under Chapter II of the 1975 Statute.

154. The Court observes that the "no construction obligation", said to be borne by Uruguay between the end of the negotiation period and the decision of the Court, is not expressly laid down by the 1975 Statute and does not follow from its provisions. Article 9 only provides for such an obligation during the performance of the procedure laid down in Articles 7 to 12 of the Statute.

Furthermore, in the event of disagreement between the parties on the planned activity persisting at the end of the negotiation period, the Statute does not provide for the Court, to which the matter would be submitted by the State concerned, according to Argentina, to decide whether or not to authorize the activity in question. The Court points out that, while the 1975 Statute gives it jurisdiction to settle any dispute concerning its interpretation or application, it does not however confer on it the role of deciding in the last resort whether or not to authorize the planned activities. Consequently, the State initiating the plan may, at the end of the negotiation period, proceed with construction at its own risk.

The Court cannot uphold the interpretation of Article 9 according to which any construction is prohibited until the Court has given its ruling pursuant to Articles 12 and 60.

155. Article 12 does not impose an obligation on the parties to submit a matter to the Court, but gives them the possibility of doing so, following the end of the negotiation period. Consequently, Article 12 can do nothing to alter the rights and obligations of the party concerned as long as the Court has not ruled finally on them. The Court considers that

droits figure celui de mettre en œuvre le projet, sous la seule responsabilité de cette partie, dans la mesure où la période de négociation a expiré.

156. La Cour avait considéré, dans son ordonnance du 13 juillet 2006, que «la construction des usines sur le site actuel ne p[ouvait] être réputée constituer un fait accompli» (*Usines de pâte à papier sur le fleuve Uruguay (Argentine c. Uruguay), mesures conservatoires, ordonnance du 13 juillet 2006, C.I.J. Recueil 2006*, p. 133, par. 78). Ainsi, en statuant au fond sur le différend qui oppose les deux Parties, la Cour est l'ultime garant du respect par celles-ci du statut de 1975.

157. La Cour conclut de ce qui précède qu'aucune «obligation de non-construction» ne pesait sur l'Uruguay après que la période de négociation prévue par l'article 12 a expiré, soit le 3 février 2006, les Parties ayant constaté à cette date l'échec des négociations entreprises dans le cadre du GTAN (voir paragraphe 40). En conséquence, le comportement illicite de l'Uruguay (constaté au paragraphe 149 ci-dessus) ne pouvait s'étendre au-delà de cette date.

158. La Cour ayant établi que l'Uruguay a violé ses obligations de nature procédurale d'informer, de notifier et de négocier dans la mesure et pour les raisons exposées ci-dessus, elle se penchera à présent sur la question du respect par cet Etat des obligations de fond prescrites par le statut de 1975.

* *

IV. Les obligations de fond

159. Avant d'examiner les violations alléguées des obligations de fond découlant du statut de 1975, la Cour traitera de deux questions préliminaires, à savoir la charge de la preuve et la preuve par expertise.

A. La charge de la preuve et la preuve par expertise

160. L'Argentine soutient que l'approche de précaution adoptée dans le statut de 1975 a pour effet de «transfér[er] la charge de la preuve à l'Uruguay, [de telle sorte que ce serait à lui de démontrer] que l'usine de pâte à papier Orion (Botnia) ne cause pas de dommages significatifs à l'environnement». Elle affirme également que la charge de la preuve ne devrait pas peser sur elle seule, en tant qu'Etat demandeur, car, selon elle, le statut de 1975 impose aux deux Parties une obligation égale de convaincre — l'une, de l'innocuité du projet, l'autre, de sa nocivité.

161. L'Uruguay estime au contraire que, conformément à la jurisprudence bien établie de la Cour, c'est à l'Argentine, Etat demandeur, qu'incombe la charge de la preuve, mais que, quand bien même la position argentine relative au transfert de la charge de la preuve serait fondée en droit, cela ne changerait rien, étant donné la faiblesse manifeste de

those rights include that of implementing the project, on the sole responsibility of that party, since the period for negotiation has expired.

156. In its Order of 13 July 2006, the Court took the view that the "construction [of the mills] at the current site cannot be deemed to create a fait accompli" (*Pulp Mills on the River Uruguay (Argentina* v. *Uruguay), Provisional Measures, Order of 13 July 2006, I.C.J. Reports 2006*, p. 133, para. 78). Thus, in pronouncing on the merits in the dispute between the Parties, the Court is the ultimate guarantor of their compliance with the 1975 Statute.

157. The Court concludes from the above that Uruguay did not bear any "no construction obligation" after the negotiation period provided for in Article 12 expired on 3 February 2006, the Parties having determined at that date that the negotiations undertaken within the GTAN had failed (see paragraph 40). Consequently the wrongful conduct of Uruguay (established in paragraph 149 above) could not extend beyond that period.

158. Having established that Uruguay breached its procedural obligations to inform, notify and negotiate to the extent and for the reasons given above, the Court will now turn to the question of the compliance of that State with the substantive obligations laid down by the 1975 Statute.

* *

IV. Substantive Obligations

159. Before taking up the examination of the alleged violations of substantive obligations under the 1975 Statute, the Court will address two preliminary issues, namely, the burden of proof and expert evidence.

A. Burden of Proof and Expert Evidence

160. Argentina contends that the 1975 Statute adopts an approach in terms of precaution whereby "the burden of proof will be placed on Uruguay for it to establish that the Orion (Botnia) mill will not cause significant damage to the environment". It also argues that the burden of proof should not be placed on Argentina alone as the Applicant, because, in its view, the 1975 Statute imposes an equal onus to persuade — for the one that the plant is innocuous and for the other that it is harmful.

161. Uruguay, on the other hand, asserts that the burden of proof is on Argentina, as the Applicant, in accordance with the Court's long-standing case law, although it considers that, even if the Argentine position about transferring the burden of proof to Uruguay were correct, it would make no difference given the manifest weakness of Argentina's

l'argumentation de l'Argentine sur le fond et le nombre d'éléments de preuve émanant de sources indépendantes que l'Uruguay a soumis à la Cour. Il conteste également avec force l'argument de l'Argentine selon lequel l'approche de précaution adoptée dans le statut de 1975 aurait pour effet de transférer la charge de la preuve, invoquant l'absence de toute disposition conventionnelle expresse en ce sens, et rejette de même l'idée avancée par l'Argentine selon laquelle le statut ferait peser la charge de la preuve à égalité sur les deux Parties.

162. Tout d'abord, la Cour considère que, selon le principe bien établi *onus probandi incumbit actori*, c'est à la partie qui avance certains faits d'en démontrer l'existence. Ce principe, confirmé par la Cour à maintes reprises (*Délimitation maritime en mer Noire (Roumanie c. Ukraine), arrêt, C.I.J. Recueil 2009*, p. 86, par. 68; *Souveraineté sur Pedra Branca/Pulau Batu Puteh, Middle Rocks et South Ledge (Malaisie/Singapour), arrêt, C.I.J. Recueil 2008*, p. 31, par. 45; *Application de la convention pour la prévention et la répression du crime de génocide (Bosnie-Herzégovine c. Serbie-et-Monténégro), arrêt, C.I.J. Recueil 2007 (I)*, p. 128, par. 204; *Activités militaires et paramilitaires au Nicaragua et contre celui-ci (Nicaragua c. Etats-Unis d'Amérique), compétence et recevabilité, arrêt, C.I.J. Recueil 1984*, p. 437, par. 101), s'applique aux faits avancés aussi bien par le demandeur que par le défendeur.

163. Le demandeur doit naturellement commencer par soumettre les éléments de preuve pertinents pour étayer sa thèse. Cela ne signifie pas pour autant que le défendeur ne devrait pas coopérer en produisant tout élément de preuve en sa possession susceptible d'aider la Cour à régler le différend dont elle est saisie.

164. Quant aux arguments avancés par l'Argentine concernant le renversement de la charge de la preuve et l'existence, à l'égard de chaque Partie, d'une obligation égale de convaincre au titre du statut de 1975, la Cour considère qu'une approche de précaution, si elle peut se révéler pertinente pour interpréter et appliquer les dispositions du statut, n'a toutefois pas pour effet d'opérer un renversement de la charge de la preuve; elle considère également que rien dans le statut de 1975 lui-même ne permet de conclure que celui-ci ferait peser la charge de la preuve de façon égale sur les deux Parties.

*

165. La Cour examinera à présent la question de la preuve par expertise. L'Argentine et l'Uruguay ont tous deux soumis à la Cour une grande quantité d'informations factuelles et scientifiques à l'appui de leurs prétentions respectives. Ils ont également produit des rapports et des études établis par les experts et les consultants qu'ils ont engagés, ainsi que par ceux engagés par la Société financière internationale en sa qualité de bailleur de fonds du projet. Certains de ces experts se sont également pré-

case and the extensive independent evidence put before the Court by Uruguay. Uruguay also strongly contests Argentina's argument that the precautionary approach of the 1975 Statute would imply a reversal of the burden of proof, in the absence of an explicit treaty provision prescribing it as well as Argentina's proposition that the Statute places the burden of proof equally on both Parties.

162. To begin with, the Court considers that, in accordance with the well-established principle of *onus probandi incumbit actori*, it is the duty of the party which asserts certain facts to establish the existence of such facts. This principle which has been consistently upheld by the Court (*Maritime Delimitation in the Black Sea (Romania* v. *Ukraine), Judgment, I.C.J. Reports 2009*, p. 86, para. 68; *Sovereignty over Pedra Branca/Pulau Batu Puteh, Middle Rocks and South Ledge (Malaysia/Singapore), Judgment, I.C.J. Reports 2008*, p. 31, para. 45; *Application of the Convention on the Prevention and Punishment of the Crime of Genocide (Bosnia and Herzegovina* v. *Serbia and Montenegro), Judgment, I.C.J. Reports 2007 (I)*, p. 128, para. 204; *Military and Paramilitary Activities in and against Nicaragua (Nicaragua* v. *United States of America), Jurisdiction and Admissibility, Judgment, I.C.J. Reports 1984*, p. 437, para. 101) applies to the assertions of fact both by the Applicant and the Respondent.

163. It is of course to be expected that the Applicant should, in the first instance, submit the relevant evidence to substantiate its claims. This does not, however, mean that the Respondent should not co-operate in the provision of such evidence as may be in its possession that could assist the Court in resolving the dispute submitted to it.

164. Regarding the arguments put forward by Argentina on the reversal of the burden of proof and on the existence, vis-à-vis each Party, of an equal onus to prove under the 1975 Statute, the Court considers that while a precautionary approach may be relevant in the interpretation and application of the provisions of the Statute, it does not follow that it operates as a reversal of the burden of proof. The Court is also of the view that there is nothing in the 1975 Statute itself to indicate that it places the burden of proof equally on both Parties.

*

165. The Court now turns to the issue of expert evidence. Both Argentina and Uruguay have placed before the Court a vast amount of factual and scientific material in support of their respective claims. They have also submitted reports and studies prepared by the experts and consultants commissioned by each of them, as well as others commissioned by the International Finance Corporation in its quality as lender to the project. Some of these experts have also appeared

sentés devant la Cour comme conseils de l'une ou l'autre Partie pour fournir des éléments de preuve.

166. Les Parties sont néanmoins divisées sur l'autorité et la fiabilité des études et rapports versés au dossier, qui ont été établis par leurs experts et consultants respectifs, d'une part, et par ceux de la SFI, d'autre part, et qui contiennent bien souvent des affirmations et des conclusions contradictoires. Répondant à une question posée par un juge, l'Argentine a affirmé que le poids à leur accorder devait être déterminé en fonction non seulement de l'«indépendance» de l'auteur, qui devait n'avoir aucun intérêt personnel à ce que l'affaire fût tranchée dans un sens ou un autre et ne devait pas être fonctionnaire du gouvernement, mais aussi des caractéristiques du document lui-même, en particulier du soin avec lequel l'analyse avait été réalisée, de son exhaustivité, de l'exactitude des données utilisées, et de la clarté et de la cohérence des conclusions tirées de celles-ci. Dans sa réponse à la même question, l'Uruguay a soutenu que les rapports élaborés par des experts engagés aux fins de l'instance et versés au dossier ne devaient pas être considérés comme établis de façon indépendante et devaient être traités avec circonspection, contrairement aux déclarations et analyses d'experts publiées par une organisation internationale compétente telle la SFI ou celles publiées par les consultants engagés par ladite organisation, qui, elles, devaient être considérées comme émanant d'une source indépendante et se voir accorder un «poids spécial».

167. La Cour a prêté la plus grande attention aux éléments qui lui ont été soumis par les Parties, ainsi qu'il ressortira de son examen des éléments de preuve ci-après relatifs aux violations alléguées des obligations de fond. S'agissant des experts qui sont intervenus à l'audience en qualité de conseils, la Cour aurait trouvé plus utile que les Parties, au lieu de les inclure à ce titre dans leurs délégations respectives, les présentent en tant que témoins-experts en vertu des articles 57 et 64 du Règlement de la Cour. Elle considère en effet que les personnes déposant devant elle sur la base de leurs connaissances scientifiques ou techniques et de leur expérience personnelle devraient le faire en qualité d'experts ou de témoins, voire, dans certains cas, à ces deux titres à la fois, mais non comme conseils, afin de pouvoir répondre aux questions de la partie adverse ainsi qu'à celles de la Cour elle-même.

168. Quant à l'indépendance de ces experts, la Cour n'estime pas nécessaire, pour statuer en l'espèce, de s'engager dans un débat général sur la valeur, la fiabilité et l'autorité relatives des documents et études élaborés par les experts et les consultants des Parties. Elle doit seulement garder à l'esprit que, si volumineuses et complexes que soient les informations factuelles qui lui ont été soumises, il lui incombe, au terme d'un examen attentif de l'ensemble des éléments soumis par les Parties, de déterminer quels faits sont à prendre en considération, d'en apprécier la force probante et d'en tirer les conclusions appropriées. Ainsi, fidèle à sa pratique, la Cour se prononcera sur les faits, en se fondant sur les éléments de preuve qui lui ont été pré-

before the Court as counsel for one or the other of the Parties to provide evidence.

166. The Parties, however, disagree on the authority and reliability of the studies and reports submitted as part of the record and prepared, on the one hand, by their respective experts and consultants, and on the other, by the experts of the IFC, which contain, in many instances, conflicting claims and conclusions. In reply to a question put by a judge, Argentina stated that the weight to be given to such documents should be determined by reference not only to the "independence" of the author, who must have no personal interest in the outcome of the dispute and must not be an employee of the government, but also by reference to the characteristics of the report itself, in particular the care with which its analysis was conducted, its completeness, the accuracy of the data used, and the clarity and coherence of the conclusions drawn from such data. In its reply to the same question, Uruguay suggested that reports prepared by retained experts for the purposes of the proceedings and submitted as part of the record should not be regarded as independent and should be treated with caution; while expert statements and evaluations issued by a competent international organization, such as the IFC, or those issued by the consultants engaged by that organization should be regarded as independent and given "special weight".

167. The Court has given most careful attention to the material submitted to it by the Parties, as will be shown in its consideration of the evidence below with respect to alleged violations of substantive obligations. Regarding those experts who appeared before it as counsel at the hearings, the Court would have found it more useful had they been presented by the Parties as expert witnesses under Articles 57 and 64 of the Rules of Court, instead of being included as counsel in their respective delegations. The Court indeed considers that those persons who provide evidence before the Court based on their scientific or technical knowledge and on their personal experience should testify before the Court as experts, witnesses or in some cases in both capacities, rather than counsel, so that they may be submitted to questioning by the other party as well as by the Court.

168. As for the independence of such experts, the Court does not find it necessary in order to adjudicate the present case to enter into a general discussion on the relative merits, reliability and authority of the documents and studies prepared by the experts and consultants of the Parties. It needs only to be mindful of the fact that, despite the volume and complexity of the factual information submitted to it, it is the responsibility of the Court, after having given careful consideration to all the evidence placed before it by the Parties, to determine which facts must be considered relevant, to assess their probative value, and to draw conclusions from them as appropriate. Thus, in keeping with its practice, the Court will make its own determination of the facts, on the basis of the evidence

sentés, puis appliquera les règles pertinentes du droit international à ceux qu'elle aura jugés avérés.

B. Les violations alléguées des obligations de fond

169. La Cour examinera maintenant les violations alléguées des obligations de fond découlant du statut de 1975 commises par l'Uruguay en autorisant la construction et la mise en service de l'usine Orion (Botnia). En particulier, l'Argentine affirme que l'Uruguay a violé les obligations que lui imposent les articles premier, 27, 35, 36 et 41, alinéa *a)*, du statut de 1975 ainsi que d'«autres obligations découlant du droit international général, conventionnel et coutumier, ... nécessaires à l'application [de ce] statut...». L'Uruguay rejette ces allégations. Il considère par ailleurs que l'article 27 du statut de 1975 autorise les parties à utiliser les eaux du fleuve à des fins ménagères, sanitaires, industrielles et agricoles.

1. L'obligation de contribuer à l'utilisation rationnelle et optimale du fleuve (article premier)

170. Selon l'Argentine, l'Uruguay a violé son obligation de contribuer à l'«utilisation rationnelle et optimale du fleuve» en manquant de la consulter sur les actions propres à éviter une modification de l'équilibre écologique, et de prendre les mesures nécessaires pour empêcher une pollution. L'Argentine fait également valoir que, pour interpréter le statut de 1975 (en particulier ses articles 27, 35 et 36) selon le principe de l'utilisation équitable et raisonnable, il faut tenir compte de toutes les utilisations préalables et légitimes du fleuve, y compris son utilisation à des fins récréatives et touristiques.

171. Pour l'Uruguay, l'objet et le but du statut de 1975 sont d'organiser la coopération entre les Parties par l'intermédiaire de la CARU au service de leur objectif commun, celui d'assurer une utilisation équitable et durable des eaux et des ressources biologiques du fleuve. L'Uruguay estime, d'une part, n'avoir contrevenu en rien au principe de l'utilisation équitable et raisonnable du fleuve et, d'autre part, que ce principe ne peut être invoqué pour privilégier des utilisations préalables du fleuve, liées par exemple au tourisme ou à la pêche, par rapport à de nouvelles utilisations.

172. Les Parties sont également en désaccord sur la portée et les implications de l'article 27 du statut de 1975 concernant le droit de chacune d'elles d'utiliser les eaux du fleuve, à l'intérieur de sa juridiction, à des fins ménagères, sanitaires, industrielles et agricoles.

173. La Cour fait observer que, comme l'indique le titre de son chapitre I, le statut de 1975 expose, en son article premier, le but de cet instrument. En tant que tel, l'article premier éclaire l'interprétation des obligations de fond mais ne confère pas, en lui-même, de droits ou d'obligations spécifiques aux parties. Celles-ci sont tenues de garantir l'utilisation rationnelle et optimale du fleuve Uruguay en se conformant aux obliga-

presented to it, and then it will apply the relevant rules of international law to those facts which it has found to have existed.

B. Alleged Violations of Substantive Obligations

169. The Court now turns to the examination of the alleged violations by Uruguay of its substantive obligations under the 1975 Statute by authorizing the construction and operation of the Orion (Botnia) mill. In particular, Argentina contends that Uruguay has breached its obligations under Articles 1, 27, 35, 36 and 41 *(a)* of the 1975 Statute and "other obligations deriving from . . . general, conventional and customary international law which are necessary for the application of the 1975 Statute". Uruguay rejects these allegations. Uruguay considers furthermore that Article 27 of the 1975 Statute allows the parties to use the waters of the river for domestic, sanitary, industrial and agricultural purposes.

1. The obligation to contribute to the optimum and rational utilization of the river (Article 1)

170. According to Argentina, Uruguay has breached its obligation to contribute to the "optimum and rational utilization of the river" by failing to co-ordinate with Argentina on measures necessary to avoid ecological change, and by failing to take the measures necessary to prevent pollution. Argentina also maintains that, in interpreting the 1975 Statute (in particular Articles 27, 35, and 36 thereof) according to the principle of equitable and reasonable use, account must be taken of all pre-existing legitimate uses of the river, including in particular its use for recreational and tourist purposes.

171. For Uruguay, the object and purpose of the 1975 Statute is to establish a structure for co-operation between the Parties through CARU in pursuit of the shared goal of equitable and sustainable use of the water and biological resources of the river. Uruguay contends that it has in no way breached the principle of equitable and reasonable use of the river and that this principle provides no basis for favouring pre-existing uses of the river, such as tourism or fishing, over other, new uses.

172. The Parties also disagree on the scope and implications of Article 27 of the 1975 Statute on the right of each Party to use the waters of the river, within its jurisdiction, for domestic, sanitary, industrial and agricultural purposes.

173. The Court observes that Article 1, as stated in the title to Chapter I of the 1975 Statute, sets out the purpose of the Statute. As such, it informs the interpretation of the substantive obligations, but does not by itself lay down specific rights and obligations for the parties. Optimum and rational utilization is to be achieved through compliance with the obligations prescribed by the 1975 Statute for the protection of the envi-

tions prescrites par le statut aux fins de la protection de l'environnement et de la gestion conjointe de cette ressource partagée. Cet objectif doit aussi être poursuivi par le biais de la CARU, qui constitue le «mécanisme commun» nécessaire à sa réalisation, ainsi que par le biais des règles adoptées par cette commission et des normes et mesures adoptées par les Parties.

174. La Cour rappellera que les Parties ont conclu le traité contenant le statut de 1975 en application de l'article 7 du traité de 1961, qui leur faisait obligation d'établir conjointement un code de l'utilisation du fleuve comprenant, entre autres, des dispositions visant à prévenir la pollution et à protéger et préserver le milieu aquatique. Ainsi, l'utilisation rationnelle et optimale des eaux du fleuve peut être considérée comme la pierre angulaire du système de coopération institué par le statut de 1975 et du mécanisme commun destiné à assurer cette coopération.

175. La Cour considère que, pour parvenir à une utilisation rationnelle et optimale, un équilibre doit être trouvé entre, d'une part, les droits et les besoins des Parties concernant l'utilisation du fleuve à des fins économiques et commerciales et, d'autre part, l'obligation de protéger celui-ci de tout dommage à l'environnement susceptible d'être causé par de telles activités. Cette nécessité d'assurer un tel équilibre ressort de plusieurs dispositions du statut de 1975 établissant les droits et obligations des Parties, telles que les articles 27, 36 et 41. La Cour appréciera donc le comportement de l'Uruguay en ce qui concerne l'autorisation de la construction et de la mise en service de l'usine Orion (Botnia) à la lumière de ces dispositions du statut, et des droits et obligations énoncés dans celles-ci.

176. La Cour a déjà examiné aux paragraphes 84 à 93 ci-dessus le rôle de la CARU par rapport aux obligations de nature procédurale établies dans le statut de 1975. En plus de son rôle à cet égard, les fonctions de la CARU concernent presque tous les aspects de la mise en œuvre des dispositions de fond du statut de 1975. Les fonctions de réglementation de la commission dans le domaine de la conservation et de la préservation des ressources biologiques, de la prévention et de la surveillance de la pollution, ainsi que celles qui concernent la coordination des mesures prises par les Parties, revêtent une importance particulière dans la présente affaire. La Cour les examinera au stade de son analyse des positions des Parties sur l'interprétation et l'application des articles 36 et 41 du statut de 1975.

177. Quant à l'article 27, la Cour considère que son libellé reflète non seulement la nécessité de concilier les intérêts variés des Etats riverains dans un contexte transfrontière et, en particulier, dans l'utilisation d'une ressource naturelle partagée, mais aussi celle de trouver un équilibre entre l'utilisation et la protection des eaux du fleuve qui soit conforme à l'objectif de développement durable. La Cour a déjà examiné les obligations découlant des articles 7 à 12 du statut de 1975 qui, selon l'article 27, doivent être respectées par toute partie souhaitant exercer son droit d'utiliser les eaux du fleuve pour l'une quelconque des fins y énoncées dès lors que le régime du fleuve ou la qualité de ses eaux risque de pâtir de cette

ronment and the joint management of this shared resource. This objective must also be ensured through CARU, which constitutes "the joint machinery" necessary for its achievement, and through the regulations adopted by it as well as the regulations and measures adopted by the Parties.

174. The Court recalls that the Parties concluded the treaty embodying the 1975 Statute, in implementation of Article 7 of the 1961 Treaty, requiring the Parties jointly to establish a régime for the use of the river covering, *inter alia*, provisions for preventing pollution and protecting and preserving the aquatic environment. Thus, optimum and rational utilization may be viewed as the cornerstone of the system of co-operation established in the 1975 Statute and the joint machinery set up to implement this co-operation.

175. The Court considers that the attainment of optimum and rational utilization requires a balance between the Parties' rights and needs to use the river for economic and commercial activities on the one hand, and the obligation to protect it from any damage to the environment that may be caused by such activities, on the other. The need for this balance is reflected in various provisions of the 1975 Statute establishing rights and obligations for the Parties, such as Articles 27, 36, and 41. The Court will therefore assess the conduct of Uruguay in authorizing the construction and operation of the Orion (Botnia) mill in the light of those provisions of the 1975 Statute, and the rights and obligations prescribed therein.

176. The Court has already addressed in paragraphs 84 to 93 above the role of CARU with respect to the procedural obligations laid down in the 1975 Statute. In addition to its role in that context, the functions of CARU relate to almost all aspects of the implementation of the substantive provisions of the 1975 Statute. Of particular relevance in the present case are its functions relating to rule-making in respect of conservation and preservation of living resources, the prevention of pollution and its monitoring, and the co-ordination of actions of the Parties. These functions will be examined by the Court in its analysis of the positions of the Parties with respect to the interpretation and application of Articles 36 and 41 of the 1975 Statute.

177. Regarding Article 27, it is the view of the Court that its formulation reflects not only the need to reconcile the varied interests of riparian States in a transboundary context and in particular in the use of a shared natural resource, but also the need to strike a balance between the use of the waters and the protection of the river consistent with the objective of sustainable development. The Court has already dealt with the obligations arising from Articles 7 to 12 of the 1975 Statute which have to be observed, according to Article 27, by any party wishing to exercise its right to use the waters of the river for any of the purposes mentioned therein insofar as such use may be liable to affect the régime of the river

utilisation. La Cour tient à ajouter que l'utilisation en question ne pourrait être jugée équitable et raisonnable s'il n'était pas tenu compte des intérêts de l'autre Etat riverain à l'égard de la ressource partagée et de la protection environnementale de cette dernière. Aussi la Cour est-elle d'avis que l'article 27 traduit ce lien étroit entre l'utilisation équitable et raisonnable d'une ressource partagée et la nécessité de concilier le développement économique et la protection de l'environnement qui est au cœur du développement durable.

2. L'obligation de veiller à ce que la gestion du sol et des forêts ne cause pas un préjudice au régime du fleuve ou à la qualité de ses eaux (article 35)

178. A l'article 35 du statut de 1975, les parties:

> «s'obligent à adopter les mesures nécessaires pour que la gestion du sol et des forêts, l'utilisation des eaux souterraines et celle des affluents du fleuve n'entraînent pas de modification causant un préjudice sensible au régime de ce dernier ou à la qualité de ses eaux».

179. L'Argentine soutient que la décision de l'Uruguay de procéder à d'importantes plantations d'eucalyptus afin de fournir de la matière première à l'usine Orion (Botnia) a des incidences non seulement sur la gestion des sols et des forêts uruguayennes, mais aussi sur la qualité des eaux du fleuve. Pour sa part, l'Uruguay affirme que l'Argentine n'expose aucun argument fondé sur la manière dont il gère ses sols et ses forêts — et qu'elle «n'a pas non plus formulé d'allégations relatives aux eaux des affluents».

180. La Cour fait observer que l'Argentine n'a apporté aucune preuve à l'appui de ce qu'elle avance. En outre, l'article 35 concerne la gestion des sols et des forêts ainsi que l'utilisation des eaux souterraines et des affluents, et rien dans les éléments de preuve produits par l'Argentine ne permet de relier directement la façon dont l'Uruguay gère ses sols et ses forêts, ou utilise les eaux souterraines et les affluents, aux modifications alléguées de la qualité des eaux du fleuve Uruguay que l'Argentine attribue à l'usine de pâte à papier Orion (Botnia). De fait, si elle a développé une longue argumentation quant aux effets des rejets de l'usine de pâte à papier sur la qualité des eaux du fleuve, l'Argentine a en revanche été nettement moins diserte quant à l'effet délétère qu'auraient eu sur la qualité de ces eaux les opérations de plantation d'eucalyptus effectuées par l'Uruguay. La Cour en conclut que l'Argentine n'a pas établi le bien-fondé de ses allégations sur ce point.

3. L'obligation de coordonner les mesures propres à éviter une modification de l'équilibre écologique (article 36)

181. L'Argentine soutient que l'Uruguay a violé l'article 36 du statut

or the quality of its waters. The Court wishes to add that such utilization could not be considered to be equitable and reasonable if the interests of the other riparian State in the shared resource and the environmental protection of the latter were not taken into account. Consequently, it is the opinion of the Court that Article 27 embodies this interconnectedness between equitable and reasonable utilization of a shared resource and the balance between economic development and environmental protection that is the essence of sustainable development.

2. The obligation to ensure that the management of the soil and woodland does not impair the régime of the river or the quality of its waters (Article 35)

178. Article 35 of the 1975 Statute provides that the parties:

> "undertake to adopt the necessary measures to ensure that the management of the soil and woodland and the use of groundwater and the waters of the tributaries of the river do not cause changes which may significantly impair the régime of the river or the quality of its waters".

179. Argentina contends that Uruguay's decision to carry out major eucalyptus planting operations to supply the raw material for the Orion (Botnia) mill has an impact on management of the soil and Uruguayan woodland, but also on the quality of the waters of the river. For its part, Uruguay states that Argentina does not make any arguments that are based on Uruguay's management of soil or woodland — "nor has it made any allegations concerning the waters of tributaries".

180. The Court observes that Argentina has not provided any evidence to support its contention. Moreover, Article 35 concerns the management of the soil and woodland as well as the use of groundwater and the water of tributaries, and there is nothing to suggest, in the evidentiary material submitted by Argentina, a direct relationship between Uruguay's management of the soil and woodland, or its use of ground water and water of tributaries and the alleged changes in the quality of the waters of the River Uruguay which had been attributed by Argentina to the Orion (Botnia) mill. Indeed, while Argentina made lengthy arguments about the effects of the pulp mill discharges on the quality of the waters of the river, no similar arguments have been presented to the Court regarding a deleterious relationship between the quality of the waters of the river and the eucalyptus-planting operations by Uruguay. The Court concludes that Argentina has not established its contention on this matter.

3. The obligation to co-ordinate measures to avoid changes in the ecological balance (Article 36)

181. Argentina contends that Uruguay has breached Article 36 of the

de 1975, qui fait obligation aux Parties de coordonner, par l'intermédiaire de la CARU, les mesures propres à éviter une modification de l'équilibre écologique du fleuve. Elle indique que les rejets de l'usine Orion (Botnia) ont modifié cet équilibre, et cite à titre d'exemples la prolifération d'algues du 4 février 2009, qui constitue selon elle une preuve flagrante d'une telle modification, et les rejets de toxines qui seraient à l'origine des malformations observées chez les rotifères dont des photographies ont été présentées à la Cour.

182. L'Uruguay considère que toute appréciation du comportement des Parties en ce qui concerne l'article 36 du statut de 1975 doit tenir compte des règles adoptées par la CARU, car cet article, qui crée une obligation de coopération, fait référence à ces règles et n'interdit pas en soi tel ou tel comportement. L'Uruguay estime que l'usine satisfait pleinement aux exigences de la CARU concernant l'équilibre écologique du fleuve, et conclut qu'il n'a pas agi de manière contraire à l'article 36 du statut de 1975.

183. Il est rappelé que, aux termes de l'article 36, «[l]es parties coordonnent, par l'intermédiaire de la commission, les mesures propres à éviter une modification de l'équilibre écologique et à contenir les fléaux et autres facteurs nocifs sur le fleuve et dans ses zones d'influence».

184. La Cour est d'avis que les Parties ne sauraient satisfaire à cette obligation isolément, par des actes individuels. Le respect de cette obligation exige une action concertée, par l'intermédiaire de la commission. Cette obligation est l'expression de la recherche par le statut de 1975 de l'intérêt collectif, et reflète l'un des objectifs ayant présidé à la mise en place de mécanismes communs, à savoir celui d'assurer une coordination entre les initiatives et mesures prises par les Parties aux fins de la gestion durable et de la protection environnementale du fleuve. Les Parties ont effectivement coordonné leur action en promulguant, dans le cadre de la commission, des normes qui figurent aux points E3 et E4 du digeste de la CARU. L'un des objectifs énoncés au point E3 consiste à «[p]rotéger et préserver le milieu aquatique et son équilibre écologique». De même, il est indiqué au point E4 que celui-ci a été élaboré «suivant ce qui [était] ... établi dans le[s] ... [a]rticles 36, 37, 38 et 39».

185. Selon la Cour, l'article 36 du statut de 1975 vise à empêcher toute pollution transfrontière susceptible de modifier l'équilibre écologique du fleuve, en coordonnant l'adoption des mesures nécessaires à cette fin, par l'intermédiaire de la CARU. Il oblige donc les deux Etats à prendre des mesures concrètes pour éviter toute modification de l'équilibre écologique. Ces mesures ne se limitent pas à l'adoption d'un cadre réglementaire — ce qu'ont fait les Parties par l'intermédiaire de la CARU; les deux Parties sont également tenues de respecter et de mettre en œuvre les mesures ainsi adoptées. Comme la Cour l'a souligné dans l'affaire relative au *Projet Gabčíkovo-Nagymaros*:

> «dans le domaine de la protection de l'environnement, la vigilance et la prévention s'imposent en raison du caractère souvent irréversible

1975 Statute, which places the Parties under an obligation to co-ordinate through CARU the necessary measures to avoid changing the ecological balance of the river. Argentina asserts that the discharges from the Orion (Botnia) mill altered the ecological balance of the river, and cites as examples the 4 February 2009 algal bloom, which, according to it, provides graphic evidence of a change in the ecological balance, as well as the discharge of toxins, which gave rise, in its view, to the malformed rotifers whose pictures were shown to the Court.

182. Uruguay considers that any assessment of the Parties' conduct in relation to Article 36 of the 1975 Statute must take account of the rules adopted by CARU, because this Article, creating an obligation of co-operation, refers to such rules and does not by itself prohibit any specific conduct. Uruguay takes the position that the mill fully meets CARU requirements concerning the ecological balance of the river, and concludes that it has not acted in breach of Article 36 of the 1975 Statute.

183. It is recalled that Article 36 provides that "[t]he parties shall co-ordinate, through the Commission, the necessary measures to avoid any change in the ecological balance and to control pests and other harmful factors in the river and the areas affected by it".

184. It is the opinion of the Court that compliance with this obligation cannot be expected to come through the individual action of either Party, acting on its own. Its implementation requires co-ordination through the Commission. It reflects the common interest dimension of the 1975 Statute and expresses one of the purposes for the establishment of the joint machinery which is to co-ordinate the actions and measures taken by the Parties for the sustainable management and environmental protection of the river. The Parties have indeed adopted such measures through the promulgation of standards by CARU. These standards are to be found in Sections E3 and E4 of the CARU Digest. One of the purposes of Section E3 is "[t]o protect and preserve the water and its ecological balance". Similarly, it is stated in Section E4 that the section was developed "in accordance with . . . Articles 36, 37, 38, and 39".

185. In the view of the Court, the purpose of Article 36 of the 1975 Statute is to prevent any transboundary pollution liable to change the ecological balance of the river by co-ordinating, through CARU, the adoption of the necessary measures. It thus imposes an obligation on both States to take positive steps to avoid changes in the ecological balance. These steps consist not only in the adoption of a regulatory framework, as has been done by the Parties through CARU, but also in the observance as well as enforcement by both Parties of the measures adopted. As the Court emphasized in the *Gabčíkovo-Nagymaros* case:

> "in the field of environmental protection, vigilance and prevention are required on account of the often irreversible character of damage

des dommages causés à l'environnement et des limites inhérentes au mécanisme même de réparation de ce type de dommages» (*Projet Gabčíkovo-Nagymaros (Hongrie/Slovaquie), arrêt, C.I.J. Recueil 1997*, p. 78, par. 140).

186. Les Parties divergent encore quant à la nature de l'obligation énoncée à l'article 36; elles s'opposent en particulier sur la question de savoir s'il s'agit d'une obligation de comportement ou de résultat. L'Argentine soutient que, suivant leur sens ordinaire, les articles 36 et 41 du statut de 1975 établissent l'un et l'autre une obligation de résultat.

187. La Cour considère que l'obligation formulée à l'article 36 incombe aux deux Parties et leur impose d'adopter un comportement spécifique consistant à prendre les mesures nécessaires de façon coordonnée, par l'intermédiaire de la commission, pour éviter toute modification de l'équilibre écologique. L'obligation d'adopter des mesures réglementaires ou administratives, que ce soit de manière individuelle ou conjointe, et de les mettre en œuvre constitue une obligation de comportement. Les deux Parties doivent donc, en application de l'article 36, faire preuve de la diligence requise («due diligence») en agissant dans le cadre de la commission pour prendre les mesures nécessaires à la préservation de l'équilibre écologique du fleuve.

188. Cette vigilance et cette prévention sont particulièrement importantes lorsqu'il s'agit de préserver l'équilibre écologique puisque les effets négatifs des activités humaines sur les eaux du fleuve risquent de toucher d'autres composantes de l'écosystème du cours d'eau, telles que sa flore, sa faune et son lit. L'obligation de coordonner, par l'intermédiaire de la commission, l'adoption des mesures nécessaires, ainsi que la mise en application et le respect de ces mesures, jouent dans ce contexte un rôle central dans le système global de protection du fleuve Uruguay établi par le statut de 1975. Il est dès lors d'une importance cruciale que les Parties respectent cette obligation.

189. La Cour conclut des développements qui précèdent que l'Argentine n'a pas démontré de manière convaincante que l'Uruguay a refusé de prendre part aux efforts de coordination prévus par l'article 36, en violation de celui-ci.

4. L'obligation d'empêcher la pollution et de préserver le milieu aquatique (article 41)

190. L'article 41 est ainsi libellé:

«Sans préjudice des fonctions assignées à la commission en la matière, les parties s'obligent:

a) à protéger et à préserver le milieu aquatique et, en particulier, à en empêcher la pollution en établissant des normes et en adoptant les mesures appropriées, conformément aux accords internationaux applicables et, le cas échéant, en harmonie avec les

to the environment and of the limitations inherent in the very mechanism of reparation of this type of damage" (*Gabčíkovo-Nagymaros Project (Hungary/Slovakia), Judgment, I.C.J. Reports 1997*, p. 78, para. 140).

186. The Parties also disagree with respect to the nature of the obligation laid down in Article 36, and in particular whether it is an obligation of conduct or of result. Argentina submits that, on a plain meaning, both Articles 36 and 41 of the 1975 Statute establish an obligation of result.

187. The Court considers that the obligation laid down in Article 36 is addressed to both Parties and prescribes the specific conduct of co-ordinating the necessary measures through the Commission to avoid changes to the ecological balance. An obligation to adopt regulatory or administrative measures either individually or jointly and to enforce them is an obligation of conduct. Both Parties are therefore called upon, under Article 36, to exercise due diligence in acting through the Commission for the necessary measures to preserve the ecological balance of the river.

188. This vigilance and prevention is all the more important in the preservation of the ecological balance, since the negative impact of human activities on the waters of the river may affect other components of the ecosystem of the watercourse such as its flora, fauna, and soil. The obligation to co-ordinate, through the Commission, the adoption of the necessary measures, as well as their enforcement and observance, assumes, in this context, a central role in the overall system of protection of the River Uruguay established by the 1975 Statute. It is therefore of crucial importance that the Parties respect this obligation.

189. In light of the above, the Court is of the view that Argentina has not convincingly demonstrated that Uruguay has refused to engage in such co-ordination as envisaged by Article 36, in breach of that provision.

4. The obligation to prevent pollution and preserve the aquatic environment (Article 41)

190. Article 41 provides that:

"Without prejudice to the functions assigned to the Commission in this respect, the parties undertake:

(a) to protect and preserve the aquatic environment and, in particular, to prevent its pollution, by prescribing appropriate rules and [adopting appropriate] measures in accordance with applicable international agreements and in keeping, where rele-

directives et les recommandations des organismes techniques internationaux;

b) à ne pas abaisser, dans leurs systèmes juridiques respectifs:

1) les normes techniques en vigueur pour prévenir la pollution des eaux, et
2) les pénalités établies pour les infractions;

c) à s'informer mutuellement des normes qu'elles se proposent d'établir en matière de pollution des eaux, en vue d'établir des normes équivalentes dans leurs systèmes juridiques respectifs.»

191. Selon l'Argentine, en autorisant le rejet de nutriments supplémentaires dans un fleuve qui connaît des phénomènes d'eutrophisation, d'inversion de courant et de stagnation, l'Uruguay a violé l'obligation qui lui incombe d'empêcher la pollution, faute d'avoir prescrit des mesures appropriées en ce qui concerne l'usine Orion (Botnia) et respecté les accords internationaux en matière d'environnement applicables, notamment la convention sur la diversité biologique et la convention de Ramsar. Elle soutient que le statut de 1975 interdit toute pollution portant atteinte à la protection et à la préservation du milieu aquatique ou modifiant l'équilibre écologique du fleuve. L'Argentine affirme en outre que l'obligation d'empêcher la pollution du fleuve est une obligation de résultat et qu'elle ne porte pas seulement sur la protection du milieu aquatique proprement dit, mais s'étend également à toute utilisation raisonnable et légitime du fleuve, y compris au tourisme et aux autres usages récréatifs.

192. L'Uruguay soutient que l'obligation d'«empêcher la pollution» énoncée à l'alinéa *a)* de l'article 41 du statut de 1975 n'emporte pas l'interdiction de tout déversement dans le fleuve. Seuls les rejets supérieurs aux limites fixées conjointement par les Parties au sein de la CARU, conformément à leurs obligations internationales, et qui ont pour cette raison des effets préjudiciables, sont susceptibles d'être qualifiés de «pollution» au sens de l'article 40 du statut de 1975. De surcroît, l'Uruguay estime que l'article 41 crée une obligation de comportement, et non de résultat, mais que, de fait, cela importe peu puisqu'il s'est acquitté de son devoir d'empêcher la pollution en exigeant de l'usine qu'elle réponde aux normes relatives aux meilleures techniques disponibles.

193. Avant d'en venir à l'analyse de l'article 41, la Cour rappelle ce qui suit:

> «L'obligation générale qu'ont les Etats de veiller à ce que les activités exercées dans les limites de leur juridiction ou sous leur contrôle respectent l'environnement dans d'autres Etats ou dans des zones ne relevant d'aucune juridiction nationale fait maintenant partie du corps de règles du droit international de l'environnement.» (*Licéité de la menace ou de l'emploi d'armes nucléaires, avis consultatif, C.I.J. Recueil 1996 (I)*, p. 242, par. 29.)

194. Dans le cadre de l'affaire relative au *Projet Gabčíkovo-Nagymaros*, la Cour a par ailleurs eu l'occasion de souligner que «les

vant, with the guidelines and recommendations of international technical bodies;

(b) not to reduce in their respective legal systems:

1. the technical requirements in force for preventing water pollution, and
2. the severity of the penalties established for violations;

(c) to inform one another of any rules which they plan to prescribe with regard to water pollution in order to establish equivalent rules in their respective legal systems."

191. Argentina claims that by allowing the discharge of additional nutrients into a river that is eutrophic and suffers from reverse flow and stagnation, Uruguay violated the obligation to prevent pollution, as it failed to prescribe appropriate measures in relation to the Orion (Botnia) mill, and failed to meet applicable international environmental agreements, including the Biodiversity Convention and the Ramsar Convention. It maintains that the 1975 Statute prohibits any pollution which is prejudicial to the protection and preservation of the aquatic environment or which alters the ecological balance of the river. Argentina further argues that the obligation to prevent pollution of the river is an obligation of result and extends not only to protecting the aquatic environment proper, but also to any reasonable and legitimate use of the river, including tourism and other recreational uses.

192. Uruguay contends that the obligation laid down in Article 41 *(a)* of the 1975 Statute to "prevent . . . pollution" does not involve a prohibition on all discharges into the river. It is only those that exceed the standards jointly agreed by the Parties within CARU in accordance with their international obligations, and that therefore have harmful effects, which can be characterized as "pollution" under Article 40 of the 1975 Statute. Uruguay also maintains that Article 41 creates an obligation of conduct, and not of result, but that it actually matters little since Uruguay has complied with its duty to prevent pollution by requiring the plant to meet best available technology ("BAT") standards.

193. Before turning to the analysis of Article 41, the Court recalls that:

> "The existence of the general obligation of States to ensure that activities within their jurisdiction and control respect the environment of other States or of areas beyond national control is now part of the corpus of international law relating to the environment." (*Legality of the Threat or Use of Nuclear Weapons, Advisory Opinion, I.C.J. Reports 1996 (I)*, pp. 241-242, para. 29.)

194. The Court moreover had occasion to stress, in the *Gabčíkovo-Nagymaros Project* case, that "the Parties together should look afresh at

Parties devraient, ensemble, examiner à nouveau les effets sur l'environnement de l'exploitation de la centrale de Gabčíkovo» (*Projet Gabčíkovo-Nagymaros (Hongrie/Slovaquie), arrêt, C.I.J. Recueil 1997*, p. 78, par. 140). C'est en gardant à l'esprit ces déclarations que la Cour analysera maintenant l'article 41 du statut de 1975.

195. Compte tenu du rôle central de cette disposition dans le différend qui oppose les Parties à la présente affaire, ainsi que des profondes divergences entre celles-ci en ce qui concerne l'interprétation et l'application de cette disposition, la Cour souhaiterait faire quelques observations d'ordre général sur le contenu normatif de l'article 41 avant de se pencher sur les arguments spécifiques des Parties. Premièrement, selon la Cour, l'article 41 établit une distinction claire entre les fonctions réglementaires confiées à la CARU en vertu du statut de 1975 — qui font l'objet de l'article 56 — et l'obligation que ledit article impose aux Parties d'adopter individuellement des normes et des mesures destinées à «protéger et à préserver le milieu aquatique et, en particulier, à en empêcher la pollution». Ainsi, l'obligation que les Parties s'engagent à respecter en vertu de l'article 41, qui est distincte de celles prévues aux articles 36 et 56 du statut de 1975, consiste à adopter les normes et mesures appropriées au sein de leurs systèmes juridiques nationaux respectifs afin de protéger et de préserver le milieu aquatique et d'en empêcher la pollution. Cette conclusion est confortée par le libellé des alinéas *b)* et *c)* de l'article 41, qui mentionnent la nécessité pour les Parties de n'abaisser ni les normes techniques ni les pénalités en vigueur dans leurs législations respectives et de s'informer mutuellement des normes qu'elles se proposent d'édicter en vue d'établir des normes équivalentes dans leurs systèmes juridiques respectifs.

196. Deuxièmement, selon la Cour, une simple lecture du texte de l'article 41 montre que ce sont les normes et mesures que les Parties sont tenues d'établir dans leurs systèmes juridiques respectifs qui doivent être «conform[es] aux accords internationaux applicables» et, «le cas échéant, en harmonie avec les directives et les recommandations des organismes techniques internationaux».

197. Troisièmement, l'obligation de «préserver le milieu aquatique et, en particulier, [d']en empêcher la pollution en établissant des normes et en adoptant les mesures appropriées» impose d'exercer la diligence requise («due diligence») vis-à-vis de toutes les activités qui se déroulent sous la juridiction et le contrôle de chacune des parties. Cette obligation implique la nécessité non seulement d'adopter les normes et mesures appropriées, mais encore d'exercer un certain degré de vigilance dans leur mise en œuvre ainsi que dans le contrôle administratif des opérateurs publics et privés, par exemple en assurant la surveillance des activités entreprises par ces opérateurs, et ce, afin de préserver les droits de l'autre partie. Par conséquent, la responsabilité d'une partie au statut de 1975 serait engagée s'il était démontré qu'elle n'avait pas agi avec la diligence requise, faute d'avoir pris toutes les mesures appropriées pour assurer l'application de la réglementation pertinente à un opérateur public ou privé relevant de sa

the effects on the environment of the operation of the Gabčíkovo power plant" (*Gabčíkovo-Nagymaros Project (Hungary/Slovakia), Judgment, I.C.J. Reports 1997*, p. 78, para. 140). The Court is mindful of these statements in taking up now the examination of Article 41 of the 1975 Statute.

195. In view of the central role of this provision in the dispute between the Parties in the present case and their profound differences as to its interpretation and application, the Court will make a few remarks of a general character on the normative content of Article 41 before addressing the specific arguments of the Parties. First, in the view of the Court, Article 41 makes a clear distinction between regulatory functions entrusted to CARU under the 1975 Statute, which are dealt with in Article 56 of the Statute, and the obligation it imposes on the Parties to adopt rules and measures individually to "protect and preserve the aquatic environment and, in particular, to prevent its pollution". Thus, the obligation assumed by the Parties under Article 41, which is distinct from those under Articles 36 and 56 of the 1975 Statute, is to adopt appropriate rules and measures within the framework of their respective domestic legal systems to protect and preserve the aquatic environment and to prevent pollution. This conclusion is supported by the wording of paragraphs *(b)* and *(c)* of Article 41, which refer to the need not to reduce the technical requirements and severity of the penalties already in force in the respective legislation of the Parties as well as the need to inform each other of the rules to be promulgated so as to establish equivalent rules in their legal systems.

196. Secondly, it is the opinion of the Court that a simple reading of the text of Article 41 indicates that it is the rules and measures that are to be prescribed by the Parties in their respective legal systems which must be "in accordance with applicable international agreements" and "in keeping, where relevant, with the guidelines and recommendations of international technical bodies".

197. Thirdly, the obligation to "preserve the aquatic environment, and in particular to prevent pollution by prescribing appropriate rules and measures" is an obligation to act with due diligence in respect of all activities which take place under the jurisdiction and control of each party. It is an obligation which entails not only the adoption of appropriate rules and measures, but also a certain level of vigilance in their enforcement and the exercise of administrative control applicable to public and private operators, such as the monitoring of activities undertaken by such operators, to safeguard the rights of the other party. The responsibility of a party to the 1975 Statute would therefore be engaged if it was shown that it had failed to act diligently and thus take all appropriate measures to enforce its relevant regulations on a public or private operator under its jurisdiction. The obligation of due diligence under Article 41 *(a)* in the adoption and enforcement of appropriate

juridiction. L'obligation de diligence requise qu'impose l'alinéa *a)* de l'article 41 en ce qui concerne l'adoption et la mise en œuvre des normes et mesures appropriées est encore renforcée par la double exigence que ces normes et mesures soient «conform[es] aux accords internationaux applicables» et, «le cas échéant, en harmonie avec les directives et les recommandations des organismes techniques internationaux». Cette exigence présente l'avantage de garantir que les normes et mesures adoptées par les parties soient conformes aux accords internationaux applicables et prennent en même temps en compte les normes techniques convenues au niveau international.

198. Enfin, la portée de l'obligation d'empêcher la pollution doit être déterminée à la lumière de la définition de la pollution donnée à l'article 40 du statut de 1975. Celui-ci se lit ainsi: «Aux fins du présent statut, le terme «pollution» désigne l'introduction directe ou indirecte par l'homme de substances ou d'énergie nocives dans le milieu aquatique», le concept d'«effets nocifs» étant pour sa part défini comme suit dans le digeste de la CARU:

> «tout changement de la qualité des eaux qui empêche ou entrave leur utilisation légitime, produisant des effets délétères ou portant atteinte aux ressources vivantes, un risque à la santé humaine, une menace aux activités aquatiques y compris la pêche, ou la réduction des activités de récréation» (titre I, chapitre 1, section 2, article 1, alinéa *c)*, du digeste de la CARU (E3)).

199. Le digeste reflète la volonté des Parties et leur interprétation des dispositions du statut de 1975. Tout comme de nombreuses autres dispositions du statut, l'article 41 énonce les obligations d'ordre général, dont les Parties sont convenues, de réglementer et de limiter l'utilisation du fleuve et de protéger son environnement; c'est par le biais de l'activité réglementaire coordonnée de la CARU, telle que définie à l'article 56 du statut, de l'activité réglementaire de chacune des parties, ou par ces deux moyens, qu'un contenu plus précis est donné à ces obligations d'ordre général. Les deux types d'activités réglementaires sont conçus pour être complémentaires. Ainsi qu'expliqué plus bas (voir paragraphes 201 à 202, et 214), les normes établies par la CARU concernent principalement la qualité de l'eau. Le digeste de la CARU établit seulement des limites générales pour certains rejets ou effluents provenant d'installations industrielles, tels que les «hydrocarbures», les «solides sédimentables» et les «huiles et graisses», mais prévoit explicitement que la réglementation de ces questions est du ressort de chacune des parties. Il dispose également que, en ce qui concerne les effluents relevant de leur juridiction, chacune des parties doit prendre les «mesures correctives» nécessaires pour assurer la conformité aux normes relatives à la qualité de l'eau (digeste de la CARU, point E3: pollution, titre 2, chapitre 5, section 1, article 3). En Uruguay, ces mesures ont pris la forme d'un règlement sur la qualité des eaux (décret n° 253/79) et, en ce qui concerne l'usine Orion (Botnia), des conditions imposées dans le cadre de l'autorisation délivrée par le

rules and measures is further reinforced by the requirement that such rules and measures must be "in accordance with applicable international agreements" and "in keeping, where relevant, with the guidelines and recommendations of international technical bodies". This requirement has the advantage of ensuring that the rules and measures adopted by the parties both have to conform to applicable international agreements and to take account of internationally agreed technical standards.

198. Finally, the scope of the obligation to prevent pollution must be determined in light of the definition of pollution given in Article 40 of the 1975 Statute. Article 40 provides that: "For the purposes of this Statute, pollution shall mean the direct or indirect introduction by man into the aquatic environment of substances or energy which have harmful effects." The term "harmful effects" is defined in the CARU Digest as:

> "any alteration of the water quality that prevents or hinders any legitimate use of the water, that causes deleterious effects or harm to living resources, risks to human health, or a threat to water activities including fishing or reduction of recreational activities" (Title I, Chapter 1, Section 2, Article 1 *(c)* of the Digest (E3)).

199. The Digest expresses the will of the Parties and their interpretation of the provisions of the 1975 Statute. Article 41, not unlike many other provisions of the 1975 Statute, lays down broad obligations agreed to by the Parties to regulate and limit their use of the river and to protect its environment. These broad obligations are given more specific content through the co-ordinated rule-making action of CARU as established under Article 56 of the 1975 Statute or through the regulatory action of each of the parties, or by both means. The two regulatory actions are meant to complement each other. As discussed below (see paragraphs 201 to 202, and 214), CARU standards concern mainly water quality. The CARU Digest sets only general limits on certain discharges or effluents from industrial plants such as: "hydrocarbons", "sedimentable solids", and "oils and greases". As the Digest makes explicit, those matters are left to each party to regulate. The Digest provides that, as regards effluents within its jurisdiction, each party shall take the appropriate "corrective measures" in order to assure compliance with water quality standards (CARU Digest, Sec. E3: Pollution, Title 2, Chapter 5, Section 1, Article 3). Uruguay has taken that action in its Regulation on Water Quality (Decree No. 253/79) and in relation to the Orion (Botnia) mill in the conditions stipulated in the authorization issued by MVOTMA. In Argentina, the Entre Ríos Province, which borders the river opposite the plant, has regulated industrial discharges in a decree that also recognizes the binding effect of the

MVOTMA. En Argentine, la province d'Entre Ríos, qui jouxte le fleuve sur la rive opposée au site de l'usine, a réglementé les rejets industriels par des décrets qui reconnaissent également le caractère contraignant du digeste de la CARU (décret réglementaire n° 5837, gouvernement d'Entre Ríos (26 décembre 1991), et décret réglementaire n° 5394, gouvernement d'Entre Ríos (7 avril 1997)).

200. La Cour estime qu'il convient de traiter à ce stade de la question des règles à l'aune desquelles doit s'apprécier toute allégation de violation et, plus précisément, l'existence d'«effets nocifs». La Cour considère qu'il convient de rechercher ces règles dans le statut de 1975, dans les mesures communes que les Parties ont adoptées de manière coordonnée par l'intermédiaire de la CARU (comme le prévoit le texte introductif des articles 41 et 56 du statut), et dans les dispositions réglementaires adoptées par chacune des Parties dans la mesure exigée par le statut de 1975 (comme le prévoient les alinéas *a), b)* et *c)* de l'article 41).

201. En vertu de l'alinéa *a)* de l'article 56, la CARU a notamment pour fonction d'établir le cadre réglementaire relatif à la prévention de la pollution ainsi qu'à la conservation et à la préservation des ressources biologiques. C'est dans l'exercice de ce pouvoir réglementaire que la commission a adopté en 1984 le digeste sur les utilisations des eaux du fleuve Uruguay, qu'elle a depuis modifié. En 1990, lorsqu'elles ont adopté le point E3 du digeste, les Parties ont indiqué l'avoir élaboré au titre de l'alinéa *f)* de l'article 7 du traité de 1961 ainsi que des articles 35, 36, 41 à 45 et 56, alinéa *a)*, point 4), du statut de 1975. Ainsi que mentionné dans le digeste, les «objectifs de base» du point E3 sont les suivants:

«*a)* protéger et préserver le milieu aquatique et son équilibre écologique;

b) assurer toute utilisation légitime des eaux, en tenant compte des besoins à long terme et particulièrement [de] ceux concernant la consommation humaine;

c) prévenir toute nouvelle forme de pollution et essayer de la réduire, lorsque les valeurs de référence adoptées pour les différentes utilisations légitimes des eaux du fleuve sont dépassées;

d) promouvoir la recherche scientifique en matière de pollution.» (Titre I, chapitre 2, section 1, article 1.)

202. Les normes établies dans le cadre du digeste ne sont toutefois pas exhaustives. Comme cela a été indiqué précédemment, il est prévu qu'elles soient complétées par les normes et mesures devant être adoptées par chacune des Parties dans le cadre de sa législation interne.

La Cour appliquera donc, outre le statut de 1975, ces deux ensembles de règles pour déterminer si les Parties ont violé les obligations qu'elles avaient contractées en ce qui concerne les rejets d'effluents de l'usine et l'impact de ces rejets sur la qualité des eaux, l'équilibre écologique et la diversité biologique du fleuve.

CARU Digest (Regulatory Decree No. 5837, Government of Entre Ríos, 26 December 1991, and Regulatory Decree No. 5394, Government of Entre Ríos, 7 April 1997).

200. The Court considers it appropriate to now address the question of the rules by which any allegations of breach are to be measured and, more specifically, by which the existence of "harmful effects" is to be determined. It is the view of the Court that these rules are to be found in the 1975 Statute, in the co-ordinated position of the Parties established through CARU (as the introductory phrases to Article 41 and Article 56 of the Statute contemplate) and in the regulations adopted by each Party within the limits prescribed by the 1975 Statute (as paragraphs *(a)*, *(b)* and *(c)* of Article 41 contemplate).

201. The functions of CARU under Article 56 *(a)* include making rules governing the prevention of pollution and the conservation and preservation of living resources. In the exercise of its rule-making power, the Commission adopted in 1984 the Digest on the uses of the waters of the River Uruguay and has amended it since. In 1990, when Section E3 of the Digest was adopted, the Parties recognized that it was drawn up under Article 7 *(f)* of the 1961 Treaty and Articles 35, 36, 41 to 45 and 56 *(a)* (4) of the 1975 Statute. As stated in the Digest, the "basic purposes" of Section E3 of the Digest are to be as follows:

"*(a)* to protect and preserve the water and its ecological balance;

(b) to ensure any legitimate use of the water considering long term needs and particularly human consumption needs;

(c) to prevent all new forms of pollution and to achieve its reduction in case the standard values adopted for the different legitimate uses of the River's water are exceeded;

(d) to promote scientific research on pollution." (Title I, Chapter 2, Section 1, Article 1.)

202. The standards laid down in the Digest are not, however, exhaustive. As pointed out earlier, they are to be complemented by the rules and measures to be adopted by each of the Parties within their domestic laws.

The Court will apply, in addition to the 1975 Statute, these two sets of rules to determine whether the obligations undertaken by the Parties have been breached in terms of the discharge of effluent by the mill as well as in respect of the impact of those discharges on the quality of the waters of the river, on its ecological balance and on its biodiversity.

a) *Evaluation de l'impact sur l'environnement*

203. La Cour se penchera maintenant sur la relation entre la nécessité de réaliser une évaluation de l'impact sur l'environnement, lorsque l'activité projetée risque d'avoir un effet préjudiciable sur une ressource partagée et de causer un dommage transfrontière, et les obligations qui incombent aux Parties en vertu des alinéas *a)* et *b)* de l'article 41 du statut de 1975. Les Parties conviennent de la nécessité de procéder à une évaluation de l'impact sur l'environnement. L'Argentine soutient que, prises dans leur globalité, les obligations prévues par le statut imposaient l'obligation de procéder à une évaluation de l'impact sur l'environnement avant d'autoriser Botnia à construire l'usine, ce dont convient l'Uruguay. En revanche, les Parties sont en désaccord quant à la portée et au contenu de l'évaluation de l'impact sur l'environnement à laquelle aurait dû procéder l'Uruguay en ce qui concerne le projet d'usine Orion (Botnia). L'Argentine soutient en premier lieu que l'Uruguay a manqué de s'assurer que «des évaluations environnementales complètes [avaient été] préparées préalablement à ses décisions d'autoriser la construction…» et, en second lieu, que «[l]es décisions de l'Uruguay [ont été] ... basées sur des évaluations environnementales qui [n'étaient] pas satisfaisantes», essentiellement parce que l'Uruguay n'a pas pris en compte l'ensemble des impacts potentiels de l'usine, alors que le droit international et la pratique internationale l'exigeaient; elle mentionne à cet égard la convention de 1991 sur l'évaluation de l'impact sur l'environnement dans un contexte transfrontière de la Commission économique des Nations Unies pour l'Europe (ci-après la «convention d'Espoo») (*RTNU*, vol. 1989, p. 309) ainsi que les buts et principes de l'évaluation de l'impact sur l'environnement adoptés en 1987 par le Programme des Nations Unies pour l'environnement (ci-après les «buts et principes du PNUE») (*UNEP/WG.152/4 Annexe (1987)*, document adopté par le conseil d'administration du PNUE lors de sa 14e session (déc. 14/25 (1987)). L'Uruguay admet que, conformément à la pratique internationale, une évaluation de l'impact sur l'environnement de l'usine Orion (Botnia) était nécessaire, mais soutient que le droit international n'impose aucune condition quant au contenu d'une telle évaluation, sa réalisation relevant d'une procédure nationale, et non internationale, du moins lorsque le projet concerné n'est pas un projet commun à plusieurs Etats. L'Uruguay estime que, en vertu de la pratique des Etats et du projet d'articles sur la prévention des dommages transfrontières résultant d'activités dangereuses adopté en 2001 par la Commission du droit international, le droit international lui impose uniquement d'évaluer les éventuels effets nocifs transfrontières du projet sur les êtres humains, les biens et l'environnement des autres Etats, sans qu'il soit nécessaire d'évaluer les risques lointains ou purement théoriques.

204. La Cour considère que, pour s'acquitter comme il se doit des obligations qu'elles tiennent des alinéas *a)* et *b)* de l'article 41 du statut de 1975, les Parties sont tenues, aux fins de protéger et de préserver le

(a) *Environmental Impact Assessment*

203. The Court will now turn to the relationship between the need for an environmental impact assessment, where the planned activity is liable to cause harm to a shared resource and transboundary harm, and the obligations of the Parties under Article 41 *(a)* and *(b)* of the 1975 Statute. The Parties agree on the necessity of conducting an environmental impact assessment. Argentina maintains that the obligations under the 1975 Statute viewed together impose an obligation to conduct an environmental impact assessment prior to authorizing Botnia to construct the plant. Uruguay also accepts that it is under such an obligation. The Parties disagree, however, with regard to the scope and content of the environmental impact assessment that Uruguay should have carried out with respect to the Orion (Botnia) mill project. Argentina maintains in the first place that Uruguay failed to ensure that "full environmental assessments [had been] produced, prior to its decision to authorize the construction . . ."; and in the second place that "Uruguay's decisions [were] . . . based on unsatisfactory environmental assessments", in particular because Uruguay failed to take account of all potential impacts from the mill, even though international law and practice require it, and refers in this context to the 1991 Convention on Environmental Impact Assessment in a Transboundary Context of the United Nations Economic Commission for Europe (hereinafter the "Espoo Convention") (*UNTS*, Vol. 1989, p. 309), and the 1987 Goals and Principles of Environmental Impact Assessment of the United Nations Environment Programme (hereinafter the "UNEP Goals and Principles") (*UNEP/WG.152/4 Annex (1987)*, document adopted by UNEP Governing Council at its 14th Session (Dec. 14/25 (1987)). Uruguay accepts that, in accordance with international practice, an environmental impact assessment of the Orion (Botnia) mill was necessary, but argues that international law does not impose any conditions upon the content of such an assessment, the preparation of which being a national, not international, procedure, at least where the project in question is not one common to several States. According to Uruguay, the only requirements international law imposes on it are that there must be assessments of the project's potential harmful transboundary effects on people, property and the environment of other States, as required by State practice and the International Law Commission 2001 draft Articles on Prevention of Transboundary Harm from Hazardous Activities, without there being any need to assess remote or purely speculative risks.

204. It is the opinion of the Court that in order for the Parties properly to comply with their obligations under Article 41 *(a)* and *(b)* of the 1975 Statute, they must, for the purposes of protecting and preserving the

milieu aquatique lorsqu'elles envisagent des activités pouvant éventuellement causer un dommage transfrontière, de procéder à une évaluation de l'impact sur l'environnement. Comme la Cour l'a relevé dans l'affaire du *Différend relatif à des droits de navigation et des droits connexes*,

> «il existe des cas où l'intention des parties au moment même de la conclusion du traité a été, ou peut être présumée avoir été, de conférer aux termes employés — ou à certains d'entre eux — un sens ou un contenu évolutif et non pas intangible, pour tenir compte notamment de l'évolution du droit international» (*Différend relatif à des droits de navigation et des droits connexes (Costa Rica c. Nicaragua), arrêt, C.I.J. Recueil 2009*, p. 242, par. 64).

Ainsi, l'obligation de protéger et de préserver, énoncée à l'alinéa *a)* de l'article 41 du statut, doit être interprétée conformément à une pratique acceptée si largement par les Etats ces dernières années que l'on peut désormais considérer qu'il existe, en droit international général, une obligation de procéder à une évaluation de l'impact sur l'environnement lorsque l'activité industrielle projetée risque d'avoir un impact préjudiciable important dans un cadre transfrontière, et en particulier sur une ressource partagée. De plus, on ne pourrait considérer qu'une partie s'est acquittée de son obligation de diligence, et du devoir de vigilance et de prévention que cette obligation implique, dès lors que, prévoyant de réaliser un ouvrage suffisamment important pour affecter le régime du fleuve ou la qualité de ses eaux, elle n'aurait pas procédé à une évaluation de l'impact sur l'environnement permettant d'apprécier les effets éventuels de son projet.

205. La Cour note que ni le statut de 1975 ni le droit international général ne précisent la portée et le contenu des évaluations de l'impact sur l'environnement. Elle relève par ailleurs que l'Argentine et l'Uruguay ne sont pas parties à la convention d'Espoo. Enfin, elle constate que l'autre instrument cité par l'Argentine à l'appui de son argument, à savoir les buts et principes du PNUE, ne lie pas les Parties, mais doit, en tant qu'il s'agit de directives établies par un organisme technique international, être pris en compte par chacune des Parties conformément à l'alinéa *a)* de l'article 41 lorsqu'elle adopte des mesures dans le cadre de sa réglementation interne. En outre, cet instrument dispose seulement que «[l]es effets sur l'environnement devraient être évalués, dans une [évaluation de l'impact sur l'environnement], à un niveau de détail correspondant à leur importance probable du point de vue de l'environnement» (principe 5), mais ne spécifie aucunement les éléments qu'une telle évaluation doit à tout le moins contenir. Dès lors, la Cour estime qu'il revient à chaque Etat de déterminer, dans le cadre de sa législation nationale ou du processus d'autorisation du projet, la teneur exacte de l'évaluation de l'impact sur l'environnement requise dans chaque cas en prenant en compte la nature et l'ampleur du projet en cause et son impact négatif probable sur l'environnement, ainsi que la nécessité d'exercer, lorsqu'il procède à une telle évaluation, toute la diligence requise. La Cour estime par ailleurs

aquatic environment with respect to activities which may be liable to cause transboundary harm, carry out an environmental impact assessment. As the Court has observed in the case concerning the *Dispute Regarding Navigational and Related Rights*,

> "there are situations in which the parties' intent upon conclusion of the treaty was, or may be presumed to have been, to give the terms used — or some of them — a meaning or content capable of evolving, not one fixed once and for all, so as to make allowance for, among other things, developments in international law" (*Dispute Regarding Navigational and Related Rights (Costa Rica* v. *Nicaragua), Judgment, I.C.J. Reports 2009*, p. 242, para. 64).

In this sense, the obligation to protect and preserve, under Article 41 *(a)* of the Statute, has to be interpreted in accordance with a practice, which in recent years has gained so much acceptance among States that it may now be considered a requirement under general international law to undertake an environmental impact assessment where there is a risk that the proposed industrial activity may have a significant adverse impact in a transboundary context, in particular, on a shared resource. Moreover, due diligence, and the duty of vigilance and prevention which it implies, would not be considered to have been exercised, if a party planning works liable to affect the régime of the river or the quality of its waters did not undertake an environmental impact assessment on the potential effects of such works.

205. The Court observes that neither the 1975 Statute nor general international law specify the scope and content of an environmental impact assessment. It points out moreover that Argentina and Uruguay are not parties to the Espoo Convention. Finally, the Court notes that the other instrument to which Argentina refers in support of its arguments, namely, the UNEP Goals and Principles, is not binding on the Parties, but, as guidelines issued by an international technical body, has to be taken into account by each Party in accordance with Article 41 *(a)* in adopting measures within its domestic regulatory framework. Moreover, this instrument provides only that the "environmental effects in an EIA should be assessed with a degree of detail commensurate with their likely environmental significance" (Principle 5) without giving any indication of minimum core components of the assessment. Consequently, it is the view of the Court that it is for each State to determine in its domestic legislation or in the authorization process for the project, the specific content of the environmental impact assessment required in each case, having regard to the nature and magnitude of the proposed development and its likely adverse impact on the environment as well as to the need to exercise due diligence in conducting such an assessment. The Court also considers that an environmental impact assessment must be conducted prior to the implementation of a project. Moreover, once

qu'une évaluation de l'impact sur l'environnement doit être réalisée avant la mise en œuvre du projet. En outre, une fois les opérations commencées, une surveillance continue des effets dudit projet sur l'environnement sera mise en place, qui se poursuivra au besoin pendant toute la durée de vie du projet.

206. La Cour a déjà examiné la place qu'occupe l'évaluation de l'impact sur l'environnement dans le cadre des obligations de nature procédurale imposées aux Parties par le statut de 1975 (paragraphes 119 et 120). Elle se penchera à présent sur les points en litige concernant spécifiquement le rôle de ce type d'évaluation dans le respect des obligations de fond des Parties, c'est-à-dire sur les questions de savoir, d'une part, si cette évaluation aurait, sur le plan méthodologique, nécessairement dû envisager d'autres sites possibles, compte tenu de la capacité de réception du fleuve dans la zone où l'usine devait être construite, et, d'autre part, si les populations susceptibles d'être affectées, en l'occurrence les populations riveraines uruguayenne comme argentine, auraient dû être consultées, ou l'ont en fait été, dans le cadre d'une évaluation de l'impact sur l'environnement.

i) *Le choix du site de Fray Bentos pour l'usine Orion (Botnia)*

207. Selon l'Argentine, si l'évaluation de l'impact sur l'environnement réalisée par l'Uruguay est insuffisante, c'est notamment parce qu'elle ne prévoit pas d'autres emplacements possibles pour la construction de l'usine, comme l'exige le droit international (buts et principes du PNUE, convention d'Espoo, politique opérationnelle SFI 4.01). L'Argentine soutient que le site choisi est particulièrement sensible d'un point de vue écologique et qu'il n'est pas propice à la dispersion des polluants «eu égard à la nature des eaux qui recevront la pollution, à la propension du site à la sédimentation et à l'eutrophisation, au phénomène d'inversion de courant et à la proximité de l'agglomération la plus importante du fleuve Uruguay».

208. L'Uruguay répond que le site de Fray Bentos a été initialement retenu en raison du volume d'eau particulièrement important du fleuve à cet endroit, qui constituerait un facteur propice à la dilution des effluents. Il précise que le site est en outre aisément accessible par voie fluviale, ce qui facilite la livraison des matières premières, et qu'une main-d'œuvre locale y est disponible. L'Uruguay considère que, s'il existe une obligation d'envisager d'autres sites, les instruments invoqués en ce sens par l'Argentine ne font pas obligation de le faire dans le cadre d'une évaluation de l'impact sur l'environnement, à moins que les circonstances ne l'imposent. Enfin, l'Uruguay affirme qu'il a de toute façon étudié les autres sites possibles et que l'opportunité du choix du site de l'usine Orion (Botnia) a été évaluée de manière exhaustive.

209. La Cour examinera à présent la question de savoir si, d'une part, l'Uruguay a manqué d'exercer la diligence requise dans le cadre de son évaluation de l'impact sur l'environnement, en particulier en ce qui

operations have started and, where necessary, throughout the life of the project, continuous monitoring of its effects on the environment shall be undertaken.

206. The Court has already considered the role of the environmental impact assessment in the context of the procedural obligations of the Parties under the 1975 Statute (paragraphs 119 and 120). It will now deal with the specific points in dispute with regard to the role of this type of assessment in the fulfilment of the substantive obligations of the Parties, that is to say, first, whether such an assessment should have, as a matter of method, necessarily considered possible alternative sites, taking into account the receiving capacity of the river in the area where the plant was to be built and, secondly, whether the populations likely to be affected, in this case both the Uruguayan and Argentine riparian populations, should have, or have in fact, been consulted in the context of the environmental impact assessment.

(i) *The siting of the Orion (Botnia) mill at Fray Bentos*

207. According to Argentina, one reason why Uruguay's environmental impact assessment is inadequate is that it contains no analysis of alternatives for the choice of the mill site, whereas the study of alternative sites is required under international law (UNEP Goals and Principles, Espoo Convention, IFC Operational Policy 4.01). Argentina contends that the chosen site is particularly sensitive from an ecological point of view and unconducive to the dispersion of pollutants "[b]ecause of the nature of the waters which will receive the pollution, the propensity of the site to sedimentation and eutrophication, the phenomenon of reverse flow and the proximity of the largest settlement on the River Uruguay".

208. Uruguay counters that the Fray Bentos site was initially chosen because of the particularly large volume of water in the river at that location, which would serve to promote effluent dilution. Uruguay adds that the site is moreover easily accessible for river navigation, which facilitates delivery of raw materials, and local manpower is available there. Uruguay considers that, if there is an obligation to consider alternative sites, the instruments invoked for that purpose by Argentina do not require alternative locations to be considered as part of an environmental impact assessment unless it is necessary in the circumstances to do so. Finally, Uruguay affirms that in any case it did so and that the suitability of the Orion (Botnia) site was comprehensively assessed.

209. The Court will now consider, first, whether Uruguay failed to exercise due diligence in conducting the environmental impact assessment, particularly with respect to the choice of the location of the plant

concerne le choix de l'emplacement de l'usine, et si, d'autre part, le site retenu, en l'occurrence Fray Bentos, était impropre à la construction d'une installation produisant des rejets industriels de cette nature et de cette ampleur ou pouvait avoir un impact préjudiciable sur le fleuve.

210. S'agissant du premier point, la Cour a déjà indiqué que la convention d'Espoo n'était pas applicable en l'espèce (voir paragraphe 205 ci-dessus); pour ce qui est des buts et principes du PNUE auxquels l'Argentine fait référence, et dont le caractère juridique a été explicité plus haut au paragraphe 205, la Cour rappelle que l'alinéa *c)* du principe 4 dispose simplement qu'une évaluation de l'impact sur l'environnement doit au minimum contenir «[une] description des autres solutions possibles, le cas échéant». Il convient par ailleurs de noter que l'Uruguay a précisé à plusieurs reprises que l'opportunité du choix de Fray Bentos avait été évaluée de manière exhaustive et que d'autres emplacements possibles avaient été envisagés. La Cour relèvera encore que l'étude d'impact cumulé (ci-après «CIS», selon l'acronyme anglais de «Cumulative Impact Study») finale réalisée par la SFI en septembre 2006 montre que Botnia a évalué au total quatre sites en 2003 — La Paloma, Paso de los Toros, Nueva Palmira et Fray Bentos —, avant de retenir celui de Fray Bentos. Ces évaluations concluaient que le site de La Paloma ne convenait pas parce que les quantités d'eau douce y étaient limitées et qu'il abritait d'importantes populations d'oiseaux, que celui de Nueva Palmira devait être écarté en raison de la présence de zones résidentielles, récréatives et culturellement importantes à proximité, et que celui de Paso de los Toros était à exclure en raison d'un trop faible débit pendant la saison sèche, d'un conflit potentiel avec d'autres utilisations de l'eau et d'un manque d'infrastructures. Dès lors, la Cour n'est pas convaincue par l'argument de l'Argentine selon lequel une évaluation des différents sites possibles n'a pas eu lieu avant le choix de l'emplacement définitif.

211. S'agissant du second point, la Cour ne peut manquer d'observer que le choix de l'emplacement effectif d'une usine telle que celle construite le long du fleuve Uruguay devrait tenir compte de la capacité des eaux du fleuve à recevoir, diluer et disperser des rejets d'effluents d'une installation de cette nature et de cette ampleur.

212. La Cour relève que, sur la question de la capacité de réception des eaux du fleuve à l'emplacement de l'usine, les Parties sont en désaccord sur les caractéristiques géomorphologiques et hydrodynamiques du fleuve dans la zone en question, notamment en ce qui concerne son débit et la manière dont le courant, y compris son sens et sa vitesse, agit à son tour sur la dispersion et la dilution des polluants. Les différentes interprétations avancées par les Parties quant au débit du fleuve résultent peut-être des différents modèles utilisés par celles-ci pour analyser les caractéristiques hydrodynamiques du fleuve Uruguay à Fray Bentos. L'Argentine a eu recours à un modèle tridimensionnel s'appuyant sur des mesures de la vitesse et du sens du courant à dix profondeurs différentes, et s'est servie d'un sonar — un profileur de courant à effet Doppler (ci-après «sonar

and, secondly, whether the particular location chosen for the siting of the plant, in this case Fray Bentos, was unsuitable for the construction of a plant discharging industrial effluent of this nature and on this scale, or could have a harmful impact on the river.

210. Regarding the first point, the Court has already indicated that the Espoo Convention is not applicable to the present case (see paragraph 205 above); while with respect to the UNEP Goals and Principles to which Argentina has referred, whose legal character has been described in paragraph 205 above, the Court recalls that Principle 4 *(c)* simply provides that an environmental impact assessment should include, at a minimum, "[a] description of practical alternatives, as appropriate". It is also to be recalled that Uruguay has repeatedly indicated that the suitability of the Fray Bentos location was comprehensively assessed and that other possible sites were considered. The Court further notes that the IFC's Final Cumulative Impact Study of September 2006 (hereinafter "CIS") shows that in 2003 Botnia evaluated four locations in total at La Paloma, at Paso de los Toros, at Nueva Palmira, and at Fray Bentos, before choosing Fray Bentos. The evaluations concluded that the limited amount of fresh water in La Paloma and its importance as a habitat for birds rendered it unsuitable, while for Nueva Palmira its consideration was discouraged by its proximity to residential, recreational, and culturally important areas, and with respect to Paso de los Toros insufficient flow of water during the dry season and potential conflict with competing water uses, as well as a lack of infrastructure, led to its exclusion. Consequently, the Court is not convinced by Argentina's argument that an assessment of possible sites was not carried out prior to the determination of the final site.

211. Regarding the second point, the Court cannot fail to note that any decision on the actual location of such a plant along the River Uruguay should take into account the capacity of the waters of the river to receive, dilute and disperse discharges of effluent from a plant of this nature and scale.

212. The Court notes, with regard to the receiving capacity of the river at the location of the mill, that the Parties disagree on the geomorphological and hydrodynamic characteristics of the river in the relevant area, particularly as they relate to river flow, and how the flow of the river, including its direction and its velocity, in turn determines the dispersal and dilution of pollutants. The differing views put forward by the Parties with regard to the river flow may be due to the different modelling systems which each has employed to analyse the hydrodynamic features of the River Uruguay at the Fray Bentos location. Argentina implemented a three-dimensional modelling that measured speed and direction at ten different depths of the river and used a sonar — an Acoustic Doppler Current Profiler (hereafter

ADCP») — pour enregistrer, pendant environ un an, la vitesse du courant à différentes profondeurs. Le système tridimensionnel a produit un grand nombre de données, intégrées ensuite dans un modèle hydrodynamique numérique. En revanche, Botnia a fondé son évaluation de l'impact sur l'environnement sur un modèle bidimensionnel — le RMA2. L'étude d'impact cumulé d'EcoMetrix, quant à elle, se fondait à la fois sur un modèle tridimensionnel et sur un modèle bidimensionnel, mais n'indiquait pas si un sonar ADCP avait été utilisé à différentes profondeurs.

213. La Cour n'estime pas nécessaire d'examiner en détail la validité scientifique et technique des différents types de modélisation, de calibrage et de validation mis en œuvre par les Parties pour déterminer le débit du fleuve et le sens de son courant dans la zone concernée. La Cour observe cependant que, si les deux Parties conviennent que des inversions de courant se produisent fréquemment et que des périodes de bas débit et de stagnation peuvent être observées dans la zone concernée, elles sont en désaccord sur les conséquences de ces phénomènes pour les rejets de l'usine Orion (Botnia) dans ce tronçon du fleuve.

214. La Cour est d'avis que, en élaborant ses normes relatives à la qualité de l'eau conformément aux articles 36 et 56 du statut de 1975, la CARU a certainement tenu compte de la capacité de réception et de la sensibilité des eaux du fleuve, y compris dans les zones fluviales qui bordent Fray Bentos. Dès lors, s'il n'est pas établi que les rejets d'effluents de l'usine Orion (Botnia) ont, du fait de leur taux de concentration, excédé les limites fixées par ces normes, la Cour ne saurait conclure que l'Uruguay a violé les obligations lui incombant en vertu du statut de 1975. Qui plus est, aucune des Parties n'a soutenu devant la Cour que, en élaborant ses normes relatives à la qualité de l'eau, la CARU n'avait pas dûment tenu compte des caractéristiques géomorphologiques et hydrologiques du fleuve et de la capacité de ses eaux à disperser et diluer différents types de rejets. La Cour estime que, si pareille insuffisance était avérée, notamment en ce qui concerne certaines portions du fleuve, telles que le tronçon qui borde Fray Bentos, les Parties devraient entamer une révision des normes relatives à la qualité de l'eau établies par la CARU pour s'assurer qu'elles tiennent bien compte des caractéristiques du fleuve et permettent d'en protéger les eaux et l'écosystème.

ii) *Consultation des populations concernées*

215. Les Parties sont en désaccord sur la mesure dans laquelle les populations susceptibles d'être affectées par la construction de l'usine Orion (Botnia), notamment les riverains en Argentine, ont été consultées au cours de la réalisation de l'évaluation de l'impact sur l'environnement. Les deux Parties conviennent que la consultation des populations concernées doit faire partie de l'évaluation de l'impact sur l'environnement, mais l'Argentine affirme que le droit international impose aux Etats des obligations spécifiques à cet égard. A l'appui de cet argument, elle cite les

"ADCP") — to record water flow velocities for a range of depths for about a year. The three-dimensional system generated a large number of data later introduced in a numerical hydrodynamic model. On the other hand, Botnia based its environmental impact assessment on a bi-dimensional modelling — the RMA2. The EcoMetrix CIS implemented both three-dimensional and bi-dimensional models. However, it is not mentioned whether an ADCP sonar was used at different depths.

213. The Court sees no need to go into a detailed examination of the scientific and technical validity of the different kinds of modelling, calibration and validation undertaken by the Parties to characterize the rate and direction of flow of the waters of the river in the relevant area. The Court notes however that both Parties agree that reverse flows occur frequently and that phenomena of low flow and stagnation may be observed in the concerned area, but that they disagree on the implications of this for the discharges from the Orion (Botnia) mill into this area of the river.

214. The Court considers that in establishing its water quality standards in accordance with Articles 36 and 56 of the 1975 Statute, CARU must have taken into account the receiving capacity and sensitivity of the waters of the river, including in the areas of the river adjacent to Fray Bentos. Consequently, in so far as it is not established that the discharges of effluent of the Orion (Botnia) mill have exceeded the limits set by those standards, in terms of the level of concentrations, the Court finds itself unable to conclude that Uruguay has violated its obligations under the 1975 Statute. Moreover, neither of the Parties has argued before the Court that the water quality standards established by CARU have not adequately taken into consideration the geomorphological and hydrological characteristics of the river and the capacity of its waters to disperse and dilute different types of discharges. The Court is of the opinion that, should such inadequacy be detected, particularly with respect to certain areas of the river such as at Fray Bentos, the Parties should initiate a review of the water quality standards set by CARU and ensure that such standards clearly reflect the characteristics of the river and are capable of protecting its waters and its ecosystem.

(ii) *Consultation of the affected populations*

215. The Parties disagree on the extent to which the populations likely to be affected by the construction of the Orion (Botnia) mill, particularly on the Argentine side of the river, were consulted in the course of the environmental impact assessment. While both Parties agree that consultation of the affected populations should form part of an environmental impact assessment, Argentina asserts that international law imposes specific obligations on States in this regard. In support of this argument, Argentina points to Articles 2.6 and 3.8 of

articles 2.6 et 3.8 de la convention d'Espoo, l'article 13 du projet d'articles de la Commission du droit international de 2001 sur la prévention des dommages transfrontières résultant d'activités dangereuses et les principes 7 et 8 des buts et principes du PNUE. L'Uruguay estime que les dispositions invoquées par l'Argentine ne peuvent servir de fondement juridique à une obligation de consulter les populations concernées et ajoute qu'en tout état de cause ces populations ont bien été consultées.

216. La Cour estime qu'aucune obligation juridique de consulter les populations concernées ne découle pour les Parties des instruments invoqués par l'Argentine.

217. En ce qui concerne les faits de l'espèce, la Cour note que, tant avant qu'après l'octroi de l'autorisation environnementale préalable, l'Uruguay a entrepris des activités visant à consulter les populations concernées, à la fois sur la rive argentine et sur la rive uruguayenne du fleuve. Ainsi, des réunions ont eu lieu le 2 décembre 2003 à Río Negro et le 26 mai 2004 à Fray Bentos, avec la participation d'organisations non gouvernementales argentines. En outre, le 21 décembre 2004, une séance publique de discussion a eu lieu à Fray Bentos, qui, selon l'Uruguay, a porté entre autres sujets sur la

> «manipulation de produits chimiques dans l'usine et dans le port, l'apparition de pluies acides, de dioxines, de furanes et d'autres composés polychlorés hautement toxiques pouvant avoir des effets dommageables sur l'environnement, la conformité à la convention de Stockholm, les rejets atmosphériques de l'usine, les émissions électromagnétiques et électrostatiques [et] les rejets liquides dans le fleuve».

Des habitants de Fray Bentos et des régions voisines d'Uruguay et d'Argentine ont participé à la réunion et présenté 138 documents, dans lesquels sont exposées leurs questions ou préoccupations.

218. De plus, la Cour note que, entre juin et novembre 2005, plus de quatre-vingts entretiens ont été menés par le Consensus Building Institute, organisation sans but lucratif spécialisée dans la facilitation du dialogue, la médiation et la négociation, que la SFI avait chargée de ce travail. Ces entretiens se sont déroulés entre autres à Fray Bentos, Gualeguaychú, Montevideo et Buenos Aires; y ont notamment participé des groupes de la société civile, des organisations non gouvernementales, des associations professionnelles, des représentants officiels, des agences de tourisme, des chefs d'entreprise locaux, des pêcheurs, des agriculteurs et des propriétaires de plantations des deux rives du fleuve. En décembre 2005, le projet d'étude d'impact cumulé et le rapport du Consensus Building Institute ont été publiés, et la SFI a ouvert une période de consultation afin de recevoir de nouveaux commentaires des parties prenantes en Argentine et en Uruguay.

219. Compte tenu de ce qui précède, la Cour constate qu'une consultation par l'Uruguay des populations concernées a bien eu lieu.

the Espoo Convention, Article 13 of the 2001 International Law Commission draft Articles on Prevention of Transboundary Harm from Hazardous Activities, and Principles 7 and 8 of the UNEP Goals and Principles. Uruguay considers that the provisions invoked by Argentina cannot serve as a legal basis for an obligation to consult the affected populations and adds that in any event the affected populations had indeed been consulted.

216. The Court is of the view that no legal obligation to consult the affected populations arises for the Parties from the instruments invoked by Argentina.

217. Regarding the facts, the Court notes that both before and after the granting of the initial environmental authorization, Uruguay did undertake activities aimed at consulting the affected populations, both on the Argentine and the Uruguayan sides of the river. These activities included meetings on 2 December 2003 in Río Negro, and on 26 May 2004 in Fray Bentos, with participation of Argentine non-governmental organizations. In addition, on 21 December 2004, a public hearing was convened in Fray Bentos which, according to Uruguay, addressed among other subjects, the

> "handling of chemical products in the plant and in the port; the appearance of acid rain, dioxins, furans and other polychlorates of high toxicity that could affect the environment; compliance with the Stockholm Convention; atmospheric emissions of the plant; electromagnetic and electrostatic emissions; [and] liquid discharges into the river".

Inhabitants of Fray Bentos and nearby regions of Uruguay and Argentina participated in the meeting and submitted 138 documents containing questions or concerns.

218. Further, the Court notes that between June and November 2005 more than 80 interviews were conducted by the Consensus Building Institute, a non-profit organization specializing in facilitated dialogues, mediation, and negotiation, contracted by the IFC. Such interviews were conducted *inter alia* in Fray Bentos, Gualeguaychú, Montevideo, and Buenos Aires, with interviewees including civil society groups, non-governmental organizations, business associations, public officials, tourism operators, local business owners, fishermen, farmers and plantation owners on both sides of the river. In December 2005, the draft CIS and the report prepared by the Consensus Building Institute were released, and the IFC opened a period of consultation to receive additional feedback from stakeholders in Argentina and Uruguay.

219. In the light of the above, the Court finds that consultation by Uruguay of the affected populations did indeed take place.

b) *La question des techniques de production utilisées à l'usine Orion (Botnia)*

220. L'Argentine soutient que l'Uruguay n'a pas pris toutes les mesures propres à empêcher la pollution en n'exigeant pas de l'usine qu'elle utilise les «meilleures techniques disponibles», alors que cette exigence résulterait de l'alinéa *d)* de l'article 5 de la convention POP, dont les dispositions seraient incorporées, par l'effet de la «clause de renvoi», dans l'alinéa *a)* de l'article 41 du statut de 1975. Selon l'Argentine, les rapports d'experts qu'elle cite établissent que l'usine n'utilise pas les meilleures techniques disponibles et que ses performances sont en deçà des normes internationales, si l'on considère les diverses techniques de production de pâte à papier disponibles. L'Uruguay conteste ces affirmations. S'appuyant sur l'étude d'impact cumulé finale, le deuxième rapport Hatfield et l'audit réalisé à la demande de la SFI par l'AMEC, l'Uruguay affirme que, par la technologie qu'elle emploie, l'usine Orion (Botnia) est une des usines de pâte à papier les plus performantes au monde, mettant en œuvre les meilleures techniques disponibles et se conformant notamment aux normes fixées par l'Union européenne dans ce domaine.

221. L'Argentine, cependant, dénonce en particulier l'absence de tout «traitement tertiaire des effluents» (c'est-à-dire un troisième traitement des résidus de production avant leur rejet dans la nature), qui serait nécessaire pour réduire le volume des nutriments, dont le phosphore, dès lors que les rejets sont déversés dans un environnement très sensible. L'usine de pâte à papier est, selon l'Argentine, également dépourvue d'un bassin d'urgence vide, censé contenir les déversements soudains d'effluents. Répondant à une question posée par un juge, l'Argentine estime qu'il serait possible d'ajouter un système de traitement tertiaire, mais que l'Uruguay n'a pas évalué comme il se devait les possibilités s'offrant en la matière à l'usine Orion (Botnia).

222. L'Uruguay fait observer que «les experts n'ont pas jugé nécessaire de prévoir, pour l'usine, une phase de traitement tertiaire». En réponse à cette même question, l'Uruguay a fait valoir que, bien que possible, l'ajout d'une installation de traitement tertiaire ne serait pas globalement bénéfique pour l'environnement, puisqu'il entraînerait une hausse importante de la consommation d'énergie, des émissions de carbone de l'usine, de la production de boues et de l'utilisation de produits chimiques. L'Uruguay a invariablement soutenu que la technique de blanchiment utilisée était adéquate, que les bassins d'urgence installés étaient suffisants, que la production de composés chimiques synthétiques de l'usine répondait aux exigences technologiques et que le risque potentiel de cette production avait bien été évalué.

223. Tout d'abord, la Cour fera observer que l'obligation d'empêcher la pollution et de protéger ainsi que de préserver le milieu aquatique du fleuve Uruguay énoncée à l'alinéa *a)* de l'article 41, et l'exercice de la diligence requise («due diligence») qu'elle implique, entraîne la nécessité

(b) *Question of the production technology used in the Orion (Botnia) mill*

220. Argentina maintains that Uruguay has failed to take all measures to prevent pollution by not requiring the mill to employ the "best available techniques", even though this is required under Article 5 *(d)* of the POPs Convention, the provisions of which are incorporated by virtue of the "referral clause" in Article 41 *(a)* of the 1975 Statute. According to Argentina, the experts' reports it cites establish that the mill does not use best available techniques and that its performance is not up to international standards, in the light of the various techniques available for producing pulp. Uruguay contests these claims. Relying on the CIS, the second Hatfield report and the audit conducted by AMEC at the IFC's request, Uruguay asserts that the Orion (Botnia) mill is, by virtue of the technology employed there, one of the best pulp mills in the world, applying best available techniques and complying with European Union standards, among others, in the area.

221. Argentina, however, specifically criticizes the absence of any "tertiary treatment of effluent" (i.e., a third round of processing production waste before discharge into the natural environment), which is necessary to reduce the quantity of nutrients, including phosphorus, since the effluent is discharged into a highly sensitive environment. The mill also lacks, according to Argentina, an empty emergency basin, designed to contain effluent spills. Answering a question asked by a judge, Argentina considers that a tertiary treatment would be possible, but that Uruguay failed to conduct an adequate assessment of tertiary treatment options for the Orion (Botnia) mill.

222. Uruguay observes that "the experts did not consider it necessary to equip the mill with a tertiary treatment phase". Answering the same question, Uruguay argued that, though feasible, the addition of a tertiary treatment facility would not be environmentally advantageous overall, as it would significantly increase the energy consumption of the plant, its carbon emissions, together with sludge generation and chemical use. Uruguay has consistently maintained that the bleaching technology used is acceptable, that the emergency basins in place are adequate, that the mill's production of synthetic chemical compounds meets technological requirements and that the potential risk from this production was indeed assessed.

223. To begin with, the Court observes that the obligation to prevent pollution and protect and preserve the aquatic environment of the River Uruguay, laid down in Article 41 *(a)*, and the exercise of due diligence implied in it, entail a careful consideration of the technology to be used

d'examiner avec soin la technologie à laquelle l'installation industrielle a recours, en particulier dans un secteur tel que celui de la fabrication de pâte à papier, où sont souvent employées ou produites des substances ayant un impact sur l'environnement. Ce point est d'autant plus important que, aux termes de l'alinéa *a)* de l'article 41, le cadre réglementaire qu'il incombe aux Parties d'adopter doit être en harmonie avec les directives et les recommandations des organismes techniques internationaux.

224. La Cour note que l'usine Orion (Botnia) utilise le procédé Kraft de fabrication de pâte blanchie. D'après le document de référence de décembre 2001 sur les meilleures techniques disponibles en matière de prévention et de réduction intégrées de la pollution dans l'industrie de la pâte à papier (ci-après «IPPC-BAT») de la Commission européenne, que les Parties ont qualifié de texte de référence pour ce secteur, le procédé Kraft, déjà utilisé à l'époque dans environ 80 % de la production mondiale de pâte à papier, constitue donc le procédé de production chimique de pâte à papier le plus répandu. L'usine utilise un procédé de blanchiment exempt de chlore élémentaire dit «léger» («ECF light»), ainsi que des systèmes de traitement des eaux usées primaire et secondaire faisant intervenir un procédé de traitement par boues activées.

225. La Cour estime que, s'agissant de la technologie employée, et sur la base des documents que lui ont soumis les Parties, en particulier du document IPPC-BAT, aucun élément de preuve ne vient à l'appui de la prétention de l'Argentine selon laquelle l'usine Orion (Botnia) n'appliquerait pas les meilleures techniques disponibles en matière de rejets d'effluents par tonne de pâte à papier produite. Cette conclusion est étayée par le fait que, comme démontré ci-dessous, l'Argentine n'a pas présenté d'éléments de preuve établissant clairement que l'usine Orion (Botnia) ne respecte pas les prescriptions du statut de 1975, du digeste de la CARU ou des règlements applicables des Parties en ce qui concerne la concentration d'effluents par litre d'eaux usées déversés par l'usine et la quantité absolue d'effluents pouvant être rejetée en une journée.

226. La Cour rappelle que l'Uruguay a soumis de très nombreuses informations relatives à la surveillance des effluents de l'usine Orion (Botnia), qui figurent dans les multiples rapports établis par EcoMetrix et la DINAMA (évaluation indépendante de la performance environnementale, réalisée par EcoMetrix à la demande de la SFI (phase 2 : examen de la performance environnementale à six mois), juillet 2008 ; évaluation indépendante de la performance environnementale, réalisée par EcoMetrix à la demande de la SFI (phase 3 : examen de la performance environnementale de l'année 2008) (ci-après le «troisième rapport de suivi d'EcoMetrix»), mars 2009 ; DINAMA, rapport d'évaluation de la performance dans la première année d'opération de l'usine Orion (Botnia) et de la qualité de l'environnement dans la zone d'influence, mai 2009 ; DINAMA, rapport semestriel des résultats du plan de contrôle des émissions et de la performance environnementale), et que l'Argentine a avancé, à cet égard, que l'Uruguay bénéficiait, sur cette question, sinon de l'exclusivité des éléments de preuve factuels, du moins d'un accès très privilégié

by the industrial plant to be established, particularly in a sector such as pulp manufacturing, which often involves the use or production of substances which have an impact on the environment. This is all the more important in view of the fact that Article 41 *(a)* provides that the regulatory framework to be adopted by the Parties has to be in keeping with the guidelines and recommendations of international technical bodies.

224. The Court notes that the Orion (Botnia) mill uses the bleached Kraft pulping process. According to the December 2001 Integrated Pollution Prevention and Control Reference Document on Best Available Techniques in the Pulp and Paper Industry of the European Commission (hereinafter "IPPC-BAT"), which the Parties referred to as the industry standard in this sector, the Kraft process already accounted at that time for about 80 per cent of the world's pulp production and is therefore the most applied production method of chemical pulping processes. The plant employs an ECF-light (Elemental chlorine-free) bleaching process and a primary and secondary wastewater treatment involving activated sludge treatment.

225. The Court finds that, from the point of view of the technology employed, and based on the documents submitted to it by the Parties, particularly the IPPC-BAT, there is no evidence to support the claim of Argentina that the Orion (Botnia) mill is not BAT-compliant in terms of the discharges of effluent for each tonne of pulp produced. This finding is supported by the fact that, as shown below, no clear evidence has been presented by Argentina establishing that the Orion (Botnia) mill is not in compliance with the 1975 Statute, the CARU Digest and applicable regulations of the Parties in terms of the concentration of effluents per litre of wastewater discharged from the plant and the absolute amount of effluents that can be discharged in a day.

226. The Court recalls that Uruguay has submitted extensive data regarding the monitoring of effluent from the Orion (Botnia) mill, as contained in the various reports by EcoMetrix and DINAMA (EcoMetrix, Independent Performance Monitoring as required by the IFC Phase 2: Six Month Environmental Performance Review (July 2008); EcoMetrix, Independent Performance Monitoring as required by the IFC, Phase 3: Environmental Performance Review (2008 Monitoring Year) (hereinafter "EcoMetrix Third Monitoring Report"); DINAMA, Performance Report for the First Year of Operation of the Botnia Plant and the Environmental Quality of the Area of Influence, May 2009; DINAMA, Six Month Report on the Botnia Emission Control and Environmental Performance Plan), and that Argentina expressed the view, in this regard, that Uruguay had on this matter, much greater, if not exclusive, access to the factual evidence. However, the Court notes that Argentina has itself generated much factual information and that the materials which Uruguay produced have

à ceux-ci. La Cour note cependant que l'Argentine a elle-même produit un grand nombre d'informations factuelles, et que les éléments soumis par l'Uruguay ou bien lui ont été accessibles à différents stades de la procédure ou bien figurent dans le domaine public. Aussi n'estime-t-elle pas que l'Argentine ait été désavantagée en ce qui concerne la production d'éléments de preuve relatifs aux déversements d'effluents provenant de l'usine de pâte à papier.

227. Afin de déterminer si les concentrations des polluants déversés par l'usine Orion (Botnia) respectent les limites réglementaires, la Cour devra les évaluer à l'aune des limites autorisées en matière de rejet d'effluents — tant en ce qui concerne la concentration d'effluents par litre d'eaux usées déversés qu'en ce qui concerne la quantité absolue d'effluents pouvant être rejetée en une journée — figurant dans les textes de réglementation applicables des Parties, tels que qualifiés plus haut par la Cour au paragraphe 200, et dans les autorisations relatives à l'usine accordées par les autorités uruguayennes. Le digeste, en effet, ne fixe que des limites générales pour les «hydrocarbures», les «solides sédimentables» et les «huiles et graisses», et n'en prévoit pas de spécifiques en ce qui concerne les substances à propos desquelles les Parties sont en désaccord. L'Argentine n'a pas allégué que l'usine Orion (Botnia) n'avait pas respecté les normes de la CARU relatives aux effluents (digeste de la CARU, point E3 (1984, tel que modifié)).

228. De l'examen des données réunies après sa mise en service, telles qu'elles figurent dans les différents rapports de la DINAMA et d'EcoMetrix, il ne ressort pas que les rejets de l'usine Orion (Botnia) ont excédé les limites fixées par les normes relatives aux effluents énoncées dans la réglementation applicable de l'Uruguay telle que qualifiée plus haut par la Cour au paragraphe 200 ou dans l'autorisation environnementale préalable accordée par le MVOTMA (autorisation environnementale préalable accordée pour l'usine Orion (Botnia) par le MVOTMA (14 février 2005)), si ce n'est dans quelques cas où les concentrations ont dépassé les limites autorisées. Des valeurs excédant les limites prescrites dans le décret n° 253/79 ou dans l'autorisation environnementale préalable du MVOTMA n'ont été mesurées qu'en ce qui concerne les paramètres suivants: l'azote, les nitrates et les AOX (composés organo-halogénés adsorbables). Dans ces cas, les mesures enregistrées pour un jour donné dépassaient le maximum autorisé. Toutefois, l'autorisation environnementale préalable du 14 février 2005 prévoit expressément la possibilité de calculer pour ces paramètres une moyenne annuelle. Le dépassement le plus notable est celui enregistré pour les AOX, paramètre utilisé sur le plan international pour surveiller les effluents rejetés par les usines de pâte à papier, comprenant parfois des polluants organiques persistants (POP). Selon le document de référence sur les IPPC-BAT, soumis par les Parties et considéré par elles comme le texte de référence pour ce secteur, «les autorités chargées de la protection de l'environnement de nombreux pays ont imposé des restrictions sévères aux rejets de substances organiques chlorées, mesurées en AOX, dans le milieu aquatique». Après la

been available to Argentina at various stages of the proceedings or have been available in the public domain. Therefore the Court does not consider that Argentina has been at a disadvantage with regard to the production of evidence relating to the discharges of effluent of the mill.

227. To determine whether the concentrations of pollutants discharged by the Orion (Botnia) mill are within the regulatory limits, the Court will have to assess them against the effluent discharge limits — both in terms of the concentration of effluents in each litre of wastewater discharged and the absolute amount of effluents that can be discharged in a day — prescribed by the applicable regulatory standards of the Parties, as characterized by the Court in paragraph 200 above, and the permits issued for the plant by the Uruguayan authorities, since the Digest only sets general limits on "hydrocarbons", "sedimentable solids", and "oils and greases", but does not establish specific ones for the substances in contention between the Parties. Argentina did not allege any non-compliance of the Orion (Botnia) mill with CARU's effluent standards (CARU Digest, Sec. E3 (1984, as amended)).

228. Taking into account the data collected after the start-up of the mill as contained in the various reports by DINAMA and EcoMetrix, it does not appear that the discharges from the Orion (Botnia) mill have exceeded the limits set by the effluent standards prescribed by the relevant Uruguayan regulation as characterized by the Court in paragraph 200 above, or the initial environmental authorization issued by MVOTMA (MVOTMA, Initial Environmental Authorization for the Botnia Plant (14 February 2005)), except for a few instances in which the concentrations have exceeded the limits. The only parameters for which a recorded measurement exceeded the standards set by Decree No. 253/79 or the initial environmental authorization by MVOTMA are: nitrogen, nitrates, and AOX (Adsorbable Organic Halogens). In those cases, measurements taken on one day exceeded the threshold. However, the initial environmental authorization of 14 February 2005 specifically allows yearly averaging for the parameters. The most notable of these cases in which the limits were exceeded is the one relating to AOX, which is the parameter used internationally to monitor pulp mill effluent, sometimes including persistent organic pollutants (POPs). According to the IPPC-BAT reference document submitted by the Parties, and considered by them as the industry standard in this sector, "the environmental control authorities in many countries have set severe restrictions on the discharges of chlorinated organics measured as AOX into the aquatic environment". Concentrations of AOX reached at one point on 9 January 2008, after the mill began operations, as high a level as 13 mg/L, whereas the maximum limit used in the environ-

mise en service de l'usine de pâte à papier, les concentrations d'AOX ont pu atteindre en une occasion, le 9 janvier 2008, 13 mg/l, alors que la limite maximale utilisée dans l'évaluation de l'impact sur l'environnement et prescrite ultérieurement par le MVOTMA était de 6 mg/l. Toutefois, en l'absence d'éléments de preuve établissant de manière convaincante qu'il ne s'agissait pas là d'un épisode isolé mais bien d'un problème plus durable, la Cour n'est pas à même de conclure que l'Uruguay a violé les dispositions du statut de 1975.

c) *L'impact des rejets sur la qualité des eaux du fleuve*

229. Comme indiqué ci-dessus (paragraphe 165), les Parties ont, au cours des trois dernières années, soumis à la Cour quantité de documents contenant des données et analyses d'ordre factuel et scientifique concernant les concentrations de référence des polluants présents dans le fleuve avant la mise en service de l'usine, ainsi que les résultats de relevés relatifs à ses eaux et aux émissions atmosphériques après le début des activités de production et, pour certains, jusqu'au milieu de l'année 2009.

230. S'agissant des données de référence, les études et rapports soumis par les Parties contenaient des informations et analyses relatives, entre autres, à la qualité de l'eau et de l'air, au phytoplancton et au zooplancton présents dans le fleuve, aux indicateurs de santé et biomarqueurs de pollution chez les poissons du fleuve, à la surveillance de l'ichtyofaune autour de l'usine de pâte à papier Orion (Botnia), aux populations de poissons et à la diversité des espèces du fleuve, aux concentrations en acides résiniques, en phénols chlorés et en phytostérols observées chez les poissons du fleuve, à l'étude des espèces appartenant au genre *Tillandsia*, à l'audit avant la mise en service de l'usine Orion (Botnia) et à des études du mercure et du plomb dans les muscles des poissons.

231. L'Argentine soutient que les données de référence de l'Uruguay laissent à désirer à bien des égards et qu'elles sont, notamment, incomplètes. L'Uruguay rejette cette assertion, et prétend que, de fait, l'Argentine s'est fondée sur ces données pour sa propre évaluation de la qualité de l'eau. L'Uruguay soutient que, contrairement aux affirmations de l'Argentine, il a commencé à recueillir des données de référence en août 2006, dans le cadre du contrôle préopérationnel de la qualité de l'eau effectué par la DINAMA avant la mise en service de l'usine (en novembre 2007). Ce contrôle s'est étendu sur une période de quinze mois et est venu compléter près de quinze années d'une surveillance plus générale menée sous la houlette de la CARU au titre du programme PROCON (Programme de contrôle de la qualité et de la pollution des eaux du fleuve Uruguay, selon l'acronyme espagnol de «Programa de Calidad de Aguas y Control de la Contaminación del Río Uruguay»). L'Argentine n'a pas, à l'audience, contesté l'allégation du conseil de l'Uruguay selon laquelle elle s'était servie des données fournies par celui-ci pour sa propre évaluation de la qualité de l'eau.

232. Parmi les données présentées par les Parties concernant le contrôle

mental impact assessment and subsequently prescribed by MVOTMA was 6 mg/L. However, in the absence of convincing evidence that this is not an isolated episode but rather a more enduring problem, the Court is not in a position to conclude that Uruguay has breached the provisions of the 1975 Statute.

(c) *Impact of the discharges on the quality of the waters of the river*

229. As pointed out earlier (see paragraph 165), the Parties have over the last three years presented to the Court a vast amount of factual and scientific material containing data and analysis of the baseline levels of contaminants already present in the river prior to the commissioning of the plant and the results of measurements of its water and air emissions after the plant started its production activities and, in some cases, until mid-2009.

230. Regarding the baseline data, the studies and reports submitted by the Parties contained data and analysis relating, *inter alia*, to water quality, air quality, phytoplankton and zooplankton of the river, health indicators and biomarkers of pollution in fish from the river, monitoring of fish fauna in the area around the Orion (Botnia) mill, fish community and species diversity in the river, concentrations of resin acids, chlorinated phenols and plant sterols in fish from the river, survey of species belonging to the genus Tillandsia, the Orion (Botnia) mill pre-start-up audit, and analysis of mercury and lead in fish muscle.

231. Argentina contends that Uruguay's baseline data were both inadequate and incomplete in many aspects. Uruguay rejects this allegation, and argues that Argentina has actually relied on Uruguay's baseline data to give its own assessment of water quality. According to Uruguay, contrary to Argentina's assertions, collection of baseline data by Uruguay started in August 2006, when DINAMA started to conduct for a period of 15 months pre-operational water quality monitoring prior to the commissioning of the plant in November 2007, which served to complement almost 15 years of more general monitoring that had been carried out within CARU under the PROCON programme (River Uruguay Water Quality and Pollution Control Programme, from the Spanish acronym for "Programa de Calidad de Aguas y Control de la Contaminación del Río Uruguay"). Argentina did not challenge counsel for Uruguay's statement during the oral proceedings that it used Uruguay's baseline data for the assessment of water quality.

232. The data presented by the Parties on the post-operation monitor-

et le suivi postopérationnel de la performance effective de l'usine quant aux effets des rejets sur le fleuve figurent des relevés obtenus au moyen de différents programmes de surveillance. Ces derniers ont été réalisés, entre autres, par une équipe scientifique argentine regroupant des chercheurs de deux universités nationales mandatée par le secrétariat d'Etat argentin à l'environnement et au développement durable (dix sites), par l'OSE (l'organisme public uruguayen chargé de l'assainissement et de la distribution de l'eau, selon l'acronyme espagnol d'«Obras Sanitarias del Estado»), par la DINAMA, indépendamment de Botnia (seize sites), et par Botnia faisant rapport à la DINAMA et à la SFI (quatre sites; et prélèvement des effluents).

233. Les sites de prélèvement relevant de la responsabilité de l'Argentine sont situés sur la rive argentine du fleuve, le plus en amont d'entre eux se trouvant à 10 kilomètres de l'usine, le plus en aval à 16 kilomètres environ. Trois d'entre eux (les sites U0, U2 et U3), néanmoins, se trouvent près de l'usine; et trois autres sont situés dans la baie de Nandubaysal et la lagune Inés. Ce sont eux qui ont fourni les données qui, selon le conseil de l'Argentine, «ont permis aux scientifiques argentins de clairement différencier la baie du reste du fleuve, étant donné qu'elle se comporte comme un écosystème relativement autonome par rapport à celui-ci» (rapport scientifique et technique, chapitre 3, annexe intitulée «Background Biogeochemical Studies», par. 4.1.2; voir aussi *ibid.*, par. 4.3.1.2).

234. Les sites de prélèvement relevant de la responsabilité de l'Uruguay (DINAMA) et de Botnia sont situés du côté uruguayen du fleuve. Le point de prélèvement de l'OSE est situé au niveau de la prise d'eau potable de Fray Bentos, devant la station n° 11 de la DINAMA.

235. L'équipe argentine a recueilli des données entre novembre 2007 et avril 2009, une bonne partie de la surveillance commençant à partir d'octobre 2008. L'Uruguay, par l'intermédiaire de la DINAMA, assure une surveillance du site depuis mars 2006, ses plus récents relevés couvrant la période allant jusqu'au mois de juin 2009. L'OSE, dans le cadre de la responsabilité globale qui lui incombe d'assurer la qualité de l'eau uruguayenne, a recueilli des informations utiles, qui ont été reprises dans les rapports périodiques sur l'exploitation de l'usine.

236. La Cour dispose également de l'interprétation des données qu'ont fournie les experts désignés par les Parties, les Parties elles-mêmes et leurs conseils. Toutefois, lorsqu'elle appréciera la valeur des éléments de preuve qui lui ont été soumis, la Cour, afin de déterminer si, en autorisant la construction et la mise en service de l'usine Orion (Botnia), l'Uruguay a violé les obligations qui étaient les siennes en vertu des articles 36 et 41 du statut de 1975, soupèsera et évaluera essentiellement les données elles-mêmes — et non les interprétations divergentes qu'en ont faites les Parties ou leurs experts et consultants.

237. Le désaccord entre les Parties quant à l'impact des effluents rejetés par l'usine Orion (Botnia) sur la qualité de l'eau du fleuve porte sur les paramètres et substances suivants: oxygène dissous; phosphore total (et

ing of the actual performance of the plant in terms of the impact of its emissions on the river includes data obtained through different testing programmes conducted, *inter alia*, by an Argentine scientific team from two national universities, contracted by the National Secretariat of Environment and Sustainable Development of Argentina (ten sites), the OSE (Uruguay's State Agency for Sanitary Works, from the Spanish acronym for "Obras Sanitarias del Estado"), DINAMA, independently of Botnia (16 sites), and Botnia, reporting to DINAMA and the IFC (four sites; and testing the effluent).

233. The monitoring sites maintained by Argentina are located on the Argentine side of the river; with the most upstream position located 10 km from the plant and the furthest downstream one at about 16 km from the plant. Nevertheless, three of the sites (U0, U2 and U3) are near the plant; while another three are in Nandubaysal Bay and Inés Lagoon, the data from which, according to Argentina's counsel, "enabled the scientists to clearly set the bay apart, as it acts as an ecosystem that is relatively detached from the Uruguay river" (Scientific and Technical Report, Chapter 3, appendix: "Background Biogeochemical Studies", para. 4.1.2; see also *ibid.*, para. 4.3.1.2).

234. The monitoring sites maintained by Uruguay (DINAMA) and by Botnia are located on the Uruguayan side. The OSE monitoring point is located at the drinking water supply intake pipe for Fray Bentos, at or near DINAMA station 11.

235. Argentina's team gathered data from November 2007 until April 2009 with many of the results being obtained from October 2008. Uruguay, through DINAMA, has been carrying out its monitoring of the site since March 2006. Its most recent data cover the period up to June 2009. The OSE, in terms of its overall responsibility for Uruguayan water quality, has been gathering relevant data which has been used in the periodic reports on the operation of the plant.

236. The Court also has before it interpretations of the data provided by experts appointed by the Parties, and provided by the Parties themselves and their counsel. However, in assessing the probative value of the evidence placed before it, the Court will principally weigh and evaluate the data, rather than the conflicting interpretations given to it by the Parties or their experts and consultants, in order to determine whether Uruguay breached its obligations under Articles 36 and 41 of the 1975 Statute in authorizing the construction and operation of the Orion (Botnia) mill.

237. The particular parameters and substances that are subject to controversy between the Parties in terms of the impact of the discharges of effluent from the Orion (Botnia) mill on the quality of the waters of the

la question connexe de l'eutrophisation due aux phosphates); substances phénoliques; nonylphénols et éthoxylates de nonylphénol; dioxines et furanes. La Cour procédera maintenant à l'examen des moyens de preuve produits par les Parties en ce qui concerne ces paramètres et substances.

i) *L'oxygène dissous*

238. C'est à l'audience que l'Argentine a, pour la première fois, fait état de l'altération des teneurs en oxygène dissous du fleuve que provoquerait l'usine Orion (Botnia), en renvoyant à des données présentées dans le rapport de l'organisme public uruguayen OSE. Pour l'Argentine, puisque l'oxygène dissous contribue à la qualité de l'environnement et qu'il existe une norme de la CARU fixant (à 5,6 mg/l) sa concentration minimale dans les eaux du fleuve, l'introduction dans le milieu aquatique, par l'usine Orion (Botnia), de substances ou d'énergie ayant fait chuter les taux d'oxygène dissous en deçà de ce seuil constitue une violation de l'obligation d'empêcher la pollution et de préserver ce milieu aquatique. L'Uruguay soutient que les chiffres que l'Argentine a puisés dans les relevés de l'OSE concernaient l'«oxidabilidad», qui renvoie à la «demande en oxygène» et non à l'«oxígeno disuelto» — c'est-à-dire l'oxygène dissous —, et qu'une chute du niveau de la demande en oxygène révèle une amélioration de la qualité de l'eau puisque ce niveau doit être maintenu aussi bas que possible.

239. La Cour note qu'en ce qui concerne l'oxygène dissous, une concentration moyenne de 3,8 mg/l après la mise en service de l'usine constituerait effectivement, si elle était avérée, une violation des normes de la CARU, ce chiffre étant au-dessous du seuil de 5,6 mg d'oxygène dissous par litre d'eau requis selon le digeste de la CARU (E3, titre 2, chapitre 4, section 2). Elle estime toutefois que cette allégation de l'Argentine n'a pas été prouvée. Premièrement, les chiffres sur lesquels se fonde l'Argentine ne correspondent pas aux valeurs indiquées dans le troisième rapport de suivi d'EcoMetrix, qui fait état de concentrations d'oxygène dissous supérieures au seuil fixé par la CARU dans tous les échantillons prélevés entre février et octobre 2008. Deuxièmement, le rapport de la DINAMA sur la qualité des eaux de surface et des sédiments de juillet 2009 (rapport semestriel: janvier-juin) (ci-après le «rapport de la DINAMA sur la qualité de l'eau») (voir p. 7, fig. 4.5: moyenne de 9,4 mg/l) fait état de concentrations d'oxygène dissous bien supérieures aux valeurs minimales requises dans le digeste de la CARU. Troisièmement, le rapport de l'Argentine en date du 30 juin 2009 indique, dans son résumé, que les paramètres de qualité de l'eau relevés au cours de la période présentaient des valeurs «normales, avec des variations saisonnières de la température et des concentrations correspondantes en oxygène dissous». Les centaines de valeurs consignées dans les données de ce chapitre du «Rapport Colombo» étayent cette conclusion, même si certaines sont légèrement inférieures. Quatrièmement, les chiffres relatifs à l'oxygène dissous figu-

river are: dissolved oxygen; total phosphorus (and the related matter of eutrophication due to phosphate); phenolic substances; nonylphenols and nonylphenolethoxylates; and dioxins and furans. The Court now turns to the assessment of the evidence presented to it by the Parties with respect to these parameters and substances.

(i) *Dissolved oxygen*

238. Argentina raised for the first time during the oral proceedings the alleged negative impact of the Orion (Botnia) mill on dissolved oxygen in the river referring to data contained in the report of the Uruguayan OSE. According to Argentina, since dissolved oxygen is environmentally beneficial and there is a CARU standard which sets a minimum level of dissolved oxygen for the river waters (5.6 mg/L), the introduction by the Orion (Botnia) mill into the aquatic environment of substances or energy which caused the dissolved oxygen level to fall below that minimum constitutes a breach of the obligation to prevent pollution and to preserve the aquatic environment. Uruguay argues that Argentina's figures taken from the measurements of the OSE were for "oxidabilidad", which refers to the "demand for oxygen" and not for "oxígeno disuelto" — i.e., dissolved oxygen. Uruguay also claims that a drop in the level of demand for oxygen shows an improvement in the quality of the water, since the level of demand should be kept as low as possible.

239. The Court observes that a post-operational average value of 3.8 mg/L for dissolved oxygen would indeed, if proven, constitute a violation of CARU standards, since it is below the minimum value of 5.6 mg of dissolved oxygen per litre required according to the CARU Digest (E3, Title 2, Chapter 4, Section 2). However, the Court finds that the allegation made by Argentina remains unproven. First, the figures on which Argentina bases itself do not correspond to the ones for dissolved oxygen that appear in the EcoMetrix Third Monitoring Report, where the samples taken between February and October 2008 were all above the CARU minimum standard for dissolved oxygen. Secondly, DINAMA's Surface Water and Sediment Quality Data Report of July 2009 (Six Month Report: January-June) (hereinafter "DINAMA's Water Quality Report") (see p. 7, fig. 4.5: average of 9.4 mg/L) displays concentrations of dissolved oxygen that are well above the minimum level required under the CARU Digest. Thirdly, Argentina's 30 June 2009 report says in its summary that the records of water quality parameters over the period were "normal for the river with typical seasonal patterns of temperature and associated dissolved oxygen". The hundreds of measurements presented in the figures in that chapter of the "Colombo Report" support that conclusion even taking account of some slightly lower figures. Fourthly, the figures relating to dissolved oxygen contained in DINAMA's Water Quality Report have essentially the same characteristics as those gathered by Argentina — they

rant dans le rapport de la DINAMA sur la qualité de l'eau présentent essentiellement les mêmes caractéristiques que ceux recueillis par l'Argentine — les valeurs sont supérieures au seuil fixé par la CARU, et sont les mêmes en amont et en aval de l'usine. La Cour en conclut que ces valeurs ne semblent pas avoir notablement changé au fil du temps et que rien ne vient étayer l'affirmation selon laquelle la référence à l'«oxidabilidad» dans le rapport de l'OSE invoquée par l'Argentine devrait être interprétée comme un renvoi à l'«oxygène dissous».

ii) *Le phosphore*

240. Les Parties s'accordent sur le niveau élevé de phosphore total dans le fleuve Uruguay. Selon l'Uruguay, la quantité totale de phosphore (naturel et anthropique) rejeté dans le fleuve est d'environ 19 000 tonnes par an, auxquelles l'usine Orion (Botnia) contribue à hauteur de quelque 15 tonnes (pour l'année 2008), voire moins, selon les estimations pour 2009. L'Argentine n'a pas contesté ces chiffres au cours de la procédure. L'Uruguay avance en outre qu'il ne saurait être allégué de violation des dispositions du statut de 1975, puisque cette forte concentration ne peut être attribuée avec certitude à l'usine Orion (Botnia), et que la CARU n'a fixé aucune norme concernant le phosphore. L'Uruguay soutient également qu'il ressort des données fournies par la DINAMA, comparées aux données de référence également recueillies par cette dernière, que «[l]es teneurs en phosphore étaient généralement plus faibles après la mise en service de l'usine, par rapport aux données de référence de 2005-2006» (troisième rapport de suivi d'EcoMetrix, mars 2009).

241. L'un des grands points de désaccord entre les Parties concerne le lien entre l'augmentation de la concentration de phosphore dans les eaux du fleuve et la prolifération d'algues survenue en février 2009, ainsi que la question de savoir si l'eutrophisation du fleuve est due à l'exploitation de l'usine Orion (Botnia). L'Argentine affirme que l'usine est à l'origine de cette eutrophisation et de l'élévation de la teneur en phosphates, tandis que l'Uruguay nie que l'une comme l'autre soient attribuables à l'exploitation de l'usine à Fray Bentos.

242. La Cour relève que la CARU n'a pas adopté de normes de qualité de l'eau relatives aux concentrations de phosphore total et de phosphates dans le fleuve. L'Argentine ne dispose pas, elle non plus, de normes de qualité de l'eau pour ce qui est du phosphore total. La Cour devra donc se référer aux normes de qualité de l'eau et limites de rejets de phosphore total édictées par l'Uruguay dans le cadre de sa législation interne, telle que qualifiée par la Cour plus haut, au paragraphe 200, afin de déterminer si la teneur en phosphore total a dépassé les limites fixées dans les textes de réglementation des Parties adoptés conformément à l'alinéa *a)* de l'article 41 du statut de 1975. La concentration de phosphore total ne peut, selon les normes de qualité de l'eau fixées par ce décret, excéder 0,025 mg/l pour certaines utilisations, telles que l'eau potable, l'irrigation des cultures destinées à la consommation humaine et l'utilisation de

are above the CARU minimum and are the same upstream and downstream. Thus, the Court concludes that there appears to be no significant difference between the sets of data over time and that there is no evidence to support the contention that the reference to "oxidabilidad" in the OSE report referred to by Argentina should be interpreted to mean "dissolved oxygen".

(ii) *Phosphorus*

240. There is agreement between the Parties that total phosphorus levels in the River Uruguay are high. According to Uruguay, the total amount of (natural and anthropogenic) phosphorus emitted into the river per year is approximately 19,000 tonnes, of which the Orion (Botnia) mill has a share of some 15 tonnes (in 2008) or even less, as was expected for 2009. These figures have not been disputed by Argentina during the proceedings. Uruguay contends further that no violation of the provisions of the 1975 Statute can be alleged since the high concentration cannot be clearly attributed to the Orion (Botnia) mill as the source, and since no standard is set by CARU for phosphorus. Uruguay maintains also that based on data provided by DINAMA as compared to baseline data also compiled by DINAMA, it can be demonstrated that "[t]otal phosphorus levels were generally lower post-start-up as compared to the 2005-2006 baseline" (EcoMetrix Third Monitoring Report, March 2009).

241. A major disagreement between the Parties relates to the relationship between the higher concentration of phosphorus in the waters of the river and the algal bloom of February 2009 and whether operation of the Orion (Botnia) mill has caused the eutrophication of the river. Argentina claims that the Orion (Botnia) mill is the cause of the eutrophication and higher concentration of phosphates, while Uruguay denies the attributability of these concentrations as well as the eutrophication to the operation of the plant in Fray Bentos.

242. The Court notes that CARU has not adopted a water quality standard relating to levels of total phosphorus and phosphates in the river. Similarly, Argentina has no water quality standards for total phosphorus. The Court will therefore have to use the water quality and effluent limits for total phosphorus enacted by Uruguay under its domestic legislation, as characterized by the Court in paragraph 200 above, to assess whether the concentration levels of total phosphorus have exceeded the limits laid down in the regulations of the Parties adopted in accordance with Article 41 *(a)* of the 1975 Statute. The water quality standard for total phosphorus under the Uruguayan Regulation is 0.025 mg/L for certain purposes such as drinking water, irrigation of crops for human consumption and water used for recreational purposes which involve direct human contact with the water (Decree No. 253/79, Regulation of

l'eau à des fins récréatives qui impliquent un contact humain direct avec cette eau (décret nº 253/79, réglementation de la qualité de l'eau). Le décret uruguayen fixe aussi — à 5 mg/l — la norme en matière de rejet de phosphore total (*ibid.*, article 11, alinéa 2)). L'usine Orion (Botnia) doit satisfaire à l'une et l'autre de ces normes.

243. La Cour estime que, sur la base des éléments de preuve qui lui ont été soumis, l'usine Orion (Botnia) a jusqu'à présent satisfait aux normes en matière de rejet de phosphore total. Dans ce contexte, la Cour note que, selon le troisième rapport de suivi d'EcoMetrix, les relevés de l'Uruguay enregistrent, pour les rejets d'effluents de l'usine, une valeur moyenne de 0,59 mg/l de phosphore total en 2008. En outre, d'après le rapport de la DINAMA sur les émissions de juillet 2009, les chiffres relatifs aux effluents variaient, pour la période allant de novembre 2008 à mai 2009, entre 0,053 mg/l et 0,41 mg/l (voir, par exemple, DINAMA, rapport semestriel des résultats du plan de contrôle des émissions et de la performance environnementale (11 novembre 2008-31 mai 2009), 22 juillet 2009, p. 5; voir aussi p. 25 et 26). L'Argentine ne conteste pas ces chiffres, dont les valeurs sont clairement inférieures à la norme établie en vertu du décret uruguayen.

244. La Cour notera à cet égard que, dès le 11 février 2005, la DINAMA relevait, dans son rapport d'évaluation de l'impact sur l'environnement relatif à l'usine Orion (Botnia), la forte teneur en nutriments (phosphore et azote) dans le fleuve, et indiquait ceci:

> «Cette situation provoque fréquemment la prolifération d'algues parfois très toxiques en raison de la présence de cyanobactéries. Ces proliférations — qui ont augmenté, à la fois en fréquence et en intensité, ces dernières années — constituent un risque sanitaire et provoquent de lourdes pertes économiques, dans la mesure où elles perturbent certaines utilisations de l'eau comme les activités de loisirs et l'approvisionnement en eau de boisson. A cette situation existante, il convient d'ajouter qu'à l'avenir l'usine rejettera un total de 200 tonnes/an d'azote et de 20 tonnes/an de phosphore, soit des valeurs équivalant approximativement aux rejets d'une ville de 65 000 habitants dépourvue de système de traitement des eaux usées.» (P. 20, par. 6.1.)

245. Le rapport de la DINAMA se poursuit en ces termes:

> «Il est également entendu qu'il serait contre-indiqué d'autoriser le rejet de déchets de nature à accroître la valeur de tout paramètre ayant déjà atteint un seuil critique, même lorsque cette augmentation est considérée comme insignifiante par l'entreprise. Néanmoins, les variations de ces valeurs ne dépendant pas des seuls effluents du projet — ces paramètres étant susceptibles d'être modifiés par le déversement de tout effluent industriel ou domestique —, le rejet des déchets proposé dans le projet pourrait être accepté, à condition de prévoir une compensation en cas d'augmentation provoquant le

Water Quality). The Uruguayan Decree also establishes a total phosphorus discharge standard of 5 mg/L (Decree No. 253/79 Regulation of Water Quality, Art. 11 (2)). The Orion (Botnia) mill must comply with both standards.

243. The Court finds that based on the evidence before it, the Orion (Botnia) mill has so far complied with the standard for total phosphorus in effluent discharge. In this context, the Court notes that, for 2008 according to the EcoMetrix Third Monitoring Report, the Uruguayan data recorded an average of 0.59 mg/L total phosphorus in effluent discharge from the plant. Moreover, according to the DINAMA 2009 Emissions Report, the effluent figures for November 2008 to May 2009 were between 0.053 mg/L and 0.41 mg/L (e.g., DINAMA, "Six Month Report on the Botnia Emission Control and Environmental Performance Plan November 11, 2008 to May 31, 2009" (22 July 2009) p. 5; see also pp. 25 and 26). Argentina does not contest these figures which clearly show values much below the standard established under the Uruguayan Decree.

244. The Court observes in this connection that as early as 11 February 2005, DINAMA, in its environmental impact assessment for the Orion (Botnia) mill, noted the heavy load of nutrients (phosphorus and nitrogen) in the river and stated that:

> "This situation has generated the frequent proliferation of algae, in some cases with an important degree of toxicity as a result of the proliferation of cyanobacteria. These proliferations, which in recent years have shown an increase in both frequency and intensity, constitute a health risk and result in important economic losses since they interfere with some uses of water, such as recreational activities and the public supply of drinking water. To this already existing situation it must be added that, in the future, the effluent in the plant will emit a total of 200 t/a of N[itrogen] and 20 t/a of P[hosphorus], values that are the approximate equivalent of the emission of the untreated sewage of a city of 65,000 people." (P. 20, para. 6.1.)

245. The DINAMA Report then continues as follows:

> "It is also understood that it is not appropriate to authorize any waste disposal that would increase any of the parameters that present critical values, even in cases in which the increase is considered insignificant by the company. Nevertheless, considering that the parameters in which the quality of water is compromised are not specific to the effluents of this project, but rather would be affected by the waste disposal of any industrial or domestic effluent under consideration, it is understood that the waste disposal proposed in the project may be accepted, as long as there is compensation for any

dépassement de la valeur standard pour l'un quelconque des paramètres critiques.» (Rapport de la DINAMA, p. 21.)

246. La Cour observera en outre que l'autorisation environnementale préalable, accordée le 15 février 2005, faisait obligation à Botnia de respecter ces conditions, les normes de la CARU et les meilleures techniques disponibles, telles que définies dans le document IPPC-BAT de la Commission européenne de décembre 2001. Elle imposait également la réalisation d'un plan de mise en œuvre de mesures d'atténuation et de compensation. Ce plan avait été réalisé avant la fin de l'année 2007 et l'autorisation de mise en service fut accordée le 8 novembre 2007. Le 29 avril 2008, Botnia et l'OSE ont conclu un accord concernant le traitement des eaux usées municipales de Fray Bentos, visant à réduire les rejets de phosphore total et autres polluants.

247. La Cour estime que le volume de phosphore total rejeté dans le fleuve qui est attribuable à l'usine Orion (Botnia) est proportionnellement insignifiant, par rapport à la teneur globale du fleuve en phosphore total provenant d'autres sources. Elle conclut donc que le fait que la concentration de phosphore total dans le fleuve dépasse les limites fixées par la législation uruguayenne en matière de normes de qualité de l'eau ne saurait être considéré comme une violation de l'alinéa *a)* de l'article 41 du statut de 1975, compte tenu de la teneur relativement élevée en phosphore total du fleuve avant la mise en service de l'usine et des mesures prises par l'Uruguay à titre de compensation.

248. La Cour en vient maintenant à l'examen de la question de la prolifération d'algues du 4 février 2009. L'Argentine a attribué celle-ci aux nutriments rejetés dans le fleuve par l'usine Orion (Botnia). A l'appui de cette assertion, elle renvoie à la présence d'effluents dans les algues bleues ainsi qu'à diverses images satellite montrant la concentration de chlorophylle dans l'eau. De telles proliférations se produisent, selon l'Argentine, pendant la saison chaude et sont dues à une croissance explosive d'algues, en particulier de cyanobactéries, consécutive à un enrichissement en nutriments, principalement des phosphates, entre autres éléments entrant dans la composition des détergents et fertilisants.

249. L'Uruguay soutient que la prolifération d'algues de février 2009 — et la forte concentration de chlorophylle — n'a pas été causée par l'usine Orion (Botnia), mais pourrait être apparue très en amont de celle-ci et s'explique très probablement non pas par les rejets d'effluents de l'usine, mais par l'afflux de visiteurs à l'occasion du carnaval annuel de Gualeguaychú et l'augmentation correspondante du volume des eaux usées. L'Uruguay soutient que les relevés de l'Argentine montrent en réalité que, depuis sa mise en service, l'usine Orion (Botnia) n'a à aucun moment provoqué l'augmentation de la concentration de phosphore dans le fleuve.

250. Les Parties sont d'accord sur plusieurs points en ce qui concerne la prolifération d'algues du 4 février 2009: elles conviennent notamment

increase over and above the standard value for any of the critical parameters." (DINAMA Report, p. 21.)

246. The Court further notes that the initial environmental authorization, granted on 15 February 2005, required compliance by Botnia with those conditions, with CARU standards and with best available techniques as included in the December 2001 IPPC-BAT of the European Commission. It also required the completion of an implementation plan for mitigation and compensation measures. That plan was completed by the end of 2007 and the authorization to operate was granted on 8 November 2007. On 29 April 2008, Botnia and the OSE concluded an Agreement Regarding Treatment of the Municipal Wastewater of Fray Bentos, aimed at reducing total phosphorus and other contaminants.

247. The Court considers that the amount of total phosphorus discharge into the river that may be attributed to the Orion (Botnia) mill is insignificant in proportionate terms as compared to the overall total phosphorus in the river from other sources. Consequently, the Court concludes that the fact that the level of concentration of total phosphorus in the river exceeds the limits established in Uruguayan legislation in respect of water quality standards cannot be considered as a violation of Article 41 *(a)* of the 1975 Statute in view of the river's relatively high total phosphorus content prior to the commissioning of the plant, and taking into account the action being taken by Uruguay by way of compensation.

248. The Court will now turn to the consideration of the issue of the algal bloom of 4 February 2009. Argentina claims that the algal bloom of 4 February 2009 was caused by the Orion (Botnia) mill's emissions of nutrients into the river. To substantiate this claim Argentina points to the presence of effluent products in the blue-green algal bloom and to various satellite images showing the concentration of chlorophyll in the water. Such blooms, according to Argentina, are produced during the warm season by the explosive growth of algae, particularly cyanobacteria, responding to nutrient enrichment, mainly phosphate, among other compounds present in detergents and fertilizers.

249. Uruguay contends that the algal bloom of February 2009, and the high concentration of chlorophyll, was not caused by the Orion (Botnia) mill but could have originated far upstream and may have most likely been caused by the increase of people present in Gualeyguaychú during the yearly carnival held in that town, and the resulting increase in sewage, and not by the mill's effluents. Uruguay maintains that Argentine data actually prove that the Orion (Botnia) mill has not added to the concentration of phosphorus in the river at any time since it began operating.

250. The Parties are in agreement on several points regarding the algal bloom of 4 February 2009, including the fact that the concentrations of

que les concentrations de nutriments dans le fleuve Uruguay ont atteint des niveaux élevés tant avant qu'après cet épisode, et que celui-ci a été très bref. Les Parties semblent également d'accord pour reconnaître l'existence de liens étroits entre prolifération d'algues, élévation des températures, faiblesse ou inversion du courant, et présence dans le fleuve de fortes concentrations de nutriments tels que l'azote et le phosphore. Il n'a toutefois pas été établi à la satisfaction de la Cour que la prolifération d'algues du 4 février 2009 avait été causée par les rejets de nutriments de l'usine Orion (Botnia).

iii) *Les substances phénoliques*

251. L'Argentine soutient que les rejets de polluants émanant de l'usine Orion (Botnia) ont, depuis la mise en service de celle-ci, enfreint la norme relative aux substances phénoliques établie par la CARU, les données de référence antérieures à l'exploitation ne faisant apparaître aucun dépassement des valeurs maximales fixées par celle-ci. L'Uruguay, pour sa part, affirme que ces valeurs ont été maintes fois dépassées, sur toute la longueur du fleuve, bien avant le démarrage des activités de l'usine. A l'appui de cette assertion, il cite plusieurs études, dont l'étude d'impact cumulé finale réalisée par EcoMetrix selon laquelle le taux maximal de substances phénoliques, fixé à 0,001 mg/l par la norme de qualité de l'eau de la CARU, a fréquemment été dépassé.

252. La Cour note également que, selon les données fournies par l'Uruguay, des valeurs supérieures à la limite autorisée par la norme de la qualité de l'eau avaient été observées bien avant la mise en service de l'usine. Ainsi, selon l'étude d'impact cumulé finale réalisée en septembre 2006 par EcoMetrix à la demande de la SFI, les substances phénoliques ont fréquemment excédé la limite autorisée, les concentrations les plus élevées étant mesurées dans la partie argentine du fleuve. Certains relevés figurant dans le rapport le plus récent soumis à la Cour indiquent encore des concentrations excessives, mais la plupart enregistrent des valeurs inférieures à la limite autorisée (Rapport de la DINAMA sur la qualité de l'eau de juillet 2009, p. 21, par. 4.1.11.2 et appendice I, qui indique des taux compris entre 0,0005 et 0,012 mg/l).

253. Un conseil de l'Argentine a fait valoir à l'audience que c'était l'activité de l'usine qui avait entraîné des dépassements des valeurs limites, lesquels n'avaient jamais été observés antérieurement. Les concentrations de substances polluantes, a-t-il déclaré, avaient en moyenne triplé, la valeur maximale étant vingt fois supérieure à la valeur autorisée. Selon l'Uruguay, les données figurant dans le rapport de juillet 2009 de la DINAMA indiquent que les concentrations de substances phénoliques mesurées après la mise en service étaient inférieures aux valeurs de référence sur l'ensemble du fleuve, y compris au niveau de la prise d'eau de l'OSE.

254. D'après les éléments versés au dossier, y compris les données fournies par les Parties, la Cour conclut que les éléments de preuve sont insuf-

nutrients in the River Uruguay have been at high levels both before and after the bloom episode, and the fact that the bloom disappeared shortly after it had begun. The Parties also appear to agree on the interdependence between algae growth, higher temperatures, low and reverse flows, and presence of high levels of nutrients such as nitrogen and phosphorus in the river. It has not, however, been established to the satisfaction of the Court that the algal bloom episode of 4 February 2009 was caused by the nutrient discharges from the Orion (Botnia) mill.

(iii) *Phenolic substances*

251. With regard to phenolic substances, Argentina contends that the Orion (Botnia) mill's emission of pollutants have resulted in violations of the CARU standard for phenolic substances once the plant started operating, while, according to Argentina, pre-operational baseline data did not show that standard to have been exceeded. Uruguay on the other hand argues that there have been numerous violations of the standard, throughout the river, long before the plant went into operation. Uruguay substantiates its arguments by pointing to several studies including the EcoMetrix final Cumulative Impact Study, which had concluded that phenolic substances were found to have frequently exceeded the water quality standard of 0.001 mg/L fixed by CARU.

252. The Court also notes that Uruguayan data indicate that the water quality standard was being exceeded from long before the plant began operating. The Cumulative Impact Study prepared in September 2006 by EcoMetrix for the IFC states that phenolics were found frequently to exceed the standard, with the highest values on the Argentine side of the river. The standard is still exceeded in some of the measurements in the most recent report before the Court but most are below it (DINAMA July 2009 Water Quality Report, p. 21, para. 4.1.11.2 and App. 1, showing measurements from 0.0005 to 0.012 mg/L).

253. During the oral proceedings, counsel for Argentina claimed that the standard had not previously been exceeded and that the plant has caused the limit to be exceeded. The concentrations, he said, had increased on average by three times and the highest figure was 20 times higher. Uruguay contends that the data contained in the DINAMA 2009 Report shows that the post-operational levels of phenolic substances were lower than the baseline levels throughout the river including at the OSE water intake.

254. Based on the record, and the data presented by the Parties, the Court concludes that there is insufficient evidence to attribute the alleged

fisants pour attribuer l'augmentation alléguée des concentrations de substances phénoliques dans le fleuve aux activités de l'usine Orion (Botnia).

iv) *La présence de nonylphénols dans le milieu aquatique*

255. L'Argentine affirme que l'usine Orion (Botnia) rejette, ou a rejeté, des nonylphénols, ce qui aurait un effet dommageable, ou ferait du moins peser une lourde menace, sur le milieu aquatique. Selon elle, la source de pollution la plus probable est à rechercher dans les agents tensioactifs (détergents), les éthoxylates de nonylphénol, utilisés pour nettoyer la pâte à papier et les équipements de l'usine elle-même. Toujours selon l'Argentine, l'analyse de 46 relevés a permis d'établir que les plus fortes concentrations de nonylphénols, notamment celles qui étaient supérieures aux normes pertinentes de l'Union européenne, se trouvaient dans les échantillons d'eau prélevés dans le tronçon situé en face et en aval de l'usine et dans les échantillons d'algues bleues ayant proliféré le 4 février 2009, avec des concentrations plus faibles en amont et en aval, laissant penser que les effluents rejetés par l'usine Orion (Botnia) étaient la source la plus probable de ces résidus. En outre, les prélèvements effectués sur les sédiments du fond du fleuve dans le tronçon situé en face et en aval de l'usine auraient montré que la concentration de nonylphénols avait augmenté rapidement entre septembre 2006 et février 2009, confirmant ainsi la présence accrue de ces composés dans le fleuve Uruguay. Pour l'Argentine, la répartition spatiale des effets sublétaux détectés chez les rotifères (absence de vertèbres), les coquillages asiatiques transplantés (réduction des réserves lipidiques) et les poissons (effets estrogènes) coïncidait avec le périmètre de distribution des nonylphénols, signe que ces composés pourraient avoir un effet perturbateur important.

256. L'Uruguay rejette les allégations de l'Argentine relatives aux nonylphénols et aux éthoxylates de nonylphénol, et dément catégoriquement l'usage de ces deux substances par l'usine Orion (Botnia). Il fournit des déclarations sous serment émanant de responsables de Botnia selon lesquelles l'usine n'utilise pas, et n'a jamais utilisé, de nonylphénols ou de dérivés d'éthoxylates de nonylphénol dans l'un quelconque de ses procédés de fabrication de pâte à papier, y compris au cours des opérations de lavage et de nettoyage de la pâte, et qu'aucun agent nettoyant contenant des nonylphénols n'est ou n'a été utilisé pour nettoyer les équipements de l'usine (déclaration sous serment de M. González, 2 octobre 2009).

257. La Cour tient à rappeler que la question des nonylphénols n'avait pas été soulevée en l'affaire avant que l'Argentine ne verse au dossier son rapport du 30 juin 2009. Bien que les concentrations de nonylphénols aient été mesurées depuis novembre 2008, l'Argentine n'a pas, de l'avis de la Cour, produit d'éléments de preuve établissant clairement un lien entre les nonylphénols présents dans les eaux du fleuve et l'usine Orion (Botnia). L'Uruguay a également démenti catégoriquement devant la Cour l'utilisation par l'usine Orion (Botnia) d'éthoxylates de nonylphénol dans ses procédés de fabrication et de nettoyage. La Cour est donc amenée à

increase in the level of concentrations of phenolic substances in the river to the operations of the Orion (Botnia) mill.

(iv) *Presence of nonylphenols in the river environment*

255. Argentina claims that the Orion (Botnia) mill emits, or has emitted, nonylphenols and thus has caused damage to, or at least has substantially put at risk, the river environment. According to Argentina, the most likely source of these emissions are surfactants (detergents), nonylphenolethoxylates used to clean the wood pulp as well as the installations of the plant itself. Argentina also contends that from 46 measurements performed in water samples the highest concentrations, in particular those exceeding the European Union relevant standards, were determined in front-downstream the mill and in the bloom sample collected on 4 February 2009, with lower levels upstream and downstream, indicating that the Orion (Botnia) mill effluent is the most probable source of these residues. In addition, according to Argentina, bottom sediments collected in front-downstream the mill showed a rapid increase of nonylphenols from September 2006 to February 2009, corroborating the increasing trend of these compounds in the River Uruguay. For Argentina, the spatial distribution of sub-lethal effects detected in rotifers (absence of spines), transplanted Asiatic clams (reduction of lipid reserves) and fish (estrogenic effects) coincided with the distribution area of nonylphenols suggesting that these compounds may be a significant stress factor.

256. Uruguay rejects Argentina's claim relating to nonylphenols and nonylphenolethoxylates, and categorically denies the use of nonylphenols and nonylphenolethoxylates by the Orion (Botnia) mill. In particular, it provides affidavits from Botnia officials to the effect that the mill does not use and has never used nonylphenols or nonylphenolethoxylate derivatives in any of its processes for the production of pulp, including in the pulp washing and cleaning stages, and that no cleaning agents containing nonylphenols are or have been used for cleaning the plant's equipment (Affidavit of Mr. González, 2 October 2009).

257. The Court recalls that the issue of nonylphenols was included in the record of the case before the Court only by the Report submitted by Argentina on 30 June 2009. Although testing for nonylphenols had been carried out since November 2008, Argentina has not however, in the view of the Court, adduced clear evidence which establishes a link between the nonylphenols found in the waters of the river and the Orion (Botnia) mill. Uruguay has also categorically denied before the Court the use of nonylphenolethoxylates for production or cleaning by the Orion (Botnia) mill. The Court therefore concludes that the evidence in

conclure que les éléments versés au dossier ne viennent pas étayer les allégations de l'Argentine.

v) *Les dioxines et furanes*

258. L'Argentine a affirmé que les concentrations de dioxines et de furanes étaient généralement très faibles dans les sédiments de surface, mais que les données issues de ses études laissaient apparaître une tendance à la hausse par rapport aux données recueillies avant la mise en service de l'usine Orion (Botnia). L'Argentine ne prétend pas que les normes établies n'ont pas été respectées, mais s'appuie sur un échantillonnage de poissons *sábalos* effectué par son équipe de surveillance, qui a révélé que l'un de ces poissons présentait des taux élevés de dioxines et de furanes, pour conclure à une présence de plus en plus notable de ces deux substances dans le fleuve depuis la mise en service de l'usine Orion (Botnia). L'Uruguay conteste cette assertion, affirmant que l'élévation de ces taux ne peut être attribuée à l'exploitation de l'usine Orion (Botnia) vu le nombre d'usines en service sur les rives du fleuve et dans la baie voisine de Nandubaysal, et le fait que le *sábalo* ayant fait l'objet de ce contrôle est une espèce de grands migrateurs. En outre, selon l'Uruguay, il ressort des résultats des analyses que ni dioxines ni furanes n'ont été introduits dans les effluents de l'usine Orion (Botnia) puisque les concentrations de ces deux substances n'étaient pas plus élevées, de manière mesurable, dans les effluents de l'usine que dans l'eau puisée dans le fleuve pour les besoins du processus de fabrication.

259. La Cour estime que les éléments de preuve ne permettent pas d'établir clairement un lien entre la présence accrue de dioxines et de furanes dans le fleuve et l'exploitation de l'usine Orion (Botnia).

d) *Effets sur la diversité biologique*

260. L'Argentine affirme que l'Uruguay «a négligé de prendre toutes les mesures propres à protéger et à préserver la diversité biologique du fleuve Uruguay et ses zones d'influence». Selon l'Argentine, l'obligation conventionnelle «de protéger et de préserver le milieu aquatique» comprend une obligation de protéger la diversité biologique du fleuve, y compris «les habitats et les espèces de la flore et de la faune». Par l'effet de la «clause de renvoi» contenue dans l'alinéa *a)* de l'article 41, l'Argentine soutient que le statut de 1975 impose à l'Uruguay, dans le cadre des activités qu'il entreprend sur le fleuve et dans ses zones d'influence, d'honorer les obligations découlant de la convention CITES, de la convention sur la diversité biologique et de la convention de Ramsar. Elle affirme que son programme de surveillance a permis de mettre en évidence des effets anormaux chez les organismes aquatiques — tels que la malformation des rotifères et la réduction des réserves lipidiques des coquillages — et une biomagnification de certains polluants persistants, comme les dioxines et les furanes, chez les poissons détritivores (tel le poisson *sábalo*). L'Argentine affirme également que, lors des inversions de courant,

the record does not substantiate the claims made by Argentina on this matter.

(v) *Dioxins and furans*

258. Argentina has alleged that while the concentration of dioxins and furans in surface sediments is generally very low, data from its studies demonstrated an increasing trend compared to data compiled before the Orion (Botnia) mill commenced operations. Argentina does not claim a violation of standards, but relies on a sample of *sábalo* fish tested by its monitoring team, which showed that one fish presented elevated levels of dioxins and furans which, according to Argentina, pointed to a rise in the incidence of dioxins and furans in the river after the commissioning of the Orion (Botnia) mill. Uruguay contests this claim, arguing that such elevated levels cannot be linked to the operation of the Orion (Botnia) mill, given the presence of so many other industries operating along the River Uruguay and in neighbouring Nandubaysal Bay, and the highly migratory nature of the *sábalo* species which was tested. In addition, Uruguay advances that its testing of the effluent coming from the Orion (Botnia) mill demonstrate that no dioxins and furans could have been introduced into the mill effluent, as the levels detected in the effluent were not measurably higher than the baseline levels in the River Uruguay.

259. The Court considers that there is no clear evidence to link the increase in the presence of dioxins and furans in the river to the operation of the Orion (Botnia) mill.

(d) *Effects on biodiversity*

260. Argentina asserts that Uruguay "has failed to take all measures to protect and preserve the biological diversity of the River Uruguay and the areas affected by it". According to Argentina, the treaty obligation "to protect and preserve the aquatic environment" comprises an obligation to protect the biological diversity including "habitats as well as species of flora and fauna". By virtue of the "referral clause" in Article 41 *(a)*, Argentina argues that the 1975 Statute requires Uruguay, in respect of activities undertaken in the river and areas affected by it, to comply with the obligations deriving from the CITES Convention, the Biodiversity Convention and the Ramsar Convention. Argentina maintains that through its monitoring programme abnormal effects were detected in aquatic organisms — such as malformation of rotifers and loss of fat by clams — and the biomagnification of persistent pollutants such as dioxins and furans was detected in detritus feeding fish (such as the sábalo fish). Argentina also contends that the operation of the mill poses a threat, under conditions of reverse flow, to the Esteros de Farrapos site, situated "in the lower section of the River . . . downstream from

l'exploitation de l'usine fait peser un risque sur le site d'Esteros de Farrapos, situé sur le cours inférieur du fleuve Uruguay «en aval du barrage de Salto Grande et à la frontière avec l'Argentine», à quelques kilomètres en amont de l'usine Orion (Botnia).

261. L'Uruguay affirme que l'Argentine n'a pas démontré qu'il avait commis la moindre violation de la convention sur la diversité biologique, tandis que la convention de Ramsar est sans pertinence en l'espèce puisque le site d'Esteros de Farrapos ne figure pas sur la liste des sites Ramsar dont les caractéristiques écologiques sont menacées. Quant à la possibilité que le panache d'effluents provenant de l'usine atteigne Esteros de Farrapos, l'Uruguay a reconnu à l'audience qu'un tel phénomène pouvait se produire lorsque certaines conditions étaient réunies. Toutefois l'Uruguay a ajouté que l'on peut s'attendre à ce que la dilution des effluents de l'usine au 1/1000 rende ces derniers relativement inoffensifs, étant ramenée bien en deçà de toute concentration constitutive de pollution. L'Uruguay soutient que les allégations de l'Argentine concernant les effets préjudiciables des effluents de l'usine Orion (Botnia) sur les poissons et les rotifères ne sont pas crédibles. Il renvoie à un rapport détaillé récemment publié par la DINAMA sur l'ichtyofaune, selon lequel la biodiversité des espèces n'a pas changé entre 2008 et 2009. L'Uruguay ajoute que, dans son rapport de juillet 2009 sur les résultats des analyses effectuées en février 2009 sur les sédiments dans lesquels s'alimentent certaines espèces de poissons, la DINAMA a déclaré que «la qualité des sédiments au fond du fleuve Uruguay n'a[vait] pas été altérée du fait de l'activité industrielle de l'usine Botnia».

262. De l'avis de la Cour, dans le cadre de leur obligation de préserver le milieu aquatique, les Parties ont le devoir de protéger la faune et la flore du fleuve. Les normes et les mesures qu'elles sont tenues d'adopter au titre de l'article 41 devraient également refléter leurs engagements internationaux en matière de protection de la biodiversité et des habitats, outre les autres normes relatives à la qualité de l'eau et aux rejets d'effluents. La Cour ne dispose cependant pas d'éléments de preuve suffisants pour lui permettre de conclure que l'Uruguay n'a pas respecté l'obligation lui incombant de préserver le milieu aquatique, y compris en protégeant la faune et la flore. Les éléments recueillis montrent plutôt qu'aucun lien n'a pu être clairement établi entre les effluents de l'usine Orion (Botnia) et les malformations des rotifères, les concentrations de dioxines mesurées chez le *sábalo* ou la réduction des réserves lipidiques des coquillages, dont il est fait état dans les constatations du programme de surveillance environnementale du fleuve Uruguay mis en œuvre par l'Argentine (programme URES).

e) *Pollution atmosphérique*

263. L'Argentine affirme que l'usine Orion (Botnia) a provoqué une pollution atmosphérique, sonore et visuelle qui a eu un impact négatif sur «le milieu aquatique», en violation de l'article 41 du statut de 1975. Elle

the Salto Grande dam and on the frontier with Argentina", a few kilometres upstream from the Orion (Botnia) mill.

261. Uruguay states that Argentina has failed to demonstrate any breach by Uruguay of the Biodiversity Convention, while the Ramsar Convention has no bearing in the present case because Esteros de Farrapos was not included in the list of Ramsar sites whose ecological character is threatened. With regard to the possibility of the effluent plume from the mill reaching Esteros de Farrapos, Uruguay in the oral proceedings acknowledged that under certain conditions that might occur. However, Uruguay added that it would be expected that the dilution of the effluent from the mill of 1:1000 would render the effluent quite harmless and below any concentration capable of constituting pollution. Uruguay contends that Argentina's claims regarding the harmful effects on fish and rotifers as a result of the effluents from the Orion (Botnia) mill are not credible. It points out that a recent comprehensive report of DINAMA on ichthyofauna concludes that compared to 2008 and 2009 there has been no change in species biodiversity. Uruguay adds that the July 2009 report of DINAMA, with results of its February 2009 monitoring of the sediments in the river where some fish species feed, stated that "the quality of the sediments at the bottom of the Uruguay River has not been altered as a consequence of the industrial activity of the Botnia plant".

262. The Court is of the opinion that as part of their obligation to preserve the aquatic environment, the Parties have a duty to protect the fauna and flora of the river. The rules and measures which they have to adopt under Article 41 should also reflect their international undertakings in respect of biodiversity and habitat protection, in addition to the other standards on water quality and discharges of effluent. The Court has not, however, found sufficient evidence to conclude that Uruguay breached its obligation to preserve the aquatic environment including the protection of its fauna and flora. The record rather shows that a clear relationship has not been established between the discharges from the Orion (Botnia) mill and the malformations of rotifers, or the dioxin found in the sábalo fish or the loss of fat by clams reported in the findings of the Argentine River Uruguay Environmental Surveillance (URES) programme.

(e) *Air pollution*

263. Argentina claims that the Orion (Botnia) mill has caused air, noise and visual pollution which negatively impact on "the aquatic environment" in violation of Article 41 of the 1975 Statute. Argentina also

fait également valoir que ce dernier a été conclu pour protéger non seulement la qualité des eaux, mais aussi, plus généralement, le «régime» et les «zones d'influence» du fleuve, c'est-à-dire «l'ensemble des éléments qui influencent, et qui sont influencés par, l'écosystème du fleuve pris dans son ensemble». L'Uruguay soutient que la Cour n'est pas compétente pour traiter ces questions et qu'en tout état de cause le bien-fondé des allégations de l'Argentine n'est pas établi.

264. Pour ce qui est de la pollution visuelle et sonore, la Cour a déjà conclu au paragraphe 52 que ces questions ne relevaient pas de sa compétence en vertu du statut de 1975. Pour ce qui est de la pollution atmosphérique, la Cour est d'avis que, si les rejets des cheminées de l'usine déposaient dans le milieu aquatique des substances nocives, cette pollution indirecte du fleuve relèverait des dispositions du statut de 1975. L'Uruguay semble adhérer à cette conclusion. Quoi qu'il en soit, eu égard aux conclusions de la Cour sur la qualité de l'eau, la Cour estime que les éléments versés au dossier n'établissent pas clairement que des substances toxiques ont été introduites dans le milieu aquatique en conséquence des rejets atmosphériques de l'usine Orion (Botnia).

f) *Conclusions relatives à l'article 41*

265. Il découle de ce qui précède que les éléments de preuve versés au dossier ne permettent pas d'établir de manière concluante que l'Uruguay n'a pas agi avec la diligence requise ou que les rejets d'effluents de l'usine Orion (Botnia) ont eu des effets délétères ou ont porté atteinte aux ressources biologiques, à la qualité des eaux ou à l'équilibre écologique du fleuve depuis le démarrage des activités de l'usine en novembre 2007. En conséquence, sur la base des preuves qui lui ont été présentées, la Cour conclut que l'Uruguay n'a pas violé ses obligations au titre de l'article 41.

g) *Obligations continues: suivi et contrôle*

266. De l'avis de la Cour, les deux Parties ont l'obligation de veiller à ce que la CARU, en tant que mécanisme commun créé par le statut de 1975, puisse continûment exercer les pouvoirs que lui confère le statut, y compris ses fonctions de surveillance de la qualité des eaux du fleuve et d'évaluation de l'impact de l'exploitation de l'usine Orion (Botnia) sur le milieu aquatique. L'Uruguay, pour sa part, a l'obligation de poursuivre le contrôle et le suivi du fonctionnement de l'usine conformément à l'article 41 du statut et de s'assurer que Botnia respecte la réglementation interne uruguayenne ainsi que les normes fixées par la commission. En vertu du statut de 1975, les Parties sont juridiquement tenues de poursuivre leur coopération par l'intermédiaire de la CARU et de permettre à cette dernière de développer les moyens nécessaires à la promotion de l'utilisation équitable du fleuve, tout en protégeant le milieu aquatique.

* *

argues that the 1975 Statute was concluded not only to protect the quality of the waters, but also, more generally, the "régime" of the river and "the areas affected by it, i.e., all the factors that affect, and are affected by the ecosystem of the river as a whole". Uruguay contends that the Court has no jurisdiction over those matters and that, in any event, the claims are not established on the merits.

264. With respect to noise and visual pollution, the Court has already concluded in paragraph 52 that it has no jurisdiction on such matters under the 1975 Statute. As regards air pollution, the Court is of the view that if emissions from the plant's stacks have deposited into the aquatic environment substances with harmful effects, such indirect pollution of the river would fall under the provisions of the 1975 Statute. Uruguay appears to agree with this conclusion. Nevertheless, in view of the findings of the Court with respect to water quality, it is the opinion of the Court that the record does not show any clear evidence that substances with harmful effects have been introduced into the aquatic environment of the river through the emissions of the Orion (Botnia) mill into the air.

(f) *Conclusions on Article 41*

265. It follows from the above that there is no conclusive evidence in the record to show that Uruguay has not acted with the requisite degree of due diligence or that the discharges of effluent from the Orion (Botnia) mill have had deleterious effects or caused harm to living resources or to the quality of the water or the ecological balance of the river since it started its operations in November 2007. Consequently, on the basis of the evidence submitted to it, the Court concludes that Uruguay has not breached its obligations under Article 41.

(g) *Continuing obligations: monitoring*

266. The Court is of the opinion that both Parties have the obligation to enable CARU, as the joint machinery created by the 1975 Statute, to exercise on a continuous basis the powers conferred on it by the 1975 Statute, including its function of monitoring the quality of the waters of the river and of assessing the impact of the operation of the Orion (Botnia) mill on the aquatic environment. Uruguay, for its part, has the obligation to continue monitoring the operation of the plant in accordance with Article 41 of the Statute and to ensure compliance by Botnia with Uruguayan domestic regulations as well as the standards set by CARU. The Parties have a legal obligation under the 1975 Statute to continue their co-operation through CARU and to enable it to devise the necessary means to promote the equitable utilization of the river, while protecting its environment.

* *

V. Les demandes présentées par les Parties dans leurs conclusions finales

267. La Cour ayant conclu que l'Uruguay a manqué aux obligations de nature procédurale lui incombant en vertu du statut de 1975 (voir paragraphes 111, 122, 131, 149, 157 et 158 ci-dessus), il lui appartient de tirer les conséquences de ces faits internationalement illicites qui engagent la responsabilité internationale de l'Uruguay et de déterminer le contenu de celle-ci.

268. L'Argentine demande en premier lieu à la Cour de constater que l'Uruguay a violé les obligations de nature procédurale lui incombant en vertu du statut de 1975, et a engagé sa responsabilité internationale à ce titre. Elle demande aussi à la Cour d'ordonner à l'Uruguay la cessation immédiate de ces faits internationalement illicites.

269. La Cour considère que la constatation du comportement illicite de l'Uruguay en ce qui concerne ses obligations de nature procédurale constitue en elle-même une mesure de satisfaction pour l'Argentine. Les manquements de l'Uruguay aux obligations de nature procédurale ayant eu lieu par le passé et ayant pris fin, il n'y a pas lieu d'en ordonner la cessation.

270. L'Argentine estime toutefois qu'un constat d'illicéité constituerait une forme de réparation insuffisante, quand bien même la Cour constaterait que l'Uruguay n'a manqué à aucune obligation de fond découlant du statut de 1975, mais seulement à certaines de ses obligations de nature procédurale. L'Argentine soutient en effet que les obligations de nature procédurale et les obligations de fond prévues par le statut de 1975 sont étroitement liées et qu'on ne saurait les dissocier sous l'angle de la réparation, car les manquements aux premières continueraient à produire des effets indésirables alors même qu'ils auraient pris fin. En conséquence, l'Argentine estime que l'Uruguay est tenu de «rétablir sur le terrain et au plan juridique la situation qui existait avant la perpétration de[s] ... faits internationalement illicites». A ce titre, l'usine Orion (Botnia) devrait être démantelée. Selon l'Argentine, la *restitutio in integrum* serait en effet la forme de réparation de principe du fait internationalement illicite. En s'appuyant sur l'article 35 des articles de la Commission du droit international sur la responsabilité de l'Etat pour fait internationalement illicite, l'Argentine soutient que la restitution jouirait d'une priorité sur toutes les autres formes de réparation, sauf lorsqu'elle est «matériellement impossible» ou impose «une charge hors de toute proportion avec l'avantage qui dériverait de la restitution plutôt que de l'indemnisation». Elle expose que le démantèlement de l'usine n'est pas matériellement impossible et n'emporterait par ailleurs pas de charge hors de toute proportion dans le chef de l'Etat défendeur, dès lors que ce dernier a

> «souligné que la construction des usines ne reviendrait pas à constituer un fait accompli susceptible de porter préjudice aux droits de l'Argentine, et que la décision de poursuivre les travaux et de

V. The Claims Made by the Parties in Their Final Submissions

267. Having concluded that Uruguay breached its procedural obligations under the 1975 Statute (see paragraphs 111, 122, 131, 149, 157 and 158 above), it is for the Court to draw the conclusions following from these internationally wrongful acts giving rise to Uruguay's international responsibility and to determine what that responsibility entails.

268. Argentina first requests the Court to find that Uruguay has violated the procedural obligations incumbent on it under the 1975 Statute and has thereby engaged its international responsibility. Argentina further requests the Court to order that Uruguay immediately cease these internationally wrongful acts.

269. The Court considers that its finding of wrongful conduct by Uruguay in respect of its procedural obligations per se constitutes a measure of satisfaction for Argentina. As Uruguay's breaches of the procedural obligations occurred in the past and have come to an end, there is no cause to order their cessation.

270. Argentina nevertheless argues that a finding of wrongfulness would be insufficient as reparation, even if the Court were to find that Uruguay has not breached any substantive obligation under the 1975 Statute but only some of its procedural obligations. Argentina maintains that the procedural obligations and substantive obligations laid down in the 1975 Statute are closely related and cannot be severed from one another for purposes of reparation, since undesirable effects of breaches of the former persist even after the breaches have ceased. Accordingly, Argentina contends that Uruguay is under an obligation to "re-establish on the ground and in legal terms the situation that existed before [the] internationally wrongful acts were committed". To this end, the Orion (Botnia) mill should be dismantled. According to Argentina, *restitutio in integrum* is the primary form of reparation for internationally wrongful acts. Relying on Article 35 of the International Law Commission's Articles on the Responsibility of States for Internationally Wrongful Acts, Argentina maintains that restitution takes precedence over all other forms of reparation except where it is "materially impossible" or involves "a burden out of all proportion to the benefit deriving from restitution instead of compensation". It asserts that dismantling the mill is not materially impossible and would not create for the Respondent State a burden out of all proportion, since the Respondent has

> "maintained that construction of the mills would not amount to a fait accompli liable to prejudice Argentina's rights and that it was for Uruguay alone to decide whether to proceed with construction

prendre ainsi le risque de devoir démanteler les usines en cas de décision défavorable de la Cour relevait de sa seule responsabilité»,

ainsi que la Cour l'a noté dans son ordonnance sur la demande en indication de mesures conservatoires soumise par l'Argentine en la présente affaire (*ordonnance du 13 juillet 2006, C.I.J. Recueil 2006*, p. 125, par. 47). L'Argentine ajoute que le caractère éventuellement disproportionné de la restitution doit s'apprécier au plus tard au moment du dépôt de la requête introductive d'instance, puisque dès cet instant l'Uruguay ne pouvait ignorer le risque qu'il encourait en poursuivant la construction de l'usine litigieuse, ayant connaissance de la demande argentine de cessation des travaux et de rétablissement de la situation antérieure. L'Argentine considère enfin que les articles 42 et 43 du statut de 1975 sont inapplicables en l'espèce car ils établissent un régime de responsabilité en l'absence de fait illicite.

271. Considérant que les obligations de nature procédurale sont distinctes des obligations de fond prévues par le statut de 1975, et que le contenu de la règle en cause doit être pris en compte pour déterminer la forme que doit prendre l'obligation de réparer découlant de sa violation, l'Uruguay soutient que la restitution ne serait pas une forme de réparation appropriée s'il n'était trouvé responsable que de manquements à des obligations de nature procédurale. L'Uruguay souligne qu'en toute hypothèse le démantèlement de l'usine Orion (Botnia) emporterait une «disproportion frappante entre la gravité des conséquences du fait illicite reproché et celles du remède demandé», le caractère éventuellement disproportionné de la charge que représente la restitution devant s'apprécier au moment où la Cour statue et non, comme le soutient l'Argentine, au moment de sa saisine. L'Uruguay ajoute que le statut de 1975 constitue une *lex specialis* au regard du droit de la responsabilité internationale, ses articles 42 et 43 érigeant l'indemnisation, et non la restitution, comme la forme de réparation appropriée en cas de pollution du fleuve survenant en violation du statut de 1975.

272. N'ayant pas été saisie d'une demande de réparation fondée sur un régime de responsabilité en l'absence de fait illicite, la Cour n'estime pas nécessaire de déterminer si les articles 42 et 43 du statut de 1975 établissent un tel régime. Il ne saurait par contre être déduit du texte desdits articles, qui visent spécifiquement des cas de pollution, qu'ils auraient pour objet ou pour effet d'écarter toute autre forme de réparation que l'indemnisation en cas de manquement aux obligations de nature procédurale découlant du statut de 1975.

273. La Cour rappelle que, selon le droit international coutumier, la restitution est l'une des formes de réparation du préjudice; elle consiste dans le rétablissement de la situation qui existait avant la survenance du fait illicite. La Cour rappelle également que, dans les cas où la restitution est matériellement impossible ou emporte une charge hors de toute proportion avec l'avantage qui en dériverait, la réparation prend alors la forme de l'indemnisation ou de la satisfaction, voire de l'indemnisation et

> and thereby assume the risk of having to dismantle the mills in the event of an adverse decision by the Court",

as the Court noted in its Order on Argentina's request for the indication of provisional measures in this case (*Order of 13 July 2006, I.C.J. Reports 2006*, p. 125, para. 47). Argentina adds that whether or not restitution is disproportionate must be determined at the latest as of the filing of the Application instituting proceedings, since as from that time Uruguay, knowing of Argentina's request to have the work halted and the *status quo ante* re-established, could not have been unaware of the risk it ran in proceeding with construction of the disputed mill. Lastly, Argentina considers Articles 42 and 43 of the 1975 Statute to be inapplicable in the present case, since they establish a régime of responsibility in the absence of any wrongful act.

271. Taking the view that the procedural obligations are distinct from the substantive obligations laid down in the 1975 Statute, and that account must be taken of the purport of the rule breached in determining the form to be taken by the obligation of reparation deriving from its violation, Uruguay maintains that restitution would not be an appropriate form of reparation if Uruguay is found responsible only for breaches of procedural obligations. Uruguay argues that the dismantling of the Orion (Botnia) mill would at any rate involve a "striking disproportion between the gravity of the consequences of the wrongful act of which it is accused and those of the remedy claimed", and that whether or not a disproportionate burden would result from restitution must be determined as of when the Court rules, not, as Argentina claims, as of the date it was seised. Uruguay adds that the 1975 Statute constitutes a *lex specialis* in relation to the law of international responsibility, as Articles 42 and 43 establish compensation, not restitution, as the appropriate form of reparation for pollution of the river in contravention of the 1975 Statute.

272. The Court, not having before it a claim for reparation based on a régime of responsibility in the absence of any wrongful act, deems it unnecessary to determine whether Articles 42 and 43 of the 1975 Statute establish such a régime. But it cannot be inferred from these Articles, which specifically concern instances of pollution, that their purpose or effect is to preclude all forms of reparation other than compensation for breaches of procedural obligations under the 1975 Statute.

273. The Court recalls that customary international law provides for restitution as one form of reparation for injury, restitution being the re-establishment of the situation which existed before occurrence of the wrongful act. The Court further recalls that, where restitution is materially impossible or involves a burden out of all proportion to the benefit deriving from it, reparation takes the form of compensation or satisfaction, or even both (see *Gabčíkovo-Nagymaros Project (Hungary/Slovakia),*

de la satisfaction (voir *Projet Gabčíkovo-Nagymaros (Hongrie/Slovaquie), arrêt, C.I.J. Recueil 1997*, p. 81, par. 152; *Conséquences juridiques de l'édification d'un mur dans le territoire palestinien occupé, avis consultatif, C.I.J. Recueil 2004 (I)*, p. 198, par. 152-153; *Application de la convention pour la prévention et la répression du crime de génocide (Bosnie-Herzégovine c. Serbie-et-Monténégro), arrêt, C.I.J. Recueil 2007 (I)*, p. 233, par. 460; voir également les articles 34 à 37 des articles de la Commission du droit international sur la responsabilité de l'Etat pour fait internationalement illicite).

274. Tout comme les autres formes de réparation, la restitution doit être appropriée au préjudice subi, compte tenu de la nature du fait illicite dont il procède. Comme la Cour l'a souligné,

> «savoir ce qui constitue «une réparation dans une forme adéquate» ... dépend, manifestement, des circonstances concrètes de chaque affaire ainsi que de la nature exacte et de l'importance du préjudice, puisqu'il s'agit de déterminer quelle est la «réparation dans une forme adéquate» qui correspond à ce préjudice» (*Avena et autres ressortissants mexicains (Mexique c. Etats-Unis d'Amérique), arrêt, C.I.J. Recueil 2004 (I)*, p. 59, par. 119).

275. Comme la Cour a eu l'occasion de le montrer (voir paragraphes 154 à 157 ci-dessus), les obligations de nature procédurale du statut de 1975 n'emportaient pas, après l'expiration de la période de négociation, l'interdiction pour l'Uruguay de construire l'usine Orion (Botnia) en l'absence du consentement de l'Argentine. La Cour a relevé cependant que la construction de cette usine avait commencé avant la fin des négociations, en violation des obligations de nature procédurale énoncées par le statut de 1975. Par ailleurs, ainsi que la Cour l'a constaté sur la base des éléments de preuve qui lui ont été soumis, le fonctionnement de l'usine Orion (Botnia) n'a pas entraîné une violation des obligations de fond prévues par le statut de 1975 (paragraphes 180, 189 et 265 ci-dessus). Dès lors qu'il n'était pas interdit à l'Uruguay de construire et de mettre en service l'usine Orion (Botnia) après l'expiration de la période de négociation, et que l'Uruguay n'a violé aucune des obligations de fond imposées par le statut de 1975, ordonner le démantèlement de cette installation ne saurait constituer, de l'avis de la Cour, une forme de réparation appropriée à la violation des obligations de nature procédurale.

276. L'Uruguay n'ayant pas manqué aux obligations de fond découlant du statut de 1975, la Cour ne saurait davantage, pour les mêmes raisons, accueillir la demande de l'Argentine relative à l'indemnisation de certains préjudices dans différents secteurs économiques, notamment le tourisme et l'agriculture, dont elle allègue l'existence.

277. L'Argentine demande aussi à la Cour de dire et juger que l'Uruguay doit «donner des garanties adéquates qu'[il] s'abstiendra à l'avenir d'empêcher l'application du statut du fleuve Uruguay de 1975 et, en particulier, du mécanisme de consultation institué par le chapitre II de ce traité».

Judgment, I.C.J. Reports 1997, p. 81, para. 152; *Legal Consequences of the Construction of a Wall in the Occupied Palestinian Territory, Advisory Opinion, I.C.J. Reports 2004 (I)*, p. 198, paras. 152-153; *Application of the Convention on the Prevention and Punishment of the Crime of Genocide (Bosnia and Herzegovina* v. *Serbia and Montenegro), Judgment, I.C.J. Reports 2007 (I)*, p. 233, para. 460; see also Articles 34 to 37 of the International Law Commission Articles on the Responsibility of States for Internationally Wrongful Acts).

274. Like other forms of reparation, restitution must be appropriate to the injury suffered, taking into account the nature of the wrongful act having caused it. As the Court has made clear,

> "[w]hat constitutes 'reparation in an adequate form' clearly varies depending upon the concrete circumstances surrounding each case and the precise nature and scope of the injury, since the question has to be examined from the viewpoint of what is the 'reparation in an adequate form' that corresponds to the injury" (*Avena and Other Mexican Nationals (Mexico* v. *United States of America), Judgment, I.C.J. Reports 2004 (I)*, p. 59, para. 119).

275. As the Court has pointed out (see paragraphs 154 to 157 above), the procedural obligations under the 1975 Statute did not entail any ensuing prohibition on Uruguay's building of the Orion (Botnia) mill, failing consent by Argentina, after the expiration of the period for negotiation. The Court has however observed that construction of that mill began before negotiations had come to an end, in breach of the procedural obligations laid down in the 1975 Statute. Further, as the Court has found, on the evidence submitted to it, the operation of the Orion (Botnia) mill has not resulted in the breach of substantive obligations laid down in the 1975 Statute (paragraphs 180, 189 and 265 above). As Uruguay was not barred from proceeding with the construction and operation of the Orion (Botnia) mill after the expiration of the period for negotiation and as it breached no substantive obligation under the 1975 Statute, ordering the dismantling of the mill would not, in the view of the Court, constitute an appropriate remedy for the breach of procedural obligations.

276. As Uruguay has not breached substantive obligations arising under the 1975 Statute, the Court is likewise unable, for the same reasons, to uphold Argentina's claim in respect of compensation for alleged injuries suffered in various economic sectors, specifically tourism and agriculture.

277. Argentina further requests the Court to adjudge and declare that Uruguay must "provide adequate guarantees that it will refrain in future from preventing the Statute of the River Uruguay of 1975 from being applied, in particular the consultation procedure established by Chapter II of that Treaty".

278. La Cour n'aperçoit pas en la présente espèce de circonstances spéciales requérant d'ordonner une mesure telle que celle que réclame l'Argentine. Comme la Cour a eu récemment l'occasion de le rappeler :

> «[S]i la Cour peut, comme il lui est arrivé de le faire, ordonner à l'Etat responsable d'un comportement internationalement illicite d'offrir à l'Etat lésé des assurances et des garanties de non-répétition, c'est seulement si les circonstances le justifient, ce qu'il lui appartient d'apprécier.
>
> En règle générale, il n'y a pas lieu de supposer que l'Etat dont un acte ou un comportement a été déclaré illicite par la Cour répétera à l'avenir cet acte ou ce comportement, puisque sa bonne foi doit être présumée (voir *Usine de Chorzów, fond, arrêt n° 13, 1928, C.P.J.I. série A n° 17*, p. 63 ; *Essais nucléaires (Australie c. France), arrêt, C.I.J. Recueil 1974*, p. 272, par. 60 ; *Essais nucléaires (Nouvelle-Zélande c. France), arrêt, C.I.J. Recueil 1974*, p. 477, par. 63 ; et *Activités militaires et paramilitaires au Nicaragua et contre celui-ci (Nicaragua c. Etats-Unis d'Amérique), compétence et recevabilité, arrêt, C.I.J. Recueil 1984*, p. 437, par. 101). Il n'y a donc pas lieu, sauf circonstances spéciales ... d'ordonner [que des assurances et des garanties de non-répétition soient offertes].» (*Différend relatif à des droits de navigation et des droits connexes (Costa Rica c. Nicaragua), arrêt, C.I.J. Recueil 2009*, p. 267, par. 150.)

279. L'Uruguay demande pour sa part à la Cour de confirmer son droit «de poursuivre l'exploitation de l'usine Botnia conformément aux dispositions du statut de 1975». L'Argentine estime que cette demande doit être rejetée, notamment parce que, ayant été formulée pour la première fois dans la duplique de l'Uruguay, elle constituerait une demande reconventionnelle irrecevable au regard de l'article 80 du Règlement.

280. Sans qu'il soit nécessaire à la Cour de trancher la question de recevabilité de cette demande, il lui suffit de constater que la demande de l'Uruguay n'a aucune portée utile dès lors que les demandes de l'Argentine relatives aux violations, par l'Uruguay, de ses obligations de fond et au démantèlement de l'usine Orion (Botnia) ont été rejetées.

* * *

281. La Cour souligne enfin que le statut de 1975 impose aux Parties de coopérer entre elles, selon les modalités qu'il précise, afin d'assurer la réalisation de son objet et de son but. Cette obligation de coopération s'étend au contrôle et au suivi d'une installation industrielle, telle que l'usine Orion (Botnia). A cet égard, la Cour relève qu'il existe entre les Parties une longue et efficace tradition de coopération et de coordination dans le cadre de la CARU. En agissant conjointement au sein de la CARU, les Parties ont établi une réelle communauté d'intérêts et de droits dans la gestion du fleuve Uruguay et dans la protection de son environnement. Elles ont également coordonné leurs actions au moyen

278. The Court fails to see any special circumstances in the present case requiring the ordering of a measure such as that sought by Argentina. As the Court has recently observed:

> "[W]hile the Court may order, as it has done in the past, a State responsible for internationally wrongful conduct to provide the injured State with assurances and guarantees of non-repetition, it will only do so if the circumstances so warrant, which it is for the Court to assess.
>
> As a general rule, there is no reason to suppose that a State whose act or conduct has been declared wrongful by the Court will repeat that act or conduct in the future, since its good faith must be presumed (see *Factory at Chorzów, Merits, Judgment No. 13, 1928, P.C.I.J., Series A, No. 17*, p. 63; *Nuclear Tests (Australia* v. *France), Judgment, I.C.J. Reports 1974*, p. 272, para. 60; *Nuclear Tests (New Zealand* v. *France), Judgment, I.C.J. Reports 1974*, p. 477, para. 63; and *Military and Paramilitary Activities in and against Nicaragua (Nicaragua* v. *United States of America), Jurisdiction and Admissibility, Judgment, I.C.J. Reports 1984*, p. 437, para. 101). There is thus no reason, except in special circumstances . . . to order [the provision of assurances and guarantees of non-repetition]." (*Dispute regarding Navigational and Related Rights (Costa Rica* v. *Nicaragua), Judgment, I.C.J. Reports 2009*, p. 267, para. 150.)

279. Uruguay, for its part, requests the Court to confirm its right "to continue operating the Botnia plant in conformity with the provisions of the 1975 Statute". Argentina contends that this claim should be rejected, in particular because it is a counter-claim first put forward in Uruguay's Rejoinder and, as such, is inadmissible by virtue of Article 80 of the Rules of Court.

280. There is no need for the Court to decide the admissibility of this claim; it is sufficient to observe that Uruguay's claim is without any practical significance, since Argentina's claims in relation to breaches by Uruguay of its substantive obligations and to the dismantling of the Orion (Botnia) mill have been rejected.

* * *

281. Lastly, the Court points out that the 1975 Statute places the Parties under a duty to co-operate with each other, on the terms therein set out, to ensure the achievement of its object and purpose. This obligation to co-operate encompasses ongoing monitoring of an industrial facility, such as the Orion (Botnia) mill. In that regard the Court notes that the Parties have a long-standing and effective tradition of co-operation and co-ordination through CARU. By acting jointly through CARU, the Parties have established a real community of interests and rights in the management of the River Uruguay and in the protection of its environment. They have also co-ordinated their actions through the joint

du mécanisme conjoint constitué par la CARU, conformément aux dispositions du statut de 1975, et trouvé dans ce cadre des solutions appropriées à leurs divergences sans éprouver la nécessité d'avoir recours au règlement judiciaire des différends prévu à l'article 60 du statut, jusqu'à ce que la présente affaire soit portée devant la Cour.

* * *

282. Par ces motifs,

La COUR,

1) Par treize voix contre une,

Dit que la République orientale de l'Uruguay a manqué aux obligations de nature procédurale lui incombant en vertu des articles 7 à 12 du statut du fleuve Uruguay de 1975 et que la constatation par la Cour de cette violation constitue une satisfaction appropriée;

POUR : M. Tomka, *vice-président, faisant fonction de président en l'affaire*; MM. Koroma, Al-Khasawneh, Simma, Abraham, Keith, Sepúlveda-Amor, Bennouna, Skotnikov, Cançado Trindade, Yusuf, Greenwood, *juges*; M. Vinuesa, *juge* ad hoc;

CONTRE : M. Torres Bernárdez, *juge* ad hoc;

2) Par onze voix contre trois,

Dit que la République orientale de l'Uruguay n'a pas manqué aux obligations de fond lui incombant en vertu des articles 35, 36 et 41 du statut du fleuve Uruguay de 1975;

POUR : M. Tomka, *vice-président, faisant fonction de président en l'affaire*; MM. Koroma, Abraham, Keith, Sepúlveda-Amor, Bennouna, Skotnikov, Cançado Trindade, Yusuf, Greenwood, *juges*; M. Torres Bernárdez, *juge* ad hoc;

CONTRE : MM. Al-Khasawneh, Simma, *juges*; M. Vinuesa, *juge* ad hoc;

3) A l'unanimité,

Rejette le surplus des conclusions des Parties.

Fait en français et en anglais, le texte français faisant foi, au Palais de la Paix, à La Haye, le vingt avril deux mille dix, en trois exemplaires, dont l'un sera déposé aux archives de la Cour et les autres seront transmis respectivement au Gouvernement de la République argentine et au Gouvernement de la République orientale de l'Uruguay.

Le vice-président,
(Signé) Peter TOMKA.

Le greffier,
(Signé) Philippe COUVREUR.

mechanism of CARU, in conformity with the provisions of the 1975 Statute, and found appropriate solutions to their differences within its framework without feeling the need to resort to the judicial settlement of disputes provided for in Article 60 of the Statute until the present case was brought before the Court.

* * *

282. For these reasons,

THE COURT,

(1) By thirteen votes to one,

Finds that the Eastern Republic of Uruguay has breached its procedural obligations under Articles 7 to 12 of the 1975 Statute of the River Uruguay and that the declaration by the Court of this breach constitutes appropriate satisfaction;

IN FAVOUR: *Vice-President* Tomka, *Acting President*; *Judges* Koroma, Al-Khasawneh, Simma, Abraham, Keith, Sepúlveda-Amor, Bennouna, Skotnikov, Cançado Trindade, Yusuf, Greenwood; *Judge* ad hoc Vinuesa;

AGAINST: *Judge* ad hoc Torres Bernárdez;

(2) By eleven votes to three,

Finds that the Eastern Republic of Uruguay has not breached its substantive obligations under Articles 35, 36 and 41 of the 1975 Statute of the River Uruguay;

IN FAVOUR: *Vice-President* Tomka, *Acting President*; *Judges* Koroma, Abraham, Keith, Sepúlveda-Amor, Bennouna, Skotnikov, Cançado Trindade, Yusuf, Greenwood; *Judge* ad hoc Torres Bernárdez;

AGAINST: *Judges* Al-Khasawneh, Simma; *Judge* ad hoc Vinuesa;

(3) Unanimously,

Rejects all other submissions by the Parties.

Done in French and in English, the French text being authoritative, at the Peace Palace, The Hague, this twentieth day of April, two thousand and ten, in three copies, one of which will be placed in the archives of the Court and the others transmitted to the Government of the Argentine Republic and the Government of the Eastern Republic of Uruguay, respectively.

AFFAIRE RELATIVE AU PROJET GABČÍKOVO-NAGYMAROS

(HONGRIE/SLOVAQUIE)

Traité du 16 septembre 1977 relatif à la construction et au fonctionnement du système d'écluses de Gabčikovo-Nagymaros — « Instruments y afférents ».

Suspension et abandon par la Hongrie, en 1989, de travaux relatifs au projet — Applicabilité de la convention de Vienne de 1969 sur le droit des traités — Droit des traités et droit de la responsabilité des Etats — Etat de nécessité en tant que cause d'exclusion de l'illicéité d'un fait — « Intérêt essentiel » de l'Etat auteur du fait — Environnement — « Péril grave et imminent » — Fait devant constituer le « seul moyen » de sauvegarder l'intérêt en cause — Etat ayant « contribué à la survenance de l'état de nécessité ».

Recours par la Tchécoslovaquie, en novembre 1991, à la « variante C » et mise en service, à partir d'octobre 1992, de cette variante — Argumentation tirée d'un principe allégué d'application par approximation — Respect des limites du traité — Droit à une part équitable et raisonnable des ressources d'un cours d'eau international — Réalisation d'un fait illicite et comportement antérieur présentant un caractère préparatoire — Obligation d'atténuer les dommages — Principe concernant seulement le calcul de dommages et intérêts — Contre-mesures — Riposte à un fait internationalement illicite — Proportionnalité — Prise de contrôle unilatérale d'une ressource partagée.

Notification par la Hongrie, le 19 mai 1992, de la terminaison du traité de 1977 et des instruments y afférents — Effets juridiques — Question relevant du droit des traités — Articles 60 à 62 de la convention de Vienne sur le droit des traités — Droit coutumier — Impossibilité d'exécution — Disparition ou destruction définitives d'un « objet » indispensable à l'exécution — Impossibilité d'exécution résultant de la violation, par la partie qui l'invoque, d'une obligation découlant du traité — Changement fondamental de circonstances — Base essentielle du consentement des parties — Portée des obligations restant à exécuter — Stabilité des relations conventionnelles — Violation substantielle du traité — Date à laquelle la violation a été commise et date de la notification de terminaison — Victime d'une violation ayant elle-même commis une violation préalable du traité — Emergence de nouvelles normes du droit de l'environnement

ting the parties, by mutual consent, to take account of those norms — Repudiation of the Treaty — Reciprocal non-compliance — Integrity of the rule pacta sunt servanda *— Treaty remaining in force until terminated by mutual consent.*

Legal consequences of the Judgment of the Court — Dissolution of Czechoslovakia — Article 12 of the Vienna Convention of 1978 on Succession of States in respect of Treaties — Customary law — Succession of States without effect on a treaty creating rights and obligations "attaching" to the territory — Irregular state of affairs as a result of failure of both Parties to comply with their treaty obligations — Ex injuria jus non oritur *— Objectives of the Treaty — Obligations overtaken by events — Positions adopted by the parties after conclusion of the Treaty — Good faith negotiations — Effects of the Project on the environment — Agreed solution to be found by the Parties — Joint régime — Reparation for acts committed by both Parties — Co-operation in the use of shared water resources — Damages — Succession in respect of rights and obligations relating to the Project — Intersecting wrongs — Settlement of accounts for the construction of the works.*

JUDGMENT

Present: *President* SCHWEBEL; *Vice-President* WEERAMANTRY; *Judges* ODA, BEDJAOUI, GUILLAUME, RANJEVA, HERCZEGH, SHI, FLEISCHHAUER, KOROMA, VERESHCHETIN, PARRA-ARANGUREN, KOOIJMANS, REZEK; *Judge* ad hoc SKUBISZEWSKI; *Registrar* VALENCIA-OSPINA.

In the case concerning the Gabčíkovo-Nagymaros Project,

between

the Republic of Hungary,

represented by

H.E. Mr. György Szénási, Ambassador, Head of the International Law Department, Ministry of Foreign Affairs,

as Agent and Counsel;

H.E. Mr. Dénes Tomaj, Ambassador of the Republic of Hungary to the Netherlands,

as Co-Agent;

Mr. James Crawford, Whewell Professor of International Law, University of Cambridge,

Mr. Pierre-Marie Dupuy, Professor at the University Panthéon-Assas (Paris II) and Director of the Institut des hautes études internationales of Paris,

Mr. Alexandre Kiss, Director of Research, Centre national de la recherche scientifique (retd.),

Mr. László Valki, Professor of International Law, Eötvös Loránd University, Budapest,

— Développement durable — Dispositions du traité permettant aux parties, d'un commun accord, de tenir compte de ces normes — Rejet du traité — Manquements réciproques — Intégrité de la règle pacta sunt servanda *— Traité demeurant en vigueur tant qu'il n'y est pas mis fin d'un commun accord.*

Conséquences juridiques de l'arrêt de la Cour — Dissolution de la Tchécoslovaquie — Article 12 de la convention de Vienne de 1978 sur la succession d'Etats en matière de traités — Droit coutumier — Succession d'Etats sans incidence sur un traité créant des droits et obligations «attachés» au territoire — Situation irrégulière due aux manquements des deux Parties à leurs obligations conventionnelles — Ex injuria jus non oritur *— Objectifs du traité — Obligations dépassées par les événements — Positions adoptées par les parties après la conclusion du traité — Négociations de bonne foi — Incidences du projet sur l'environnement — Solution à trouver de commun accord par les Parties — Régime conjoint — Réparation des actes commis par les deux Parties — Coopération pour l'utilisation des ressources en eau partagées — Dommages et intérêts — Succession en ce qui concerne les droits et obligations relatifs au projet — Actes illicites croisés — Règlement des comptes concernant la construction des ouvrages.*

ARRÊT

Présents: M. SCHWEBEL, *Président*; M. WEERAMANTRY, *Vice-Président*; MM. ODA, BEDJAOUI, GUILLAUME, RANJEVA, HERCZEGH, SHI, FLEISCHHAUER, KOROMA, VERESHCHETIN, PARRA-ARANGUREN, KOOIJMANS, REZEK, *juges*; M. SKUBISZEWSKI, *juge* ad hoc; M. VALENCIA-OSPINA, *Greffier*.

as Legal Assistants,

THE COURT,

composed as above,

after deliberation,

delivers the following Judgment:

1. By a letter dated 2 July 1993, filed in the Registry of the Court on the same day, the Ambassador of the Republic of Hungary (hereinafter called "Hungary") to the Netherlands and the Chargé d'affaires *ad interim* of the Slovak Republic (hereinafter called "Slovakia") to the Netherlands jointly notified to the Court a Special Agreement in English that had been signed at Brussels on 7 April 1993 and had entered into force on 28 June 1993, on the date of the exchange of instruments of ratification.

2. The text of the Special Agreement reads as follows:

d'études politiques de Paris, membre de la Commission du droit international,
M. Walter D. Sohier, membre des barreaux de l'Etat de New York et du district de Columbia,
sir Arthur Watts, K.C.M.G., Q.C., *Barrister*, membre du barreau d'Angleterre et du pays de Galles,
M. Samuel S. Wordsworth, avocat à la cour d'appel de Paris et *Solicitor* auprès de la Cour suprême d'Angleterre et du pays de Galles, Frere Cholmeley, Paris,

comme conseils et avocats;

M. Igor Mucha, professeur d'hydrogéologie et ancien directeur du département des eaux souterraines à la faculté des sciences naturelles de l'Université Comenius de Bratislava,
M. Karra Venkateswara Rao, directeur de la section des techniques d'aménagement hydrauliques du département du génie civil de la City University de Londres,
M. Jens Christian Refsgaard, directeur de la recherche et du développement à l'Institut danois d'hydraulique,

comme conseils et experts;

Mme Cecília Kandráčová, directeur de département au ministère des affaires étrangères,
M. Luděk Krajhanzl, avocat, cabinet Vyroubal Krajhanzl Skácel et associés, Prague,
M. Miroslav Liška, directeur de la division des relations publiques et de l'expertise de l'entreprise d'Etat pour la mise en valeur des ressources en eau, Bratislava,
M. Peter Vršanský, ministre conseiller, chargé d'affaires par intérim de l'ambassade de la République slovaque aux Pays-Bas,

comme conseillers;

Mlle Anouche Beaudouin, allocataire de recherche à l'Université de Paris X-Nanterre,
Mme Cheryl Dunn, Frere Cholmeley, Paris,
Mme Nikoleta Glindová, attachée au ministère des affaires étrangères,
M. Drahoslav Štefánek, attaché au ministère des affaires étrangères,

comme assistants juridiques,

LA COUR,

ainsi composée,

après délibéré en chambre du conseil,

rend l'arrêt suivant:

1. Par lettre en date du 2 juillet 1993, déposée au Greffe de la Cour le même jour, l'ambassadeur aux Pays-Bas de la République de Hongrie (dénommée ci-après la «Hongrie») et le chargé d'affaires par intérim aux Pays-Bas de la République slovaque (dénommée ci-après la «Slovaquie») ont notifié conjointement à la Cour un compromis en langue anglaise, signé à Bruxelles le 7 avril 1993 et entré en vigueur le 28 juin 1993 à la date de l'échange des instruments de ratification.

2. Dans sa traduction française, le texte du compromis se lit comme suit:

"*The Republic of Hungary and the Slovak Republic,*

Considering that differences have arisen between the Czech and Slovak Federal Republic and the Republic of Hungary regarding the implementation and the termination of the Treaty on the Construction and Operation of the Gabčíkovo-Nagymaros Barrage System signed in Budapest on 16 September 1977 and related instruments (hereinafter referred to as 'the Treaty'), and on the construction and operation of the 'provisional solution';

Bearing in mind that the Slovak Republic is one of the two successor States of the Czech and Slovak Federal Republic and the sole successor State in respect of rights and obligations relating to the Gabčíkovo-Nagymaros Project;

Recognizing that the Parties concerned have been unable to settle these differences by negotiations;

Having in mind that both the Czechoslovak and Hungarian delegations expressed their commitment to submit the differences connected with the Gabčíkovo-Nagymaros Project in all its aspects to binding international arbitration or to the International Court of Justice;

Desiring that these differences should be settled by the International Court of Justice;

Recalling their commitment to apply, pending the Judgment of the International Court of Justice, such a temporary water management régime of the Danube as shall be agreed between the Parties;

Desiring further to define the issues to be submitted to the International Court of Justice,

Have agreed as follows:

Article 1

The Parties submit the questions contained in Article 2 to the International Court of Justice pursuant to Article 40, paragraph 1, of the Statute of the Court.

Article 2

(1) The Court is requested to decide on the basis of the Treaty and rules and principles of general international law, as well as such other treaties as the Court may find applicable,

(a) whether the Republic of Hungary was entitled to suspend and subsequently abandon, in 1989, the works on the Nagymaros Project and on the part of the Gabčíkovo Project for which the Treaty attributed responsibility to the Republic of Hungary;

(b) whether the Czech and Slovak Federal Republic was entitled to proceed, in November 1991, to the 'provisional solution' and to put into operation from October 1992 this system, described in the Report of the Working Group of Independent Experts of the Commission of the European Communities, the Republic of Hungary and the Czech and Slovak Federal Republic dated 23 November 1992 (damming up of the Danube at river kilometre 1851.7 on Czechoslovak territory and resulting consequences on water and navigation course);

«*La République de Hongrie et la République slovaque*,

Considérant que des contestations ont surgi entre la République fédérative tchèque et slovaque et la République de Hongrie concernant l'application et la terminaison du traité relatif à la construction et au fonctionnement du système de barrage de Gabčíkovo-Nagymaros, signé à Budapest le 16 septembre 1977, et des instruments y afférents (ci-après dénommés le «traité»), ainsi que la construction et le fonctionnement de la «solution provisoire»;

Tenant compte de ce que la République slovaque est l'un des deux Etats successeurs de la République fédérative tchèque et slovaque et l'unique Etat successeur en ce qui concerne les droits et obligations relatifs au projet Gabčíkovo-Nagymaros;

Reconnaissant que les parties concernées ne sont pas parvenues à régler ces contestations par voie de négociation;

Ayant à l'esprit que tant la délégation tchécoslovaque que la délégation hongroise ont déclaré qu'elles s'engageaient à soumettre les contestations liées au projet Gabčíkovo-Nagymaros sous tous ses aspects à un arbitrage international obligatoire ou à la Cour internationale de Justice;

Souhaitant que ces contestations soient réglées par la Cour internationale de Justice;

Rappelant qu'elles se sont engagées à appliquer, en attendant l'arrêt de la Cour internationale de Justice, le régime temporaire de gestion des eaux du Danube dont seront convenues les Parties;

Désirant en outre définir les questions à soumettre à la Cour internationale de Justice,

Sont convenues de ce qui suit:

Article premier

Les Parties soumettent à la Cour internationale de Justice, conformément au paragraphe 1 de l'article 40 du Statut de la Cour, les questions énoncées à l'article 2 ci-après.

Article 2

1) La Cour est priée de dire, sur la base du traité et des règles et principes du droit international général, ainsi que de tous autres traités qu'elle jugera applicables:

a) si la République de Hongrie était en droit de suspendre puis d'abandonner, en 1989, les travaux relatifs au projet de Nagymaros ainsi qu'à la partie du projet de Gabčíkovo dont la République de Hongrie est responsable aux termes du traité;

b) si la République fédérative tchèque et slovaque était en droit de recourir, en novembre 1991, à la «solution provisoire» et de mettre en service, à partir d'octobre 1992, ce système, décrit dans le rapport en date du 23 novembre 1992 du groupe de travail d'experts indépendants nommés par la Commission des Communautés européennes, la République de Hongrie et la République fédérative tchèque et slovaque (construction d'un barrage sur le Danube au kilomètre 1851,7 du fleuve, en territoire tchécoslovaque, et conséquences en résultant pour l'écoulement des eaux et la navigation);

(c) what are the legal effects of the notification, on 19 May 1992, of the termination of the Treaty by the Republic of Hungary.

(2) The Court is also requested to determine the legal consequences, including the rights and obligations for the Parties, arising from its Judgment on the questions in paragraph 1 of this Article.

Article 3

(1) All questions of procedure and evidence shall be regulated in accordance with the provisions of the Statute and the Rules of Court.

(2) However, the Parties request the Court to order that the written proceedings should consist of:

(a) a Memorial presented by each of the Parties not later than ten months after the date of notification of this Special Agreement to the Registrar of the International Court of Justice;

(b) a Counter-Memorial presented by each of the Parties not later than seven months after the date on which each has received the certified copy of the Memorial of the other Party;

(c) a Reply presented by each of the Parties within such time-limits as the Court may order.

(d) The Court may request additional written pleadings by the Parties if it so determines.

(3) The above-mentioned parts of the written proceedings and their annexes presented to the Registrar will not be transmitted to the other Party until the Registrar has received the corresponding part of the proceedings from the said Party.

Article 4

(1) The Parties agree that, pending the final Judgment of the Court, they will establish and implement a temporary water management régime for the Danube.

(2) They further agree that, in the period before such a régime is established or implemented, if either Party believes its rights are endangered by the conduct of the other, it may request immediate consultation and reference, if necessary, to experts, including the Commission of the European Communities, with a view to protecting those rights; and that protection shall not be sought through a request to the Court under Article 41 of the Statute.

(3) This commitment is accepted by both Parties as fundamental to the conclusion and continuing validity of the Special Agreement.

Article 5

(1) The Parties shall accept the Judgment of the Court as final and binding upon them and shall execute it in its entirety and in good faith.

(2) Immediately after the transmission of the Judgment the Parties shall enter into negotiations on the modalities for its execution.

(3) If they are unable to reach agreement within six months, either Party may request the Court to render an additional Judgment to determine the modalities for executing its Judgment.

Article 6

(1) The present Special Agreement shall be subject to ratification.

c) quels sont les effets juridiques de la notification, le 19 mai 1992, de la terminaison du traité par la République de Hongrie.

2) La Cour est également priée de déterminer les conséquences juridiques, y compris les droits et obligations pour les Parties, de l'arrêt qu'elle rendra sur les questions énoncées au paragraphe 1 du présent article.

Article 3

1) Toutes les questions de procédure et de preuve seront réglées conformément aux dispositions du Statut et du Règlement de la Cour.

2) Toutefois, les Parties prient la Cour de bien vouloir ordonner que la procédure écrite comprenne les pièces suivantes:

a) un mémoire présenté par chacune des Parties au plus tard dix mois après la date de la notification du présent compromis au Greffier de la Cour internationale de Justice;

b) un contre-mémoire présenté par chacune des Parties au plus tard sept mois après la date à laquelle chacune aura reçu la copie certifiée conforme du mémoire de l'autre Partie;

c) une réplique présentée par chacune des Parties dans les délais que la Cour indiquera.

d) La Cour pourra, si elle le juge utile, demander aux Parties de déposer des pièces de procédure écrite supplémentaires.

3) Les pièces de procédure écrite susmentionnées et leurs annexes, déposées auprès du Greffier, ne seront transmises à l'autre Partie que lorsque le Greffier aura reçu de ladite Partie la pièce de procédure correspondante.

Article 4

1) Les Parties conviennent, en attendant l'arrêt définitif de la Cour, d'établir et d'appliquer un régime temporaire de gestion des eaux pour le Danube.

2) Les Parties conviennent en outre qu'au cas où, au cours de la période précédant l'établissement ou l'application d'un tel régime, l'une d'entre elles considérerait que la conduite de l'autre met ses droits en danger, elle pourra demander des consultations immédiates et, au besoin, qu'il soit recouru à des experts, y compris la Commission des Communautés européennes, en vue de protéger ces droits; et que la protection de ces droits ne sera pas recherchée au moyen d'une demande présentée à la Cour en vertu de l'article 41 du Statut.

3) Les deux Parties acceptent cet engagement en tant qu'élément fondamental de la conclusion et du maintien de la validité du compromis.

Article 5

1) Les Parties s'engagent à accepter l'arrêt de la Cour comme définitif et obligatoire pour elles et à l'exécuter intégralement et de bonne foi.

2) Aussitôt que l'arrêt leur aura été remis, les Parties engageront des négociations pour fixer les modalités de son exécution.

3) Si les Parties ne peuvent parvenir à un accord dans un délai de six mois, l'une ou l'autre d'entre elles pourra prier la Cour de rendre un arrêt supplémentaire pour déterminer les modalités d'exécution de son arrêt.

Article 6

1) Le présent compromis est soumis à ratification.

(2) The instruments of ratification shall be exchanged as soon as possible in Brussels.

(3) The present Special Agreement shall enter into force on the date of exchange of instruments of ratification. Thereafter it will be notified jointly to the Registrar of the Court.

In witness whereof the undersigned being duly authorized thereto, have signed the present Special Agreement and have affixed thereto their seals."

3. Pursuant to Article 40, paragraph 3, of the Statute and Article 42 of the Rules of Court, copies of the notification and of the Special Agreement were transmitted by the Registrar to the Secretary-General of the United Nations, Members of the United Nations and other States entitled to appear before the Court.

4. Since the Court included upon the Bench no judge of Slovak nationality, Slovakia exercised its right under Article 31, paragraph 2, of the Statute to choose a judge *ad hoc* to sit in the case: it chose Mr. Krzysztof Jan Skubiszewski.

5. By an Order dated 14 July 1993, the Court fixed 2 May 1994 as the time-limit for the filing by each of the Parties of a Memorial and 5 December 1994 for the filing by each of the Parties of a Counter-Memorial, having regard to the provisions of Article 3, paragraph 2 *(a)* and *(b)*, of the Special Agreement. Those pleadings were duly filed within the prescribed time-limits.

6. By an Order dated 20 December 1994, the President of the Court, having heard the Agents of the Parties, fixed 20 June 1995 as the time-limit for the filing of the Replies, having regard to the provisions of Article 3, paragraph 2 *(c)*, of the Special Agreement. The Replies were duly filed within the time-limit thus prescribed and, as the Court had not asked for the submission of additional pleadings, the case was then ready for hearing.

7. By letters dated 27 January 1997, the Agent of Slovakia, referring to the provisions of Article 56, paragraph 1, of the Rules of Court, expressed his Government's wish to produce two new documents; by a letter dated 10 February 1997, the Agent of Hungary declared that his Government objected to their production. On 26 February 1997, after having duly ascertained the views of the two Parties, the Court decided, in accordance with Article 56, paragraph 2, of the Rules of Court, to authorize the production of those documents under certain conditions of which the Parties were advised. Within the time-limit fixed by the Court to that end, Hungary submitted comments on one of those documents under paragraph 3 of that same Article. The Court authorized Slovakia to comment in turn upon those observations, as it had expressed a wish to do so; its comments were received within the time-limit prescribed for that purpose.

8. Moreover, each of the Parties asked to be allowed to show a video cassette in the course of the oral proceedings. The Court agreed to those requests, provided that the cassettes in question were exchanged in advance between the Parties, through the intermediary of the Registry. That exchange was effected accordingly.

9. In accordance with Article 53, paragraph 2, of the Rules of Court, the Court decided, after having ascertained the views of the Parties, that copies of the pleadings and documents annexed would be made available to the public as from the opening of the oral proceedings.

10. By a letter dated 16 June 1995, the Agent of Slovakia invited the Court

2) Les instruments de ratification seront échangés aussitôt que possible à Bruxelles.

3) Le présent compromis entrera en vigueur à la date de l'échange des instruments de ratification. Il fera ensuite l'objet d'une notification conjointe au Greffier de la Cour.

En foi de quoi les soussignés, dûment habilités à cet effet, ont signé le présent compromis et y ont apposé leur sceau.»

3. Conformément au paragraphe 3 de l'article 40 du Statut et à l'article 42 du Règlement de la Cour, des copies de la notification et du compromis ont été transmises par le Greffier au Secrétaire général de l'Organisation des Nations Unies, aux Membres des Nations Unies et aux autres Etats admis à ester devant la Cour.

4. La Cour ne comptant pas sur le siège de juge de nationalité slovaque, la Slovaquie s'est prévalue du droit que lui confère le paragraphe 2 de l'article 31 du Statut de procéder à la désignation d'un juge *ad hoc* pour siéger en l'affaire: elle a désigné à cet effet M. Krzysztof Jan Skubiszewski.

5. Par ordonnance en date du 14 juillet 1993, la Cour a fixé au 2 mai 1994 la date d'expiration du délai pour le dépôt d'un mémoire par chaque Partie, et au 5 décembre 1994 la date d'expiration du délai pour le dépôt par chacune d'elles d'un contre-mémoire, eu égard aux dispositions de l'article 3, paragraphe 2, alinéas *a)* et *b)*, du compromis. Ces pièces ont été dûment déposées dans les délais ainsi prescrits.

6. Par ordonnance en date du 20 décembre 1994, le Président de la Cour, après avoir entendu les agents des Parties, a fixé au 20 juin 1995 la date d'expiration du délai pour le dépôt des répliques, eu égard aux dispositions de l'article 3, paragraphe 2, alinéa *c)*, du compromis. Les répliques ont été dûment déposées dans le délai ainsi prescrit et, la Cour n'ayant pas demandé la production de pièces supplémentaires, l'affaire s'est alors trouvée en état.

7. Par lettres du 27 janvier 1997, l'agent de la Slovaquie, se référant aux dispositions du paragraphe 1 de l'article 56 du Règlement, a exprimé le désir de son gouvernement de produire deux nouveaux documents; par lettre du 10 février 1997, l'agent de la Hongrie a fait savoir que son gouvernement s'y opposait. Le 26 février 1997, après avoir dûment recueilli les vues des deux Parties, la Cour a décidé, conformément au paragraphe 2 de l'article 56 du Règlement, d'autoriser la production de ces documents sous certaines conditions dont les Parties ont été avisées. Dans le délai fixé par la Cour à cet effet, la Hongrie a présenté des observations au titre du paragraphe 3 du même article sur l'un de ces documents. La Cour a autorisé la Slovaquie, comme celle-ci en avait exprimé le souhait, à soumettre à son tour des commentaires sur ces observations; lesdits commentaires ont été reçus dans le délai prescrit à cette fin.

8. Chacune des Parties a en outre demandé de pouvoir présenter une vidéocassette au cours de la procédure orale. La Cour a accédé à ces demandes, à la condition que les cassettes en question soient au préalable échangées entre les Parties par l'entremise du Greffe. Il a ainsi été procédé.

9. Conformément au paragraphe 2 de l'article 53 du Règlement, la Cour a décidé, après s'être renseignée auprès des Parties, que des exemplaires des pièces de procédure et des documents y annexés seraient rendus accessibles au public à compter de l'ouverture de la procédure orale.

10. Par lettre en date du 16 juin 1995, l'agent de la Slovaquie avait invité la

to visit the locality to which the case relates and there to exercise its functions with regard to the obtaining of evidence, in accordance with Article 66 of the Rules of Court. For his part, the Agent of Hungary indicated, by a letter dated 28 June 1995, that, if the Court should decide that a visit of that kind would be useful, his Government would be pleased to co-operate in organizing it. By a letter dated 14 November 1995, the Agents of the Parties jointly notified to the Court the text of a Protocol of Agreement, concluded in Budapest and New York the same day, with a view to proposing to the Court the arrangements that might be made for such a visit *in situ*; and, by a letter dated 3 February 1997, they jointly notified to it the text of Agreed Minutes drawn up in Budapest and New York the same day, which supplemented the Protocol of Agreement of 14 November 1995. By an Order dated 5 February 1997, the Court decided to accept the invitation to exercise its functions with regard to the obtaining of evidence at a place to which the case relates and, to that end, to adopt the arrangements proposed by the Parties. The Court visited the area from 1 to 4 April 1997; it visited a number of locations along the Danube and took note of the technical explanations given by the representatives who had been designated for the purpose by the Parties.

11. The Court held a first round of ten public hearings from 3 to 7 March and from 24 to 27 March 1997, and a second round of four public hearings on 10, 11, 14 and 15 April 1997, after having made the visit *in situ* referred to in the previous paragraph. During those hearings, the Court heard the oral arguments and replies of:

For Hungary: H.E. Mr. Szénási,
Professor Valki,
Professor Kiss,
Professor Vida,
Professor Carbiener,
Professor Crawford,
Professor Nagy,
Dr. Kern,
Professor Wheater,
Ms Gorove,
Professor Dupuy,
Professor Sands.

For Slovakia: H.E. Dr. Tomka,
Dr. Mikulka,
Mr. Wordsworth,
Professor McCaffrey,
Professor Mucha,
Professor Pellet,
Mr. Refsgaard,
Sir Arthur Watts.

12. The Parties replied orally and in writing to various questions put by Members of the Court. Referring to the provisions of Article 72 of the Rules of Court, each of the Parties submitted to the Court its comments upon the replies given by the other Party to some of those questions.

*

Cour à se déplacer sur les lieux auxquels se rapporte l'affaire et à y exercer ses fonctions relatives à l'établissement des preuves, conformément à l'article 66 du Règlement. Pour sa part, l'agent de la Hongrie avait indiqué, par lettre en date du 28 juin 1995, que, si la Cour jugeait une telle visite utile, son gouvernement serait heureux de collaborer à l'organisation de celle-ci. Par lettre du 14 novembre 1995, les agents des Parties notifièrent conjointement à la Cour le texte d'un protocole d'accord, conclu à Budapest et à New York le même jour, en vue de proposer à la Cour les modalités d'une telle descente sur les lieux; et, par lettre du 3 février 1997, ils lui notifièrent conjointement le texte d'un procès-verbal établi à Budapest et à New York le même jour, qui complétait le protocole d'accord du 14 novembre 1995. La Cour, par ordonnance en date du 5 février 1997, a décidé de donner suite à l'invitation qui lui était faite d'exercer ses fonctions relatives à l'établissement des preuves sur les lieux auxquels l'affaire se rapporte, et d'adopter à cette fin les modalités proposées par les Parties. La Cour s'est déplacée sur les lieux du 1er au 4 avril 1997; elle a visité un certain nombre de sites le long du Danube et a pris note des explications techniques qui lui ont été fournies par les représentants que les Parties avaient désignés à cet effet.

11. La Cour a tenu une première série de dix audiences publiques du 3 au 7 mars et du 24 au 27 mars 1997; elle a tenu une seconde série de quatre audiences publiques les 10, 11, 14 et 15 avril 1997, après avoir effectué la descente sur les lieux dont il est fait mention au paragraphe précédent. Au cours de ces audiences ont été entendus en leurs plaidoiries et réponses:

Pour la Hongrie:
S. Exc. M. Szénási,
M. Valki,
M. Kiss,
M. Vida,
M. Carbiener,
M. Crawford,
M. Nagy,
M. Kern,
M. Wheater,
Mme Gorove,
M. Dupuy,
M. Sands.

Pour la Slovaquie:
S. Exc. M. Tomka,
M. Mikulka,
M. Wordsworth,
M. McCaffrey,
M. Mucha,
M. Pellet,
M. Refsgaard,
sir Arthur Watts.

12. Les Parties ont répondu oralement et par écrit à diverses questions posées par des membres de la Cour. Se référant aux dispositions de l'article 72 du Règlement, chacune des Parties a fait tenir à la Cour des observations sur les réponses données par l'autre Partie à certaines de ces questions.

*

13. In the course of the written proceedings, the following submissions were presented by the Parties:

On behalf of Hungary,

in the Memorial, the Counter-Memorial and the Reply (*mutatis mutandis* identical texts):

"On the basis of the evidence and legal argument presented in the Memorial, Counter-Memorial and this Reply, the Republic of Hungary

Requests the Court to adjudge and declare

First, that the Republic of Hungary was entitled to suspend and subsequently abandon the works on the Nagymaros Project and on the part of the Gabčíkovo Project for which the Treaty attributed responsibility to the Republic of Hungary;

Second, that the Czech and Slovak Federal Republic was not entitled to proceed to the 'provisional solution' (damming up of the Danube at river kilometre 1851.7 on Czechoslovak territory and resulting consequences on water and navigation course);

Third, that by its Declaration of 19 May 1992, Hungary validly terminated the Treaty on the Construction and Operation of the Gabčíkovo-Nagymaros Barrage System of 16 September 1977;

Requests the Court to adjudge and declare further

that the legal consequences of these findings and of the evidence and the arguments presented to the Court are as follows:

(1) that the Treaty of 16 September 1977 has never been in force between the Republic of Hungary and the Slovak Republic;
(2) that the Slovak Republic bears responsibility to the Republic of Hungary for maintaining in operation the 'provisional solution' referred to above;
(3) that the Slovak Republic is internationally responsible for the damage and loss suffered by the Republic of Hungary and by its nationals as a result of the 'provisional solution';
(4) that the Slovak Republic is under an obligation to make reparation in respect of such damage and loss, the amount of such reparation, if it cannot be agreed by the Parties within six months of the date of the Judgment of the Court, to be determined by the Court;
(5) that the Slovak Republic is under the following obligations:
   (a) to return the waters of the Danube to their course along the international frontier between the Republic of Hungary and the Slovak Republic, that is to say the main navigable channel as defined by applicable treaties;
   (b) to restore the Danube to the situation it was in prior to the putting into effect of the provisional solution; and
   (c) to provide appropriate guarantees against the repetition of the damage and loss suffered by the Republic of Hungary and by its nationals."

13. Dans la procédure écrite, les conclusions ci-après ont été présentées par les Parties:

Au nom de la Hongrie,

dans le mémoire, le contre-mémoire et la réplique (textes identiques *mutatis mutandis*):

«Sur la base des éléments de preuve et des arguments juridiques présentés dans son mémoire, son contre-mémoire et sa réplique, la République de Hongrie

Prie la Cour de dire et juger:

Premièrement, que la République de Hongrie était en droit de suspendre puis d'abandonner les travaux relatifs au projet de Nagymaros ainsi qu'à la partie du projet de Gabčíkovo dont la République de Hongrie était responsable aux termes du traité;

Deuxièmement, que la République fédérative tchèque et slovaque n'était pas en droit de recourir à la «solution provisoire» (construction d'un barrage sur le Danube au kilomètre 1851,7 du fleuve, en territoire tchécoslovaque, et conséquences en résultant pour l'écoulement des eaux et la navigation);

Troisièmement, que, par sa déclaration du 19 mai 1992, la Hongrie a valablement mis fin au traité du 16 septembre 1977 relatif à la construction et au fonctionnement du système de barrage de Gabčíkovo-Nagymaros;

Prie la Cour de dire et juger également

que les conséquences juridiques de ces conclusions et des éléments de preuve et arguments présentés à la Cour sont les suivantes:

1) que le traité du 16 septembre 1977 n'a jamais été en vigueur entre la République de Hongrie et la République slovaque;
2) que la République slovaque est responsable envers la Hongrie pour avoir poursuivi l'exploitation de la «solution provisoire»;
3) que la République slovaque est internationalement responsable des dommages et pertes que la République de Hongrie et ses ressortissants ont subis du fait de la «solution provisoire»;
4) que la République slovaque est tenue de réparer ces dommages et ces pertes, et que le montant de ladite réparation sera déterminé par la Cour si les Parties ne peuvent en convenir entre elles dans les six mois suivant la date à laquelle la Cour aura rendu son arrêt;
5) que la République slovaque est tenue des obligations suivantes:
   a) rétablir les eaux du Danube dans leur cours le long de la frontière internationale entre la République de Hongrie et la République slovaque, c'est-à-dire le principal chenal de navigation tel que défini par les traités applicables;
   b) rétablir la situation dans laquelle le Danube se trouvait avant la mise en service de la solution provisoire;
   c) fournir des garanties adéquates contre la répétition des dommages et pertes subis par la République de Hongrie et par ses ressortissants.»

On behalf of Slovakia,

in the Memorial, the Counter-Memorial and the Reply (*mutatis mutandis* identical texts):

"On the basis of the evidence and legal arguments presented in the Slovak Memorial, Counter-Memorial and in this Reply, and reserving the right to supplement or amend its claims in the light of further written pleadings, the Slovak Republic

Requests the Court to adjudge and declare:

1. That the Treaty between Czechoslovakia and Hungary of 16 September 1977 concerning the construction and operation of the Gabčíkovo/Nagymaros System of Locks, and related instruments, and to which the Slovak Republic is the acknowledged successor, is a treaty in force and has been so from the date of its conclusion; and that the notification of termination by the Republic of Hungary on 19 May 1992 was without legal effect.
2. That the Republic of Hungary was not entitled to suspend and subsequently abandon the works on the Nagymaros Project and on that part of the Gabčíkovo Project for which the 1977 Treaty attributed responsibility to the Republic of Hungary.
3. That the act of proceeding with and putting into operation Variant C, the 'provisional solution', was lawful.
4. That the Republic of Hungary must therefore cease forthwith all conduct which impedes the full and bona fide implementation of the 1977 Treaty and must take all necessary steps to fulfil its own obligations under the Treaty without further delay in order to restore compliance with the Treaty.
5. That, in consequence of its breaches of the 1977 Treaty, the Republic of Hungary is liable to pay, and the Slovak Republic is entitled to receive, full compensation for the loss and damage caused to the Slovak Republic by those breaches, plus interest and loss of profits, in the amounts to be determined by the Court in a subsequent phase of the proceedings in this case."

14. In the oral proceedings, the following submissions were presented by the Parties

On behalf of Hungary,

at the hearing of 11 April 1997:

The submissions read at the hearing were *mutatis mutandis* identical to those presented by Hungary during the written proceedings.

On behalf of Slovakia,

at the hearing of 15 April 1997:

"On the basis of the evidence and legal arguments presented in its written and oral pleadings, the Slovak Republic,

Requests the Court to adjudge and declare:

1. That the Treaty, as defined in the first paragraph of the Preamble to the Compromis between the Parties, dated 7 April 1993, concerning the construction and operation of the Gabčikovo/Nagymaros System of Locks and related instruments, concluded between Hungary and

Au nom de la Slovaquie,

dans le mémoire, le contre-mémoire et la réplique (textes identiques *mutatis mutandis*):

«Sur la base des éléments de preuve et des arguments juridiques présentés dans son mémoire, son contre-mémoire et sa réplique, et en se réservant le droit de compléter ou de modifier son argumentation à la lumière d'autres exposés, la République slovaque

Prie la Cour de dire et juger:

1. Que le traité du 16 septembre 1977 entre la Hongrie et la Tchécoslovaquie relatif à la construction et à l'exploitation du système d'écluses de Gabčíkovo-Nagymaros, et les instruments s'y rapportant, à l'égard duquel il est reconnu que la République slovaque est l'Etat successeur, constitue un traité en vigueur et ce depuis la date de sa conclusion; et que la notification de terminaison effectuée le 19 mai 1992 par la République de Hongrie est sans effet juridique.
2. Que la République de Hongrie n'était pas en droit de suspendre puis d'abandonner les travaux relatifs au projet de Nagymaros ainsi qu'à la partie du projet de Gabčíkovo dont la République de Hongrie est responsable aux termes du traité de 1977.
3. Que le recours à la variante C, la «solution provisoire», et sa mise en service constituaient un acte licite.
4. Que la République de Hongrie doit dès lors mettre immédiatement un terme à toute conduite qui empêche l'application intégrale et de bonne foi du traité de 1977 et doit prendre toutes les mesures nécessaires pour s'acquitter des obligations que lui impose ce traité sans plus tarder, afin de faire en sorte que le traité soit à nouveau respecté.
5. Qu'en conséquence de sa violation du traité de 1977 la République de Hongrie doit payer, et la République slovaque a le droit de recevoir, une indemnisation complète au titre des pertes et dommages occasionnés par ces violations à la République slovaque, y compris les intérêts et la réparation du manque à gagner, dont le montant sera déterminé par la Cour lors d'une phase ultérieure de la présente instance.»

14. Dans la procédure orale, les conclusions ci-après ont été présentées par les Parties:

Au nom de la Hongrie,

à l'audience du 11 avril 1997:

Les conclusions lues à l'audience étaient *mutatis mutandis* identiques à celles présentées par la Hongrie dans la procédure écrite.

Au nom de la Slovaquie,

à l'audience du 15 avril 1997:

«Sur la base des éléments de preuve et des arguments juridiques présentés dans ses écritures et ses plaidoiries orales, la République slovaque

Prie la Cour de bien vouloir dire et juger:

1. Que le traité, tel qu'il est défini à l'alinéa premier du préambule du compromis entre les Parties en date du 7 avril 1993, relatif à la construction et à l'exploitation du système d'écluses de Gabčíkovo-Nagymaros et les instruments s'y rapportant, conclu entre la Hongrie et la Tché-

Czechoslovakia and with regard to which the Slovak Republic is the successor State, has never ceased to be in force and so remains, and that the notification of 19 May 1992 of purported termination of the Treaty by the Republic of Hungary was without legal effect;

2. That the Republic of Hungary was not entitled to suspend and subsequently abandon the works on the Nagymaros Project and on that part of the Gabčíkovo Project for which the 1977 Treaty attributes responsibility to the Republic of Hungary;
3. That the Czech and Slovak Federal Republic was entitled, in November 1991, to proceed with the 'provisional solution' and to put this system into operation from October 1992; and that the Slovak Republic was, and remains, entitled to continue the operation of this system;

4. That the Republic of Hungary shall therefore cease forthwith all conduct which impedes the bona fide implementation of the 1977 Treaty and shall take all necessary steps to fulfil its own obligations under the Treaty without further delay in order to restore compliance with the Treaty, subject to any amendments which may be agreed between the Parties;
5. That the Republic of Hungary shall give appropriate guarantees that it will not impede the performance of the Treaty, and the continued operation of the system;
6. That, in consequence of its breaches of the 1977 Treaty, the Republic of Hungary shall, in addition to immediately resuming performance of its Treaty obligations, pay to the Slovak Republic full compensation for the loss and damage, including loss of profits, caused by those breaches together with interest thereon;
7. That the Parties shall immediately begin negotiations with a view, in particular, to adopting a new timetable and appropriate measures for the implementation of the Treaty by both Parties, and to fixing the amount of compensation due by the Republic of Hungary to the Slovak Republic; and that, if the Parties are unable to reach an agreement within six months, either one of them may request the Court to render an additional Judgment to determine the modalities for executing its Judgment."

* * *

15. The present case arose out of the signature, on 16 September 1977, by the Hungarian People's Republic and the Czechoslovak People's Republic, of a treaty "concerning the construction and operation of the Gabčíkovo-Nagymaros System of Locks" (hereinafter called the "1977 Treaty"). The names of the two contracting States have varied over the years; hereinafter they will be referred to as Hungary and Czechoslovakia. The 1977 Treaty entered into force on 30 June 1978.

It provides for the construction and operation of a System of Locks by the parties as a "joint investment". According to its Preamble, the barrage system was designed to attain

> "the broad utilization of the natural resources of the Bratislava-Budapest section of the Danube river for the development of water

coslovaquie, à l'égard duquel la République slovaque est l'Etat successeur, n'a jamais cessé d'être en vigueur et le demeure, et que la notification, le 19 mai 1992, de la prétendue terminaison du traité par la République de Hongrie n'a eu aucun effet sur la validité de celui-ci;

2. Que la République de Hongrie n'était pas en droit de suspendre puis d'abandonner les travaux relatifs au projet de Nagymaros ainsi qu'à la partie du projet de Gabčíkovo dont la République de Hongrie est responsable aux termes du traité;
3. Que la République fédérative tchèque et slovaque était en droit de recourir, en novembre 1991, à la «solution provisoire» et de mettre ce système en service à partir d'octobre 1992 et que la République slovaque était et demeure en droit de continuer à mettre en œuvre ce système;
4. Que la République de Hongrie doit dès lors mettre immédiatement un terme à toute conduite qui empêche l'application de bonne foi du traité de 1977 et qu'elle doit prendre toutes les mesures nécessaires pour s'acquitter sans retard des obligations que lui impose ce traité, afin de faire en sorte que le traité soit à nouveau respecté, sous réserve des modifications qui pourraient y être apportées par accord entre les Parties;
5. Que la République de Hongrie doit donner des garanties adéquates de s'abstenir d'empêcher l'application du traité et le fonctionnement continu du système;
6. Qu'en conséquence de sa violation du traité de 1977, la République de Hongrie doit, outre la reprise immédiate de l'exécution de ses obligations en vertu du traité, payer à la République slovaque une indemnisation complète au titre des pertes et dommages, y compris le manque à gagner, occasionnés par ces violations, assortis des intérêts;
7. Que les Parties doivent engager immédiatement des négociations en vue, notamment, de l'adoption d'un nouveau calendrier et de mesures appropriées pour la mise en œuvre du traité par les deux Parties et la fixation du montant de l'indemnité due par la République de Hongrie à la République slovaque; et que si les Parties ne peuvent parvenir à un accord dans un délai de six mois, l'une ou l'autre d'entre elles pourra prier la Cour de rendre un arrêt supplémentaire pour déterminer les modalités d'exécution de son arrêt.»

* * *

15. La présente affaire trouve son origine dans la signature, le 16 septembre 1977, par la République populaire hongroise et la République socialiste tchécoslovaque d'un traité «relatif à la construction et au fonctionnement du système d'écluses de Gabčíkovo-Nagymaros» (dénommé ci-après le «traité de 1977»). Le nom des deux Etats contractants a varié au cours des ans; ils seront dénommés ci-après la Hongrie et la Tchécoslovaquie. Le traité de 1977 est entré en vigueur le 30 juin 1978.

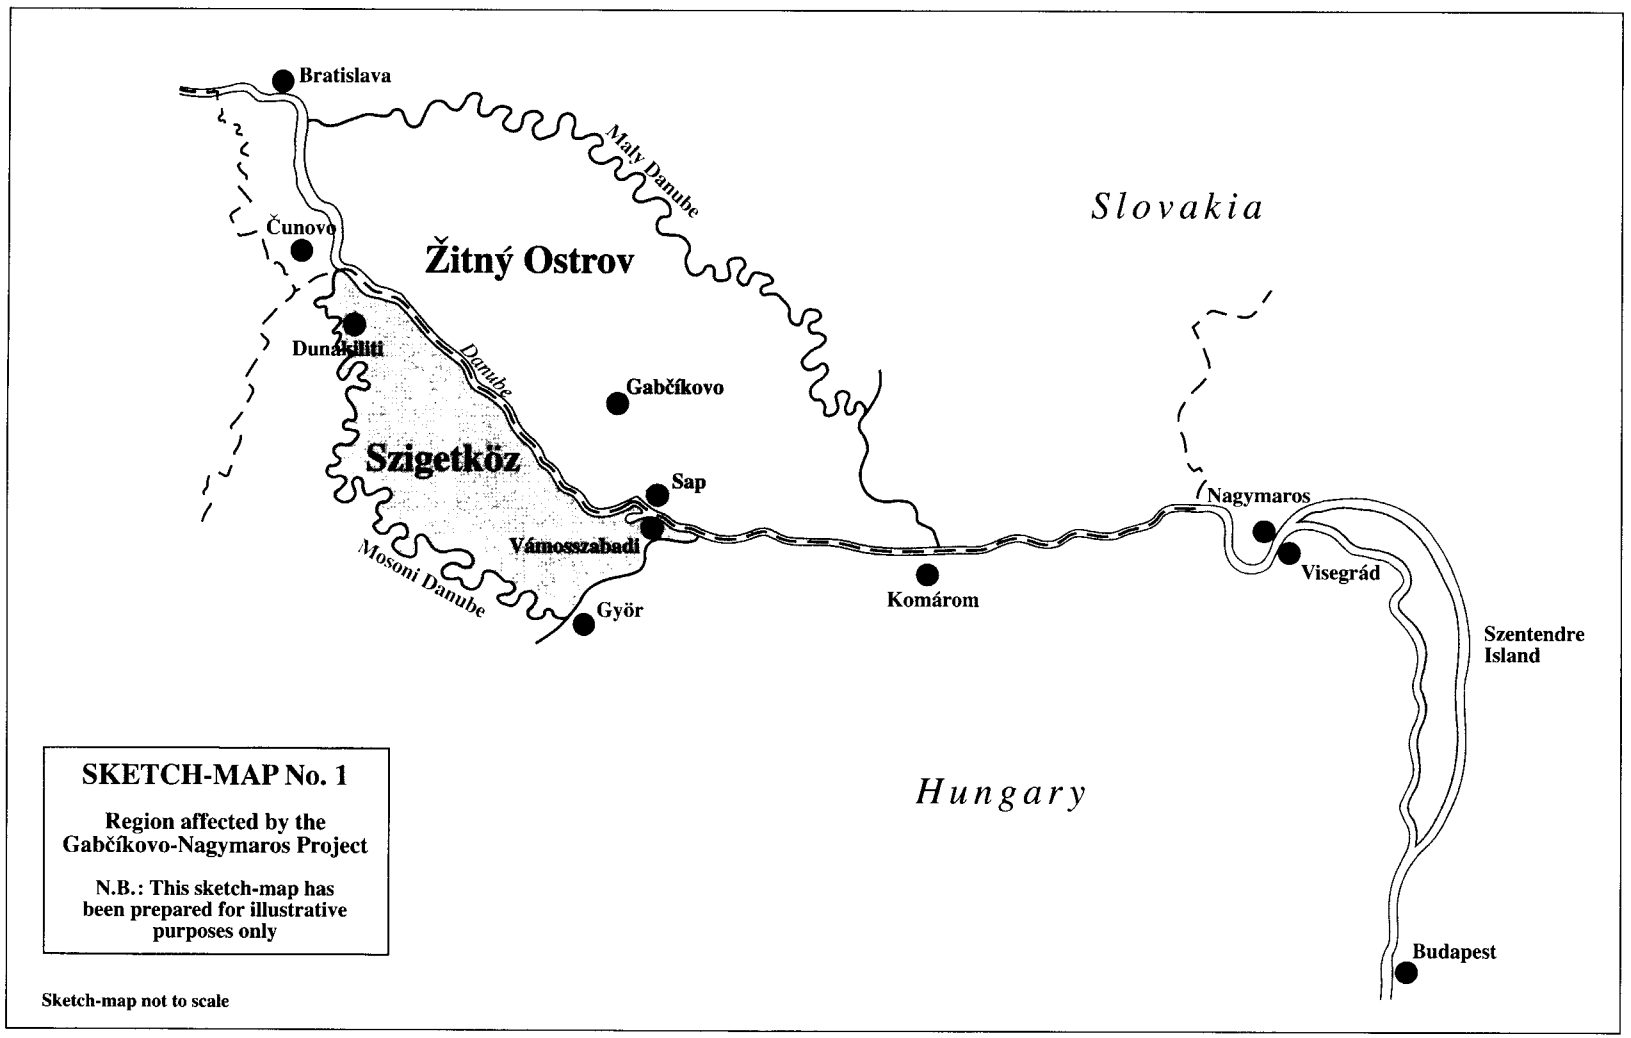
Il prévoit la construction et l'exploitation du système d'écluses par les parties «en tant qu'investissement conjoint». Selon le préambule du traité, le système de barrage avait pour but

> «de mettre en valeur, de façon générale, les ressources naturelles de la section Bratislava-Budapest du Danube aux fins du développe-

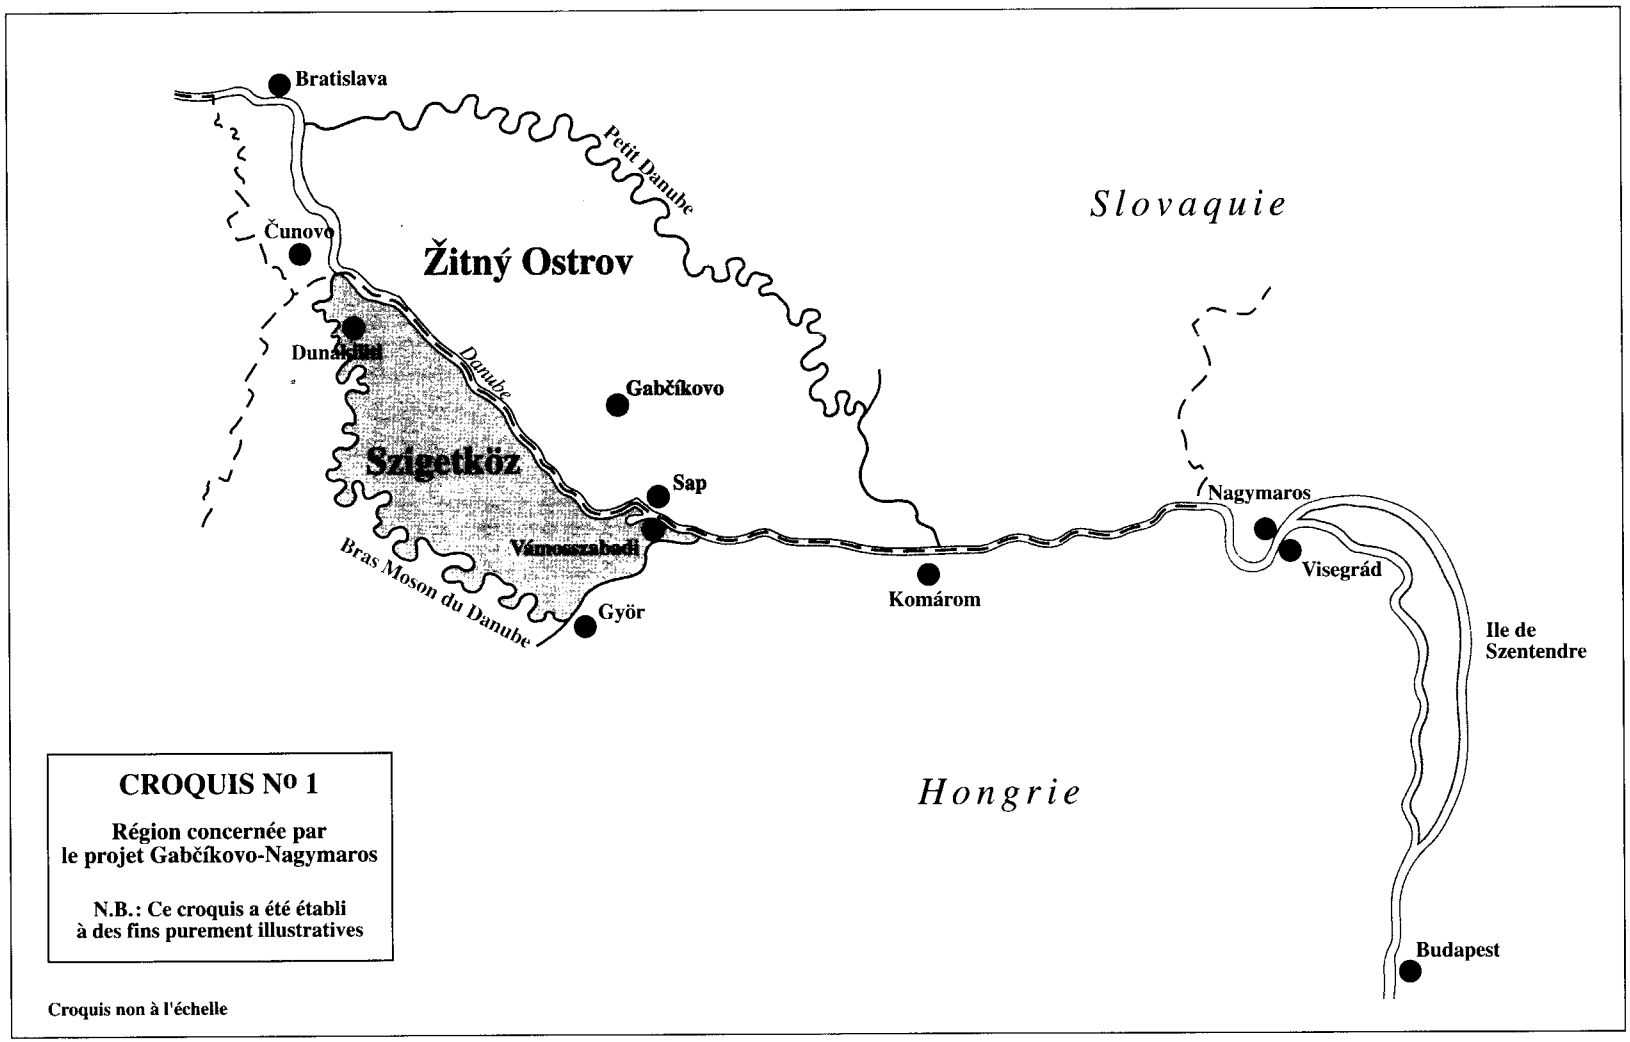
resources, energy, transport, agriculture and other sectors of the national economy of the Contracting Parties".

The joint investment was thus essentially aimed at the production of hydroelectricity, the improvement of navigation on the relevant section of the Danube and the protection of the areas along the banks against flooding. At the same time, by the terms of the Treaty, the contracting parties undertook to ensure that the quality of water in the Danube was not impaired as a result of the Project, and that compliance with the obligations for the protection of nature arising in connection with the construction and operation of the System of Locks would be observed.

16. The Danube is the second longest river in Europe, flowing along or across the borders of nine countries in its 2,860-kilometre course from the Black Forest eastwards to the Black Sea. For 142 kilometres, it forms the boundary between Slovakia and Hungary. The sector with which this case is concerned is a stretch of approximately 200 kilometres, between Bratislava in Slovakia and Budapest in Hungary. Below Bratislava, the river gradient decreases markedly, creating an alluvial plain of gravel and sand sediment. This plain is delimited to the north-east, in Slovak territory, by the Malý Danube and to the south-west, in Hungarian territory, by the Mosoni Danube. The boundary between the two States is constituted, in the major part of that region, by the main channel of the river. The area lying between the Malý Danube and that channel, in Slovak territory, constitutes the Žitný Ostrov; the area between the main channel and the Mosoni Danube, in Hungarian territory, constitutes the Szigetköz. Čunovo and, further downstream, Gabčíkovo, are situated in this sector of the river on Slovak territory, Čunovo on the right bank and Gabčíkovo on the left. Further downstream, after the confluence of the various branches, the river enters Hungarian territory and the topography becomes hillier. Nagymaros lies in a narrow valley at a bend in the Danube just before it turns south, enclosing the large river island of Szentendre before reaching Budapest (see sketch-map No. 1, p. 19 below).



17. The Danube has always played a vital part in the commercial and economic development of its riparian States, and has underlined and reinforced their interdependence, making international co-operation essential. Improvements to the navigation channel have enabled the Danube, now linked by canal to the Main and thence to the Rhine, to become an important navigational artery connecting the North Sea to the Black Sea. In the stretch of river to which the case relates, flood protection measures have been constructed over the centuries, farming and forestry practised, and, more recently, there has been an increase in population and industrial activity in the area. The cumulative effects on the river and on the environment of various human activities over the years have not all been favourable, particularly for the water régime.



ment des secteurs des ressources hydrauliques, de l'énergie, des transports et de l'agriculture et des autres secteurs de l'économie nationale des parties contractantes».

L'investissement conjoint tendait ainsi essentiellement à la production d'hydro-électricité, à l'amélioration de la navigation sur le tronçon en cause du Danube et à la protection des régions riveraines contre les inondations. En même temps, les parties contractantes, selon les termes du traité, s'engageaient tant à veiller à ce que la mise en œuvre du projet ne compromette pas la qualité des eaux du Danube qu'à s'acquitter de leurs obligations concernant la protection de la nature et découlant de la construction et du fonctionnement du système d'écluses.

16. Par sa longueur, le Danube est le deuxième fleuve d'Europe, longeant ou traversant neuf pays sur un cours de 2860 kilomètres et se dirigeant vers l'est, depuis la Forêt-Noire jusqu'à la mer Noire. Sur 142 kilomètres, il constitue la frontière entre la Slovaquie et la Hongrie. Le secteur auquel se rapporte la présente affaire est un tronçon d'environ 200 kilomètres, entre Bratislava, en Slovaquie, et Budapest, en Hongrie. En aval de Bratislava, la déclivité du fleuve diminue sensiblement, créant une plaine alluviale de gravier et de sédiments sableux. Cette plaine est délimitée au nord-est, en territoire slovaque, par le petit Danube et au sud-ouest, en territoire hongrois, par le bras Moson du Danube. La frontière entre les deux Etats est constituée dans la majeure partie de cette région par le chenal principal du fleuve. La zone comprise entre le petit Danube et ce chenal constitue, en territoire slovaque, le Žitný Ostrov; celle comprise entre le chenal principal et le bras Moson du Danube constitue, en territoire hongrois, le Szigetköz. Čunovo et, plus en aval, Gabčíkovo sont situés dans ce secteur du fleuve, en territoire slovaque; Čunovo est situé sur la rive droite du fleuve et Gabčíkovo sur la rive gauche. Plus bas, après jonction des divers bras, le fleuve entre en territoire hongrois et le relief devient plus accidenté. Nagymaros se trouve dans une vallée étroite à un endroit où le Danube fait un coude juste avant de se diriger vers le sud, entourant la grande île fluviale de Szentendre avant d'atteindre Budapest (voir ci-après, p. 19, le croquis n° 1).

17. Le Danube a toujours joué un rôle vital dans le développement commercial et économique des Etats riverains; il a mis en évidence et a accru leur interdépendance, rendant indispensable la coopération internationale. Des améliorations apportées au chenal de navigation ont permis au Danube, aujourd'hui relié par un canal au Main et de là au Rhin, de devenir une importante artère de navigation reliant la mer du Nord à la mer Noire. Dans le tronçon du fleuve auquel se rapporte la présente affaire, des mesures de protection contre les inondations ont été prises au cours des siècles, l'agriculture et la sylviculture ont été pratiquées et, plus récemment, la région a connu un essor démographique et industriel. Les effets cumulatifs, sur le fleuve et l'environnement, des diverses activités humaines menées au cours des ans n'ont pas tous été positifs, notamment en ce qui concerne le régime des eaux.

Only by international co-operation could action be taken to alleviate these problems. Water management projects along the Danube have frequently sought to combine navigational improvements and flood protection with the production of electricity through hydroelectric power plants. The potential of the Danube for the production of hydroelectric power has been extensively exploited by some riparian States. The history of attempts to harness the potential of the particular stretch of the river at issue in these proceedings extends over a 25-year period culminating in the signature of the 1977 Treaty.

18. Article 1, paragraph 1, of the 1977 Treaty describes the principal works to be constructed in pursuance of the Project. It provided for the building of two series of locks, one at Gabčíkovo (in Czechoslovak territory) and the other at Nagymaros (in Hungarian territory), to constitute "a single and indivisible operational system of works" (see sketch-map No. 2, p. 21 below). The Court will subsequently have occasion to revert in more detail to those works, which were to comprise, *inter alia*, a reservoir upstream of Dunakiliti, in Hungarian and Czechoslovak territory; a dam at Dunakiliti, in Hungarian territory; a bypass canal, in Czechoslovak territory, on which was to be constructed the Gabčíkovo System of Locks (together with a hydroelectric power plant with an installed capacity of 720 megawatts (MW)); the deepening of the bed of the Danube downstream of the place at which the bypass canal was to rejoin the old bed of the river; a reinforcement of flood-control works along the Danube upstream of Nagymaros; the Nagymaros System of Locks, in Hungarian territory (with a hydroelectric power plant of a capacity of 158 MW); and the deepening of the bed of the Danube downstream.

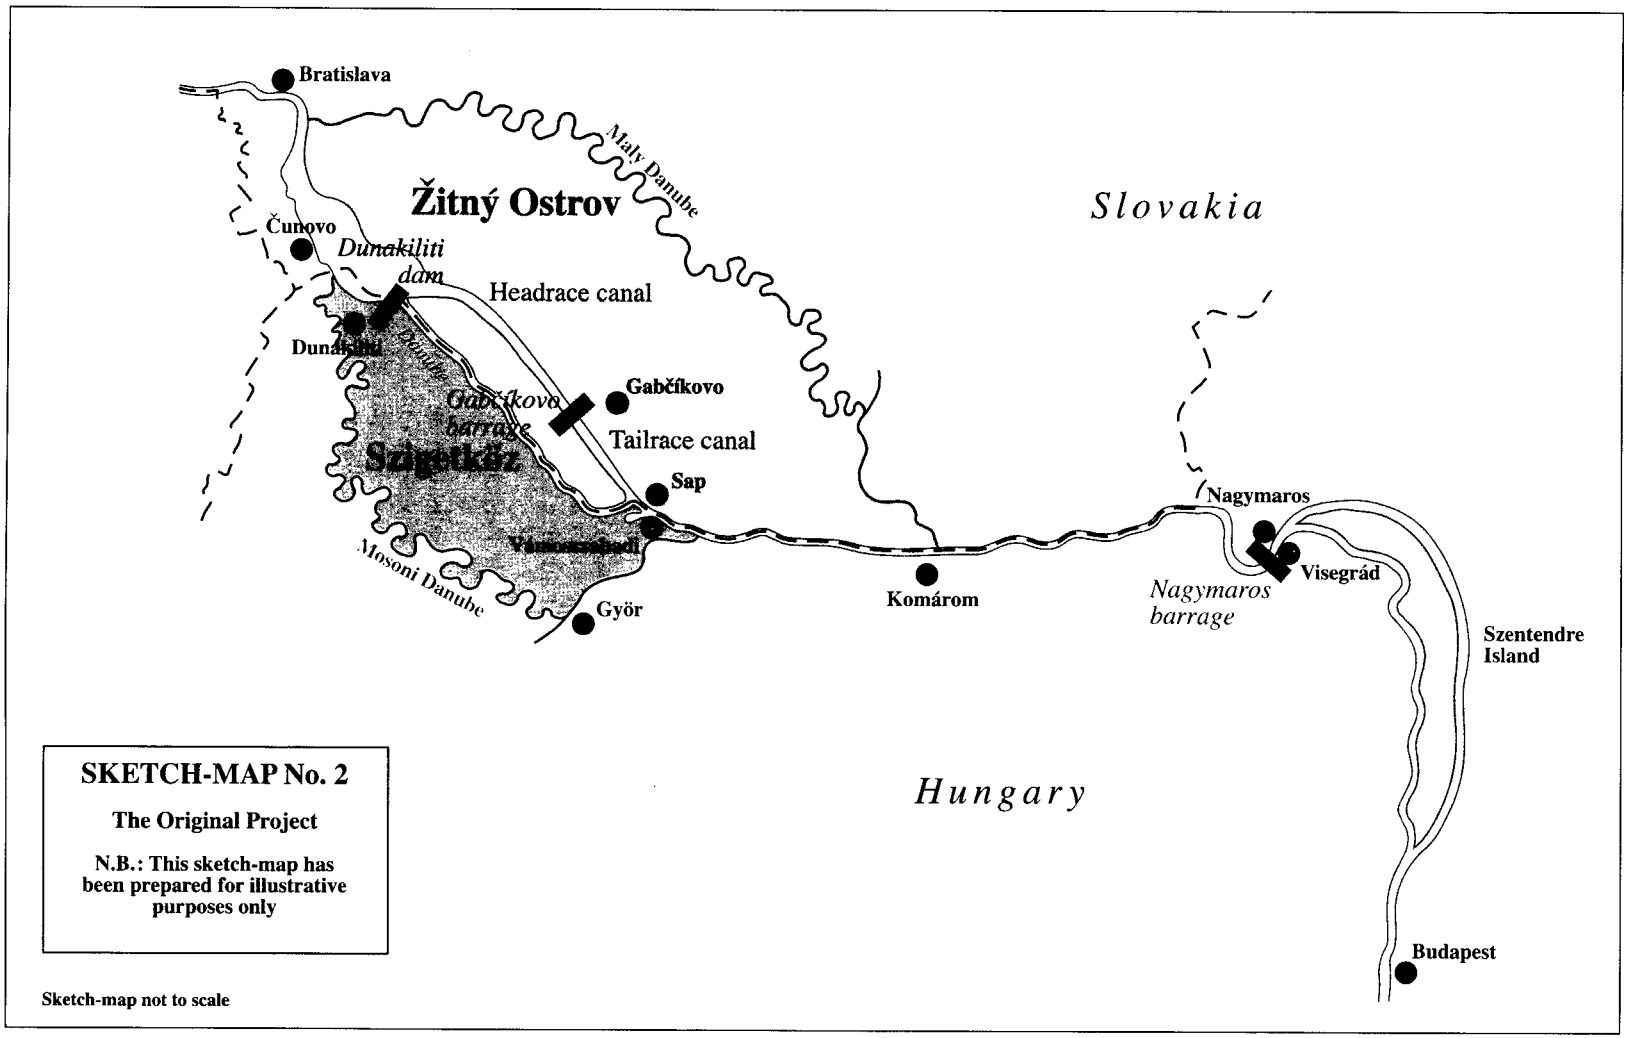
Article 1, paragraph 4, of the Treaty further provided that the technical specifications concerning the system would be included in the "Joint Contractual Plan" which was to be drawn up in accordance with the Agreement signed by the two Governments for this purpose on 6 May 1976; Article 4, paragraph 1, for its part, specified that "the joint investment [would] be carried out in conformity with the joint contractual plan".

According to Article 3, paragraph 1:

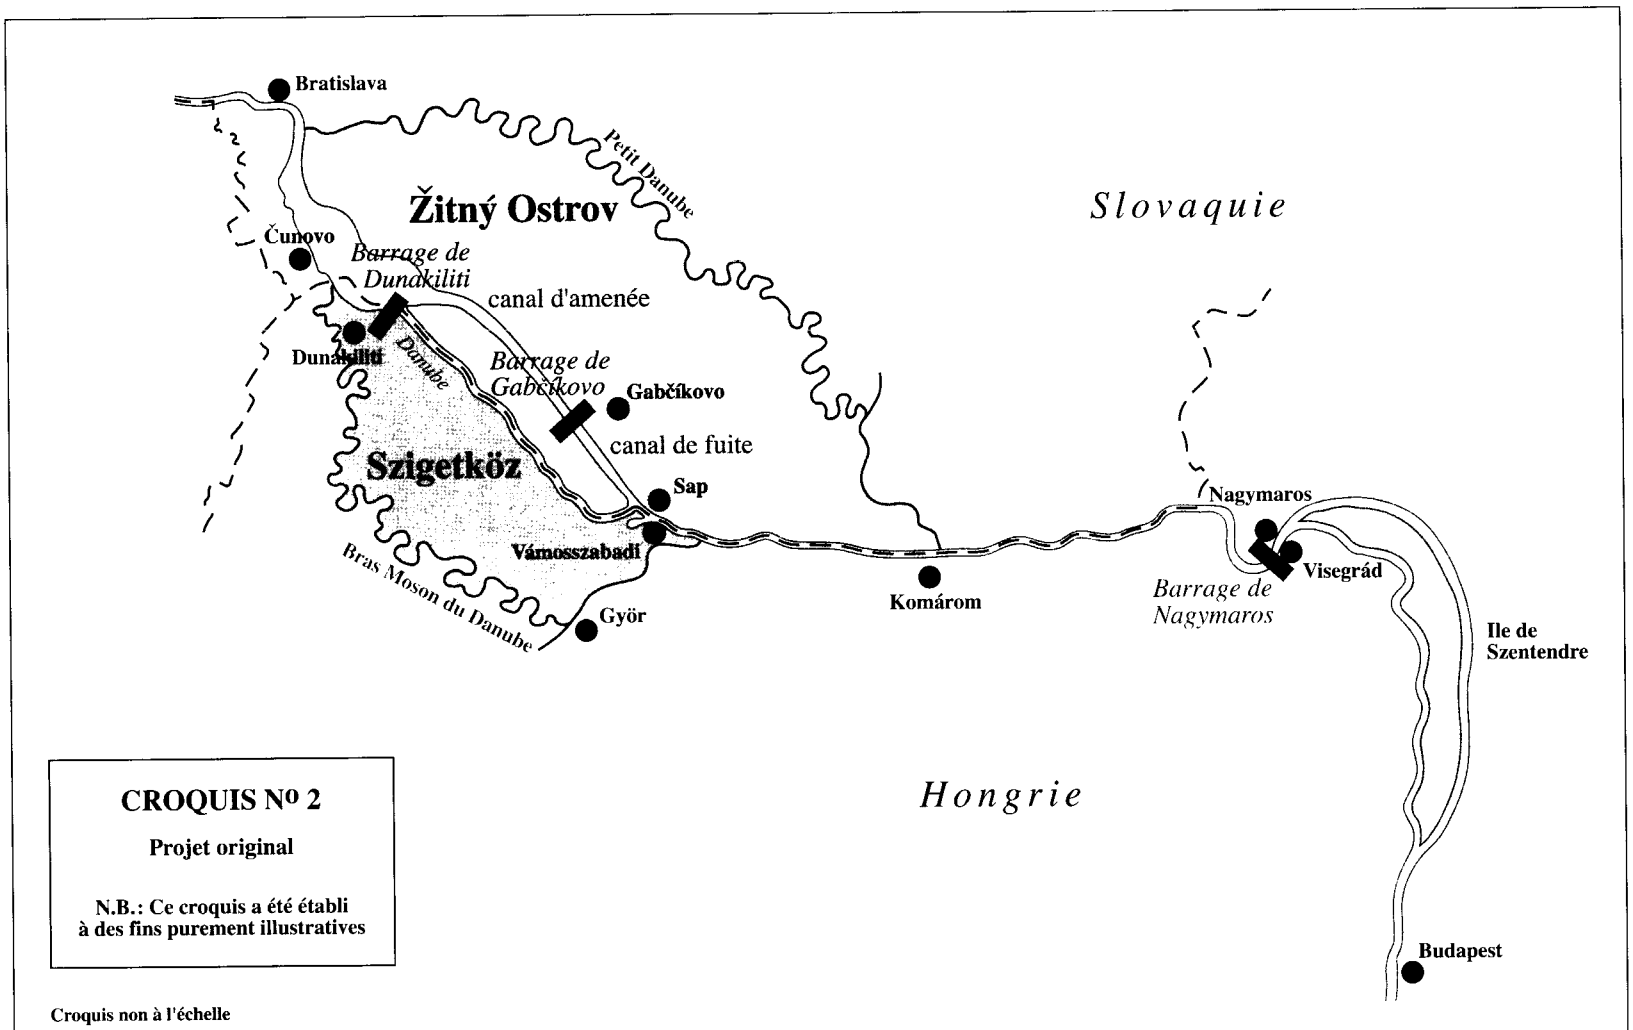
> "Operations connected with the realization of the joint investment and with the performance of tasks relating to the operation of the System of Locks shall be directed and supervised by the Governments of the Contracting Parties through . . . (. . . 'government delegates')."

Those delegates had, *inter alia*, "to ensure that construction of the System of Locks is . . . carried out in accordance with the approved joint contractual plan and the project work schedule". When the works were brought into operation, they were moreover "To establish the operating

Des mesures destinées à atténuer ces problèmes ne pouvaient être prises que dans le cadre d'une coopération internationale. Les projets de gestion des eaux du Danube ont souvent cherché à combiner amélioration des conditions de navigation, lutte contre les inondations et production d'électricité par des centrales hydro-électriques. Certains Etats riverains ont largement tiré parti des ressources du Danube en matière de production d'énergie hydro-électrique. Les tentatives qui ont été faites pour exploiter le potentiel du tronçon particulier du fleuve qui est en cause dans la présente instance se sont échelonnées sur une période de vingt-cinq ans, qui a culminé avec la signature du traité de 1977.



18. Les principaux ouvrages à construire en exécution du projet sont décrits au paragraphe 1 de l'article premier du traité de 1977. Deux séries d'écluses étaient prévues, l'une à Gabčíkovo (en territoire tchécoslovaque), l'autre à Nagymaros (en territoire hongrois), en vue de constituer «un système d'ouvrages opérationnel, unique et indivisible» (voir ci-après, p. 21, le croquis n° 2). La Cour aura plus loin l'occasion de revenir sur le détail de ces ouvrages, qui devaient notamment comprendre un réservoir en amont de Dunakiliti, en territoire hongrois et en territoire tchécoslovaque; un barrage à Dunakiliti, en territoire hongrois; un canal de dérivation, en territoire tchécoslovaque, sur lequel devait être construit le système d'écluses de Gabčíkovo (de même qu'une centrale hydro-électrique d'une capacité installée de 720 mégawatts (MW)); l'approfondissement du lit du Danube après la jonction du canal de dérivation et de l'ancien lit du fleuve; un renforcement des ouvrages de protection contre les inondations le long du Danube en amont de Nagymaros; le système d'écluses de Nagymaros, en territoire hongrois (avec une centrale hydro-électrique d'une capacité de 158 MW); et l'approfondissement du lit du Danube en aval.



Le paragraphe 4 de l'article premier du traité prévoyait que les spécifications techniques concernant le système seraient fixées dans le «plan contractuel conjoint», qui devait être établi conformément à l'accord signé à cette fin par les deux gouvernements le 6 mai 1976; le paragraphe 1 de l'article 4 précisait quant à lui que «l'investissement conjoint [serait] effectué conformément au plan contractuel conjoint».

Aux termes du paragraphe 1 de l'article 3:

> «Les opérations liées à la réalisation de l'investissement conjoint et à l'exécution des tâches relatives au fonctionnement du système d'écluses seront dirigées et supervisées par les gouvernements des parties contractantes, par l'intermédiaire de ... (... «délégués gouvernementaux»).»

Ces délégués étaient notamment chargés de «veiller à ce que la construction du système d'écluses soit ... réalisée conformément au plan contractuel conjoint approuvé et au calendrier des travaux du projet». Lors de la mise en service des ouvrages, ils devaient en outre «établir les procédures

and operational procedures of the System of Locks and ensure compliance therewith."

Article 4, paragraph 4, stipulated that:

> "Operations relating to the joint investment [should] be organized by the Contracting Parties in such a way that the power generation plants [would] be put into service during the period 1986-1990."

Article 5 provided that the cost of the joint investment would be borne by the contracting parties in equal measure. It specified the work to be carried out by each one of them. Article 8 further stipulated that the Dunakiliti dam, the bypass canal and the two series of locks at Gabčíkovo and Nagymaros would be "jointly owned" by the contracting parties "in equal measure". Ownership of the other works was to be vested in the State on whose territory they were constructed.

The parties were likewise to participate in equal measure in the use of the system put in place, and more particularly in the use of the base-load and peak-load power generated at the hydroelectric power plants (Art. 9).

According to Article 10, the works were to be managed by the State on whose territory they were located, "in accordance with the jointly-agreed operating and operational procedures", while Article 12 stipulated that the operation, maintenance (repair) and reconstruction costs of jointly owned works of the System of Locks were also to be borne jointly by the contracting parties in equal measure.

According to Article 14,

> "The discharge specified in the water balance of the approved joint contractual plan shall be ensured in the bed of the Danube [between Dunakiliti and Sap] unless natural conditions or other circumstances temporarily require a greater or smaller discharge."

Paragraph 3 of that Article was worded as follows:

> "In the event that the withdrawal of water in the Hungarian-Czechoslovak section of the Danube exceeds the quantities of water specified in the water balance of the approved joint contractual plan and the excess withdrawal results in a decrease in the output of electric power, the share of electric power of the Contracting Party benefiting from the excess withdrawal shall be correspondingly reduced."

Article 15 specified that the contracting parties

> "shall ensure, by the means specified in the joint contractual plan, that the quality of the water in the Danube is not impaired as a result of the construction and operation of the System of Locks".

opérationnelles concernant le système d'écluses et en assurer l'observation».

Le paragraphe 4 de l'article 4 stipulait que:

> «Les opérations liées à l'investissement conjoint ser[aient] organisées par les parties contractantes de façon que les centrales de génération d'énergie soient mises en service pendant la période 1986-1990.»

L'article 5 disposait que les coûts de l'investissement conjoint seraient pris en charge, à parts égales, par les parties contractantes. Il précisait les travaux à réaliser par chacune d'entre elles. L'article 8 ajoutait que le barrage de Dunakiliti, le canal de dérivation et les deux séries d'écluses de Gabčíkovo et Nagymaros seraient «la propriété conjointe, à parts égales», des parties contractantes. Les autres ouvrages devaient être la propriété de l'Etat sur le territoire duquel ils étaient construits.

Les parties devaient de même participer à parts égales à l'utilisation du système mis en place et plus particulièrement à l'utilisation de l'énergie de base et de pointe générée dans les centrales hydro-électriques (art. 9).

Aux termes de l'article 10, les ouvrages devaient être gérés par l'Etat sur le territoire duquel ils se trouvaient, «conformément aux procédures opérationnelles arrêtées d'un commun accord», alors que l'article 12 prévoyait que les frais d'exploitation, d'entretien (réparation) et de reconstruction des ouvrages du système d'écluses appartenant en commun aux parties contractantes seraient aussi pris en charge conjointement, à parts égales, par celles-ci.

Conformément à l'article 14:

> «Le débit spécifié dans l'équilibre hydraulique prévu dans le plan contractuel conjoint approuvé sera assuré dans le lit du Danube [entre Dunakiliti et Sap], à moins que des conditions naturelles ou d'autres circonstances n'exigent temporairement un débit supérieur ou inférieur.»

Le paragraphe 3 de cet article était ainsi libellé:

> «Au cas où les prélèvements d'eau du Danube, dans le secteur hungaro-tchécoslovaque, dépasseraient les quantités d'eau spécifiées dans l'équilibre hydraulique prévu dans le plan contractuel conjoint approuvé et où les prélèvements entraîneraient une diminution de la production d'énergie électrique, la part d'énergie électrique revenant à la partie contractante ayant procédé aux prélèvements excédentaires sera réduite en conséquence.»

L'article 15 précisait que les parties contractantes

> «veiller[aient], selon les modalités spécifiées dans le plan contractuel conjoint, à ce que la qualité des eaux du Danube ne soit pas compromise par suite de la construction et du fonctionnement du système d'écluses».

Article 16 set forth the obligations of the contracting parties concerning the maintenance of the bed of the Danube.

Article 18, paragraph 1, provided as follows:

> "The Contracting Parties, in conformity with the obligations previously assumed by them, and in particular with article 3 of the Convention concerning the regime of navigation on the Danube, signed at Belgrade on 18 August 1948, shall ensure uninterrupted and safe navigation on the international fairway both during the construction and during the operation of the System of Locks."

It was stipulated in Article 19 that:

> "The Contracting Parties shall, through the means specified in the joint contractual plan, ensure compliance with the obligations for the protection of nature arising in connection with the construction and operation of the System of Locks."

Article 20 provided for the contracting parties to take appropriate measures, within the framework of their national investments, for the protection of fishing interests in conformity with the Convention concerning Fishing in the Waters of the Danube, signed at Bucharest on 29 January 1958.

According to Article 22, paragraph 1, of the Treaty, the contracting parties had, in connection with the construction and operation of the System of Locks, agreed on minor revision to the course of the State frontier between them as follows:

> "*(d)* In the Dunakiliti-Hrušov head-water area, the State frontier shall run from boundary point 161.V.O.á. to boundary stone No. I.5. in a straight line in such a way that the territories affected, to the extent of about 10-10 hectares shall be offset between the two States."

It was further provided, in paragraph 2, that the revision of the State frontier and the exchange of territories so provided for should be effected "by the Contracting Parties on the basis of a separate treaty". No such treaty was concluded.

Finally a dispute settlement provision was contained in Article 27, worded as follows:

> "1. The settlement of disputes in matters relating to the realization and operation of the System of Locks shall be a function of the government delegates.
>
> 2. If the government delegates are unable to reach agreement on the matters in dispute, they shall refer them to the Governments of the Contracting Parties for decision."

19. The Joint Contractual Plan, referred to in the previous paragraph, set forth, on a large number of points, both the objectives of the system

L'article 16 indiquait quelles étaient les obligations des parties contractantes en ce qui concerne l'entretien du lit du Danube.

Quant à l'article 18, il prévoyait ce qui suit en son paragraphe 1:

> «Les parties contractantes, conformément aux obligations qu'elles ont précédemment assumées et en particulier à l'article 3 de la convention relative au régime de la navigation sur le Danube signée à Belgrade le 18 août 1948, veilleront à ce que la navigation puisse se poursuivre de façon ininterrompue et dans des conditions de sécurité dans le chenal international, tant pendant la construction que pendant le fonctionnement du système d'écluses.»

L'article 19 stipulait:

> «Les parties contractantes assureront, par les moyens spécifiés dans le plan contractuel conjoint, le respect des obligations concernant la protection de la nature découlant de la construction et du fonctionnement du système d'écluses.»

L'article 20 disposait que, dans le cadre de leurs investissements nationaux, les parties contractantes prendraient les mesures appropriées pour protéger les intérêts en matière de pêche conformément à la convention relative à la pêche dans le Danube, signée à Bucarest le 29 janvier 1958.

Aux termes du paragraphe 1 de l'article 22 du traité, les parties contractantes étaient convenues, dans le contexte de la construction et du fonctionnement du système d'écluses, d'apporter des modifications mineures au tracé de la frontière d'Etat qui les sépare; ces modifications étaient les suivantes:

> «*d)* Dans le secteur d'amont de Dunakiliti-Hrušov, la frontière d'Etat ira du point frontière 161.V.O.á. à la borne frontière n° I.5., en ligne droite, de façon que les territoires affectés, à concurrence d'environ 10-10 hectares, soient répartis également entre les deux Etats.»

Il était en outre disposé, au paragraphe 2, que la revision de la frontière d'Etat et l'échange de territoires ainsi prévus seraient effectués «par les parties contractantes sur la base d'un traité distinct». Un tel traité n'a pas été conclu.

Enfin, l'article 27 contenait des dispositions relatives au règlement des différends, rédigées comme suit:

> «1. Le règlement des différends concernant toutes questions relatives à la réalisation et au fonctionnement du système d'écluses incombera aux délégués gouvernementaux.
>
> 2. Si les délégués gouvernementaux ne peuvent parvenir à un accord sur les questions en litige, ils les soumettront aux gouvernements des parties contractantes pour décisions.»

19. Sur un grand nombre de points, le plan contractuel conjoint mentionné au paragraphe précédent précisait à la fois les objectifs du système

and the characteristics of the works. In its latest version it specified in paragraph 6.2 that the Gabčíkovo bypass canal would have a discharge capacity of 4,000 cubic metres per second (m^3/s). The power plant would include "Eight . . . turbines with 9.20 m diameter running wheels" and would "mainly operate in peak-load time and continuously during high water". This type of operation would give an energy production of 2,650 gigawatt/hours (GWh) per annum. The Plan further stipulated in paragraph 4.4.2:

> "The low waters are stored every day, which ensures the peak-load time operation of the Gabčíkovo hydropower plant . . . a minimum of 50 m^3/s additional water is provided for the old bed [of the Danube] besides the water supply of the branch system."

The Plan further specified that, in the event that the discharge into the bypass canal exceeded 4,000-4,500 m^3/s, the excess amounts of water would be channelled into the old bed. Lastly, according to paragraph 7.7 of the Plan:

> "The common operational regulation stipulates that concerning the operation of the Dunakiliti barrage in the event of need during the growing season 200 m^3/s discharge must be released into the old Danube bed, in addition to the occasional possibilities for rinsing the bed."

The Joint Contractual Plan also contained "Preliminary Operating and Maintenance Rules", Article 23 of which specified that "The final operating rules [should] be approved within a year of the setting into operation of the system." (Joint Contractual Plan, Summary Documentation, Vol. O-1-A.)

Nagymaros, with six turbines, was, according to paragraph 6.3 of the Plan, to be a "hydropower station . . . type of a basic power-station capable of operating in peak-load time for five hours at the discharge interval between 1,000-2,500 m^3/s" per day. The intended annual production was to be 1,025 GWh (i.e., 38 per cent of the production of Gabčíkovo, for an installed power only equal to 21 per cent of that of Gabčíkovo).

20. Thus, the Project was to have taken the form of an integrated joint project with the two contracting parties on an equal footing in respect of the financing, construction and operation of the works. Its single and indivisible nature was to have been realized through the Joint Contractual Plan which complemented the Treaty. In particular, Hungary would have had control of the sluices at Dunakiliti and the works at Nagymaros, whereas Czechoslovakia would have had control of the works at Gabčíkovo.

*

21. The schedule of work had for its part been fixed in an Agreement on mutual assistance signed by the two parties on 16 September 1977, at

et les caractéristiques des ouvrages. Dans sa dernière version, il spécifiait en son paragraphe 6.2 que le canal de dérivation de Gabčíkovo aurait une capacité de débit de 4000 mètres cubes par seconde (m^3/s). La centrale compterait «huit turbines ... avec des aubes de 9,20 mètres de diamètre» et «fonctionner[ait] principalement en régime de pointe et en mode continu lors des hautes eaux». Ce type de fonctionnement permettrait une production d'énergie électrique de 2650 gigawatts/heure (GWh) par an. Le plan ajoutait en son paragraphe 4.4.2:

> «Les basses eaux sont emmagasinées chaque jour pour permettre le fonctionnement en régime de pointe de la centrale hydro-électrique de Gabčíkovo ... tandis qu'un débit minimum de 50 m^3/s est assuré à l'ancien lit [du Danube] en sus de l'eau fournie au système de bras.»

Le plan spécifiait en outre que, dans les cas où le débit dans le canal de dérivation dépasserait 4000-4500 m^3/s, les quantités d'eau excédentaires seraient déversées dans l'ancien lit. Enfin, selon le paragraphe 7.7 du plan:

> «Le règlement opérationnel conjoint prévoit qu'en cas de besoin pendant la saison végétative le barrage de Dunakiliti devra envoyer 200 m^3/s dans l'ancien lit du Danube en sus des volumes occasionnellement nécessaires pour le rinçage du lit.»

Le plan contractuel conjoint comprenait également des «consignes provisoires d'exploitation et d'entretien» dont l'article 23 précisait que: «Les consignes d'exploitation définitives [seraient] agréées dans un délai d'un an à compter de la mise en service du système.» (Plan contractuel conjoint, documentation de synthèse, vol. O-1-A.)

Quant à Nagymaros, avec six turbines, il devait s'agir, selon le paragraphe 6.3 du plan, d'une «centrale hydro-électrique ... du type centrale de base capable de fonctionner en régime de pointe pendant cinq heures avec un débit situé entre 1000 et 2500 m^3/s» par jour. La production annuelle prévue était de 1025 GWh (soit trente-huit pour cent de la production de Gabčíkovo pour une puissance installée n'atteignant que vingt et un pour cent de celle de Gabčíkovo).

20. Ainsi, le projet devait se présenter comme un projet conjoint intégré dans lequel les deux parties contractantes seraient sur un pied d'égalité en ce qui concerne le financement, la construction et l'exploitation des ouvrages. Son caractère unique et indivisible devait être concrétisé grâce au plan contractuel conjoint qui complétait le traité. C'est sous le contrôle de la Hongrie, en particulier, que se seraient trouvés les vannes de Dunakiliti et les ouvrages de Nagymaros, tandis que les ouvrages de Gabčíkovo aurait été placés sous le contrôle de la Tchécoslovaquie.

*

21. Le calendrier de réalisation des travaux avait pour sa part été fixé dans un accord d'assistance mutuelle signé par les deux parties le 16 sep-

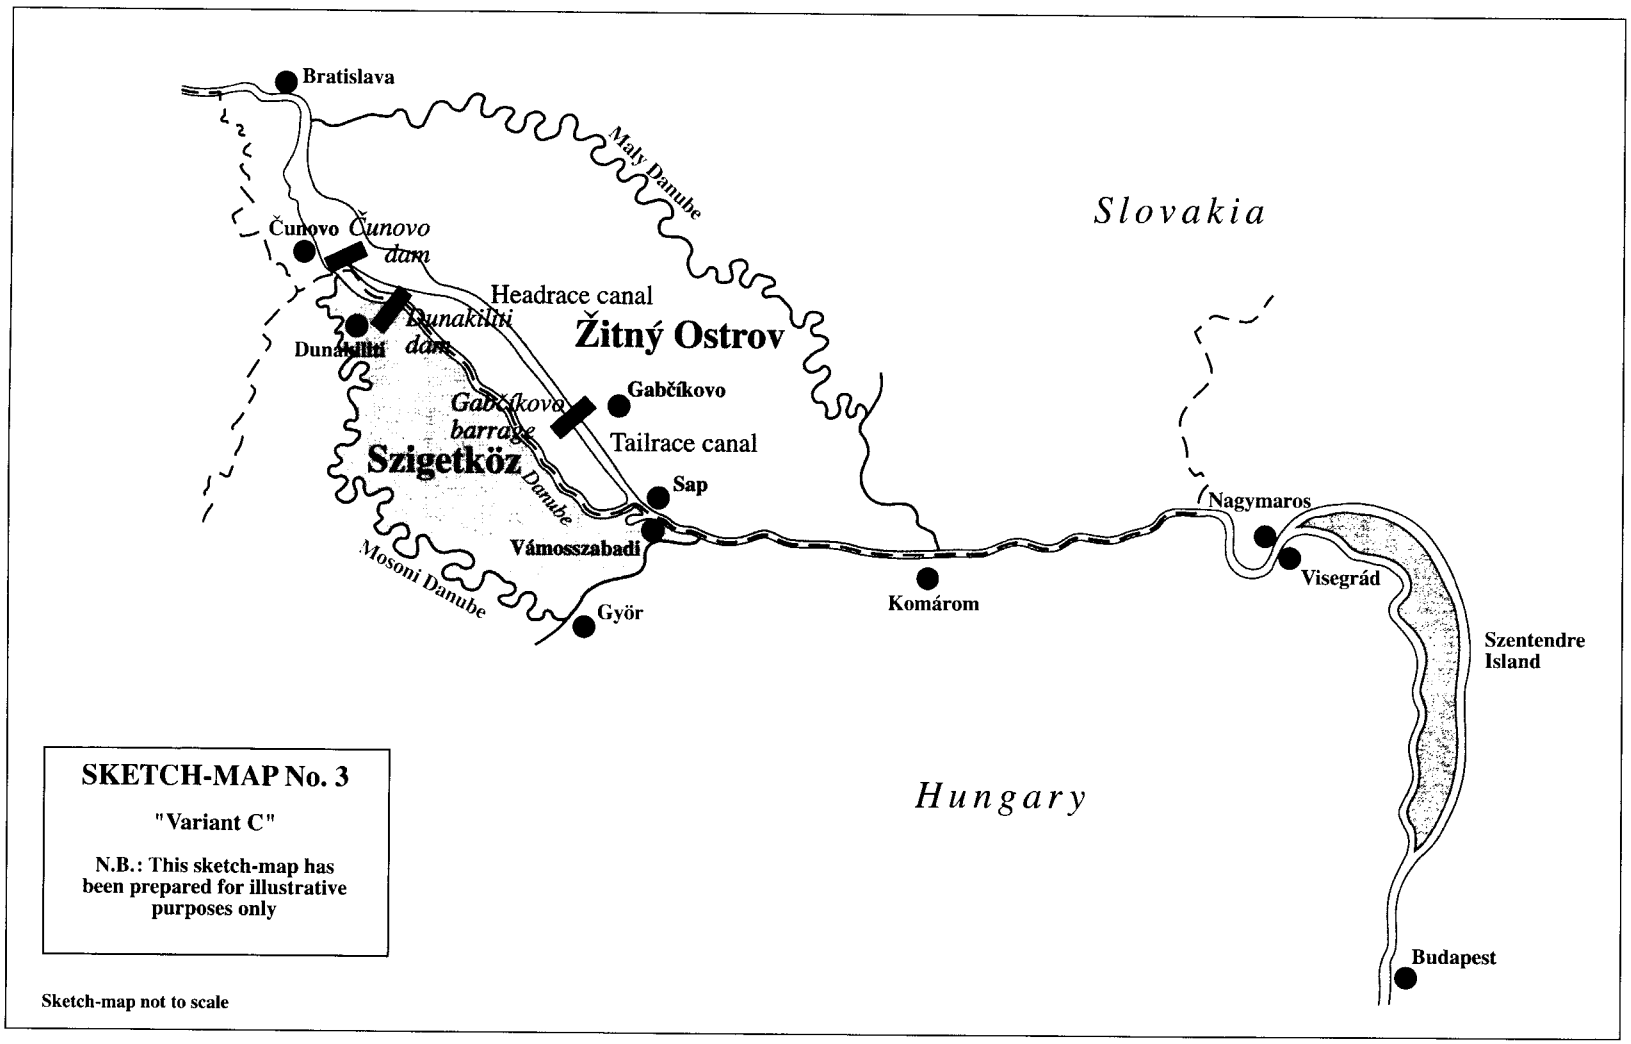
the same time as the Treaty itself. The Agreement moreover made some adjustments to the allocation of the works between the parties as laid down by the Treaty.

Work on the Project started in 1978. On Hungary's initiative, the two parties first agreed, by two Protocols signed on 10 October 1983 (one amending Article 4, paragraph 4, of the 1977 Treaty and the other the Agreement on mutual assistance), to slow the work down and to postpone putting into operation the power plants, and then, by a Protocol signed on 6 February 1989 (which amended the Agreement on mutual assistance), to accelerate the Project.

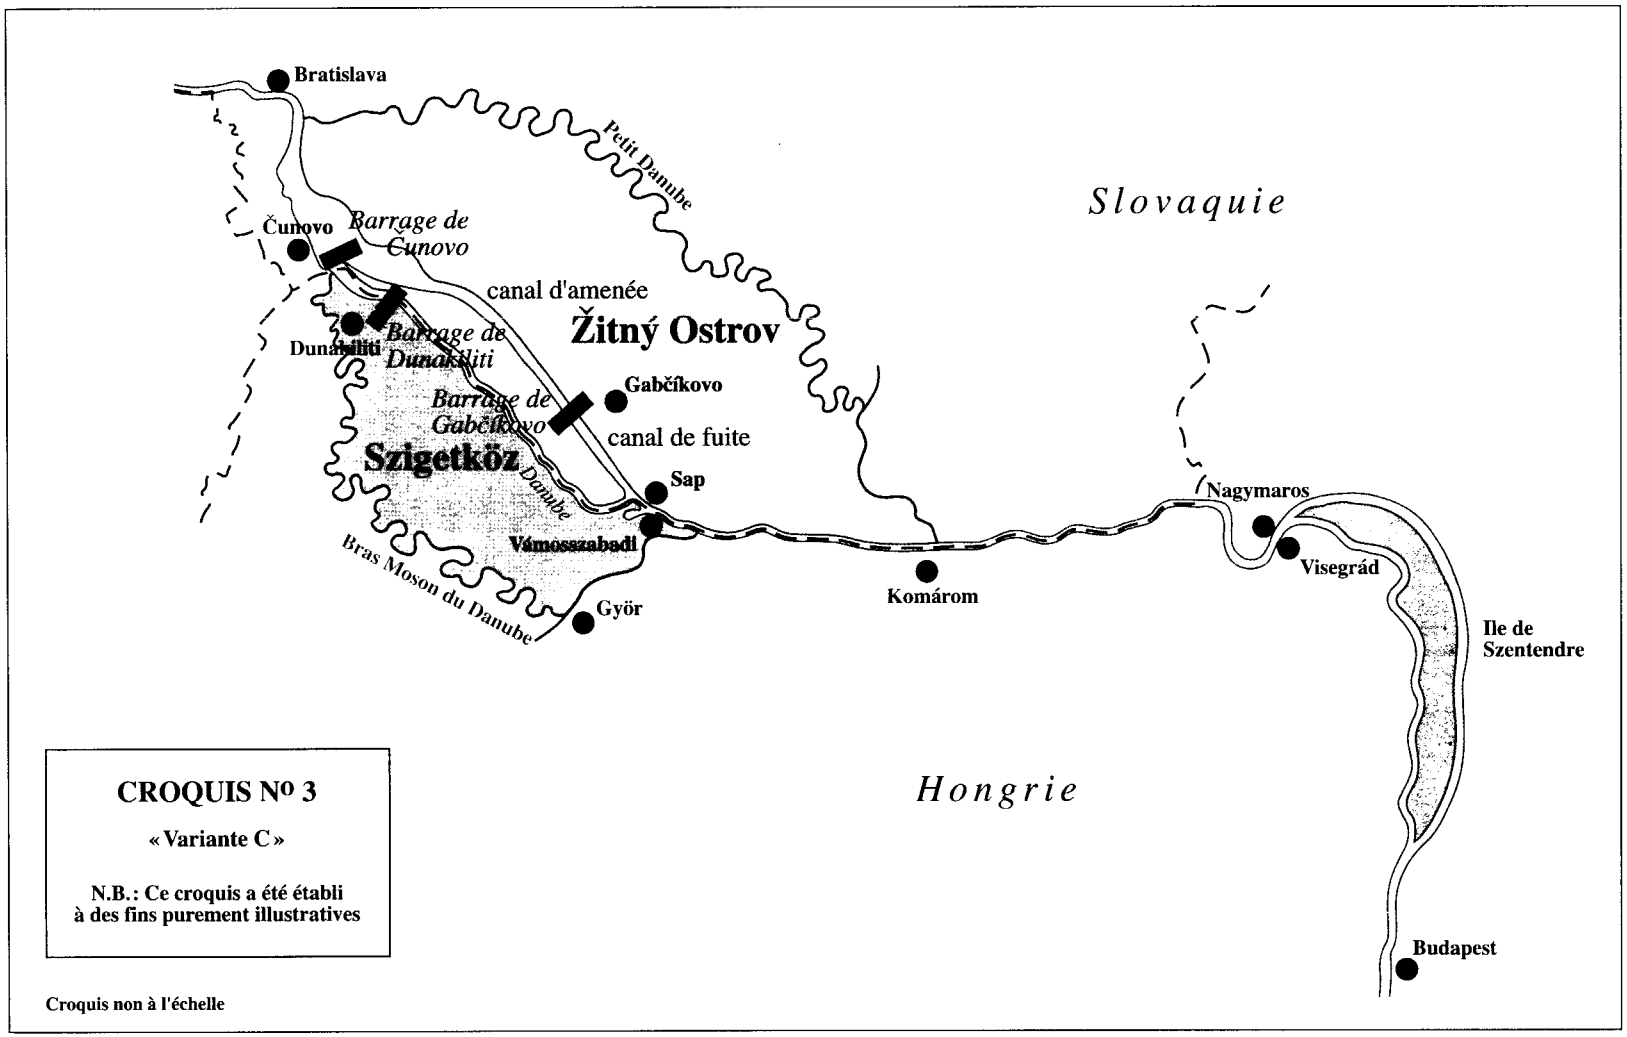
22. As a result of intense criticism which the Project had generated in Hungary, the Hungarian Government decided on 13 May 1989 to suspend the works at Nagymaros pending the completion of various studies which the competent authorities were to finish before 31 July 1989. On 21 July 1989, the Hungarian Government extended the suspension of the works at Nagymaros until 31 October 1989, and, in addition, suspended the works at Dunakiliti until the same date. Lastly, on 27 October 1989, Hungary decided to abandon the works at Nagymaros and to maintain the status quo at Dunakiliti.

23. During this period, negotiations were being held between the parties. Czechoslovakia also started investigating alternative solutions. One of them, subsequently known as "Variant C", entailed a unilateral diversion of the Danube by Czechoslovakia on its territory some 10 kilometres upstream of Dunakiliti (see sketch-map No. 3, p. 26 below). In its final stage, Variant C included the construction at Čunovo of an overflow dam and a levee linking that dam to the south bank of the bypass canal. The corresponding reservoir was to have a smaller surface area and provide approximately 30 per cent less storage than the reservoir initially contemplated. Provision was made for ancillary works, namely: an intake structure to supply the Mosoni Danube; a weir to enable, *inter alia*, floodwater to be directed along the old bed of the Danube; an auxiliary shiplock; and two hydroelectric power plants (one capable of an annual production of 4 GWh on the Mosoni Danube, and the other with a production of 174 GWh on the old bed of the Danube). The supply of water to the side-arms of the Danube on the Czechoslovak bank was to be secured by means of two intake structures in the bypass canal at Dobrohošt' and Gabčíkovo. A solution was to be found for the Hungarian bank. Moreover, the question of the deepening of the bed of the Danube at the confluence of the bypass canal and the old bed of the river remained outstanding.

On 23 July 1991, the Slovak Government decided "to begin, in September 1991, construction to put the Gabčíkovo Project into operation by the provisional solution". That decision was endorsed by the Federal Czechoslovak Government on 25 July. Work on Variant C began in November 1991. Discussions continued between the two parties but to no avail, and, on 19 May 1992, the Hungarian Government transmitted



tembre 1977, en même temps que le traité lui-même. L'accord apportait par ailleurs quelques retouches à la répartition des travaux entre les parties telle qu'opérée par le traité.



Les travaux relatifs au projet commencèrent en 1978. A l'initiative de la Hongrie, les deux parties convinrent d'abord, par deux protocoles signés le 10 octobre 1983 (l'un amendant le paragraphe 4 de l'article 4 du traité de 1977 et l'autre l'accord d'assistance mutuelle), de ralentir les travaux et de différer la mise en service des centrales, puis, par un protocole signé le 6 février 1989 (qui amendait l'accord d'assistance mutuelle), d'accélérer le projet.

22. A la suite de vives critiques que le projet avait suscitées en Hongrie, le Gouvernement hongrois décida le 13 mai 1989 de suspendre les travaux à Nagymaros en attendant l'achèvement de diverses études que les autorités compétentes devaient mener à bien avant le 31 juillet 1989. Le 21 juillet 1989, le Gouvernement hongrois prolongea jusqu'au 31 octobre 1989 la suspension des travaux à Nagymaros et suspendit en outre les travaux à Dunakiliti jusqu'à la même date. Enfin, le 27 octobre 1989, la Hongrie décida d'abandonner les travaux à Nagymaros et de maintenir le statu quo à Dunakiliti.

23. Au cours de cette période, des négociations furent tenues entre les parties. La Tchécoslovaquie mit aussi à l'étude des solutions de rechange. L'une d'entre elles, dénommée par la suite «variante C», impliquait le détournement unilatéral du Danube par la Tchécoslovaquie sur son territoire à quelque 10 kilomètres en amont de Dunakiliti (voir ci-après, p. 26, le croquis n° 3). Dans son dernier état, la variante C comportait la construction à Čunovo d'un barrage déversoir et d'une digue reliant ce barrage à la rive sud du canal de dérivation. Le réservoir correspondant devait avoir une surface plus réduite et disposer d'une capacité de retenue d'environ trente pour cent inférieure à celle du réservoir initialement envisagé. Des ouvrages accessoires étaient prévus, à savoir: une prise d'eau destinée à alimenter le bras Moson du Danube; un déversoir permettant, notamment, de diriger les eaux de crue dans l'ancien lit du Danube; une écluse de navigation auxiliaire; et deux centrales hydroélectriques (l'une permettant une production annuelle de 4 GWh sur le bras Moson du Danube, l'autre une production de 174 GWh sur l'ancien lit du Danube). L'alimentation en eau des bras secondaires du Danube sur la rive tchécoslovaque devait être assurée grâce à deux prises d'eau situées, dans le canal de dérivation, à Dobrohošt' et à Gabčíkovo. Une solution devait être trouvée pour la rive hongroise. En outre, la question de l'approfondissement du lit du Danube au confluent du canal de dérivation et de l'ancien lit du fleuve restait posée.

Le 23 juillet 1991, le Gouvernement slovaque décida de «commencer en septembre 1991 les constructions en vue de permettre la mise en exploitation du projet de Gabčíkovo grâce à la solution provisoire». Cette décision fut entérinée par le Gouvernement fédéral tchécoslovaque le 25 juillet. Les travaux relatifs à la variante C commencèrent en novembre 1991. Les discussions se poursuivirent en vain entre les deux parties

Croquis non à l'échelle

to the Czechoslovak Government a Note Verbale terminating the 1977 Treaty with effect from 25 May 1992. On 15 October 1992, Czechoslovakia began work to enable the Danube to be closed and, starting on 23 October, proceeded to the damming of the river.

24. On 23 October 1992, the Court was seised of an "Application of the Republic of Hungary *v.* The Czech and Slovak Federal Republic on the Diversion of the Danube River"; however, Hungary acknowledged that there was no basis on which the Court could have founded its jurisdiction to entertain that application, on which Czechoslovakia took no action. In the meanwhile, the Commission of the European Communities had offered to mediate and, during a meeting of the two parties with the Commission held in London on 28 October 1992, the parties entered into a series of interim undertakings. They principally agreed that the dispute would be submitted to the International Court of Justice, that a tripartite fact-finding mission should report on Variant C not later than 31 October, and that a tripartite group of independent experts would submit suggestions as to emergency measures to be taken.

25. On 1 January 1993 Slovakia became an independent State. On 7 April 1993, the "Special Agreement for Submission to the International Court of Justice of the Differences between the Republic of Hungary and the Slovak Republic concerning the Gabčíkovo-Nagymaros Project" was signed in Brussels, the text of which is reproduced in paragraph 2 above. After the Special Agreement was notified to the Court, Hungary informed the Court, by a letter dated 9 August 1993, that it considered its "initial Application [to be] now without object, and . . . lapsed".

According to Article 4 of the Special Agreement, "The Parties [agreed] that, pending the final Judgment of the Court, they [would] establish and implement a temporary water management régime for the Danube." However, this régime could not easily be settled. The filling of the Čunovo dam had rapidly led to a major reduction in the flow and in the level of the downstream waters in the old bed of the Danube as well as in the side-arms of the river. On 26 August 1993, Hungary and Slovakia reached agreement on the setting up of a tripartite group of experts (one expert designated by each party and three independent experts designated by the Commission of the European Communities)

> "In order to provide reliable and undisputed data on the most important effects of the current water discharge and the remedial measures already undertaken as well as to make recommendations for appropriate measures."

On 1 December 1993, the experts designated by the Commission of the European Communities recommended the adoption of various measures to remedy the situation on a temporary basis. The Parties were unable to agree on these recommendations. After lengthy negotiations, they finally concluded an Agreement "concerning Certain Temporary Technical Measures and Discharges in the Danube and Mosoni branch of the Danube",

et, le 19 mai 1992, le Gouvernement hongrois transmit au Gouvernement tchécoslovaque une note verbale mettant fin, à compter du 25 mai 1992, au traité de 1977. Le 15 octobre 1992, la Tchécoslovaquie entama les travaux devant permettre la fermeture du Danube et elle procéda, à partir du 23 octobre, au barrage du fleuve.

24. Le 23 octobre 1992, la Cour fut saisie d'une «requête de la République de Hongrie contre la République fédérative tchèque et slovaque concernant le détournement du Danube»; toutefois, la Hongrie reconnaissait qu'il n'y avait aucune base sur laquelle la Cour eût pu fonder sa compétence pour connaître de cette requête, à laquelle la Tchécoslovaquie ne donna pas suite. Dans l'intervalle, la Commission des Communautés européennes avait offert sa médiation et, lors d'une réunion tenue à Londres le 28 octobre 1992 entre les deux parties et la Commission, les parties prirent divers engagements transitoires. Elles convinrent surtout que le différend serait soumis à la Cour internationale de Justice, qu'une mission d'enquête tripartite ferait rapport sur la variante C le 31 octobre au plus tard et qu'un groupe tripartite d'experts indépendants ferait des propositions concernant les mesures d'urgence à prendre.

25. Le 1er janvier 1993, la Slovaquie devint un Etat indépendant. Le 7 avril 1993 fut signé à Bruxelles le «Compromis visant à soumettre à la Cour internationale de Justice les contestations entre la République de Hongrie et la République slovaque concernant le projet Gabčíkovo-Nagymaros», dont le texte est reproduit au paragraphe 2 ci-dessus. Après la notification du compromis à la Cour, la Hongrie, par lettre du 9 août 1993, informa la Cour qu'elle considérait sa «requête initiale [comme désormais] sans objet et ... caduque».

Aux termes de l'article 4 du compromis: «Les Parties [étaient convenues], en attendant l'arrêt définitif de la Cour, d'établir et d'appliquer un régime temporaire de gestion des eaux pour le Danube.» Toutefois, l'établissement de ce régime ne fut pas aisé. La mise en eau du barrage de Čunovo avait rapidement entraîné une importante réduction du débit et du niveau des eaux en aval dans l'ancien lit du Danube comme dans les bras secondaires du fleuve. Le 26 août 1993, la Hongrie et la Slovaquie s'accordèrent pour créer un groupe tripartite d'experts (un expert nommé par chaque partie et trois experts indépendants nommés par la Commission des Communautés européennes)

> «afin de recueillir des données fiables et incontestées sur les effets les plus importants du débit actuel et des mesures correctives déjà entreprises, ainsi que pour formuler des recommandations sur les mesures appropriées».

Le 1er décembre 1993, les experts nommés par la Commission des Communautés européennes recommandèrent l'adoption de diverses mesures en vue de remédier, à titre temporaire, à la situation. Les Parties ne purent se mettre d'accord sur ces recommandations. A l'issue de longues négociations, elles conclurent finalement, le 19 avril 1995, un accord «concernant certaines mesures techniques temporaires et les débits d'eau dans le Danube

on 19 April 1995. That Agreement raised the discharge of water into the Mosoni Danube to 43 m^3/s. It provided for an annual average of 400 m^3/s in the old bed (not including flood waters). Lastly, it provided for the construction by Hungary of a partially underwater weir near to Dunakiliti with a view to improving the water supply to the side-arms of the Danube on the Hungarian side. It was specified that this temporary agreement would come to an end 14 days after the Judgment of the Court.

* * *

26. The first subparagraph of the Preamble to the Special Agreement covers the disputes arising between Czechoslovakia and Hungary concerning the application and termination, not only of the 1977 Treaty, but also of "related instruments"; the subparagraph specifies that, for the purposes of the Special Agreement, the 1977 Treaty and the said instruments shall be referred to as "the Treaty". "The Treaty" is expressly referred to in the wording of the questions submitted to the Court in Article 2, paragraph 1, subparagraphs *(a)* and *(c)*, of the Special Agreement.

The Special Agreement however does not define the concept of "related instruments", nor does it list them. As for the Parties, they gave some consideration to that question — essentially in the written proceedings — without reaching agreement as to the exact meaning of the expression or as to the actual instruments referred to. The Court notes however that the Parties seemed to agree to consider that that expression covers at least the instruments linked to the 1977 Treaty which implement it, such as the Agreement on mutual assistance of 16 September 1977 and its amending Protocols dated, respectively, 10 October 1983 and 6 February 1989 (see paragraph 21 above), and the Agreement as to the common operational regulations of Plenipotentiaries fulfilling duties related to the construction and operation of the Gabčíkovo-Nagymaros Barrage System signed in Bratislava on 11 October 1979. The Court notes that Hungary, unlike Slovakia, declined to apply the description of related instruments to the 1977 Treaty to the Joint Contractual Plan (see paragraph 19 above), which it refused to see as "an agreement at the same level as the other . . . related Treaties and inter-State agreements".

Lastly the Court notes that the Parties, in setting out the replies which should in their view be given to the questions put in the Special Agreement, concentrated their reasoning on the 1977 Treaty; and that they would appear to have extended their arguments to "related instruments" in considering them as accessories to a whole treaty system, whose fate was in principle linked to that of the main part, the 1977 Treaty. The Court takes note of the positions of the Parties and considers that it does not need to go into this matter further at this juncture.

* * *

et le bras Moson du Danube». Cet accord portait le débit d'eau dans le bras Moson à 43 m^3/s. Il prévoyait une moyenne annuelle de 400 m^3/s dans l'ancien lit (en ce non compris les eaux de crue). Il prescrivait enfin la construction par la Hongrie d'un déversoir partiellement noyé près de Dunakiliti, en vue d'améliorer l'alimentation en eau des bras secondaires du Danube du côté hongrois. Il était précisé que cet accord temporaire prendrait fin quatorze jours après le prononcé de l'arrêt de la Cour.

* * *

26. Le premier alinéa du préambule du compromis vise les contestations surgies entre la Tchécoslovaquie et la Hongrie concernant l'application et la terminaison non seulement du traité de 1977, mais aussi des «instruments y afférents»; l'alinéa précise qu'aux fins du compromis le traité de 1977 et lesdits instruments seront dénommés le «traité». Il est expressément fait référence au «traité» dans le texte des questions posées à la Cour à l'article 2, paragraphe 1, alinéas *a)* et *c)*, du compromis.

Le compromis ne définit toutefois pas la notion d'«instruments ... afférents» au traité de 1977 et n'énumère pas davantage ceux-ci. Quant aux Parties, elles ont consacré quelques développements à cette question — essentiellement dans la procédure écrite — sans parvenir à s'entendre sur le sens exact de l'expression ni sur les instruments concrets auxquels elle renverrait. La Cour constate cependant que les Parties paraissent s'accorder pour considérer que cette expression vise au moins les instruments liés au traité de 1977 qui en assurent la mise en œuvre, tels que l'accord d'assistance mutuelle du 16 septembre 1977 et ses protocoles modificatifs en date, respectivement, du 10 octobre 1983 et du 6 février 1989 (voir paragraphe 21 ci-dessus), et l'accord relatif à la réglementation opérationnelle commune applicable aux plénipotentiaires s'acquittant de fonctions liées à la construction et à l'exploitation du système de barrage de Gabčíkovo-Nagymaros, signé à Bratislava le 11 octobre 1979. La Cour note que la Hongrie, contrairement à la Slovaquie, a dénié le caractère d'instrument afférent au traité de 1977 au plan contractuel conjoint (voir paragraphe 19 ci-dessus), dans lequel elle a refusé de voir «un accord au même titre que les autres traités et accords entre Etats ... liés [au traité de 1977]».

La Cour fera enfin observer qu'en exposant quelles sont, à leur sens, les réponses qui devraient être données aux questions posées dans le compromis, les Parties ont concentré leur argumentation sur le traité de 1977; et qu'elles paraissent avoir étendu leurs arguments à des instruments y afférents» en les considérant comme des éléments accessoires d'un ensemble conventionnel, dont le sort était en principe lié à celui de l'élément principal constitué par le traité. La Cour prend acte de ces positions des Parties et estime ne pas avoir à approfondir davantage cette question à ce stade.

* * *

27. The Court will now turn to a consideration of the questions submitted by the Parties. In terms of Article 2, paragraph 1 *(a)*, of the Special Agreement, the Court is requested to decide first

> "whether the Republic of Hungary was entitled to suspend and subsequently abandon, in 1989, the works on the Nagymaros Project and on the part of the Gabčíkovo Project for which the Treaty attributed responsibility to the Republic of Hungary".

28. The Court would recall that the Gabčíkovo-Nagymaros System of Locks is characterized in Article 1, paragraph 1, of the 1977 Treaty as a "single and indivisible operational system of works".

The principal works which were to constitute this system have been described in general terms above (see paragraph 18). Details of them are given in paragraphs 2 and 3 of Article 1 of the Treaty.

For Gabčíkovo, paragraph 2 lists the following works:

"*(a)* the Dunakiliti-Hrušov head-water installations in the Danube sector at r.km. (river kilometre(s)) 1860-1842, designed for a maximum flood stage of 131.10 m.B. (metres above sea-level, Baltic system), in Hungarian and Czechoslovak territory;

(b) the Dunakiliti dam and auxiliary navigation lock at r.km. 1842, in Hungarian territory;

(c) the by-pass canal (head-water canal and tail-water canal) at r.km. 1842-1811, in Czechoslovak territory;

(d) series of locks on the by-pass canal, in Czechoslovak territory, consisting of a hydroelectric power plant with installed capacity of 720 MW, double navigation locks and appurtenances thereto;

(e) improved old bed of the Danube at r.km. 1842-1811, in the joint Hungarian-Czechoslovak section;

(f) deepened and regulated bed of the Danube at r.km. 1811-1791, in the joint Hungarian-Czechoslovak section."

For Nagymaros, paragraph 3 specifies the following works:

"*(a)* head-water installations and flood-control works in the Danube sector at r.km. 1791-1696.25 and in the sectors of tributaries affected by flood waters, designed for a maximum flood stage of 107.83 m.B., in Hungarian and Czechoslovak territory;

(b) series of locks at r.km. 1696.25, in Hungarian territory, consisting of a dam, a hydroelectric power plant with installed capacity of 158 MW, double navigation locks and appurtenances thereto;

(c) deepened and regulated bed of the Danube, in both its branches, at r.km. 1696.25-1657, in the Hungarian section."

27. La Cour passera maintenant à l'examen des questions soumises par les Parties. Aux termes de l'article 2, paragraphe 1, alinéa *a)*, du compromis, il est demandé en premier lieu à la Cour de dire

> «si la République de Hongrie était en droit de suspendre puis d'abandonner, en 1989, les travaux relatifs au projet de Nagymaros ainsi qu'à la partie du projet de Gabčíkovo dont la République de Hongrie est responsable aux termes du traité».

28. La Cour rappellera que le système d'écluses de Gabčíkovo-Nagymaros est qualifié, au paragraphe 1 de l'article premier du traité de 1977, de «système d'ouvrages opérationnel, unique et indivisible».

Les principaux ouvrages qui devaient constituer ce système ont été décrits en termes généraux ci-dessus (voir paragraphe 18). Le détail en est donné aux paragraphes 2 et 3 de l'article premier du traité.

S'agissant de Gabčíkovo, le paragraphe 2 énumère les ouvrages suivants:

«*a)* les installations d'amont de Dunakiliti-Hrušov, dans le secteur du Danube, aux kilomètres 1860-1842, conçues pour un niveau maximal des hautes eaux de 131,10 mètres au-dessus du niveau de la mer, système de la Baltique, en territoires hongrois et tchécoslovaque;

b) le barrage de Dunakiliti et l'écluse de navigation auxiliaire au kilomètre 1842, en territoire hongrois;

c) le canal de dérivation (canal d'amont et canal d'aval) aux kilomètres 1842-1811, en territoire tchécoslovaque;

d) une série d'écluses sur le canal de dérivation, en territoire tchécoslovaque, comprenant une centrale hydro-électrique d'une capacité installée de 720 MW, des écluses de navigation doubles et le matériel connexe;

e) une amélioration de l'ancien lit du Danube aux kilomètres 1842-1811, dans le secteur commun hungaro-tchécoslovaque;

f) l'approfondissement et la régulation du lit du Danube aux kilomètres 1811-1791, dans le secteur conjoint hungaro-tchécoslovaque».

Quant à Nagymaros, le paragraphe 3 énumère les ouvrages ci-après:

«*a)* installations d'amont et ouvrages de protection contre les inondations dans le secteur du Danube aux kilomètres 1791-1696,25 et dans les secteurs des affluents affectés par les crues, conçus pour un niveau maximum des hautes eaux de 107,83 mètres au-dessus du niveau de la mer, système de la Baltique, en territoires hongrois et tchécoslovaque;

b) une série d'écluses au kilomètre 1696,25, en territoire hongrois, comprenant un barrage, une centrale hydro-électrique d'une capacité installée de 158 MW, des écluses de navigation doubles et un matériel connexe;

c) l'approfondissement et la régulation du lit du Danube, dans ses deux branches, aux kilomètres 1696,25-1657, dans le secteur hongrois».

29. Moreover, the precise breakdown of the works incumbent on each party was set out in Article 5, paragraph 5, of the 1977 Treaty, as follows:

"5. The labour and supplies required for the realization of the joint investment shall be apportioned between the Contracting Parties in the following manner:

(a) The Czechoslovak Party shall be responsible for:

(1) the Dunakiliti-Hrušov head-water installations on the left bank, in Czechoslovak territory;
(2) the head-water canal of the by-pass canal, in Czechoslovak territory;
(3) the Gabčíkovo series of locks, in Czechoslovak territory;
(4) the flood-control works of the Nagymaros head-water installations, in Czechoslovak territory, with the exception of the lower Ipel district;
(5) restoration of vegetation in Czechoslovak territory;

(b) The Hungarian Party shall be responsible for:

(1) the Dunakiliti-Hrušov head-water installations on the right bank, in Czechoslovak territory, including the connecting weir and the diversionary weir;
(2) the Dunakiliti-Hrušov head-water installations on the right bank, in Hungarian territory;
(3) the Dunakiliti dam, in Hungarian territory;
(4) the tail-water canal of the by-pass canal, in Czechoslovak territory;
(5) deepening of the bed of the Danube below Palkovičovo, in Hungarian and Czechoslovak territory;
(6) improvement of the old bed of the Danube, in Hungarian and Czechoslovak territory;
(7) operational equipment of the Gabčíkovo system of locks (transport equipment, maintenance machinery), in Czechoslovak territory;
(8) the flood-control works of the Nagymaros head-water installations in the lower Ipel district, in Czechoslovak territory;
(9) the flood-control works of the Nagymaros head-water installations, in Hungarian territory;
(10) the Nagymaros series of locks, in Hungarian territory;
(11) deepening of the tail-water bed below the Nagymaros system of locks, in Hungarian territory;
(12) operational equipment of the Nagymaros system of locks (transport equipment, maintenance machinery), in Hungarian territory;
(13) restoration of vegetation in Hungarian territory."

29. Par ailleurs, la ventilation précise des travaux incombant à chaque partie était opérée comme suit au paragraphe 5 de l'article 5 du traité de 1977:

«5. La main-d'œuvre et les fournitures nécessaires pour la réalisation de l'investissement conjoint seront réparties comme suit entre les parties contractantes:

a) la partie tchécoslovaque sera responsable:

1) des installations d'amont de Dunakiliti-Hrušov sur la rive gauche, en territoire tchécoslovaque;
2) du canal d'amont du canal de dérivation, en territoire tchécoslovaque;
3) de la série d'écluses de Gabčíkovo, en territoire tchécoslovaque;
4) des ouvrages de protection contre les inondations des installations d'amont de Nagymaros, en territoire tchécoslovaque, à l'exception du district inférieur d'Ipel;
5) de la remise en état de la végétation en territoire tchécoslovaque;

b) la partie hongroise sera responsable:

1) des installations d'amont de Dunakiliti-Hrušov, sur la rive droite, en territoire tchécoslovaque, y compris la vanne de connexion et la vanne de détournement;
2) des installations d'amont de Dunakiliti-Hrušov, sur la rive droite, en territoire hongrois;
3) du barrage de Dunakiliti, en territoire hongrois;
4) du canal d'aval du canal de dérivation, en territoire tchécoslovaque;
5) de l'approfondissement du lit du Danube en aval de Palkovičovo, en territoire hongrois et en territoire tchécoslovaque;
6) de l'amélioration de l'ancien lit du Danube, en territoire hongrois et en territoire tchécoslovaque;
7) du matériel opérationnel du système d'écluses de Gabčíkovo (matériel de transport, machines d'entretien), en territoire tchécoslovaque;
8) des ouvrages de protection contre les inondations des installations d'amont de Nagymaros dans le district inférieur d'Ipel, en territoire tchécoslovaque;
9) des ouvrages de protection contre les inondations des installations d'amont de Nagymaros, en territoire hongrois;
10) de la série d'écluses de Nagymaros, en territoire hongrois;
11) de l'approfondissement du lit d'aval en dessous du système d'écluses de Nagymaros, en territoire hongrois;
12) du matériel opérationnel du système d'écluses de Nagymaros (matériel de transport, machines d'entretien), en territoire hongrois;
13) de la remise en état de la végétation en territoire hongrois.»

30. As the Court has already indicated (see paragraph 18 above), Article 1, paragraph 4, of the 1977 Treaty stipulated in general terms that the "technical specifications" concerning the System of Locks would be included in the "joint contractual plan". The schedule of work had for its part been fixed in an Agreement on mutual assistance signed by the two parties on 16 September 1977 (see paragraph 21 above). In accordance with the provisions of Article 1, paragraph 1, of that Agreement, the whole of the works of the barrage system were to have been completed in 1991. As indicated in paragraph 2 of that same article, a summary construction schedule was appended to the Agreement, and provision was made for a more detailed schedule to be worked out in the Joint Contractual Plan. The Agreement of 16 September 1977 was twice amended further. By a Protocol signed on 10 October 1983, the parties agreed first to postpone the works and the putting into operation of the power plants for four more years; then, by a Protocol signed on 6 February 1989, the parties decided, conversely, to bring them forward by 15 months, the whole system having to be operational in 1994. A new summary construction schedule was appended to each of those Protocols; those schedules were in turn to be implemented by means of new detailed schedules, included in the Joint Contractual Plan.

31. In spring 1989, the work on the Gabčíkovo sector was well advanced: the Dunakiliti dam was 90 per cent complete, the Gabčíkovo dam was 85 per cent complete, and the bypass canal was between 60 per cent complete (downstream of Gabčíkovo) and 95 per cent complete (upstream of Gabčíkovo) and the dykes of the Dunakiliti-Hrušov reservoir were between 70 and 98 per cent complete, depending on the location. This was not the case in the Nagymaros sector where, although dykes had been built, the only structure relating to the dam itself was the coffer-dam which was to facilitate its construction.

32. In the wake of the profound political and economic changes which occurred at this time in central Europe, the Gabčíkovo-Nagymaros Project was the object, in Czechoslovakia and more particularly in Hungary, of increasing apprehension, both within a section of public opinion and in some scientific circles. The uncertainties not only about the economic viability of the Project, but also, and more so, as to the guarantees it offered for preservation of the environment, engendered a climate of growing concern and opposition with regard to the Project.

33. It was against this background that, on 13 May 1989, the Government of Hungary adopted a resolution to suspend works at Nagymaros, and ordered

> "the Ministers concerned to commission further studies in order to place the Council of Ministers in a position where it can make well-founded suggestions to the Parliament in connection with the amendment of the international treaty on the investment. In the interests of

30. Comme la Cour l'a déjà indiqué (voir paragraphe 18), le paragraphe 4 de l'article premier du traité de 1977 stipulait en termes généraux que les «spécifications techniques» concernant le système d'écluses seraient fixées dans le «plan contractuel conjoint». Le calendrier de réalisation des travaux avait pour sa part été fixé dans l'accord d'assistance mutuelle signé par les deux parties le 16 septembre 1977 (voir paragraphe 21 ci-dessus). Conformément aux dispositions du paragraphe 1 de l'article premier de cet accord, l'ensemble des travaux du système de barrage devaient être achevés en 1991. Ainsi qu'il était indiqué au paragraphe 2 du même article, un calendrier sommaire des travaux de construction était annexé à l'accord; il y était prévu qu'un échéancier plus détaillé serait établi dans le cadre du plan contractuel conjoint. L'accord du 16 septembre 1977 fut amendé à deux reprises. Par un protocole signé le 10 octobre 1983, il fut d'abord convenu par les parties de repousser de quatre années les travaux et la mise en service des centrales; puis, par un protocole signé le 6 février 1989, les parties décidèrent à l'inverse de les accélérer de quinze mois, l'ensemble du système devant être opérationnel en 1994. Un nouveau calendrier sommaire des travaux de construction était annexé à chacun de ces protocoles; ces calendriers devaient à leur tour recevoir effet au moyen de nouveaux échéanciers détaillés inscrits dans le plan contractuel conjoint.

31. Au printemps 1989, les travaux concernant le secteur de Gabčíkovo étaient bien avancés: le barrage de Dunakiliti était réalisé à 90 %, celui de Gabčíkovo à 85 %, le canal de dérivation entre 60 % (en aval de Gabčíkovo) et 95 % (en amont de Gabčíkovo) et les digues du réservoir de Dunakiliti-Hrušov entre 70 et 98 %, selon les endroits. Il n'en allait pas de même dans le secteur de Nagymaros où, si des digues avaient été édifiées, le seul ouvrage relatif au barrage lui-même à avoir été mis en place était le batardeau qui devait en permettre la construction.

32. Dans le sillage des changements politiques et économiques profonds survenus à cette époque en Europe centrale, le projet Gabčíkovo-Nagymaros suscita en Tchécoslovaquie et tout particulièrement en Hongrie de plus en plus d'appréhensions dans une partie de l'opinion publique et du monde scientifique. Les incertitudes éprouvées, non seulement quant à la viabilité économique du projet, mais aussi et plus encore quant aux garanties qu'il présentait pour ce qui est du respect de l'environnement, engendrèrent un climat d'inquiétude et de contestation croissantes autour de ce projet.

33. C'est dans ce contexte que le Gouvernement hongrois adopta, le 13 mai 1989, une résolution par laquelle il suspendait les travaux à Nagymaros et ordonnait

> «aux ministres intéressés de faire faire de nouvelles études afin de mettre le conseil des ministres en mesure de présenter au Parlement des suggestions dûment fondées concernant la modification du traité international sur l'investissement considéré. Il nous faut, à cet égard,

> the above, we must examine the international and legal consequences, the technical considerations, the obligations related to continuous navigation on the Danube and the environmental/ecological and seismic impacts of the eventual stopping of the Nagymaros investment. To be further examined are the opportunities for the replacement of the lost electric energy and the procedures for minimising claims for compensation."

The suspension of the works at Nagymaros was intended to last for the duration of these studies, which were to be completed by 31 July 1989. Czechoslovakia immediately protested and a document defining the position of Czechoslovakia was transmitted to the Ambassador of Hungary in Prague on 15 May 1989. The Prime Ministers of the two countries met on 24 May 1989, but their talks did not lead to any tangible result. On 2 June, the Hungarian Parliament authorized the Government to begin negotiations with Czechoslovakia for the purpose of modifying the 1977 Treaty.

34. At a meeting held by the Plenipotentiaries on 8 and 9 June 1989, Hungary gave Czechoslovakia a number of assurances concerning the continuation of works in the Gabčíkovo sector, and the signed Protocol which records that meeting contains the following passage:

> "The Hungarian Government Commissioner and the Hungarian Plenipotentiary stated, that the Hungarian side will complete construction of the Gabčíkovo Project in the agreed time and in accordance with the project plans. Directives have already been given to continue works suspended in the area due to misunderstanding."

These assurances were reiterated in a letter that the Commissioner of the Government of Hungary addressed to the Czechoslovak Plenipotentiary on 9 June 1989.

35. With regard to the suspension of work at Nagymaros, the Hungarian Deputy Prime Minister, in a letter dated 24 June 1989 addressed to his Czechoslovak counterpart, expressed himself in the following terms:

> "The Hungarian Academy of Sciences (HAS) has studied the environmental, ecological and water quality as well as the seismological impacts of abandoning or implementing the Nagymaros Barrage of the Gabčíkovo-Nagymaros Barrage System (GNBS).
>
> . . . . . .
>
> Having studied the expected impacts of the construction in accordance with the original plan, the Committee *[ad hoc]* of the Academy [set up for this purpose] came to the conclusion that we do not have adequate knowledge of the consequences of environmental risks.
>
> In its opinion, the risk of constructing the Barrage System in accordance with the original plan cannot be considered acceptable. Of course, it cannot be stated either that the adverse impacts will

examiner les conséquences internationales et juridiques, les aspects techniques, l'obligation que nous avons d'assurer la navigation continue sur le Danube et les incidences du point de vue écologique et sismique de l'arrêt éventuel de l'investissement de Nagymaros. Il convient en outre d'examiner les possibilités de remplacer l'énergie électrique perdue ainsi que les moyens à mettre en œuvre pour réduire au minimum les demandes d'indemnisation.»

La suspension des travaux à Nagymaros était prévue pour le temps de la réalisation de ces études; celles-ci devaient être terminées pour le 31 juillet 1989. La Tchécoslovaquie protesta immédiatement; un document définissant la position tchécoslovaque fut remis à l'ambassadeur de Hongrie à Prague le 15 mai 1989. Les premiers ministres des deux pays se rencontrèrent le 24 mai 1989, sans que leurs entretiens n'aboutissent à des résultats tangibles. Le 2 juin, le Parlement hongrois autorisa le gouvernement à entamer des négociations avec la Tchécoslovaquie à l'effet de modifier le traité de 1977.

34. Au cours d'une réunion que les plénipotentiaires tinrent les 8 et 9 juin 1989, la Hongrie donna à la Tchécoslovaquie diverses assurances concernant la poursuite des travaux dans le secteur de Gabčíkovo; le protocole signé qui rend compte de cette réunion contient le passage suivant:

«Le commissaire du Gouvernement hongrois et le plénipotentiaire hongrois ont fait savoir que la partie hongroise mènerait à bien la réalisation du projet de Gabčíkovo dans les délais convenus et conformément aux plans du projet. Des directives ont déjà été données pour que les travaux suspendus pour cause de malentendu reprennent dans la zone.»

Ces assurances furent réitérées dans une lettre que le commissaire du Gouvernement hongrois adressa au plénipotentiaire tchécoslovaque le 9 juin 1989.

35. S'agissant de la suspension des travaux à Nagymaros, le vice-premier ministre hongrois, dans une lettre en date du 24 juin 1989 adressée à son homologue tchécoslovaque, s'exprima dans les termes suivants:

«L'Académie des sciences de Hongrie (ASH) a étudié les conséquences qu'aurait sur l'environnement, l'écologie et la qualité de l'eau ainsi que sur la situation sismologique, la décision d'abandonner ou de réaliser la construction du barrage de Nagymaros, dans le cadre du système de barrage de Gabčíkovo-Nagymaros.

. . . . . .

Après avoir étudié les conséquences prévues de la construction réalisée selon le plan initial, le comité *[ad hoc]* de l'Académie [créé à cette fin] est arrivé à la conclusion que nous ne disposons pas de connaissances satisfaisantes sur les conséquences des risques écologiques.

A son avis, le risque qu'entraînerait la construction du système de barrage conformément au plan initial ne peut être considéré comme acceptable. On ne peut évidemment pas déclarer non plus que des consé-

ensue for certain, therefore, according to their recommendation, further thorough and time consuming studies are necessary."

36. The Hungarian and Czechoslovak Prime Ministers met again on 20 July 1989 to no avail. Immediately after that meeting, the Hungarian Government adopted a second resolution, under which the suspension of work at Nagymaros was extended to 31 October 1989. However, this resolution went further, as it also prescribed the suspension, until the same date, of the "Preparatory works on the closure of the riverbed at . . . Dunakiliti"; the purpose of this measure was to invite "international scientific institutions [and] foreign scientific institutes and experts" to co-operate with "the Hungarian and Czechoslovak institutes and experts" with a view to an assessment of the ecological impact of the Project and the "development of a technical and operational water quality guarantee system and . . . its implementation".

37. In the ensuing period, negotiations were conducted at various levels between the two States, but proved fruitless. Finally, by a letter dated 4 October 1989, the Hungarian Prime Minister formally proposed to Czechoslovakia that the Nagymaros sector of the Project be abandoned and that an agreement be concluded with a view to reducing the ecological risks associated with the Gabčíkovo sector of the Project. He proposed that that agreement should be concluded before 30 July 1990.

The two Heads of Government met on 26 October 1989, and were unable to reach agreement. By a Note Verbale dated 30 October 1989, Czechoslovakia, confirming the views it had expressed during those talks, proposed to Hungary that they should negotiate an agreement on a system of technical, operational and ecological guarantees relating to the Gabčíkovo-Nagymaros Project, "on the assumption that the Hungarian party will immediately commence preparatory work on the refilling of the Danube's bed in the region of Dunakiliti". It added that the technical principles of the agreement could be initialled within two weeks and that the agreement itself ought to be signed before the end of March 1990. After the principles had been initialled, Hungary "[was to] start the actual closure of the Danube bed". Czechoslovakia further stated its willingness to "conclu[de] . . . a separate agreement in which both parties would oblige themselves to limitations or exclusion of peak hour operation mode of the . . . System". It also proposed "to return to deadlines indicated in the Protocol of October 1983", the Nagymaros construction deadlines being thus extended by 15 months, so as to enable Hungary to take advantage of the time thus gained to study the ecological issues and formulate its own proposals in due time. Czechoslovakia concluded by announcing that, should Hungary continue unilaterally to breach the Treaty, Czechoslovakia would proceed with a provisional solution.

In the meantime, the Hungarian Government had on 27 October adopted a further resolution, deciding to abandon the construction of the

quences préjudiciables se produiraient inévitablement et il est donc nécessaire, conformément à la recommandation du comité, d'effectuer de nouvelles études approfondies qui exigeront beaucoup de temps.»

36. Les premiers ministres hongrois et tchécoslovaque se rencontrèrent de nouveau le 20 juillet 1989, sans succès. Aussitôt après cette rencontre, le Gouvernement hongrois adopta une deuxième résolution, aux termes de laquelle la suspension des travaux à Nagymaros était prorogée jusqu'au 31 octobre 1989. Cette résolution allait cependant plus loin, car elle prescrivait également la suspension, jusqu'à la même date, des «travaux préparatoires en vue de la fermeture du lit du fleuve à Dunakiliti»; cette mesure avait pour objet d'inviter «[des] institutions scientifiques internationales et ... [des] instituts et experts scientifiques étrangers» à coopérer avec «[les] instituts et experts hongrois et tchécoslovaques» en vue d'apprécier les incidences écologiques du projet et de «mettre au point et réaliser un système technique et opérationnel garantissant la qualité de l'eau».

37. Dans la période qui suivit, des négociations furent menées à divers niveaux entre les deux Etats, mais elles s'avérèrent infructueuses. Finalement, par lettre en date du 4 octobre 1989, le premier ministre hongrois proposa formellement à la Tchécoslovaquie l'abandon du projet dans le secteur de Nagymaros et la conclusion d'un accord ayant pour objet de réduire les risques écologiques liés au projet dans le secteur de Gabčíkovo. Il suggérait que cet accord soit conclu avant le 30 juillet 1990.

Les deux chefs de gouvernement se rencontrèrent le 26 octobre 1989 et ne purent parvenir à un accord. Par note verbale du 30 octobre 1989, la Tchécoslovaquie, confirmant le point de vue qu'elle avait exprimé lors de ces entretiens, proposa à la Hongrie de négocier un accord au sujet d'un système de garanties techniques, opérationnelles et écologiques relatif au projet Gabčíkovo-Nagymaros, «en partant de l'hypothèse que la partie hongroise commencera immédiatement les travaux de préparation du remplissage du lit du Danube dans la région de Dunakiliti». Elle ajoutait que les principes techniques dudit accord pourraient être paraphés sous quinzaine et que l'accord lui-même devrait être signé avant la fin mars 1990. Dès le paraphe, la Hongrie «devra[it] commencer à fermer effectivement le lit du Danube». La Tchécoslovaquie se disait en outre prête à «conclure un accord distinct par lequel les deux parties s'engageraient d'elles-mêmes à limiter ou à exclure le fonctionnement en régime de pointe du système». Elle proposait encore «de revenir ... aux dates limites indiquées dans le protocole d'octobre 1983», les délais de construction de Nagymaros étant ainsi prorogés de quinze mois afin de permettre à la Hongrie de mettre à profit le temps gagné pour étudier les questions écologiques et formuler ses propositions en temps voulu. Enfin, la Tchécoslovaquie annonçait que, si la Hongrie continuait à enfreindre unilatéralement les dispositions du traité, la Tchécoslovaquie se verrait contrainte de mettre en œuvre une solution provisoire.

Dans l'intervalle, le Gouvernement hongrois avait adopté le 27 octobre 1989 une nouvelle résolution par laquelle il décidait d'abandonner la construc-

Nagymaros dam and to leave in place the measures previously adopted for suspending the works at Dunakiliti. Then, by Notes Verbales dated 3 and 30 November 1989, Hungary proposed to Czechoslovakia a draft treaty incorporating its earlier proposals, relinquishing peak power operation of the Gabčíkovo power plant and abandoning the construction of the Nagymaros dam. The draft provided for the conclusion of an agreement on the completion of Gabčíkovo in exchange for guarantees on protection of the environment. It finally envisaged the possibility of one or other party seising an arbitral tribunal or the International Court of Justice in the event that differences of view arose and persisted between the two Governments about the construction and operation of the Gabčíkovo dam, as well as measures to be taken to protect the environment. Hungary stated that it was ready to proceed immediately "with the preparatory operations for the Dunakiliti bed-decanting", but specified that the river would not be dammed at Dunakiliti until the agreement on guarantees had been concluded.

38. During winter 1989-1990, the political situation in Czechoslovakia and Hungary alike was transformed, and the new Governments were confronted with many new problems.

In spring 1990, the new Hungarian Government, in presenting its National Renewal Programme, announced that the whole of the Gabčíkovo-Nagymaros Project was a "mistake" and that it would initiate negotiations as soon as possible with the Czechoslovak Government "on remedying and sharing the damages". On 20 December 1990, the Hungarian Government adopted a resolution for the opening of negotiations with Czechoslovakia on the termination of the Treaty by mutual consent and the conclusion of an agreement addressing the consequences of the termination. On 15 February 1991, the Hungarian Plenipotentiary transmitted a draft agreement along those lines to his Czechoslovak counterpart.

On the same day, the Czechoslovak President declared that the Gabčíkovo-Nagymaros Project constituted a "totalitarian, gigomaniac monument which is against nature", while emphasizing that "the problem [was] that [the Gabčíkovo power plant] [had] already been built". For his part, the Czechoslovak Minister of the Environment stated, in a speech given to Hungarian parliamentary committees on 11 September 1991, that "the G/N Project [was] an old, obsolete one", but that, if there were "many reasons to change, modify the treaty . . . it [was] not acceptable to cancel the treaty . . . and negotiate later on".

During the ensuing period, Hungary refrained from completing the work for which it was still responsible at Dunakiliti. Yet it continued to maintain the structures it had already built and, at the end of 1991, completed the works relating to the tailrace canal of the bypass canal assigned to it under Article 5, paragraph 5 *(b)*, of the 1977 Treaty.

* *

tion du barrage de Nagymaros et de maintenir les mesures de suspension des travaux antérieurement adoptées pour Dunakiliti. Puis, par des notes verbales en date des 3 et 30 novembre 1989, la Hongrie proposa à la Tchécoslovaquie un projet de traité concrétisant ses propositions antérieures et portant renonciation à l'exploitation de la centrale de Gabčíkovo en régime de pointe et abandon de la construction du barrage de Nagymaros. Le projet prévoyait en outre la conclusion d'un accord sur l'achèvement de Gabčíkovo au prix de garanties concernant la protection de l'environnement. Il envisageait enfin la possibilité pour l'une ou l'autre partie de saisir un tribunal arbitral ou la Cour internationale de Justice au cas où des divergences de vues auraient surgi et persisté entre les deux gouvernements au sujet de la construction et du fonctionnement du barrage de Gabčíkovo ainsi que des mesures à prendre pour protéger l'environnement. La Hongrie se déclarait prête à engager immédiatement «les opérations de préparation du décantage du lit du Danube», mais précisait que le fleuve ne serait barré à Dunakiliti qu'après conclusion de l'accord sur les garanties.

38. Au cours de l'hiver 1989-1990, la situation politique changea profondément tant en Tchécoslovaquie qu'en Hongrie et les nouveaux gouvernements eurent à faire face à de nombreux nouveaux problèmes.

Au printemps 1990, le nouveau Gouvernement hongrois, en présentant son «programme de renouveau national», déclara que l'ensemble du projet Gabčíkovo-Nagymaros constituait une «erreur» et qu'il engagerait aussitôt que possible des négociations avec le Gouvernement tchécoslovaque «sur la remise en l'état des lieux et le partage des dommages». Le 20 décembre 1990, le Gouvernement hongrois adopta une résolution en vue de l'ouverture de négociations avec la Tchécoslovaquie sur la terminaison du traité par consentement mutuel et la conclusion d'un accord qui réglerait les conséquences de cette terminaison. Le 15 février 1991, le plénipotentiaire hongrois faisait parvenir à son homologue tchécoslovaque un projet d'accord en ce sens.

Le même jour, le président tchécoslovaque déclara que le projet Gabčíkovo-Nagymaros constituait un «monument totalitaire, atteint de gigantisme et contraire à la nature», tout en soulignant que «le problème [était] que [la centrale de Gabčíkovo] a[vait] déjà été construite». Pour sa part, le ministre tchécoslovaque de l'environnement indiqua, dans un discours prononcé devant des commissions du Parlement hongrois le 11 septembre 1991, que «le projet G/N constituait un vieux projet, de caractère désuet», mais que s'il existait «de nombreuses raisons de changer, de modifier le traité ... il n'[était] pas acceptable d'annuler le traité ... et de négocier plus tard».

La Hongrie, au cours de la période qui suivit, s'abstint de terminer les travaux qui lui incombaient encore à Dunakiliti. Elle continua cependant d'entretenir les ouvrages qu'elle y avait déjà construits et, à la fin de l'année 1991, elle termina les travaux afférents au canal de fuite du canal de dérivation, dont elle avait la responsabilité en vertu de l'article 5, paragraphe 5, alinéa *b)*, du traité de 1977.

* *

39. The two Parties to this case concur in recognizing that the 1977 Treaty, the above-mentioned Agreement on mutual assistance of 1977 and the Protocol of 1989 were validly concluded and were duly in force when the facts recounted above took place.

Further, they do not dispute the fact that, however flexible they may have been, these texts did not envisage the possibility of the signatories unilaterally suspending or abandoning the work provided for therein, or even carrying it out according to a new schedule not approved by the two partners.

40. Throughout the proceedings, Hungary contended that, although it did suspend or abandon certain works, on the contrary, it never suspended the application of the 1977 Treaty itself. To justify its conduct, it relied essentially on a "state of ecological necessity".

Hungary contended that the various installations in the Gabčíkovo-Nagymaros System of Locks had been designed to enable the Gabčíkovo power plant to operate in peak mode. Water would only have come through the plant twice each day, at times of peak power demand. Operation in peak mode required the vast expanse (60 km^2) of the planned reservoir at Dunakiliti, as well as the Nagymaros dam, which was to alleviate the tidal effects and reduce the variation in the water level downstream of Gabčíkovo. Such a system, considered to be more economically profitable than using run-of-the-river plants, carried ecological risks which it found unacceptable.

According to Hungary, the principal ecological dangers which would have been caused by this system were as follows. At Gabčíkovo/Dunakiliti, under the original Project, as specified in the Joint Contractual Plan, the residual discharge into the old bed of the Danube was limited to 50 m^3/s, in addition to the water provided to the system of side-arms. That volume could be increased to 200 m^3/s during the growing season. Additional discharges, and in particular a number of artificial floods, could also be effected, at an unspecified rate. In these circumstances, the groundwater level would have fallen in most of the Szigetköz. Furthermore, the groundwater would then no longer have been supplied by the Danube — which, on the contrary, would have acted as a drain — but by the reservoir of stagnant water at Dunakiliti and the side-arms which would have become silted up. In the long term, the quality of water would have been seriously impaired. As for the surface water, risks of eutrophication would have arisen, particularly in the reservoir; instead of the old Danube there would have been a river choked with sand, where only a relative trickle of water would have flowed. The network of arms would have been for the most part cut off from the principal bed. The fluvial fauna and flora, like those in the alluvial plains, would have been condemned to extinction.

As for Nagymaros, Hungary argued that, if that dam had been built,

39. Les deux Parties à la présente instance s'accordent pour reconnaître que le traité de 1977 ainsi que l'accord d'assistance mutuelle de 1977 et le protocole de 1989 susmentionnés ont été valablement conclus et étaient dûment en vigueur au moment où se sont produits les faits ci-dessus rapportés.

Elles ne contestent pas davantage que ces textes, aussi souples qu'ils aient été, n'envisageaient pas la possibilité pour les signataires de suspendre ou d'abandonner unilatéralement les travaux qui y étaient prévus, voire de réaliser ceux-ci selon un calendrier nouveau qui n'eût pas été agréé par les deux partenaires.

40. Tout au long de la procédure, la Hongrie a soutenu que, si elle avait suspendu ou abandonné certains travaux, elle n'avait en revanche jamais suspendu l'application du traité de 1977 lui-même. Elle a essentiellement invoqué, pour justifier sa conduite, un «état de nécessité écologique».

La Hongrie a fait valoir que les diverses installations du système d'écluses de Gabčíkovo-Nagymaros avaient été conçues pour permettre à la centrale de Gabčíkovo de fonctionner en régime de pointe. L'eau ne se serait écoulée à travers la centrale que deux fois par jour, lors des périodes de forte demande d'électricité. L'exploitation en régime de pointe rendait nécessaires l'énorme étendue (60 km^2) du réservoir prévu à Dunakiliti ainsi que le barrage de Nagymaros, qui devait atténuer les vagues de fond et réduire la variation du niveau des eaux en aval de Gabčíkovo. Un tel régime, considéré comme économiquement plus rentable que l'utilisation des installations au fil de l'eau, comportait des risques écologiques inacceptables pour elle.

D'après la Hongrie, les principaux dangers écologiques qu'aurait engendrés le système étaient les suivants. Pour ce qui est de Gabčíkovo/Dunakiliti, selon le projet initial, tel qu'il a été précisé dans le plan contractuel conjoint, le débit réservé dans l'ancien lit du Danube était limité à 50 m^3/s, en sus de l'eau fournie au système de bras. Ce volume pouvait être porté à 200 m^3/s en saison végétative. Des déversements supplémentaires, et notamment des inondations artificielles, pouvaient également être réalisés, à un rythme non précisé. Dans ces conditions, le niveau des eaux souterraines aurait baissé dans la plus grande partie du Szigetköz. En outre, la nappe aquifère aurait désormais été alimentée non plus par le Danube — qui au contraire aurait joué le rôle de drain —, mais par le réservoir d'eaux stagnantes de Dunakiliti et les bras secondaires qui se seraient envasés. Sur le long terme, la qualité des eaux en aurait gravement souffert. En ce qui concerne les eaux de surface, des risques d'eutrophisation seraient apparus, notamment dans le réservoir. A l'ancien Danube aurait par ailleurs été substituée une rivière ensablée où n'aurait coulé qu'un filet d'eau assez mince. Le réseau des bras aurait été isolé le plus souvent du lit principal. La faune et la flore du fleuve, comme celles des plaines alluviales, auraient été condamnées à disparaître.

Quant à Nagymaros, la Hongrie a fait valoir que, si ce barrage avait

the bed of the Danube upstream would have silted up and, consequently, the quality of the water collected in the bank-filtered wells would have deteriorated in this sector. What is more, the operation of the Gabčíkovo power plant in peak mode would have occasioned significant daily variations in the water level in the reservoir upstream, which would have constituted a threat to aquatic habitats in particular. Furthermore, the construction and operation of the Nagymaros dam would have caused the erosion of the riverbed downstream, along Szentendre Island. The water level of the river would therefore have fallen in this section and the yield of the bank-filtered wells providing two-thirds of the water supply of the city of Budapest would have appreciably diminished. The filter layer would also have shrunk or perhaps even disappeared, and fine sediments would have been deposited in certain pockets in the river. For this twofold reason, the quality of the infiltrating water would have been severely jeopardized.

From all these predictions, in support of which it quoted a variety of scientific studies, Hungary concluded that a "state of ecological necessity" did indeed exist in 1989.

41. In its written pleadings, Hungary also accused Czechoslovakia of having violated various provisions of the 1977 Treaty from before 1989 — in particular Articles 15 and 19 relating, respectively, to water quality and nature protection — in refusing to take account of the now evident ecological dangers and insisting that the works be continued, notably at Nagymaros. In this context Hungary contended that, in accordance with the terms of Article 3, paragraph 2, of the Agreement of 6 May 1976 concerning the Joint Contractual Plan, Czechoslovakia bore responsibility for research into the Project's impact on the environment; Hungary stressed that the research carried out by Czechoslovakia had not been conducted adequately, the potential effects of the Project on the environment of the construction having been assessed by Czechoslovakia only from September 1990. However, in the final stage of its argument, Hungary does not appear to have sought to formulate this complaint as an independent ground formally justifying the suspension and abandonment of the works for which it was responsible under the 1977 Treaty. Rather, it presented the violations of the Treaty prior to 1989, which it imputes to Czechoslovakia, as one of the elements contributing to the emergence of a state of necessity.

42. Hungary moreover contended from the outset that its conduct in the present case should not be evaluated only in relation to the law of treaties. It also observed that, in accordance with the provisions of Article 4, the Vienna Convention of 23 May 1969 on the Law of Treaties could not be applied to the 1977 Treaty, which was concluded before that Convention entered into force as between the parties. Hungary has indeed acknowledged, with reference to the jurisprudence of the Court, that in many respects the Convention reflects the existing customary law. Hungary nonetheless stressed the need to adopt a cautious attitude, while

été construit, le lit du Danube en amont se serait envasé et, par suite, la qualité de l'eau recueillie dans les puits filtrants sur berge se serait détériorée dans ce secteur. Bien plus, l'exploitation de la centrale de Gabčíkovo en régime de pointe aurait engendré d'importantes variations journalières du niveau des eaux dans le réservoir d'amont, ce qui aurait notamment menacé les habitats aquatiques. En outre, la construction et l'exploitation du barrage de Nagymaros auraient entraîné une érosion du lit en aval, le long de l'île de Szentendre. De ce fait, le niveau des eaux dans le fleuve aurait baissé sur ce tronçon et la productivité des puits filtrants sur berge assurant, pour les deux tiers, l'alimentation en eau de la ville de Budapest aurait sensiblement diminué. Par ailleurs, la couche filtrante se serait amincie et aurait même pu disparaître; des sédiments fins se seraient déposés dans certaines poches du fleuve. Pour cette double raison, la qualité de l'eau d'infiltration aurait été gravement menacée.

De l'ensemble de ces prévisions, à l'appui desquelles elle a cité diverses études scientifiques, la Hongrie a conclu qu'un «état de nécessité écologique» existait bien en 1989.

41. Dans ses écritures, la Hongrie a aussi reproché à la Tchécoslovaquie d'avoir, dès avant 1989, violé différentes dispositions du traité de 1977 — en particulier ses articles 15 et 19 relatifs, respectivement, à la protection de la qualité des eaux et à la protection de la nature — en refusant de prendre en considération les dangers écologiques qui s'étaient alors précisés et en insistant sur la poursuite des travaux, notamment à Nagymaros. La Hongrie a soutenu dans ce contexte que, conformément aux termes du paragraphe 2 de l'article 3 de l'accord du 6 mai 1976 relatif au plan contractuel conjoint, les recherches concernant l'impact du projet sur l'environnement incombaient à la Tchécoslovaquie; et la Hongrie a souligné que les recherches entreprises par la partie tchécoslovaque n'avaient pas été menées de manière adéquate, les effets potentiels du projet sur l'environnement n'ayant été évalués par la Tchécoslovaquie qu'à partir de septembre 1990. Toutefois, dans le dernier état de son argumentation, la Hongrie ne semble pas avoir entendu formuler ce grief comme un moyen autonome tendant à justifier formellement la suspension et l'abandon des travaux dont elle était responsable aux termes du traité de 1977. Elle a plutôt présenté les violations du traité antérieures à 1989, qu'elle impute à la Tchécoslovaquie, comme l'un des éléments qui ont concouru à la survenance d'un état de nécessité.

42. La Hongrie a d'ailleurs d'emblée soutenu que sa conduite en l'espèce ne devrait pas être appréciée exclusivement à l'aune du droit des traités. Elle a en outre fait observer que, conformément aux dispositions de son article 4, la convention de Vienne du 23 mai 1969 sur le droit des traités ne pouvait s'appliquer au traité de 1977, conclu avant que celle-ci n'entre en vigueur entre les parties. La Hongrie a certes reconnu, en faisant référence à la jurisprudence de la Cour, qu'à bien des égards la convention traduit le droit coutumier existant. Elle n'en a pas moins souligné la nécessité de faire preuve de prudence, tout en suggérant que la

suggesting that the Court should consider, in each case, the conformity of the prescriptions of the Convention with customary international law.

43. Slovakia, for its part, denied that the basis for suspending or abandoning the performance of a treaty obligation can be found outside the law of treaties. It acknowledged that the 1969 Vienna Convention could not be applied as such to the 1977 Treaty, but at the same time stressed that a number of its provisions are a reflection of pre-existing rules of customary international law and specified that this is, in particular, the case with the provisions of Part V relating to invalidity, termination and suspension of the operation of treaties. Slovakia has moreover observed that, after the Vienna Convention had entered into force for both parties, Hungary affirmed its accession to the substantive obligations laid down by the 1977 Treaty when it signed the Protocol of 6 February 1989 that cut short the schedule of work; and this led it to conclude that the Vienna Convention was applicable to the "contractual legal régime" constituted by the network of interrelated agreements of which the Protocol of 1989 was a part.

44. In the course of the proceedings, Slovakia argued at length that the state of necessity upon which Hungary relied did not constitute a reason for the suspension of a treaty obligation recognized by the law of treaties. At the same time, it cast doubt upon whether "ecological necessity" or "ecological risk" could, in relation to the law of State responsibility, constitute a circumstance precluding the wrongfulness of an act.

In any event, Slovakia denied that there had been any kind of "ecological state of necessity" in this case either in 1989 or subsequently. It invoked the authority of various scientific studies when it claimed that Hungary had given an exaggeratedly pessimistic description of the situation. Slovakia did not, of course, deny that ecological problems could have arisen. However, it asserted that they could to a large extent have been remedied. It accordingly stressed that no agreement had been reached with respect to the modalities of operation of the Gabčíkovo power plant in peak mode, and claimed that the apprehensions of Hungary related only to operating conditions of an extreme kind. In the same way, it contended that the original Project had undergone various modifications since 1977 and that it would have been possible to modify it even further, for example with respect to the discharge of water reserved for the old bed of the Danube, or the supply of water to the side-arms by means of underwater weirs.

45. Slovakia moreover denied that it in any way breached the 1977 Treaty — particularly its Articles 15 and 19 — and maintained, *inter alia*, that according to the terms of Article 3, paragraph 2, of the Agreement of 6 May 1976 relating to the Joint Contractual Plan, research into the impact of the Project on the environment was not the exclusive responsibility of Czechoslovakia but of either one of the parties, depending on the location of the works.

Lastly, in its turn, it reproached Hungary with having adopted its unilateral measures of suspension and abandonment of the works in viola-

Cour examine dans chaque cas si les prescriptions de la convention correspondent à l'état du droit international coutumier.

43. La Slovaquie, pour sa part, a dénié que la suspension ou l'abandon de l'exécution d'une obligation conventionnelle puisse trouver son fondement hors du droit des traités. Elle a reconnu que la convention de Vienne de 1969 ne pouvait pas s'appliquer comme telle au traité de 1977; mais elle a en même temps souligné que nombre de ses dispositions traduisent des règles préexistantes du droit international coutumier et a précisé que tel est en particulier le cas des dispositions de sa partie V afférente à la nullité, à l'extinction et à la suspension de l'application des traités. La Slovaquie a par ailleurs fait observer qu'après l'entrée en vigueur de la convention de Vienne entre les deux parties, la Hongrie avait confirmé son adhésion aux obligations de fond créées par le traité de 1977 en signant le protocole du 6 février 1989 qui abrégeait le calendrier des travaux; et elle en a conclu que la convention de Vienne s'appliquait au «régime juridique contractuel» constitué par le réseau d'accords liés les uns aux autres dont le protocole de 1989 faisait partie.

44. Au cours de la procédure, la Slovaquie a longuement plaidé que l'état de nécessité invoqué par la Hongrie ne constituait pas un motif de suspension d'une obligation conventionnelle reconnu par le droit des traités. Elle a en même temps mis en doute que la «nécessité écologique» ou le «risque écologique» puissent constituer, au regard du droit de la responsabilité des Etats, une circonstance excluant l'illicéité d'un acte.

La Slovaquie a en tout état de cause nié qu'il y ait eu en l'espèce un quelconque «état de nécessité écologique», en 1989 ou par la suite. Se réclamant de diverses études scientifiques, elle a prétendu que la Hongrie avait donné une description exagérément pessimiste de la situation. La Slovaquie n'a certes pas contesté que des problèmes écologiques auraient pu se poser; mais elle a fait valoir qu'il aurait pu y être largement remédié. Ainsi, elle a souligné qu'aucun accord n'était intervenu quant aux modalités d'exploitation de la centrale de Gabčíkovo en régime de pointe, et a affirmé que les appréhensions hongroises ne se rapportaient qu'à des conditions d'exploitation de nature extrême. De même, elle a soutenu que le projet initial avait déjà subi depuis 1977 diverses modifications et qu'il aurait pu être encore modifié, par exemple en ce qui concerne le débit de l'eau réservé pour l'ancien lit du Danube ou l'alimentation des bras secondaires par l'effet de déversoirs noyés.

45. La Slovaquie a en outre démenti avoir violé de quelque façon que ce soit le traité de 1977 — en particulier ses articles 15 et 19 — et a notamment fait valoir que, conformément aux termes du paragraphe 2 de l'article 3 de l'accord du 6 mai 1976 relatif au plan contractuel conjoint, les recherches concernant l'impact du projet sur l'environnement n'incombaient pas exclusivement à la Tchécoslovaquie, mais à l'une ou à l'autre des parties, selon l'emplacement des ouvrages.

Enfin, elle a à son tour fait grief à la Hongrie d'avoir arrêté ses mesures unilatérales de suspension et d'abandon des travaux en violation des dis-

tion of the provisions of Article 27 of the 1977 Treaty (see paragraph 18 above), which it submits required prior recourse to the machinery for dispute settlement provided for in that Article.

* *

46. The Court has no need to dwell upon the question of the applicability in the present case of the Vienna Convention of 1969 on the Law of Treaties. It needs only to be mindful of the fact that it has several times had occasion to hold that some of the rules laid down in that Convention might be considered as a codification of existing customary law. The Court takes the view that in many respects this applies to the provisions of the Vienna Convention concerning the termination and the suspension of the operation of treaties, set forth in Articles 60 to 62 (see *Legal Consequences for States of the Continued Presence of South Africa in Namibia (South West Africa) notwithstanding Security Council Resolution 276 (1970), Advisory Opinion, I.C.J. Reports, 1971,* p. 47, and *Fisheries Jurisdiction (United Kingdom* v. *Iceland), Jurisdiction of the Court, Judgment, I.C.J. Reports 1973,* p. 18; see also *Interpretation of the Agreement of 25 March 1951 between the WHO and Egypt, Advisory Opinion, I.C.J. Reports 1980,* pp. 95-96).

Neither has the Court lost sight of the fact that the Vienna Convention is in any event applicable to the Protocol of 6 February 1989 whereby Hungary and Czechoslovakia agreed to accelerate completion of the works relating to the Gabčíkovo-Nagymaros Project.

47. Nor does the Court need to dwell upon the question of the relationship between the law of treaties and the law of State responsibility, to which the Parties devoted lengthy arguments, as those two branches of international law obviously have a scope that is distinct. A determination of whether a convention is or is not in force, and whether it has or has not been properly suspended or denounced, is to be made pursuant to the law of treaties. On the other hand, an evaluation of the extent to which the suspension or denunciation of a convention, seen as incompatible with the law of treaties, involves the responsibility of the State which proceeded to it, is to be made under the law of State responsibility.

Thus the Vienna Convention of 1969 on the Law of Treaties confines itself to defining — in a limitative manner — the conditions in which a treaty may lawfully be denounced or suspended; while the effects of a denunciation or suspension seen as not meeting those conditions are, on the contrary, expressly excluded from the scope of the Convention by operation of Article 73. It is moreover well established that, when a State has committed an internationally wrongful act, its international responsibility is likely to be involved whatever the nature of the obligation it has failed to respect (cf. *Interpretation of Peace Treaties with Bulgaria, Hungary and Romania, Second Phase, Advisory Opinion, I.C.J. Reports 1950,* p. 228; and see Article 17 of the Draft Articles on State Responsi-

positions de l'article 27 du traité de 1977 (voir paragraphe 18 ci-dessus), qui, d'après elle, prescrivaient le recours préalable aux mécanismes de règlement des différends prévus par cet article.

* *

46. La Cour n'a pas à s'attarder sur la question de l'applicabilité en l'espèce de la convention de Vienne de 1969 sur le droit des traités. Il lui suffira de rappeler qu'à plusieurs reprises déjà elle a eu l'occasion de dire que certaines des règles énoncées dans ladite convention pouvaient être considérées comme une codification du droit coutumier existant. La Cour est d'avis qu'à bien des égards tel est le cas des règles de la convention de Vienne afférentes à l'extinction et à la suspension de l'application des traités, énoncées à ses articles 60 à 62 (voir *Conséquences juridiques pour les Etats de la présence continue de l'Afrique du Sud en Namibie (Sud-Ouest africain) nonobstant la résolution 276 (1970) du Conseil de sécurité, avis consultatif, C.I.J. Recueil 1971*, p. 47, et *Compétence en matière de pêcheries (Royaume-Uni c. Islande), compétence de la Cour, arrêt, C.I.J. Recueil 1973*, p. 18; voir également *Interprétation de l'accord du 25 mars 1951 entre l'OMS et l'Egypte, avis consultatif, C.I.J. Recueil 1980*, p. 95-96).

La Cour ne perd pas non plus de vue que la convention de Vienne est en tout état de cause applicable au protocole du 6 février 1989 par lequel la Hongrie et la Tchécoslovaquie étaient convenues d'accélérer les travaux relatifs au projet Gabčíkovo-Nagymaros.

47. La Cour n'a pas davantage à s'étendre sur la question des relations qu'entretiennent le droit des traités et le droit de la responsabilité des Etats, à laquelle les Parties ont consacré de longs développements. Ces deux branches du droit international ont en effet, à l'évidence, des champs d'application distincts. C'est au regard du droit des traités qu'il convient de déterminer si une convention est ou non en vigueur, et si elle a ou non été régulièrement suspendue ou dénoncée. C'est en revanche au regard du droit de la responsabilité des Etats qu'il y a lieu d'apprécier dans quelle mesure la suspension ou la dénonciation d'une convention qui serait incompatible avec le droit des traités engage la responsabilité de l'Etat qui y a procédé.

Ainsi, la convention de Vienne de 1969 sur le droit des traités se borne à définir — de façon limitative — les conditions dans lesquelles un traité peut, de façon licite, être dénoncé ou suspendu; les effets d'une dénonciation ou d'une suspension qui ne satisferait pas à ces conditions sont par contre expressément exclus du champ d'application de la convention par le jeu de son article 73. Il est au demeurant bien établi que, dès lors qu'un Etat a commis un acte internationalement illicite, sa responsabilité internationale est susceptible d'être engagée, quelle que soit la nature de l'obligation méconnue (voir *Interprétation des traités de paix conclus avec la Bulgarie, la Hongrie et la Roumanie, deuxième phase, avis consultatif, C.I.J. Recueil 1950*, p. 228, et l'article 17 du projet d'articles sur la

bility provisionally adopted by the International Law Commission on first reading, *Yearbook of the International Law Commission*, 1980, Vol. II, Part 2, p. 32).

48. The Court cannot accept Hungary's argument to the effect that, in 1989, in suspending and subsequently abandoning the works for which it was still responsible at Nagymaros and at Dunakiliti, it did not, for all that, suspend the application of the 1977 Treaty itself or then reject that Treaty. The conduct of Hungary at that time can only be interpreted as an expression of its unwillingness to comply with at least some of the provisions of the Treaty and the Protocol of 6 February 1989, as specified in the Joint Contractual Plan. The effect of Hungary's conduct was to render impossible the accomplishment of the system of works that the Treaty expressly described as "single and indivisible".

The Court moreover observes that, when it invoked the state of necessity in an effort to justify that conduct, Hungary chose to place itself from the outset within the ambit of the law of State responsibility, thereby implying that, in the absence of such a circumstance, its conduct would have been unlawful. The state of necessity claimed by Hungary — supposing it to have been established — thus could not permit of the conclusion that, in 1989, it had acted in accordance with its obligations under the 1977 Treaty or that those obligations had ceased to be binding upon it. It would only permit the affirmation that, under the circumstances, Hungary would not incur international responsibility by acting as it did. Lastly, the Court points out that Hungary expressly acknowledged that, in any event, such a state of necessity would not exempt it from its duty to compensate its partner.

*

49. The Court will now consider the question of whether there was, in 1989, a state of necessity which would have permitted Hungary, without incurring international responsibility, to suspend and abandon works that it was committed to perform in accordance with the 1977 Treaty and related instruments.

50. In the present case, the Parties are in agreement in considering that the existence of a state of necessity must be evaluated in the light of the criteria laid down by the International Law Commission in Article 33 of the Draft Articles on the International Responsibility of States that it adopted on first reading. That provision is worded as follows:

"*Article 33. State of Necessity*

1. A state of necessity may not be invoked by a State as a ground for precluding the wrongfulness of an act of that State not in conformity with an international obligation of the State unless:

(a) the act was the only means of safeguarding an essential interest of the State against a grave and imminent peril; and

responsabilité des Etats adopté à titre provisoire par la Commission du droit international en première lecture, *Annuaire de la Commission du droit international*, 1980, vol. II, deuxième partie, p. 30-31).

48. La Cour ne peut suivre la Hongrie lorsque celle-ci soutient qu'en suspendant puis en abandonnant en 1989 les travaux dont elle avait encore la charge à Nagymaros et à Dunakiliti elle n'a pas pour autant suspendu l'application du traité de 1977 lui-même, puis rejeté ce traité. Le comportement de la Hongrie à l'époque ne peut être interprété que comme traduisant sa volonté de ne pas exécuter au moins certaines dispositions du traité et du protocole du 6 février 1989, telles que précisées dans le plan contractuel conjoint. L'effet du comportement de la Hongrie a été de rendre impossible la réalisation du système d'ouvrages que le traité qualifiait expressément d'«unique et indivisible».

La Cour fera d'ailleurs observer qu'en invoquant l'état de nécessité pour tenter de justifier ce comportement la Hongrie a choisi de se placer d'emblée sur le terrain du droit de la responsabilité des Etats, impliquant par là qu'en l'absence d'une telle circonstance sa conduite eût été illicite. L'état de nécessité allégué par la Hongrie — à le supposer établi — ne pourrait donc permettre de conclure qu'en 1989 elle aurait agi conformément à ses obligations en vertu du traité de 1977 ou que ces obligations auraient cessé de la lier. Il permettrait seulement d'affirmer que, compte tenu des circonstances, la Hongrie n'aurait pas engagé sa responsabilité internationale en agissant comme elle l'a fait. La Cour notera enfin que la Hongrie a expressément reconnu qu'en tout état de cause un tel état de nécessité ne la dispenserait pas de devoir dédommager son partenaire.

*

49. La Cour examinera à présent la question de savoir s'il existait, en 1989, un état de nécessité qui eût permis à la Hongrie, sans engager sa responsabilité internationale, de suspendre et d'abandonner des travaux qu'elle était tenue de réaliser conformément au traité de 1977 et aux instruments y afférents.

50. Dans l'instance, les Parties se sont accordées pour estimer que l'existence d'un état de nécessité doit être appréciée à la lumière des critères énoncés par la Commission du droit international à l'article 33 du projet d'articles sur la responsabilité internationale des Etats qu'elle a adopté en première lecture. Cette disposition est ainsi conçue:

«*Article 33. Etat de nécessité*

1. L'état de nécessité ne peut pas être invoqué par un Etat comme une cause d'exclusion de l'illicéité d'un fait de cet Etat non conforme à une de ses obligations internationales, à moins que

a) ce fait n'ait constitué le seul moyen de sauvegarder un intérêt essentiel dudit Etat contre un péril grave et imminent; et que

(b) the act did not seriously impair an essential interest of the State towards which the obligation existed.

2. In any case, a state of necessity may not be invoked by a State as a ground for precluding wrongfulness:

(a) if the international obligation with which the act of the State is not in conformity arises out of a peremptory norm of general international law; or

(b) if the international obligation with which the act of the State is not in conformity is laid down by a treaty which, explicitly or implicitly, excludes the possibility of invoking the state of necessity with respect to that obligation; or

(c) if the State in question has contributed to the occurrence of the state of necessity." (*Yearbook of the International Law Commission,* 1980, Vol. II, Part 2, p. 34.)

In its Commentary, the Commission defined the "state of necessity" as being

> "the situation of a State whose sole means of safeguarding an essential interest threatened by a grave and imminent peril is to adopt conduct not in conformity with what is required of it by an international obligation to another State" (*ibid.*, para. 1).

It concluded that "the notion of state of necessity is . . . deeply rooted in general legal thinking" (*ibid.*, p. 49, para. 31).

51. The Court considers, first of all, that the state of necessity is a ground recognized by customary international law for precluding the wrongfulness of an act not in conformity with an international obligation. It observes moreover that such ground for precluding wrongfulness can only be accepted on an exceptional basis. The International Law Commission was of the same opinion when it explained that it had opted for a negative form of words in Article 33 of its Draft

> "in order to show, by this formal means also, that the case of invocation of a state of necessity as a justification must be considered as really constituting an exception — and one even more rarely admissible than is the case with the other circumstances precluding wrongfulness . . ." (*ibid.*, p. 51, para. 40).

Thus, according to the Commission, the state of necessity can only be invoked under certain strictly defined conditions which must be cumulatively satisfied; and the State concerned is not the sole judge of whether those conditions have been met.

52. In the present case, the following basic conditions set forth in Draft Article 33 are relevant: it must have been occasioned by an "essential interest" of the State which is the author of the act conflicting with one of its international obligations; that interest must have been threatened by a "grave and imminent peril"; the act being challenged must

b) ce fait n'ait pas gravement porté atteinte à un intérêt essentiel de l'Etat à l'égard duquel l'obligation existait.

2. En tout état de cause, l'état de nécessité ne peut pas être invoqué par un Etat comme une cause d'exclusion d'illicéité

a) si l'obligation internationale à laquelle le fait de l'Etat n'est pas conforme découle d'une norme impérative du droit international général; ou

b) si l'obligation internationale à laquelle le fait de l'Etat n'est pas conforme est prévue par un traité qui, explicitement ou implicitement, exclut la possibilité d'invoquer l'état de nécessité en ce qui concerne cette obligation; ou

c) si l'Etat en question a contribué à la survenance de l'état de nécessité.» (*Annuaire de la Commission du droit international*, 1980, vol. II, deuxième partie, p. 33.)

Dans son commentaire, la Commission a défini l'«état de nécessité» comme

> «la situation où se trouve un Etat n'ayant absolument pas d'autre moyen de sauvegarder un intérêt essentiel menacé par un péril grave et imminent que celui d'adopter un comportement non conforme à ce qui est requis de lui par une obligation internationale envers un autre Etat» (*ibid.*, par. 1).

Elle a conclu que: «La notion d'état de nécessité est ... profondément enracinée dans la théorie générale du droit.» (*Ibid.*, p. 47, par. 31.)

51. La Cour considère tout d'abord que l'état de nécessité constitue une cause, reconnue par le droit international coutumier, d'exclusion de l'illicéité d'un fait non conforme à une obligation internationale. Elle observe en outre que cette cause d'exclusion de l'illicéité ne saurait être admise qu'à titre exceptionnel. Telle était aussi l'opinion de la Commission du droit international lorsqu'elle a expliqué qu'elle avait opté pour une formule négative à l'article 33 de son projet

> «pour marquer, par cet aspect formel aussi, que l'hypothèse d'une invocation à titre de justification de l'état de nécessité doit être considérée comme constituant vraiment une exception — une exception encore plus rarement admissible que ce n'est le cas pour les autres circonstances excluant l'illicéité...» (*ibid.*, p. 50, par. 40).

Ainsi, d'après la Commission, l'état de nécessité ne peut être invoqué qu'à certaines conditions, strictement définies, qui doivent être cumulativement réunies; et l'Etat concerné n'est pas seul juge de la réunion de ces conditions.

52. Dans la présente affaire, les conditions de base suivantes, énoncées au projet d'article 33, sont pertinentes: un «intérêt essentiel» de l'Etat auteur du fait contraire à l'une de ses obligations internationales doit avoir été en cause; cet intérêt doit avoir été menacé par un «péril grave et imminent»; le fait incriminé doit avoir été le «seul moyen» de sauvegar-

have been the "only means" of safeguarding that interest; that act must not have "seriously impair[ed] an essential interest" of the State towards which the obligation existed; and the State which is the author of that act must not have "contributed to the occurrence of the state of necessity". Those conditions reflect customary international law.

The Court will now endeavour to ascertain whether those conditions had been met at the time of the suspension and abandonment, by Hungary, of the works that it was to carry out in accordance with the 1977 Treaty.

53. The Court has no difficulty in acknowledging that the concerns expressed by Hungary for its natural environment in the region affected by the Gabčíkovo-Nagymaros Project related to an "essential interest" of that State, within the meaning given to that expression in Article 33 of the Draft of the International Law Commission.

The Commission, in its Commentary, indicated that one should not, in that context, reduce an "essential interest" to a matter only of the "existence" of the State, and that the whole question was, ultimately, to be judged in the light of the particular case (see *Yearbook of the International Law Commission*, 1980, Vol. II, Part 2, p. 49, para. 32); at the same time, it included among the situations that could occasion a state of necessity, "a grave danger to . . . the ecological preservation of all or some of [the] territory [of a State]" (*ibid.*, p. 35, para. 3); and specified, with reference to State practice, that "It is primarily in the last two decades that safeguarding the ecological balance has come to be considered an 'essential interest' of all States." (*Ibid.*, p. 39, para. 14.)

The Court recalls that it has recently had occasion to stress, in the following terms, the great significance that it attaches to respect for the environment, not only for States but also for the whole of mankind:

> "the environment is not an abstraction but represents the living space, the quality of life and the very health of human beings, including generations unborn. The existence of the general obligation of States to ensure that activities within their jurisdiction and control respect the environment of other States or of areas beyond national control is now part of the corpus of international law relating to the environment." (*Legality of the Threat or Use of Nuclear Weapons, Advisory Opinion, I.C.J. Reports 1996*, pp. 241-242, para. 29.)

54. The verification of the existence, in 1989, of the "peril" invoked by Hungary, of its "grave and imminent" nature, as well as of the absence of any "means" to respond to it, other than the measures taken by Hungary to suspend and abandon the works, are all complex processes.

der ledit intérêt; ce fait ne doit pas avoir «gravement porté atteinte à un intérêt essentiel» de l'Etat à l'égard duquel l'obligation existait; et l'Etat auteur dudit fait ne doit pas avoir «contribué à la survenance de l'état de nécessité». Ces conditions reflètent le droit international coutumier.

La Cour s'emploiera maintenant à rechercher si ces conditions étaient remplies au moment de la suspension et de l'abandon, par la Hongrie, des travaux qu'elle devait accomplir conformément au traité de 1977.

53. La Cour ne voit aucune difficulté à reconnaître que les préoccupations exprimées par la Hongrie en ce qui concerne son environnement naturel dans la région affectée par le projet Gabčíkovo-Nagymaros avaient trait à un «intérêt essentiel» de cet Etat, au sens où cette expression est utilisée à l'article 33 du projet de la Commission du droit international.

La Commission, dans son commentaire, a indiqué qu'il ne fallait pas, dans ce contexte, réduire un «intérêt essentiel» de l'Etat à sa seule «existence», et que tout était, en définitive, question d'espèce (voir *Annuaire de la Commission du droit international*, 1980, vol. II, deuxième partie, p. 48, par. 32); en même temps, elle a mentionné, parmi les situations susceptibles d'engendrer un état de nécessité, «un danger grave ... pour la conservation écologique [du] territoire [d'un Etat] ou d'une partie de son territoire» (*ibid.*, p. 34, par. 3) et a précisé, en se référant à la pratique des Etats, que: «C'est surtout dans les deux dernières décennies que la sauvegarde de l'équilibre écologique en est venue à être considérée comme répondant à un «intérêt essentiel» de tous les Etats.» (*Ibid.*, p. 38, par. 14.)

La Cour rappellera qu'elle a récemment eu l'occasion de souligner dans les termes suivants toute l'importance que le respect de l'environnement revêt à son avis, non seulement pour les Etats mais aussi pour l'ensemble du genre humain:

> «l'environnement n'est pas une abstraction, mais bien l'espace où vivent les êtres humains et dont dépendent la qualité de leur vie et leur santé, y compris pour les générations à venir. L'obligation générale qu'ont les Etats de veiller à ce que les activités exercées dans les limites de leur juridiction ou sous leur contrôle respectent l'environnement dans d'autres Etats ou dans des zones ne relevant d'aucune juridiction nationale fait maintenant partie du corps de règles du droit international de l'environnement.» (*Licéité de la menace ou de l'emploi d'armes nucléaires, avis consultatif, C.I.J. Recueil 1996*, p. 241-242, par. 29.)

54. La vérification de l'existence, en 1989, du «péril» invoqué par la Hongrie, de son caractère «grave et imminent», ainsi que de l'absence, pour y faire face, de tout «moyen» autre que les mesures de suspension et d'abandon des travaux prises par la Hongrie, constitue autant d'opérations complexes.

As the Court has already indicated (see paragraphs 33 *et seq.*), Hungary on several occasions expressed, in 1989, its "uncertainties" as to the ecological impact of putting in place the Gabčíkovo-Nagymaros barrage system, which is why it asked insistently for new scientific studies to be carried out.

The Court considers, however, that, serious though these uncertainties might have been they could not, alone, establish the objective existence of a "peril" in the sense of a component element of a state of necessity. The word "peril" certainly evokes the idea of "risk"; that is precisely what distinguishes "peril" from material damage. But a state of necessity could not exist without a "peril" duly established at the relevant point in time; the mere apprehension of a possible "peril" could not suffice in that respect. It could moreover hardly be otherwise, when the "peril" constituting the state of necessity has at the same time to be "grave" and "imminent". "Imminence" is synonymous with "immediacy" or "proximity" and goes far beyond the concept of "possibility". As the International Law Commission emphasized in its commentary, the "extremely grave and imminent" peril must "have been a threat to the interest at the actual time" (*Yearbook of the International Law Commission*, 1980, Vol. II, Part 2, p. 49, para. 33). That does not exclude, in the view of the Court, that a "peril" appearing in the long term might be held to be "imminent" as soon as it is established, at the relevant point in time, that the realization of that peril, however far off it might be, is not thereby any less certain and inevitable.

The Hungarian argument on the state of necessity could not convince the Court unless it was at least proven that a real, "grave" and "imminent" "peril" existed in 1989 and that the measures taken by Hungary were the only possible response to it.

Both Parties have placed on record an impressive amount of scientific material aimed at reinforcing their respective arguments. The Court has given most careful attention to this material, in which the Parties have developed their opposing views as to the ecological consequences of the Project. It concludes, however, that, as will be shown below, it is not necessary in order to respond to the questions put to it in the Special Agreement for it to determine which of those points of view is scientifically better founded.

55. The Court will begin by considering the situation at Nagymaros. As has already been mentioned (see paragraph 40), Hungary maintained that, if the works at Nagymaros had been carried out as planned, the environment — and in particular the drinking water resources — in the area would have been exposed to serious dangers on account of problems linked to the upstream reservoir on the one hand and, on the other, the risks of erosion of the riverbed downstream.

The Court notes that the dangers ascribed to the upstream reservoir were mostly of a long-term nature and, above all, that they remained uncertain. Even though the Joint Contractual Plan envisaged that the Gab-

Comme la Cour l'a déjà indiqué (voir paragraphes 33 et suivants), la Hongrie a à maintes reprises fait état, en 1989, de ses «incertitudes» quant aux incidences écologiques de la mise en place du système de barrage de Gabčíkovo-Nagymaros: c'est la raison pour laquelle elle a demandé avec insistance que de nouvelles études scientifiques soient effectuées.

La Cour considère cependant que, quelque sérieuses qu'aient été ces incertitudes, elles ne sauraient, à elles seules, établir l'existence objective d'un «péril» en tant qu'élément constitutif d'un état de nécessité. Le mot «péril» évoque certes l'idée de «risque»; c'est précisément en cela que le «péril» se distingue du dommage matérialisé. Mais il ne saurait y avoir d'état de nécessité sans un «péril» dûment avéré au moment pertinent; la seule appréhension d'un «péril» possible ne saurait à cet égard suffire. Il pourrait d'ailleurs difficilement en aller autrement dès lors que le «péril» constitutif de l'état de nécessité doit être à la fois «grave» et «imminent». L'«imminence» est synonyme d'«immédiateté» ou de «proximité» et dépasse de loin le concept d'«éventualité». Comme l'a souligné la Commission du droit international dans son commentaire, le péril «extrêmement grave et imminent» doit s'être «trouvé peser au moment même sur l'intérêt menacé» (*Annuaire de la Commission du droit international*, 1980, vol. II, deuxième partie, p. 48, par. 33). Cela n'exclut pas, de l'avis de la Cour, qu'un «péril» qui s'inscrirait dans le long terme puisse être tenu pour «imminent» dès lors qu'il serait établi, au moment considéré, que la réalisation de ce péril, pour lointaine qu'elle soit, n'en serait pas moins certaine et inévitable.

La thèse hongroise sur l'état de nécessité ne pourrait emporter la conviction de la Cour s'il n'était pas au moins prouvé qu'un «péril» réel, «grave» et «imminent» existait en 1989 et que seules les mesures prises par la Hongrie pouvaient permettre d'y faire face.

Les deux Parties ont versé au dossier de l'affaire un impressionnant matériel de nature scientifique à l'effet d'étayer leurs thèses respectives. La Cour a étudié très attentivement ce matériel, dans lequel les Parties ont développé leurs points de vue opposés sur les conséquences écologiques du projet. Elle conclut toutefois que, comme elle le montrera ci-après, il ne lui est pas nécessaire, pour répondre aux questions qui lui ont été posées dans le compromis, de déterminer lequel de ces points de vue est scientifiquement le plus solide.

55. La Cour se penchera d'abord sur la situation à Nagymaros. Comme cela a déjà été mentionné (voir paragraphe 40), la Hongrie a soutenu que, si les ouvrages de Nagymaros avaient été réalisés comme prévu, l'environnement — et en particulier les ressources en eau potable — dans la région aurait été exposé à de graves dangers en raison, d'une part, des problèmes liés au réservoir d'amont et, d'autre part, des risques d'érosion du lit du fleuve en aval.

La Cour constate que les dangers imputés au réservoir d'amont s'inscrivaient pour la plupart dans le long terme et, surtout, qu'ils demeuraient incertains. Même si le plan contractuel conjoint envisageait que

čikovo power plant would "mainly operate in peak-load time and continuously during high water", the final rules of operation had not yet been determined (see paragraph 19 above); however, any dangers associated with the putting into service of the Nagymaros portion of the Project would have been closely linked to the extent to which it was operated in peak mode and to the modalities of such operation. It follows that, even if it could have been established — which, in the Court's appreciation of the evidence before it, was not the case — that the reservoir would ultimately have constituted a "grave peril" for the environment in the area, one would be bound to conclude that the peril was not "imminent" at the time at which Hungary suspended and then abandoned the works relating to the dam.

With regard to the lowering of the riverbed downstream of the Nagymaros dam, the danger could have appeared at once more serious and more pressing, in so far as it was the supply of drinking water to the city of Budapest which would have been affected. The Court would however point out that the bed of the Danube in the vicinity of Szentendre had already been deepened prior to 1980 in order to extract building materials, and that the river had from that time attained, in that sector, the depth required by the 1977 Treaty. The peril invoked by Hungary had thus already materialized to a large extent for a number of years, so that it could not, in 1989, represent a peril arising entirely out of the project. The Court would stress, however, that, even supposing, as Hungary maintained, that the construction and operation of the dam would have created serious risks, Hungary had means available to it, other than the suspension and abandonment of the works, of responding to that situation. It could for example have proceeded regularly to discharge gravel into the river downstream of the dam. It could likewise, if necessary, have supplied Budapest with drinking water by processing the river water in an appropriate manner. The two Parties expressly recognized that that possibility remained open even though — and this is not determinative of the state of necessity — the purification of the river water, like the other measures envisaged, clearly would have been a more costly technique.

56. The Court now comes to the Gabčíkovo sector. It will recall that Hungary's concerns in this sector related on the one hand to the quality of the surface water in the Dunakiliti reservoir, with its effects on the quality of the groundwater in the region, and on the other hand, more generally, to the level, movement and quality of both the surface water and the groundwater in the whole of the Szigetköz, with their effects on the fauna and flora in the alluvial plain of the Danube (see paragraph 40 above).

Whether in relation to the Dunakiliti site or to the whole of the Szigetköz, the Court finds here again, that the peril claimed by Hungary was to be considered in the long term, and, more importantly, remained uncertain. As Hungary itself acknowledges, the damage that it appre-

la centrale de Gabčíkovo «fonctionner[ait] principalement en régime de pointe et en mode continu lors des hautes eaux», les consignes d'exploitation définitives n'avaient pas encore été arrêtées (voir le paragraphe 19 ci-dessus); or tout danger lié à la mise en œuvre de la partie du projet concernant Nagymaros aurait été étroitement dépendant de la mesure dans laquelle et des modalités selon lesquelles il aurait été recouru au régime de pointe. En conséquence, même s'il avait pu être établi — ce que la Cour, au vu des éléments de preuve qui lui ont été soumis, n'estime pas être le cas — que le réservoir d'amont aurait en définitive constitué un «péril grave» pour l'environnement dans la région, force est de conclure que ce péril n'était pas «imminent» au moment où la Hongrie a suspendu puis abandonné les travaux afférents au barrage.

Pour ce qui est de l'abaissement du lit du fleuve en aval du barrage de Nagymaros, le danger pouvait paraître à la fois plus grave et plus pressant, dans la mesure où c'était l'alimentation en eau potable de la ville de Budapest qui aurait été affectée. La Cour fera toutefois observer que le lit du Danube dans la région de Szentendre avait déjà été approfondi avant 1980 en vue d'en extraire des matériaux de construction et que le fleuve avait dès cette époque atteint dans ce secteur la profondeur requise par le traité de 1977. Le péril invoqué par la Hongrie s'était ainsi déjà largement réalisé depuis plusieurs années, si bien qu'il ne pouvait pas, en 1989, s'agir d'un péril résultant entièrement du projet. La Cour soulignera cependant que, à supposer que la construction et l'exploitation du barrage auraient créé de graves risques, comme l'a soutenu la Hongrie, celle-ci avait à sa disposition des moyens, autres que la suspension et l'abandon des travaux, pour faire face à cette situation. Elle aurait ainsi pu procéder régulièrement au déversement de gravier dans le fleuve en aval du barrage. Elle aurait également pu, si nécessaire, pourvoir à l'alimentation de Budapest en eau potable en traitant de manière appropriée l'eau du fleuve. Les deux Parties ont expressément reconnu que cette possibilité demeurait ouverte même si — ce qui ne constitue pas un élément déterminant au regard de l'état de nécessité — l'épuration des eaux du fleuve, comme les autres mesures envisagées, aurait à l'évidence constitué une technique plus coûteuse.

56. La Cour en vient maintenant au secteur de Gabčíkovo. Elle rappellera que les préoccupations hongroises dans ce secteur concernaient d'une part la qualité des eaux de surface dans le réservoir de Dunakiliti, avec ses incidences sur la qualité des eaux souterraines dans la région, et, d'autre part, plus généralement, le niveau, le mouvement et la qualité tant des eaux de surface que des eaux souterraines dans l'ensemble du Szigetköz, avec leurs incidences sur la faune et la flore de la plaine alluviale du Danube (voir le paragraphe 40 ci-dessus).

Qu'il s'agisse du site de Dunakiliti ou de l'ensemble du Szigetköz, la Cour constate ici encore que le péril allégué par la Hongrie s'inscrivait dans le long terme et — élément plus important — demeurait incertain. Comme le reconnaît elle-même la Hongrie, les dommages qu'elle appré-

hended had primarily to be the result of some relatively slow natural processes, the effects of which could not easily be assessed.

Even if the works were more advanced in this sector than at Nagymaros, they had not been completed in July 1989 and, as the Court explained in paragraph 34 above, Hungary expressly undertook to carry on with them, early in June 1989. The report dated 23 June 1989 by the *ad hoc* Committee of the Hungarian Academy of Sciences, which was also referred to in paragraph 35 of the present Judgment, does not express any awareness of an authenticated peril — even in the form of a definite peril, whose realization would have been inevitable in the long term — when it states that:

> "The measuring results of an at least five-year monitoring period following the completion of the Gabčíkovo construction are indispensable to the trustworthy prognosis of the ecological impacts of the barrage system. There is undoubtedly a need for the establishment and regular operation of a comprehensive monitoring system, which must be more developed than at present. The examination of biological indicator objects that can sensitively indicate the changes happening in the environment, neglected till today, have to be included."

The report concludes as follows:

> "It can be stated, that the environmental, ecological and water quality impacts were not taken into account properly during the design and construction period until today. Because of the complexity of the ecological processes and lack of the measured data and the relevant calculations the environmental impacts cannot be evaluated.
>
> The data of the monitoring system newly operating on a very limited area are not enough to forecast the impacts probably occurring over a longer term. In order to widen and to make the data more frequent a further multi-year examination is necessary to decrease the further degradation of the water quality playing a dominant role in this question. The expected water quality influences equally the aquatic ecosystems, the soils and the recreational and tourist land-use."

The Court also notes that, in these proceedings, Hungary acknowledged that, as a general rule, the quality of the Danube waters had improved over the past 20 years, even if those waters remained subject to hypertrophic conditions.

However "grave" it might have been, it would accordingly have been difficult, in the light of what is said above, to see the alleged peril as sufficiently certain and therefore "imminent" in 1989.

The Court moreover considers that Hungary could, in this context

hendait devaient résulter avant tout de processus naturels relativement lents dont les effets ne pouvaient être aisément évalués.

Même si les travaux étaient plus avancés dans ce secteur qu'à Nagymaros, ils n'étaient pas terminés en juillet 1989 et, comme la Cour l'a exposé au paragraphe 34 ci-dessus, la Hongrie s'était expressément engagée, au début du mois de juin 1989, à les poursuivre. Le rapport en date du 23 juin 1989 du comité *ad hoc* de l'Académie des sciences de Hongrie, auquel il a été fait allusion au paragraphe 35 du présent arrêt, n'exprime pas la conscience d'un péril avéré — pas même sous la forme d'un péril précis, dont la réalisation aurait été inéluctable dans le long terme — lorsqu'il déclare:

> «Pour prévoir de façon fiable les incidences du système de barrage sur l'environnement, il est indispensable de disposer des résultats de mesures effectuées au cours d'une période de suivi d'au moins cinq ans à compter de l'achèvement des travaux de construction à Gabčíkovo. Il est sans aucun doute nécessaire de mettre en place et d'exploiter régulièrement un système de suivi global, qui devrait être beaucoup plus développé qu'à l'heure actuelle. Il conviendrait d'y inclure l'analyse, jusqu'ici négligée, d'indicateurs biologiques capables de révéler avec sensibilité les changements qui se produisent dans l'environnement.»

Et le rapport de conclure:

> «On peut dire que, de la période de conception et de construction jusqu'à ce jour, les incidences sur l'environnement, l'écologie et la qualité de l'eau n'ont pas été correctement prises en compte. Il est impossible d'évaluer les incidences sur l'environnement en raison de la complexité des processus écologiques ainsi que du manque de données chiffrées et de calculs pertinents.
>
> Les données recueillies grâce au système de suivi récemment mis en œuvre dans une zone très limitée ne permettent pas de prévoir les incidences qui se produiront probablement à plus long terme. Afin de limiter toute nouvelle dégradation de la qualité de l'eau, qui joue un rôle primordial en l'occurrence, il y a lieu de procéder à une nouvelle analyse sur plusieurs années de manière à disposer de données plus complètes et plus fréquentes. La qualité prévue de l'eau influe également sur les écosystèmes aquatiques, les sols et l'utilisation de la zone à des fins récréatives et touristiques.»

La Cour notera aussi que, dans l'instance, la Hongrie a reconnu qu'en règle générale la qualité des eaux du Danube s'était améliorée au cours des vingt dernières années, même si ces eaux restaient sujettes à des conditions hypertrophiques.

Si «grave» qu'il eût pu être, le péril allégué pouvait difficilement, au vu de ce qui précède, être tenu pour suffisamment certain et, dès lors, «imminent», en 1989.

La Cour estime en outre que la Hongrie aurait là encore pu recourir à

also, have resorted to other means in order to respond to the dangers that it apprehended. In particular, within the framework of the original Project, Hungary seemed to be in a position to control at least partially the distribution of the water between the bypass canal, the old bed of the Danube and the side-arms. It should not be overlooked that the Dunakiliti dam was located in Hungarian territory and that Hungary could construct the works needed to regulate flows along the old bed of the Danube and the side-arms. Moreover, it should be borne in mind that Article 14 of the 1977 Treaty provided for the possibility that each of the parties might withdraw quantities of water exceeding those specified in the Joint Contractual Plan, while making it clear that, in such an event, "the share of electric power of the Contracting Party benefiting from the excess withdrawal shall be correspondingly reduced".

57. The Court concludes from the foregoing that, with respect to both Nagymaros and Gabčíkovo, the perils invoked by Hungary, without prejudging their possible gravity, were not sufficiently established in 1989, nor were they "imminent"; and that Hungary had available to it at that time means of responding to these perceived perils other than the suspension and abandonment of works with which it had been entrusted. What is more, negotiations were under way which might have led to a review of the Project and the extension of some of its time-limits, without there being need to abandon it. The Court infers from this that the respect by Hungary, in 1989, of its obligations under the terms of the 1977 Treaty would not have resulted in a situation "characterized so aptly by the maxim *summum jus summa injuria*" (*Yearbook of the International Law Commission*, 1980, Vol. II, Part 2, p. 49, para. 31).

Moreover, the Court notes that Hungary decided to conclude the 1977 Treaty, a Treaty which — whatever the political circumstances prevailing at the time of its conclusion — was treated by Hungary as valid and in force until the date declared for its termination in May 1992. As can be seen from the material before the Court, a great many studies of a scientific and technical nature had been conducted at an earlier time, both by Hungary and by Czechoslovakia. Hungary was, then, presumably aware of the situation as then known, when it assumed its obligations under the Treaty. Hungary contended before the Court that those studies had been inadequate and that the state of knowledge at that time was not such as to make possible a complete evaluation of the ecological implications of the Gabčíkovo-Nagymaros Project. It is nonetheless the case that although the principal object of the 1977 Treaty was the construction of a System of Locks for the production of electricity, improvement of navigation on the Danube and protection against flooding, the need to ensure the protection of the environment had not escaped the parties, as can be seen from Articles 15, 19 and 20 of the Treaty.

What is more, the Court cannot fail to note the positions taken by Hungary after the entry into force of the 1977 Treaty. In 1983, Hungary asked that the works under the Treaty should go forward more slowly,

d'autres moyens pour faire face aux dangers qu'elle redoutait. Dans le cadre du projet initial, la Hongrie paraissait notamment en mesure de contrôler au moins partiellement la répartition des eaux entre le canal de dérivation, l'ancien lit du Danube et les bras secondaires. On ne saurait perdre de vue que le barrage de Dunakiliti était situé en territoire hongrois et que la Hongrie pouvait aménager des ouvrages de régulation des flux dans l'ancien lit du Danube et dans les bras secondaires. De plus, il y a lieu de rappeler que l'article 14 du traité de 1977 prévoyait la possibilité pour chacune des parties de prélever des quantités d'eau supérieures à celles spécifiées dans le plan contractuel conjoint, tout en précisant qu'en pareil cas «la part d'énergie électrique revenant à la partie contractante ayant procédé aux prélèvements excédentaires sera[it] réduite en conséquence».

57. La Cour conclut de ce qui précède que, s'agissant aussi bien de Nagymaros que de Gabčíkovo, les périls invoqués par la Hongrie, sans préjudice de leur gravité éventuelle, n'étaient en 1989 ni suffisamment établis, ni «imminents»; et que, pour y faire face, la Hongrie disposait à l'époque d'autres moyens que la suspension et l'abandon de travaux dont elle avait la charge. Qui plus est, des négociations étaient en cours, qui auraient pu aboutir à une revision du projet et au report de certaines de ses échéances, sans qu'il fût besoin de l'abandonner. La Cour en infère que le respect par la Hongrie, en 1989, de ses obligations aux termes du traité de 1977 n'aurait pas abouti à une situation «que l'adage *summum jus summa injuria* caractérise parfaitement» (*Annuaire de la Commission du droit international*, 1980, vol. II, deuxième partie, p. 48, par. 31).

En outre, la Cour fera observer que la Hongrie a décidé de conclure le traité de 1977, traité qui — quelles que fussent les circonstances politiques dans lesquelles il a été conclu — a été considéré par la Hongrie comme valide et en vigueur jusqu'à la date indiquée pour sa terminaison en mai 1992. Comme il ressort des éléments en possession de la Cour, de nombreuses études de nature scientifique et technique avaient auparavant été menées, tant par la Hongrie que par la Tchécoslovaquie. On peut donc supposer que c'était en étant consciente de la situation telle qu'elle était alors connue que la Hongrie avait assumé ses obligations aux termes du traité. La Hongrie a soutenu devant la Cour que ces études avaient été insuffisantes et que l'état des connaissances à l'époque ne permettait pas d'évaluer pleinement les incidences écologiques du projet Gabčíkovo-Nagymaros. Il n'en reste pas moins que, bien que le traité de 1977 eût pour principal objet la construction d'un système d'écluses pour la production d'électricité, l'amélioration de la navigation sur le Danube et la protection contre les inondations, la nécessité d'assurer la protection de l'environnement n'avait pas échappé aux parties, ainsi qu'en témoignent les articles 15, 19 et 20 du traité.

De surcroît, la Cour ne peut manquer de noter les positions adoptées par la Hongrie après l'entrée en vigueur du traité de 1977. En 1983, la Hongrie a sollicité le ralentissement des travaux prescrits par le traité,

for reasons that were essentially economic but also, subsidiarily, related to ecological concerns. In 1989, when, according to Hungary itself, the state of scientific knowledge had undergone a significant development, it asked for the works to be speeded up, and then decided, three months later, to suspend them and subsequently to abandon them. The Court is not however unaware that profound changes were taking place in Hungary in 1989, and that, during that transitory phase, it might have been more than usually difficult to co-ordinate the different points of view prevailing from time to time.

The Court infers from all these elements that, in the present case, even if it had been established that there was, in 1989, a state of necessity linked to the performance of the 1977 Treaty, Hungary would not have been permitted to rely upon that state of necessity in order to justify its failure to comply with its treaty obligations, as it had helped, by act or omission to bring it about.

58. It follows that the Court has no need to consider whether Hungary, by proceeding as it did in 1989, "seriously impair[ed] an essential interest" of Czechoslovakia, within the meaning of the aforementioned Article 33 of the Draft of the International Law Commission — a finding which does not in any way prejudge the damage Czechoslovakia claims to have suffered on account of the position taken by Hungary.

Nor does the Court need to examine the argument put forward by Hungary, according to which certain breaches of Articles 15 and 19 of the 1977 Treaty, committed by Czechoslovakia even before 1989, contributed to the purported state of necessity; and neither does it have to reach a decision on the argument advanced by Slovakia, according to which Hungary breached the provisions of Article 27 of the Treaty, in 1989, by taking unilateral measures without having previously had recourse to the machinery of dispute settlement for which that Article provides.

* *

59. In the light of the conclusions reached above, the Court, in reply to the question put to it in Article 2, paragraph 1 *(a)*, of the Special Agreement (see paragraph 27 above), finds that Hungary was not entitled to suspend and subsequently abandon, in 1989, the works on the Nagymaros Project and on the part of the Gabčíkovo Project for which the 1977 Treaty and related instruments attributed responsibility to it.

* * *

60. By the terms of Article 2, paragraph 1 *(b)*, of the Special Agreement, the Court is asked in the second place to decide

> "*(b)* whether the Czech and Slovak Federal Republic was entitled to proceed, in November 1991, to the 'provisional solution'

pour des raisons essentiellement économiques mais aussi, subsidiairement, écologiques. En 1989, alors que, selon la Hongrie elle-même, l'état des connaissances scientifiques avait sensiblement évolué, elle a sollicité l'accélération desdits travaux, pour décider ensuite, trois mois plus tard, de les suspendre, puis de les abandonner. La Cour n'en ignore pas pour autant que de profonds changements étaient en cours en Hongrie en 1989 et que, pendant cette phase transitoire, il pouvait s'avérer bien plus difficile qu'à l'ordinaire de coordonner les différents points de vues qui prévalaient à divers moments.

La Cour infère de tous ces éléments qu'en l'espèce, même s'il avait été établi qu'il existait en 1989 un état de nécessité lié à l'exécution du traité de 1977, la Hongrie n'aurait pas été admise à s'en prévaloir pour justifier le manquement à ses obligations conventionnelles, car elle aurait contribué, par action ou omission, à sa survenance.

58. En conséquence, la Cour n'a pas à examiner la question de savoir si, en procédant comme elle l'a fait en 1989, la Hongrie aurait «gravement porté atteinte à un intérêt essentiel» de la Tchécoslovaquie, au sens de l'article 33 susmentionné du projet de la Commission du droit international; cette constatation ne saurait en rien préjuger des dommages que la Tchécoslovaquie affirme avoir subis du fait de la position hongroise.

La Cour n'a pas davantage à se pencher sur l'argument présenté par la Hongrie, suivant lequel certaines violations des articles 15 et 19 du traité de 1977, commises par la Tchécoslovaquie dès avant 1989, auraient concouru à l'état de nécessité allégué; et elle n'a pas non plus à se prononcer sur l'argument avancé par la Slovaquie, selon lequel la Hongrie aurait violé les dispositions de l'article 27 du traité, en 1989, en prenant des mesures unilatérales sans avoir au préalable eu recours aux mécanismes de règlement des différends prévus à cet article.

* *

59. Au vu des conclusions auxquelles elle est parvenue ci-dessus, la Cour répond à la question qui lui a été posée à l'article 2, paragraphe 1, alinéa *a)*, du compromis (voir ci-dessus paragraphe 27) que la Hongrie n'était pas en droit de suspendre puis d'abandonner, en 1989, les travaux relatifs au projet de Nagymaros ainsi qu'à la partie du projet de Gabčíkovo dont elle était responsable aux termes du traité de 1977 et des instruments y afférents.

* * *

60. Aux termes de l'article 2, paragraphe 1, alinéa *b)*, du compromis, il est demandé en second lieu à la Cour de dire

> «*b)* si la République fédérative tchèque et slovaque était en droit de recourir, en novembre 1991, à la «solution provisoire» et de

and to put into operation from October 1992 this system, described in the Report of the Working Group of Independent Experts of the Commission of the European Communities, the Republic of Hungary and the Czech and Slovak Federal Republic dated 23 November 1992 (damming up of the Danube at river kilometre 1851.7 on Czechoslovak territory and resulting consequences on water and navigation course)".

61. The Court will recall that, as soon as Hungary suspended the works at Nagymaros on 13 May 1989 and extended that suspension to certain works to be carried out at Dunakiliti, Czechoslovakia informed Hungary that it would feel compelled to take unilateral measures if Hungary were to persist in its refusal to resume the works. This was *inter alia* expressed as follows in Czechoslovakia's Note Verbale of 30 October 1989 to which reference is made in paragraph 37 above:

"Should the Republic of Hungary fail to meet its liabilities and continue unilaterally to breach the Treaty and related legal documents then the Czechoslovak party will be forced to commence a provisional, substitute project on the territory of the Czechoslovak Socialist Republic in order to prevent further losses. Such a provisional project would entail directing as much water into the Gabčíkovo dam as agreed in the Joint Construction Plan."

As the Court has already indicated (see paragraph 23), various alternative solutions were contemplated by Czechoslovakia. In September 1990, the Hungarian authorities were advised of seven hypothetical alternatives defined by the firm of Hydroconsult of Bratislava. All of those solutions implied an agreement between the parties, with the exception of one variant, subsequently known as "Variant C", which was presented as a provisional solution which could be brought about without Hungarian co-operation. Other contacts between the parties took place, without leading to a settlement of the dispute. In March 1991, Hungary acquired information according to which perceptible progress had been made in finalizing the planning of Variant C; it immediately gave expression to the concern this caused.

62. Inter-governmental negotiation meetings were held on 22 April and 15 July 1991.

On 22 April 1991, Hungary proposed the suspension, until September 1993, of all the works begun on the basis of the 1977 Treaty, on the understanding that the parties undertook to abstain from any unilateral action, and that joint studies would be carried out in the interval. Czechoslovakia maintained its previous position according to which the studies contemplated should take place within the framework of the 1977 Treaty and without any suspension of the works.

On 15 July 1991, Czechoslovakia confirmed its intention of putting the

mettre en service, à partir d'octobre 1992, ce système, décrit dans le rapport en date du 23 novembre 1992 du groupe de travail d'experts indépendants nommés par la Commission des Communautés européennes, la République de Hongrie et la République fédérative tchèque et slovaque (construction d'un barrage sur le Danube au kilomètre 1851,7 du fleuve, en territoire tchécoslovaque, et conséquences en résultant pour l'écoulement des eaux et la navigation)».

61. La Cour rappellera que, dès que la Hongrie a suspendu les travaux à Nagymaros le 13 mai 1989 et a étendu cette suspension à certains travaux qui devaient être réalisés à Dunakiliti, la Tchécoslovaquie a informé la Hongrie qu'elle se verrait contrainte de prendre des mesures unilatérales si cette dernière persistait dans son refus de reprendre les travaux. Cela fut notamment exprimé de la façon suivante dans la note verbale tchécoslovaque en date du 30 octobre 1989, à laquelle il est fait référence au paragraphe 37 ci-dessus:

> «Si la République de Hongrie ne s'acquittait pas de ses responsabilités et continuait à enfreindre unilatéralement les dispositions du traité et des documents juridiques y afférents, la partie tchécoslovaque se verrait contrainte d'entreprendre à la place un projet provisoire sur son territoire pour éviter de nouvelles pertes. Ce projet provisoire conduirait à diriger vers le barrage de Gabčíkovo toute la quantité d'eau convenue dans le plan de construction conjoint.»

Comme la Cour l'a déjà indiqué (voir paragraphe 23), différentes solutions de rechange furent envisagées par la Tchécoslovaquie. En septembre 1990, les autorités hongroises furent avisées des sept hypothèses définies par la firme Hydroconsult de Bratislava. Toutes ces solutions impliquaient un accord entre les parties, à l'exception d'une variante, dénommée par la suite «variante C», qui était présentée comme une solution provisoire pouvant être réalisée sans la coopération de la Hongrie. D'autres contacts entre les parties eurent lieu sans conduire à une solution du différend. En mars 1991, la Hongrie entra en possession d'informations selon lesquelles la mise au point de la planification de la variante C avait sensiblement progressé; elle fit aussitôt connaître les craintes que cela lui inspirait.

62. Des réunions intergouvernementales de négociation se tinrent le 22 avril et le 15 juillet 1991.

Le 22 avril 1991, la Hongrie proposa la suspension, jusqu'en septembre 1993, de tous les travaux commencés sur la base du traité de 1977, étant entendu que les parties s'engageraient à s'abstenir de toute action unilatérale et que des études communes seraient menées dans l'intervalle. La Tchécoslovaquie maintint sa position antérieure selon laquelle les études envisagées devraient avoir lieu dans le cadre du traité de 1977 et sans suspension des travaux.

Le 15 juillet 1991, la Tchécoslovaquie confirma son intention de mettre

Gabčíkovo power plant into service and indicated that the available data enabled the effects of four possible scenarios to be assessed, each of them requiring the co-operation of the two Governments. At the same time, it proposed the setting up of a tripartite committee of experts (Hungary, Czechoslovakia, European Communities) which would help in the search for technical solutions to the problems arising from the entry into operation of the Gabčíkovo sector. Hungary, for its part, took the view that:

> "In the case of a total lack of understanding the so-called C variation or 'theoretical opportunity' suggested by the Czecho-Slovak party as a unilateral solution would be such a grave transgression of Hungarian territorial integrity and International Law for which there is no precedent even in the practices of the formerly socialist countries for the past 30 years";

it further proposed the setting up of a bilateral committee for the assessment of environmental consequences, subject to work on Czechoslovak territory being suspended.

63. By a letter dated 24 July 1991, the Government of Hungary communicated the following message to the Prime Minister of Slovakia:

> "Hungarian public opinion and the Hungarian Government anxiously and attentively follows the [Czechoslovakian] press reports of the unilateral steps of the Government of the Slovak Republic in connection with the barrage system.
>
> The preparatory works for diverting the water of the Danube near the Dunakiliti dam through unilaterally are also alarming. These steps are contrary to the 1977 Treaty and to the good relationship between our nations."

On 30 July 1991 the Slovak Prime Minister informed the Hungarian Prime Minister of

> "the decision of the Slovak Government and of the Czech and Slovak Federal Government to continue work on the Gabčíkovo power plant, as a provisional solution, which is aimed at the commencement of operations on the territory of the Czech and Slovak Federal Republic".

On the same day, the Government of Hungary protested, by a Note Verbale, against the filling of the headrace canal by the Czechoslovak construction company, by pumping water from the Danube.

By a letter dated 9 August 1991 and addressed to the Prime Minister of Slovakia, the Hungarian authorities strenuously protested against "any unilateral step that would be in contradiction with the interests of our [two] nations and international law" and indicated that they considered it "very important [to] receive information as early as possible on the

en service la centrale de Gabčíkovo et indiqua que les données disponibles permettaient d'évaluer les effets de quatre scénarios d'exploitation possibles requérant chacun la coopération des deux gouvernements. En même temps, elle proposa la constitution d'un comité d'experts tripartite (Hongrie, Tchécoslovaquie, Communautés européennes) qui aiderait à trouver des solutions techniques aux problèmes résultant de la mise en exploitation du secteur de Gabčíkovo. La Hongrie, quant à elle, exposa que:

> «Dans le cas où on ne parviendrait absolument pas à s'entendre, la solution dite variante C ou «possibilité théorique», proposée par la partie tchécoslovaque en tant que solution unilatérale, constituerait une atteinte grave à l'intégrité territoriale de la Hongrie et au droit international dont il n'existe aucun précédent même dans la pratique des anciens pays socialistes au cours des trente dernières années»;

elle proposa par ailleurs de constituer un comité bipartite d'évaluation des incidences écologiques, sous réserve que les travaux soient suspendus en territoire tchécoslovaque.

63. Par lettre en date du 24 juillet 1991, le Gouvernement hongrois communiqua au premier ministre slovaque le message suivant:

> «L'opinion publique hongroise et le Gouvernement hongrois suivent avec inquiétude et attention les nouvelles publiées dans la presse [tchécoslovaque] sur les mesures unilatérales prises par le Gouvernement de la République slovaque concernant le système de barrage.
>
> Les travaux préparatoires entrepris au voisinage du barrage de Dunakiliti pour détourner unilatéralement les eaux du Danube ont également de quoi inquiéter. Ces mesures vont à l'encontre des dispositions du traité de 1977 et sont préjudiciables aux relations de bon voisinage entre nos pays.»

Le 30 juillet 1991, le premier ministre slovaque informa le premier ministre hongrois de

> «la décision du Gouvernement slovaque et du Gouvernement de la République fédérative tchèque et slovaque de poursuivre les travaux de construction de la centrale de Gabčíkovo, à titre de solution provisoire, en vue de permettre sa mise en service sur le territoire de la République fédérative tchèque et slovaque».

Le même jour, le Gouvernement hongrois protesta, par note verbale, contre la mise en eau du canal d'amenée réalisée par l'entreprise tchécoslovaque de construction en pompant de l'eau du Danube.

Par lettre du 9 août 1991, adressée au premier ministre slovaque, les autorités hongroises s'élevèrent vivement «contre toute mesure unilatérale allant à l'encontre des intérêts [des deux] pays ainsi que du droit international» et indiquèrent qu'elles considéraient «comme très important d'être informé[es] dès que possible des détails de la solution provi-

details of the provisional solution". For its part, Czechoslovakia, in a Note Verbale dated 27 August 1991, rejected the argument of Hungary that the continuation of the works under those circumstances constituted a violation of international law, and made the following proposal:

> "Provided the Hungarian side submits a concrete technical solution aimed at putting into operation the Gabčíkovo system of locks and a solution of the system of locks based on the 1977 Treaty in force and the treaty documents related to it, the Czechoslovak side is prepared to implement the mutually agreed solution."

64. The construction permit for Variant C was issued on 30 October 1991. In November 1991 construction of a dam started at Čunovo, where both banks of the Danube are on Czechoslovak (now Slovak) territory.

In the course of a new inter-governmental negotiation meeting, on 2 December 1991, the parties agreed to entrust the task of studying the whole of the question of the Gabčíkovo-Nagymaros Project to a Joint Expert Committee which Hungary agreed should be complemented with an expert from the European Communities. However whereas, for Hungary, the work of that Committee would have been meaningless if Czechoslovakia continued construction of Variant C, for Czechoslovakia, the suspension of the construction, even on a temporary basis, was unacceptable.

That meeting was followed by a large number of exchanges of letters between the parties and various meetings between their representatives at the end of 1991 and early in 1992. On 23 January 1992, Czechoslovakia expressed its readiness "to stop work on the provisional solution and continue the construction upon mutual agreement" if the tripartite committee of experts whose constitution it proposed, and the results of the test operation of the Gabčíkovo part, were to "confirm that negative ecological effects exceed its benefits". However, the positions of the parties were by then comprehensively defined, and would scarcely develop any further. Hungary considered, as it indicated in a Note Verbale of 14 February 1992, that Variant C was in contravention

> "of [the Treaty of 1977] . . . and the convention ratified in 1976 regarding the water management of boundary waters.
>
> . . . . . .
>
> with the principles of sovereignty, territorial integrity, with the inviolability of State borders, as well as with the general customary norms on international rivers and the spirit of the 1948 Belgrade Danube Convention";

and the suspension of the implementation of Variant C was, in its view, a prerequisite. As for Czechoslovakia, it took the view that recourse to Variant C had been rendered inevitable, both for economic and ecologi-

soire». Pour sa part, la Tchécoslovaquie, dans une note verbale en date du 27 août 1991, rejeta l'argument hongrois selon lequel la poursuite des travaux dans ces conditions constituait une violation du droit international et fit la proposition suivante:

> «Pourvu que la partie hongroise apporte une solution technique concrète en vue de la mise en service du système d'écluses de Gabčíkovo et une solution pour le système d'écluses fondée sur le traité de 1977 en vigueur et sur les actes conventionnels y afférents, la partie tchécoslovaque est prête à exécuter la solution arrêtée d'un commun accord.»

64. Le permis de construire de la variante C fut délivré le 30 octobre 1991. En novembre 1991, la construction d'un barrage commença à Čunovo, où les deux rives du Danube se trouvent en territoire tchécoslovaque (aujourd'hui slovaque).

Au cours d'une nouvelle réunion intergouvernementale de négociation, le 2 décembre 1991, les parties s'accordèrent pour confier l'étude de l'ensemble de la question du projet Gabčíkovo-Nagymaros à un comité mixte d'experts auquel la Hongrie accepta d'associer un expert des Communautés européennes. Mais alors que, pour la Hongrie, le travail dudit comité aurait été dépourvu de sens si la Tchécoslovaquie poursuivait la construction de la variante C, pour la Tchécoslovaquie, une interruption, même provisoire, des travaux était inacceptable.

Cette réunion fut suivie de nombreux échanges de correspondances entre les parties et de diverses rencontres entre leurs représentants à la fin de l'année 1991 et au début de 1992. Le 23 janvier 1992, la Tchécoslovaquie se dit prête «à arrêter ses travaux afférents à la solution provisoire et à poursuivre la construction [qui serait] convenue d'un commun accord» si le comité d'experts tripartite dont elle proposait la constitution et les résultats de l'essai d'exploitation de l'élément de Gabčíkovo «confirm[ai]ent que les effets écologiques défavorables dépass[ai]ent les avantages recueillis». Toutefois, les positions des parties étaient alors globalement arrêtées, et ne devaient plus guère évoluer. La Hongrie estimait, comme elle l'a indiqué dans une note verbale du 14 février 1992, que la variante C était contraire

> «aux dispositions du [traité de 1977] ... comme à celles de la convention ratifiée en 1976 sur la réglementation en matière d'eaux frontières.
>
> . . . . . .
>
> aux principes de souveraineté et d'intégrité territoriale, à l'inviolabilité des frontières d'Etat ainsi qu'aux règles coutumières générales relatives aux fleuves internationaux et à l'esprit de la convention de Belgrade de 1948 sur le Danube»;

et la suspension de l'exécution de la variante C était pour elle un préalable. Quant à la Tchécoslovaquie, elle considérait que le recours à la variante C avait été rendu inévitable, pour des raisons tant économiques

cal as well as navigational reasons, because of the unlawful suspension and abandonment by Hungary of the works for which provision was made in the 1977 Treaty. Any negotiation had, in its view, to be conducted within the framework of the Treaty and without the implementation of Variant C — described as "provisional" — being called into question.

65. On 5 August 1992, the Czechoslovak representative to the Danube Commission informed it that "work on the severance cutting through of the Danube's flow will begin on 15 October 1992 at the 1,851.759-kilometre line" and indicated the measures that would be taken at the time of the "severance". The Hungarian representative on the Commission protested on 17 August 1992, and called for additional explanations.

During the autumn of 1992, the implementation of Variant C was stepped up. The operations involved in damming the Danube at Čunovo had been scheduled by Czechoslovakia to take place during the second half of October 1992, at a time when the waters of the river are generally at their lowest level. On the initiative of the Commission of the European Communities, trilateral negotiations took place in Brussels on 21 and 22 October 1992, with a view to setting up a committee of experts and defining its terms of reference. On that date, the first phase of the operations leading to the damming of the Danube (the reinforcement of the riverbed and the narrowing of the principal channel) had been completed. The closure of the bed was begun on 23 October 1992 and the construction of the actual dam continued from 24 to 27 October 1992: a pontoon bridge was built over the Danube on Czechoslovak territory using river barges, large stones were thrown into the riverbed and reinforced with concrete, while 80 to 90 per cent of the waters of the Danube were directed into the canal designed to supply the Gabčíkovo power plant. The implementation of Variant C did not, however, come to an end with the diversion of the waters, as there still remained outstanding both reinforcement work on the dam and the building of certain auxiliary structures.

The Court has already referred in paragraph 24 to the meeting held in London on 28 October 1992 under the auspices of the European Communities, in the course of which the parties to the negotiations agreed, *inter alia*, to entrust a tripartite Working Group composed of independent experts (i.e., four experts designated by the European Commission, one designated by Hungary and another by Czechoslovakia) with the task of reviewing the situation created by the implementation of Variant C and making proposals as to urgent measures to adopt. After having worked for one week in Bratislava and one week in Budapest, the Working Group filed its report on 23 November 1992.

66. A summary description of the constituent elements of Variant C appears at paragraph 23 of the present Judgment. For the purposes of the question put to the Court, the official description that should be adopted is, according to Article 2, paragraph 1 *(b)*, of the Special Agreement, the one given in the aforementioned report of the Working Group

qu'écologiques et de navigation, du fait de la suspension et de l'abandon illicites, par la Hongrie, des travaux prévus par le traité de 1977; toute négociation devait, selon elle, se poursuivre dans le cadre du traité et sans que l'exécution de la variante C — qualifiée de «provisoire» — soit mise en cause.

65. Le 5 août 1992, le représentant tchécoslovaque à la commission du Danube informa celle-ci que «les travaux de fermeture du Danube commencer[aient] le 15 octobre 1992 au point kilométrique 1851,759» et indiqua les mesures qui seraient prises au moment de la fermeture. Le représentant hongrois à la commission protesta le 17 août 1992, en réclamant plus d'explications.

Pendant l'automne 1992, l'exécution de la variante C s'accéléra. Les opérations de barrage du Danube à Čunovo avaient été prévues par la Tchécoslovaquie pour la seconde moitié du mois d'octobre 1992, à un moment où les eaux du fleuve sont en général à leur niveau le plus bas. A l'initiative de la Commission des Communautés européennes, des négociations trilatérales eurent lieu à Bruxelles les 21 et 22 octobre 1992 en vue de mettre en place un comité d'experts et de définir son mandat. A cette date, la première phase des opérations de barrage du Danube (renforcement du lit du fleuve et réduction de la largeur du chenal principal) était achevée. La fermeture du lit fut amorcée le 23 octobre 1992 et la construction du barrage proprement dit se poursuivit du 24 au 27 octobre 1992: un pont flottant fut aménagé sur le Danube en territoire tchécoslovaque au moyen de péniches, de grosses pierres furent déversées dans le lit de la rivière et recouvertes de béton, tandis que quatre-vingts à quatre-vingt-dix pour cent des eaux du Danube étaient dirigées dans le canal destiné à l'alimentation de la centrale de Gabčíkovo. L'exécution de la variante C n'était cependant pas terminée avec le détournement des eaux car il restait encore à effectuer des travaux de consolidation du barrage et à construire certains ouvrages auxiliaires.

La Cour a déjà évoqué au paragraphe 24 la réunion tenue à Londres le 28 octobre 1992 sous les auspices des Communautés européennes, au cours de laquelle les parties aux négociations convinrent notamment de charger un groupe de travail tripartite d'experts indépendants (soit quatre experts désignés par la Commission européenne, un expert désigné par la Hongrie et un autre désigné par la Tchécoslovaquie) d'étudier la situation créée par la mise en œuvre de la variante C et de faire des propositions sur les mesures d'urgence à adopter. Après avoir travaillé une semaine à Bratislava et une semaine à Budapest, le groupe de travail déposa son rapport le 23 novembre 1992.

66. Il a été procédé à une description sommaire des éléments constitutifs de la variante C au paragraphe 23 du présent arrêt. Aux fins de la question posée à la Cour, la description officielle à retenir est, selon l'article 2, paragraphe 1, alinéa *b)*, du compromis, celle qu'en fait le rapport susmentionné du groupe de travail d'experts indépendants; il y a lieu de

of independent experts, and it should be emphasized that, according to the Special Agreement, "Variant C" must be taken to include the consequences "on water and navigation course" of the dam closing off the bed of the Danube.

In the section headed "Variant C Structures and Status of Ongoing Work", one finds, in the report of the Working Group, the following passage:

> "In both countries the original structures for the Gabčíkovo scheme are completed except for the closure of the Danube river at Dunakiliti and the
>
> (1) Completion of the hydropower station (installation and testing of turbines) at Gabčíkovo.
>
> Variant C consists of a complex of structures, located in Czecho-Slovakia . . . The construction of these are planned for two phases. The structures include . . .:
>
> (2) By-pass weir controlling the flow into the river Danube.
> (3) Dam closing the Danubian river bed.
> (4) Floodplain weir (weir in the inundation).
> (5) Intake structure for the Mosoni Danube.
> (6) Intake structure in the power canal.
> (7) Earth barrages/dykes connecting structures.
> (8) Ship lock for smaller ships (15 m × 80 m).
> (9) Spillway weir.
> (10) Hydropower station.
>
> The construction of the structures 1-7 are included in Phase 1, while the remaining 8-10 are a part of Phase 2 scheduled for construction 1993-1995."

* *

67. Czechoslovakia had maintained that proceeding to Variant C and putting it into operation did not constitute internationally wrongful acts; Slovakia adopted this argument. During the proceedings before the Court Slovakia contended that Hungary's decision to suspend and subsequently abandon the construction of works at Dunakiliti had made it impossible for Czechoslovakia to carry out the works as initially contemplated by the 1977 Treaty and that the latter was therefore entitled to proceed with a solution which was as close to the original Project as possible. Slovakia invoked what it described as a "principle of approximate application" to justify the construction and operation of Variant C. It explained that this was the only possibility remaining to it "of fulfilling not only the purposes of the 1977 Treaty, but the continuing obligation to implement it in good faith".

68. Slovakia also maintained that Czechoslovakia was under a duty to mitigate the damage resulting from Hungary's unlawful actions. It claimed

souligner par ailleurs que, d'après le compromis, la «variante C» doit être comprise comme incluant les conséquences «pour l'écoulement des eaux et la navigation» qui résultent du barrage fermant le lit du Danube.

Sous le point intitulé «Ouvrages de la variante C et état d'avancement des travaux», on trouve, dans le rapport du groupe de travail, le passage suivant:

> «Dans les deux pays, les ouvrages prévus à l'origine dans le programme de Gabčíkovo sont achevés, à l'exception de la fermeture du Danube à Dunakiliti ainsi que:
>
> 1) les derniers travaux de la centrale hydro-électrique (installation et essais des turbines) de Gabčíkovo.
>
> La variante C est un ensemble complexe d'ouvrages, situé en Tchécoslovaquie ... La construction de ces ouvrages est prévue en deux phases. Les ouvrages comprennent ...:
>
> 2) les déversoirs de dérivation contrôlant l'écoulement dans le Danube;
> 3) le barrage fermant le lit du Danube;
> 4) le déversoir de la plaine d'inondation;
> 5) l'ouvrage de prise alimentant le bras Moson du Danube;
> 6) l'ouvrage de prise alimentant le canal usinier;
> 7) les barrages/digues en terre reliant les ouvrages;
> 8) l'écluse destinée aux navires de faible tonnage (15 m × 80 m);
> 9) l'évacuateur de crue;
> 10) la centrale hydro-électrique.
>
> La construction des ouvrages 1 à 7 est prévue pendant la phase 1, tandis que les ouvrages 8 à 10 relèvent de la phase 2 prévue pour 1993-1995.»

* *

67. La Tchécoslovaquie avait soutenu que le recours à la variante C et la mise en service de celle-ci ne constituaient pas des faits internationalement illicites; la Slovaquie a repris cette thèse. Au cours de la procédure devant la Cour, la Slovaquie a affirmé que la décision de la Hongrie de suspendre puis d'abandonner la construction des ouvrages à Dunakiliti avait mis la Tchécoslovaquie dans l'impossibilité d'effectuer les travaux tels qu'ils avaient initialement été envisagés par le traité de 1977 et que cette dernière était en conséquence en droit de recourir à une solution qui était aussi proche que possible du projet initial. La Slovaquie a invoqué ce qu'elle a décrit comme un «principe d'application par approximation» pour justifier la construction et la mise en service de la variante C. Elle a expliqué que c'était là la seule possibilité qui lui restait «non seulement d'atteindre les buts visés par le traité de 1977, mais encore de respecter l'obligation continue de mettre en œuvre ledit traité de bonne foi».

68. La Slovaquie a aussi soutenu que la Tchécoslovaquie avait l'obligation d'atténuer les dommages résultant des agissements illicites de la

that a State which is confronted with a wrongful act of another State is under an obligation to minimize its losses and, thereby, the damages claimable against the wrongdoing State. It argued furthermore that "Mitigation of damages is also an aspect of the performance of obligations in good faith." For Slovakia, these damages would have been immense in the present case, given the investments made and the additional economic and environmental prejudice which would have resulted from the failure to complete the works at Dunakiliti/Gabčíkovo and to put the system into operation. For this reason, Czechoslovakia was not only entitled, but even obliged, to implement Variant C.

69. Although Slovakia maintained that Czechoslovakia's conduct was lawful, it argued in the alternative that, even were the Court to find otherwise, the putting into operation of Variant C could still be justified as a countermeasure.

70. Hungary for its part contended that Variant C was a material breach of the 1977 Treaty. It considered that Variant C also violated Czechoslovakia's obligations under other treaties, in particular the Convention of 31 May 1976 on the Regulation of Water Management Issues of Boundary Waters concluded at Budapest, and its obligations under general international law.

71. Hungary contended that Slovakia's arguments rested on an erroneous presentation of the facts and the law. Hungary denied, *inter alia*, having committed the slightest violation of its treaty obligations which could have justified the putting into operation of Variant C. It considered that "no such rule" of "approximate application" of a treaty exists in international law; as to the argument derived from "mitigation of damage[s]", it claimed that this has to do with the quantification of loss, and could not serve to excuse conduct which is substantively unlawful. Hungary furthermore stated that Variant C did not satisfy the conditions required by international law for countermeasures, in particular the condition of proportionality.

* *

72. Before dealing with the arguments advanced by the Parties, the Court wishes to make clear that it is aware of the serious problems with which Czechoslovakia was confronted as a result of Hungary's decision to relinquish most of the construction of the System of Locks for which it was responsible by virtue of the 1977 Treaty. Vast investments had been made, the construction at Gabčíkovo was all but finished, the bypass canal was completed, and Hungary itself, in 1991, had duly fulfilled its obligations under the Treaty in this respect in completing work on the tailrace canal. It emerges from the report, dated 31 October 1992, of the tripartite fact-finding mission the Court has referred to in paragraph 24 of the present Judgment, that not using the system would have

Hongrie. Elle a allégué qu'un Etat qui se trouve confronté au fait illicite d'un autre Etat est tenu de limiter ses pertes au minimum, et de réduire ainsi les dommages et intérêts susceptibles d'être réclamés à l'Etat auteur du fait illicite. Elle a en outre exposé que: «L'atténuation des dommages est aussi un aspect de l'exécution des obligations de bonne foi.» Pour la Slovaquie, les dommages et intérêts auraient en l'occurrence été considérables, compte tenu des investissements effectués et des préjudices supplémentaires, tant de nature économique qu'écologique, qui auraient résulté de l'inachèvement des travaux à Dunakiliti/Gabčíkovo et du défaut de mise en service du système. C'est pourquoi la Tchécoslovaquie était non seulement en droit, mais encore dans l'obligation, de mettre en œuvre la variante C.

69. Bien que la Slovaquie affirme que le comportement de la Tchécoslovaquie était licite, elle a soutenu à titre subsidiaire que, même si la Cour devait conclure dans un autre sens, la mise en service de la variante C pourrait encore être justifiée en tant que contre-mesure.

70. La Hongrie, pour sa part, a soutenu que la variante C constitue une violation substantielle du traité de 1977. Elle considère que la variante C viole aussi les obligations de la Tchécoslovaquie en vertu d'autres traités, notamment la convention sur la réglementation en matière d'eaux frontières, conclue à Budapest le 31 mai 1976, et ses obligations au titre du droit international général.

71. La Hongrie a prétendu que l'argumentation slovaque reposait sur une présentation erronée des faits et du droit. La Hongrie nie notamment avoir commis la moindre violation de ses obligations conventionnelles qui aurait pu justifier la mise en œuvre de la variante C. Elle estime qu'il n'existe «aucune règle» d'«application par approximation» d'un traité en droit international; quant à l'argument tiré de «l'atténuation des dommages», elle fait valoir qu'il a trait à l'appréciation du préjudice et ne saurait servir à excuser un comportement illicite sur le fond. La Hongrie expose en outre que la variante C ne satisfait pas aux conditions requises par le droit international en matière de contre-mesures, et en particulier à la condition de proportionnalité.

* *

72. Avant d'examiner les arguments que les Parties ont ainsi avancés, la Cour souhaite indiquer clairement qu'elle est consciente des sérieux problèmes auxquels la Tchécoslovaquie a dû faire face à la suite de la décision prise par la Hongrie de renoncer à la plus grande partie de la construction du système d'écluses qui lui incombait en vertu du traité de 1977. Des investissements très importants avaient été effectués, la construction de l'ouvrage de Gabčíkovo était pratiquement achevée, le canal de dérivation était terminé, et la Hongrie elle-même, en 1991, s'était dûment acquittée de ses obligations à cet égard en achevant les travaux du canal de fuite. Il ressort du rapport, en date du 31 octobre 1992, de la mission d'enquête tripartite à laquelle la Cour s'est référée au paragraphe 24 du présent arrêt que la non-

led to considerable financial losses, and that it could have given rise to serious problems for the environment.

73. Czechoslovakia repeatedly denounced Hungary's suspension and abandonment of works as a fundamental breach of the 1977 Treaty and consequently could have invoked this breach as a ground for terminating the Treaty; but this would not have brought the Project any nearer to completion. It therefore chose to insist on the implementation of the Treaty by Hungary, and on many occasions called upon the latter to resume performance of its obligations under the Treaty.

When Hungary steadfastly refused to do so — although it had expressed its willingness to pay compensation for damage incurred by Czechoslovakia — and when negotiations stalled owing to the diametrically opposed positions of the parties, Czechoslovakia decided to put the Gabčíkovo system into operation unilaterally, exclusively under its own control and for its own benefit.

74. That decision went through various stages and, in the Special Agreement, the Parties asked the Court to decide whether Czechoslovakia "was entitled to proceed, in November 1991" to Variant C, and "to put [it] into operation from October 1992".

75. With a view to justifying those actions, Slovakia invoked what it described as "the principle of approximate application", expressed by Judge Sir Hersch Lauterpacht in the following terms:

> "It is a sound principle of law that whenever a legal instrument of continuing validity cannot be applied literally owing to the conduct of one of the parties, it must, without allowing that party to take advantage of its own conduct, be applied in a way approximating most closely to its primary object. To do that is to interpret and to give effect to the instrument — not to change it." (*Admissibility of Hearings of Petitioners by the Committee on South West Africa, I.C.J. Reports 1956*, separate opinion of Sir Hersch Lauterpacht, p. 46.)

It claimed that this is a principle of international law and a general principle of law.

76. It is not necessary for the Court to determine whether there is a principle of international law or a general principle of law of "approximate application" because, even if such a principle existed, it could by definition only be employed within the limits of the treaty in question. In the view of the Court, Variant C does not meet that cardinal condition with regard to the 1977 Treaty.

77. As the Court has already observed, the basic characteristic of the 1977 Treaty is, according to Article 1, to provide for the construction of the Gabčíkovo-Nagymaros System of Locks as a joint investment constituting a single and indivisible operational system of works. This element is equally reflected in Articles 8 and 10 of the Treaty providing for joint ownership of the most important works of the Gabčíkovo-Nagymaros Project and for the operation of this joint property as a co-ordinated single unit. By definition all this could not be carried

utilisation du système aurait causé des pertes financières considérables et qu'elle aurait pu entraîner de graves problèmes pour l'environnement.

73. La Tchécoslovaquie a maintes fois indiqué que la suspension et l'abandon des travaux par la Hongrie constituaient une violation essentielle du traité de 1977 et elle aurait pu par conséquent invoquer celle-ci comme motif de mettre fin au traité; mais cela n'aurait en rien fait avancer le projet vers son achèvement. C'est pourquoi elle a préféré insister pour que la Hongrie mette en œuvre le traité et a demandé à de nombreuses reprises à celle-ci de reprendre l'exécution des obligations lui incombant en vertu du traité.

Lorsque la Hongrie a résolument refusé de s'exécuter — bien qu'elle eût exprimé sa volonté d'indemniser la Tchécoslovaquie pour les dommages subis — et lorsque les négociations sont arrivées au point mort du fait des positions diamétralement opposées des parties, la Tchécoslovaquie a décidé de mettre unilatéralement en service le système de Gabčíkovo, sous son contrôle et à son profit exclusifs.

74. Cette décision a comporté plusieurs étapes et, dans le compromis, les Parties ont demandé à la Cour de dire si la Tchécoslovaquie «était en droit de recourir, en novembre 1991», à la variante C et «de mettre en service [cette dernière], à partir d'octobre 1992».

75. En vue de justifier ces actions, la Slovaquie a invoqué ce qu'elle a décrit comme «le principe d'application par approximation» tel qu'exprimé par sir Hersch Lauterpacht dans les termes suivants:

> «C'est un principe sain de droit que si un instrument juridique de validité continue ne peut s'appliquer littéralement, du fait de la conduite de l'une des parties, il faut, sans permettre à celle-ci de se prévaloir de sa propre conduite, l'appliquer d'une manière s'approchant le plus possible de son but primitif. Agir ainsi est interpréter et donner effet à l'instrument et non le modifier.» (*Admissibilité de l'audition de pétitionnaires par le Comité du Sud-Ouest africain, C.I.J. Recueil 1956*, opinion individuelle de sir Hersch Lauterpacht, p. 46.)

Elle a prétendu qu'il s'agit d'un principe du droit international et d'un principe général de droit.

76. La Cour n'a pas à déterminer s'il existe un principe de droit international ou un principe général de droit d'«application par approximation» car, même si un tel principe existait, il ne pourrait par définition y être recouru que dans les limites du traité en cause. Or, de l'avis de la Cour, la variante C ne satisfait pas à cette condition primordiale au regard du traité de 1977.

77. Comme la Cour l'a déjà observé, la caractéristique fondamentale du traité de 1977 est, selon son article premier, de prévoir la construction du système d'écluses de Gabčíkovo-Nagymaros en tant qu'investissement conjoint constituant un système d'ouvrages opérationnel, unique et indivisible. Cet élément est également reflété aux articles 8 et 10 du traité, qui prévoient la propriété conjointe des ouvrages les plus importants du projet Gabčíkovo-Nagymaros et l'exploitation de cette propriété conjointe comme une entité unique et coordonnée. Par définition, tout cela ne pou-

out by unilateral action. In spite of having a certain external physical similarity with the original Project, Variant C thus differed sharply from it in its legal characteristics.

78. Moreover, in practice, the operation of Variant C led Czechoslovakia to appropriate, essentially for its use and benefit, between 80 and 90 per cent of the waters of the Danube before returning them to the main bed of the river, despite the fact that the Danube is not only a shared international watercourse but also an international boundary river.

Czechoslovakia submitted that Variant C was essentially no more than what Hungary had already agreed to and that the only modifications made were those which had become necessary by virtue of Hungary's decision not to implement its treaty obligations. It is true that Hungary, in concluding the 1977 Treaty, had agreed to the damming of the Danube and the diversion of its waters into the bypass canal. But it was only in the context of a joint operation and a sharing of its benefits that Hungary had given its consent. The suspension and withdrawal of that consent constituted a violation of Hungary's legal obligations, demonstrating, as it did, the refusal by Hungary of joint operation; but that cannot mean that Hungary forfeited its basic right to an equitable and reasonable sharing of the resources of an international watercourse.

The Court accordingly concludes that Czechoslovakia, in putting Variant C into operation, was not applying the 1977 Treaty but, on the contrary, violated certain of its express provisions, and, in so doing, committed an internationally wrongful act.

79. The Court notes that between November 1991 and October 1992, Czechoslovakia confined itself to the execution, on its own territory, of the works which were necessary for the implementation of Variant C, but which could have been abandoned if an agreement had been reached between the parties and did not therefore predetermine the final decision to be taken. For as long as the Danube had not been unilaterally dammed, Variant C had not in fact been applied.

Such a situation is not unusual in international law or, for that matter, in domestic law. A wrongful act or offence is frequently preceded by preparatory actions which are not to be confused with the act or offence itself. It is as well to distinguish between the actual commission of a wrongful act (whether instantaneous or continuous) and the conduct prior to that act which is of a preparatory character and which "does not qualify as a wrongful act" (see for example the Commentary on Article 41 of the Draft Articles on State Responsibility, "Report of the International Law Commission on the work of its forty-eighth session, 6 May-26 July 1996", *Official Records of the General Assembly, Fifty-first Session, Supplement No. 10* (A/51/10), p. 141, and *Yearbook of the International Law Commission*, 1993, Vol. II, Part 2, p. 57, para. 14).

*

vait être réalisé par voie d'action unilatérale. En dépit d'une certaine ressemblance physique extérieure avec le projet initial, la variante C en diffère donc nettement quant à ses caractéristiques juridiques.

78. De plus, dans la pratique, la mise en service de la variante C a conduit la Tchécoslovaquie à s'approprier, essentiellement pour son usage et à son profit, entre quatre-vingts et quatre-vingt-dix pour cent des eaux du Danube avant de les restituer au lit principal du fleuve, en dépit du fait que le Danube est non seulement un cours d'eau international partagé mais aussi un fleuve frontière.

La Tchécoslovaquie a soutenu que la variante C, pour l'essentiel, n'est rien d'autre que ce à quoi la Hongrie avait déjà consenti et que seules ont été effectuées les modifications rendues nécessaires par suite de la décision de la Hongrie de ne pas exécuter ses obligations conventionnelles. Il est vrai que la Hongrie, en concluant le traité de 1977, avait accepté le barrage du Danube et le détournement de ses eaux dans le canal de dérivation. Mais c'était seulement dans le contexte d'une opération conjointe et d'un partage de ses bénéfices que la Hongrie avait donné son consentement. La suspension et le retrait de ce consentement ont constitué une violation par la Hongrie de ses obligations juridiques, montrant effectivement que celle-ci a refusé une exploitation conjointe; mais il ne saurait s'ensuivre que la Hongrie aurait perdu son droit fondamental à une part équitable et raisonnable des ressources d'un cours d'eau international.

La Cour conclut en conséquence que la Tchécoslovaquie, en mettant en service la variante C, n'a pas appliqué le traité de 1977 mais, au contraire, a violé certaines de ses dispositions expresses et, de ce fait, a commis un acte internationalement illicite.

79. La Cour note qu'entre novembre 1991 et octobre 1992 la Tchécoslovaquie s'est bornée à exécuter sur son propre territoire des travaux qui étaient certes nécessaires pour la mise en œuvre de la variante C, mais qui auraient pu être abandonnés si un accord était intervenu entre les parties et ne préjugeaient dès lors pas de la décision définitive à prendre. Tant que le Danube n'avait pas été barré unilatéralement, la variante C n'avait en fait pas été appliquée.

Une telle situation n'est pas rare en droit international, comme d'ailleurs en droit interne. Un fait illicite ou une infraction est fréquemment précédée d'actes préparatoires qui ne sauraient être confondus avec le fait ou l'infraction eux-mêmes. Il convient de distinguer entre la réalisation même d'un fait illicite (que celui-ci soit instantané ou continu) et le comportement antérieur à ce fait qui présente un caractère préparatoire et «qui ne saurait être traité comme un fait illicite» (voir par exemple le commentaire de l'article 41 du projet d'articles sur la responsabilité des Etats, «Rapport de la Commission du droit international sur les travaux de sa quarante-huitième session, 6 mai-26 juillet 1996», *Documents officiels de l'Assemblée générale, cinquante et unième session, supplément n° 10* (A/51/10), p. 164, et *Annuaire de la Commission du droit international*, 1993, vol. II, deuxième partie, p. 59, par. 14).

*

80. Slovakia also maintained that it was acting under a duty to mitigate damages when it carried out Variant C. It stated that "It is a general principle of international law that a party injured by the non-performance of another contract party must seek to mitigate the damage he has sustained."

It would follow from such a principle that an injured State which has failed to take the necessary measures to limit the damage sustained would not be entitled to claim compensation for that damage which could have been avoided. While this principle might thus provide a basis for the calculation of damages, it could not, on the other hand, justify an otherwise wrongful act.

81. Since the Court has found that the putting into operation of Variant C constituted an internationally wrongful act, the duty to mitigate damage invoked by Slovakia does not need to be examined further.

*

82. Although it did not invoke the plea of countermeasures as a primary argument, since it did not consider Variant C to be unlawful, Slovakia stated that "Variant C could be presented as a justified countermeasure to Hungary's illegal acts".

The Court has concluded, in paragraph 78 above, that Czechoslovakia committed an internationally wrongful act in putting Variant C into operation. Thus, it now has to determine whether such wrongfulness may be precluded on the ground that the measure so adopted was in response to Hungary's prior failure to comply with its obligations under international law.

83. In order to be justifiable, a countermeasure must meet certain conditions (see *Military and Paramilitary Activities in and against Nicaragua (Nicaragua* v. *United States of America), Merits, Judgment, I.C.J. Reports 1986*, p. 127, para. 249. See also *Arbitral Award of 9 December 1978 in the case concerning the Air Service Agreement of 27 March 1946 between the United States of America and France*, United Nations, *Reports of International Arbitral Awards (RIAA)*, Vol. XVIII, pp. 443 *et seq.*; also Articles 47 to 50 of the Draft Articles on State Responsibility adopted by the International Law Commission on first reading, "Report of the International Law Commission on the work of its forty-eighth session, 6 May-26 July 1996", *Official Records of the General Assembly, Fifty-first Session, Supplement No. 10* (A/51/10), pp. 144-145.)

In the first place it must be taken in response to a previous international wrongful act of another State and must be directed against that State. Although not primarily presented as a countermeasure, it is clear that Variant C was a response to Hungary's suspension and abandon-

80. La Slovaquie a aussi soutenu que son action était motivée par une obligation d'atténuer des dommages lorsqu'elle a réalisé la variante C. Elle a déclaré que «c'est un principe de droit international qu'une partie lésée du fait de la non-exécution d'un engagement pris par une autre partie doit s'employer à atténuer les dommages qu'elle a subis».

Il découlerait d'un tel principe qu'un Etat lésé qui n'a pas pris les mesures nécessaires à l'effet de limiter les dommages subis ne serait pas en droit de réclamer l'indemnisation de ceux qui auraient pu être évités. Si ledit principe pourrait ainsi fournir une base pour le calcul de dommages et intérêts, en revanche, il ne saurait justifier ce qui constitue par ailleurs un fait illicite.

81. La Cour ayant conclu que la mise en service de la variante C a constitué un fait internationalement illicite, l'obligation d'atténuer les dommages invoquée par la Slovaquie n'a pas à être examinée plus avant.

*

82. Bien qu'elle n'ait pas fait valoir à titre principal l'argumentation tirée des contre-mesures, puisqu'elle ne considère pas la variante C comme illicite, la Slovaquie a déclaré que «la variante C pourrait être considérée comme une contre-mesure justifiée en réponse aux actes illicites de la Hongrie».

La Cour, au paragraphe 78 ci-dessus, est parvenue à la conclusion que la Tchécoslovaquie a commis un acte internationalement illicite en mettant en service la variante C. Il lui faut donc à présent rechercher si cette illicéité peut être excusée au motif que la mesure ainsi adoptée l'aurait été en réaction au défaut préalable de la Hongrie de s'acquitter de ses obligations en vertu du droit international.

83. Pour pouvoir être justifiée, une contre-mesure doit satisfaire à certaines conditions (voir *Activités militaires et paramilitaires au Nicaragua et contre celui-ci (Nicaragua c. Etats-Unis d'Amérique), fond, arrêt, C.I.J. Recueil 1986*, p. 127, par. 249. Voir aussi *Sentence arbitrale du 9 décembre 1978 en l'affaire concernant l'accord relatif aux services aériens du 27 mars 1946 entre les Etats-Unis d'Amérique et la France*, Nations Unies, *Recueil des sentences arbitrales (RSA)*, vol. XVIII, p. 483 et suiv., et articles 47 à 50 du projet d'articles sur la responsabilité des Etats adopté par la Commission du droit international en première lecture, «Rapport de la Commission du droit international sur les travaux de sa quarante-huitième session, 6 mai-26 juillet 1996», *Documents officiels de l'Assemblée générale, cinquante et unième session, supplément n° 10* (A/51/10), p. 167-168.)

En premier lieu, elle doit être prise pour riposter à un fait internationalement illicite d'un autre Etat et doit être dirigée contre ledit Etat. Bien qu'elle n'ait pas été présentée à titre principal comme une contre-mesure, il est clair que la variante C a constitué une riposte à la suspension et à

ment of works and that it was directed against that State; and it is equally clear, in the Court's view, that Hungary's actions were internationally wrongful.

84. Secondly, the injured State must have called upon the State committing the wrongful act to discontinue its wrongful conduct or to make reparation for it. It is clear from the facts of the case, as recalled above by the Court (see paragraphs 61 *et seq.*), that Czechoslovakia requested Hungary to resume the performance of its treaty obligations on many occasions.

85. In the view of the Court, an important consideration is that the effects of a countermeasure must be commensurate with the injury suffered, taking account of the rights in question.

In 1929, the Permanent Court of International Justice, with regard to navigation on the River Oder, stated as follows:

> "[the] community of interest in a navigable river becomes the basis of a common legal right, the essential features of which are the perfect equality of all riparian States in the user of the whole course of the river and the exclusion of any preferential privilege of any one riparian State in relation to the others" (*Territorial Jurisdiction of the International Commission of the River Oder, Judgment No. 16, 1929, P.C.I.J., Series A, No. 23,* p. 27).

Modern development of international law has strengthened this principle for non-navigational uses of international watercourses as well, as evidenced by the adoption of the Convention of 21 May 1997 on the Law of the Non-Navigational Uses of International Watercourses by the United Nations General Assembly.

The Court considers that Czechoslovakia, by unilaterally assuming control of a shared resource, and thereby depriving Hungary of its right to an equitable and reasonable share of the natural resources of the Danube — with the continuing effects of the diversion of these waters on the ecology of the riparian area of the Szigetköz — failed to respect the proportionality which is required by international law.

86. Moreover, as the Court has already pointed out (see paragraph 78), the fact that Hungary had agreed in the context of the original Project to the diversion of the Danube (and, in the Joint Contractual Plan, to a provisional measure of withdrawal of water from the Danube) cannot be understood as having authorized Czechoslovakia to proceed with a unilateral diversion of this magnitude without Hungary's consent.

87. The Court thus considers that the diversion of the Danube carried out by Czechoslovakia was not a lawful countermeasure because it was not proportionate. It is therefore not required to pass upon one other condition for the lawfulness of a countermeasure, namely that its purpose must be to induce the wrongdoing State to comply with its obliga-

l'abandon des travaux par la Hongrie et qu'elle était dirigée contre cet Etat; et il est tout aussi clair, de l'avis de la Cour, que les agissements de la Hongrie étaient internationalement illicites.

84. En second lieu, l'Etat lésé doit avoir invité l'Etat auteur du fait illicite à mettre fin à son comportement illicite ou à en fournir réparation. Il ressort clairement des faits de la cause, tels que rappelés ci-dessus par la Cour (voir paragraphes 61 et suivants), que la Tchécoslovaquie, à de nombreuses reprises, a prié la Hongrie de reprendre l'exécution de ses obligations conventionnelles.

85. De l'avis de la Cour, une condition importante est que les effets d'une contre-mesure doivent être proportionnés aux dommages subis compte tenu des droits en cause.

En 1929, la Cour permanente de Justice internationale, à propos de la navigation sur l'Oder, a déclaré ce qui suit:

> «[la] communauté d'intérêts sur un fleuve navigable devient la base d'une communauté de droit, dont les traits essentiels sont la parfaite égalité de tous les Etats riverains dans l'usage de tout le parcours du fleuve et l'exclusion de tout privilège d'un riverain quelconque par rapport aux autres» (*Juridiction territoriale de la Commission internationale de l'Oder, arrêt n° 16, 1929, C.P.J.I. série A n° 23*, p. 27).

Le développement moderne du droit international a renforcé ce principe également pour les utilisations des cours d'eau internationaux à des fins autres que la navigation, comme en témoigne l'adoption par l'Assemblée générale des Nations Unies, le 21 mai 1997, de la convention sur le droit relatif aux utilisations des cours d'eau internationaux à des fins autres que la navigation.

La Cour considère que la Tchécoslovaquie, en prenant unilatéralement le contrôle d'une ressource partagée, et en privant ainsi la Hongrie de son droit à une part équitable et raisonnable des ressources naturelles du Danube — avec les effets continus que le détournement de ses eaux déploie sur l'écologie de la région riveraine du Szigetköz — n'a pas respecté la proportionnalité exigée par le droit international.

86. Par ailleurs, comme la Cour l'a déjà relevé ci-dessus (voir paragraphe 78), le fait que la Hongrie ait consenti, dans le cadre du projet initial, au détournement du Danube (et, dans le plan contractuel conjoint, à titre provisoire à des prélèvements d'eau dans le Danube) ne saurait s'interpréter comme ayant autorisé la Tchécoslovaquie à procéder à un détournement unilatéral de cette importance sans le consentement de la Hongrie.

87. La Cour estime donc que le détournement du Danube effectué par la Tchécoslovaquie n'était pas une contre-mesure licite, faute d'être proportionnée. Elle n'a dès lors pas à statuer sur une autre condition dont dépend la licéité d'une contre-mesure, à savoir que celle-ci doit avoir pour but d'inciter l'Etat auteur du fait illicite à exécuter les obligations

tions under international law, and that the measure must therefore be reversible.

* *

88. In the light of the conclusions reached above, the Court, in reply to the question put to it in Article 2, paragraph 1 *(b)*, of the Special Agreement (see paragraph 60), finds that Czechoslovakia was entitled to proceed, in November 1991, to Variant C in so far as it then confined itself to undertaking works which did not predetermine the final decision to be taken by it. On the other hand, Czechoslovakia was not entitled to put that Variant into operation from October 1992.

* * *

89. By the terms of Article 2, paragraph 1 *(c)*, of the Special Agreement, the Court is asked, thirdly, to determine "what are the legal effects of the notification, on 19 May 1992, of the termination of the Treaty by the Republic of Hungary".

The Court notes that it has been asked to determine what are the legal effects of the notification given on 19 May 1992 of the termination of the Treaty. It will consequently confine itself to replying to this question.

90. The Court will recall that, by early 1992, the respective parties to the 1977 Treaty had made clear their positions with regard to the recourse by Czechoslovakia to Variant C. Hungary in a Note Verbale of 14 February 1992 had made clear its view that Variant C was a contravention of the 1977 Treaty (see paragraph 64 above); Czechoslovakia insisted on the implementation of Variant C as a condition for further negotiation. On 26 February 1992, in a letter to his Czechoslovak counterpart, the Prime Minister of Hungary described the impending diversion of the Danube as "a serious breach of international law" and stated that, unless work was suspended while further enquiries took place, "the Hungarian Government [would] have no choice but to respond to this situation of necessity by terminating the 1977 inter-State Treaty". In a Note Verbale dated 18 March 1992, Czechoslovakia reaffirmed that, while it was prepared to continue negotiations "on every level", it could not agree "to stop all work on the provisional solution".

On 24 March 1992, the Hungarian Parliament passed a resolution authorizing the Government to terminate the 1977 Treaty if Czechoslovakia did not stop the works by 30 April 1992. On 13 April 1992, the Vice-President of the Commission of the European Communities wrote to both parties confirming the willingness of the Commission to chair a committee of independent experts including representatives of the two countries, in order to assist the two Governments in identifying a mutu-

qui lui incombent en droit international, et que la mesure doit partant être réversible.

* *

88. Au vu des conclusions auxquelles elle est parvenue ci-dessus, la Cour répond à la question qui lui a été posée à l'article 2, paragraphe 1, alinéa *b)*, du compromis (voir paragraphe 60) que la Tchécoslovaquie était en droit de recourir, en novembre 1991, à la variante C, dans la mesure où elle se bornait alors à entamer des travaux qui ne préjugeaient pas de la décision définitive qu'elle devait prendre. En revanche, la Tchécoslovaquie n'était pas en droit de mettre en service cette variante à partir d'octobre 1992.

* * *

89. Aux termes de l'article 2, paragraphe 1, alinéa *c)*, du compromis, il est demandé à la Cour en troisième lieu de dire «quels sont les effets juridiques de la notification, le 19 mai 1992, de la terminaison du traité par la République de Hongrie».

La Cour relèvera qu'il lui a été demandé de déterminer les effets juridiques de la notification de terminaison du traité effectuée à la date du 19 mai 1992. Elle se bornera en conséquence à répondre à cette question.

90. La Cour rappellera que, début 1992, les parties au traité de 1977 avaient clairement fait connaître leurs positions respectives sur le recours par la Tchécoslovaquie à la variante C. Dans une note verbale du 14 février 1992, la Hongrie avait fait savoir qu'elle considérait que la variante C contrevenait au traité de 1977 (voir paragraphe 64 ci-dessus); la Tchécoslovaquie faisait de la mise en œuvre de la variante C une condition de toute nouvelle négociation. Le 26 février 1992, dans une lettre à son homologue tchécoslovaque, le premier ministre hongrois décrivit le détournement imminent du Danube comme «une grave violation du droit international» et affirma qu'à moins que les travaux ne soient suspendus pendant la réalisation de nouvelles études «le Gouvernement hongrois n'aura[it] d'autre choix, pour faire face à cette situation de nécessité, que de mettre fin au traité interétatique de 1977». Dans une note verbale du 18 mars 1992, la Tchécoslovaquie réaffirma que, tout en étant disposée à poursuivre les négociations «à tous les niveaux», elle ne pouvait pas accepter «d'arrêter les travaux afférents à la solution provisoire».

Le 24 mars 1992, le Parlement hongrois adopta une résolution par laquelle il autorisait le gouvernement à mettre fin au traité de 1977 si la Tchécoslovaquie n'avait pas cessé les travaux au 30 avril 1992. Le 13 avril 1992, le vice-président de la Commission des Communautés européennes écrivit aux deux parties pour leur confirmer que la Commission était disposée à présider un comité d'experts indépendants, comprenant des représentants des deux pays, en vue d'aider les deux gouvernements à dégager

ally acceptable solution. Commission involvement would depend on each Government not taking "any steps . . . which would prejudice possible actions to be undertaken on the basis of the report's findings". The Czechoslovak Prime Minister stated in a letter to the Hungarian Prime Minister dated 23 April 1992, that his Government continued to be interested in the establishment of the proposed committee "without any preliminary conditions"; criticizing Hungary's approach, he refused to suspend work on the provisional solution, but added, "in my opinion, there is still time, until the damming of the Danube (i.e., until October 31, 1992), for resolving disputed questions on the basis of agreement of both States".

On 7 May 1992, Hungary, in the very resolution in which it decided on the termination of the Treaty, made a proposal, this time to the Slovak Prime Minister, for a six-month suspension of work on Variant C. The Slovak Prime Minister replied that the Slovak Government remained ready to negotiate, but considered preconditions "inappropriate".

91. On 19 May 1992, the Hungarian Government transmitted to the Czechoslovak Government a Declaration notifying it of the termination by Hungary of the 1977 Treaty as of 25 May 1992. In a letter of the same date from the Hungarian Prime Minister to the Czechoslovak Prime Minister, the immediate cause for termination was specified to be Czechoslovakia's refusal, expressed in its letter of 23 April 1992, to suspend the work on Variant C during mediation efforts of the Commission of the European Communities. In its Declaration, Hungary stated that it could not accept the deleterious effects for the environment and the conservation of nature of the implementation of Variant C which would be practically equivalent to the dangers caused by the realization of the original Project. It added that Variant C infringed numerous international agreements and violated the territorial integrity of the Hungarian State by diverting the natural course of the Danube.

* *

92. During the proceedings, Hungary presented five arguments in support of the lawfulness, and thus the effectiveness, of its notification of termination. These were the existence of a state of necessity; the impossibility of performance of the Treaty; the occurrence of a fundamental change of circumstances; the material breach of the Treaty by Czechoslovakia; and, finally, the development of new norms of international environmental law. Slovakia contested each of these grounds.

93. On the first point, Hungary stated that, as Czechoslovakia had "remained inflexible" and continued with its implementation of Variant C, "a temporary state of necessity eventually became permanent, justifying termination of the 1977 Treaty".

Slovakia, for its part, denied that a state of necessity existed on the

une solution qu'ils puissent tous deux accepter. La participation de la Commission était subordonnée à la condition que les deux gouvernements s'abstiennent de prendre «des mesures susceptibles de porter atteinte aux actions qu'il pourrait y avoir lieu d'entreprendre sur la base des conclusions du rapport». Le premier ministre tchécoslovaque, dans une lettre du 23 avril 1992 adressée au premier ministre hongrois, fit savoir que son gouvernement était toujours intéressé, «sans conditions préalables», à la constitution du comité envisagé; critiquant l'attitude de la Hongrie, il refusait de suspendre les travaux relatifs à la solution provisoire, mais ajoutait: «selon moi, d'ici le barrage du Danube (c'est-à-dire d'ici au 31 octobre 1992), il reste du temps pour résoudre les questions litigieuses sur la base d'un accord entre les deux Etats».

Le 7 mai 1992, la Hongrie, dans la résolution même où elle prenait la décision de mettre fin au traité, proposa, cette fois au premier ministre slovaque, une suspension de six mois des travaux relatifs à la variante C. Le premier ministre slovaque répondit que le Gouvernement slovaque était toujours prêt à négocier, mais qu'il considérait «inapproprié» de poser des conditions préalables.

91. Le 19 mai 1992, le Gouvernement hongrois transmit au Gouvernement tchécoslovaque une déclaration portant notification de la terminaison, par la Hongrie, du traité de 1977, à compter du 25 mai 1992. Dans une lettre du même jour adressée au premier ministre tchécoslovaque, le premier ministre hongrois précisait que la cause immédiate de la terminaison était le refus de la Tchécoslovaquie, exprimé dans sa lettre du 23 avril 1992, de suspendre les travaux afférents à la variante C pendant les efforts de médiation de la Commission des Communautés européennes. Dans sa déclaration, la Hongrie disait qu'elle ne pouvait accepter les effets néfastes de la mise en œuvre de la variante C sur l'environnement et sur la protection de la nature, qui seraient pratiquement équivalents aux dangers créés par la réalisation du projet initial. Elle ajoutait que la variante C contrevenait à de nombreux accords internationaux et violait l'intégrité territoriale de la Hongrie en détournant le Danube de son cours naturel.

* *

92. Au cours de la procédure, la Hongrie a présenté cinq motifs en vue de démontrer que la notification de terminaison était licite, et par suite effective: l'existence d'un état de nécessité, l'impossibilité d'exécuter le traité, la survenance d'un changement fondamental de circonstances, la violation substantielle du traité par la Tchécoslovaquie et, enfin, l'apparition de nouvelles normes de droit international de l'environnement. La Slovaquie a contesté chacun de ces motifs.

93. Sur le premier point, la Hongrie a affirmé que, puisque la Tchécoslovaquie «était demeurée inflexible» et avait poursuivi la mise en œuvre de la variante C, «l'état provisoire de nécessité [était] finalement devenu permanent, justifiant ainsi la terminaison du traité de 1977».

Pour sa part, la Slovaquie, se fondant sur ce qu'elle estime être les don-

basis of what it saw as the scientific facts; and argued that even if such a state of necessity had existed, this would not give rise to a right to terminate the Treaty under the Vienna Convention of 1969 on the Law of Treaties.

94. Hungary's second argument relied on the terms of Article 61 of the Vienna Convention, which is worded as follows:

> "*Article 61*
>
> *Supervening Impossibility of Performance*
>
> 1. A party may invoke the impossibility of performing a treaty as a ground for terminating or withdrawing from it if the impossibility results from the permanent disappearance or destruction of an object indispensable for the execution of the treaty. If the impossibility is temporary, it may be invoked only as a ground for suspending the operation of the treaty.
>
> 2. Impossibility of performance may not be invoked by a party as a ground for terminating, withdrawing from or suspending the operation of a treaty if the impossibility is the result of a breach by that party either of an obligation under the treaty or of any other international obligation owed to any other party to the treaty."

Hungary declared that it could not be "obliged to fulfil a practically impossible task, namely to construct a barrage system on its own territory that would cause irreparable environmental damage". It concluded that

> "By May 1992 the essential object of the Treaty — an economic joint investment which was consistent with environmental protection and which was operated by the two parties jointly — had permanently disappeared, and the Treaty had thus become impossible to perform."

In Hungary's view, the "object indispensable for the execution of the treaty", whose disappearance or destruction was required by Article 61 of the Vienna Convention, did not have to be a physical object, but could also include, in the words of the International Law Commission, "a legal situation which was the raison d'être of the rights and obligations".

Slovakia claimed that Article 61 was the only basis for invoking impossibility of performance as a ground for termination, that paragraph 1 of that Article clearly contemplated physical "disappearance or destruction" of the object in question, and that, in any event, paragraph 2 precluded the invocation of impossibility "if the impossibility is the result of a breach by that party . . . of an obligation under the treaty".

95. As to "fundamental change of circumstances", Hungary relied on Article 62 of the Vienna Convention on the Law of Treaties which states as follows:

nées scientifiques, a contesté l'existence d'un état de nécessité et a fait valoir que, même si un tel état de nécessité avait existé, il n'aurait pu conférer le droit de mettre fin au traité en vertu de la convention de Vienne de 1969 sur le droit des traités.

94. Le deuxième argument de la Hongrie était tiré des termes de l'article 61 de la convention de Vienne, ainsi libellé:

«*Article 61*

Survenance d'une situation rendant l'exécution impossible

1. Une partie peut invoquer l'impossibilité d'exécuter un traité comme motif pour y mettre fin ou pour s'en retirer si cette impossibilité résulte de la disparition ou destruction définitives d'un objet indispensable à l'exécution de ce traité. Si l'impossibilité est temporaire, elle peut être invoquée seulement comme motif pour suspendre l'application du traité.

2. L'impossibilité d'exécution ne peut être invoquée par une partie comme motif pour mettre fin au traité, pour s'en retirer ou pour en suspendre l'application si cette impossibilité résulte d'une violation, par la partie qui l'invoque, soit d'une obligation du traité, soit de toute autre obligation internationale à l'égard de toute autre partie au traité.»

La Hongrie a déclaré qu'elle ne pouvait «être obligée d'accomplir une tâche pratiquement impossible, à savoir construire un système de barrage sur son propre territoire qui causerait des dommages irréparables à l'environnement». Elle a conclu que:

> «En mai 1992 l'objet essentiel du traité — un investissement économique conjoint qui était compatible avec la protection de l'environnement et qui était exploité par les deux parties conjointement — avait disparu de manière permanente, et [que] le traité était donc devenu impossible à exécuter.»

De l'avis de la Hongrie, il n'est pas nécessaire que la disparition ou la destruction de l'«objet indispensable à l'exécution de ce traité», qu'exige l'article 61 de la convention de Vienne, vise un objet physique; il peut aussi s'agir, suivant les termes utilisés par la Commission du droit international, d'«une situation juridique qui constituait la raison d'être des droits et obligations».

La Slovaquie a prétendu que la seule base sur laquelle l'impossibilité d'exécution puisse être invoquée comme motif de terminaison d'un traité est indiquée à l'article 61 de la convention de Vienne; que le paragraphe 1 de cet article envisage manifestement la «disparition ou destruction» matérielle de l'objet dont il s'agit; et que, en tout état de cause, selon le paragraphe 2, on ne peut invoquer l'impossibilité d'exécution «si cette impossibilité résulte d'une violation, par la partie qui l'invoque, ... d'une obligation aux termes du traité».

95. En ce qui concerne le «changement fondamental de circonstances», la Hongrie se fonde sur l'article 62 de la convention de Vienne sur le droit des traités, ainsi conçu:

"*Article 62*

Fundamental Change of Circumstances

1. A fundamental change of circumstances which has occurred with regard to those existing at the time of the conclusion of a treaty, and which was not foreseen by the parties, may not be invoked as a ground for terminating or withdrawing from the treaty unless:

(a) the existence of those circumstances constituted an essential basis of the consent of the parties to be bound by the treaty; and

(b) the effect of the change is radically to transform the extent of obligations still to be performed under the treaty.

2. A fundamental change of circumstances may not be invoked as a ground for terminating or withdrawing from a treaty:

(a) if the treaty establishes a boundary; or

(b) if the fundamental change is the result of a breach by the party invoking it either of an obligation under the treaty or of any other international obligation owed to any other party to the treaty.

3. If, under the foregoing paragraphs, a party may invoke a fundamental change of circumstances as a ground for terminating or withdrawing from a treaty it may also invoke the change as a ground for suspending the operation of the treaty."

Hungary identified a number of "substantive elements" present at the conclusion of the 1977 Treaty which it said had changed fundamentally by the date of notification of termination. These included the notion of "socialist integration", for which the Treaty had originally been a "vehicle", but which subsequently disappeared; the "single and indivisible operational system", which was to be replaced by a unilateral scheme; the fact that the basis of the planned joint investment had been overturned by the sudden emergence of both States into a market economy; the attitude of Czechoslovakia which had turned the "framework treaty" into an "immutable norm"; and, finally, the transformation of a treaty consistent with environmental protection into "a prescription for environmental disaster".

Slovakia, for its part, contended that the changes identified by Hungary had not altered the nature of the obligations under the Treaty from those originally undertaken, so that no entitlement to terminate it arose from them.

96. Hungary further argued that termination of the Treaty was justified by Czechoslovakia's material breaches of the Treaty, and in this regard it invoked Article 60 of the Vienna Convention on the Law of Treaties, which provides:

« *Article 62*
Changement fondamental de circonstances

1. Un changement fondamental de circonstances qui s'est produit par rapport à celles qui existaient au moment de la conclusion d'un traité et qui n'avait pas été prévu par les parties ne peut pas être invoqué comme motif pour mettre fin au traité ou pour s'en retirer, à moins que:

a) l'existence de ces circonstances n'ait constitué une base essentielle du consentement des parties à être liées par le traité; et que

b) ce changement n'ait pour effet de transformer radicalement la portée des obligations qui restent à exécuter en vertu du traité.

2. Un changement fondamental de circonstances ne peut pas être invoqué comme motif pour mettre fin à un traité ou pour s'en retirer:

a) s'il s'agit d'un traité établissant une frontière; ou
b) si le changement fondamental résulte d'une violation, par la partie qui l'invoque, soit d'une obligation du traité, soit de toute autre obligation internationale à l'égard de toute autre partie au traité.

3. Si une partie peut, conformément aux paragraphes qui précèdent, invoquer un changement fondamental de circonstances comme motif pour mettre fin à un traité ou pour s'en retirer, elle peut également ne l'invoquer que pour suspendre l'application du traité.»

La Hongrie a énuméré divers «éléments de fond» présents lors de la conclusion du traité de 1977 qui, selon elle, avaient fondamentalement changé à la date à laquelle elle a notifié qu'elle mettait fin au traité. Parmi ces éléments, elle a évoqué la notion d'«intégration socialiste», dont le traité avait été initialement «le vecteur», mais qui avait par la suite disparu; le «système d'ouvrages opérationnel, unique et indivisible», auquel avait été substitué un projet unilatéral; le fait que la base de l'investissement conjoint prévu avait été radicalement transformée avec l'entrée soudaine des deux Etats dans l'économie de marché; l'attitude de la Tchécoslovaquie qui avait fait d'un «traité-cadre» une «norme immuable»; et enfin, la transformation d'un traité qui tenait compte de la protection de l'environnement en «traité porteur de catastrophes écologiques».

La Slovaquie, quant à elle, a soutenu que les changements signalés par la Hongrie n'avaient pas modifié la nature des obligations prévues initialement au traité, de sorte qu'aucun droit d'y mettre fin ne pouvait découler de ces changements.

96. La Hongrie a en outre fait valoir que la terminaison du traité était justifiée du fait des violations substantielles de ce traité commises par la Tchécoslovaquie, et elle a invoqué à cet égard l'article 60 de la convention de Vienne sur le droit des traités, qui dispose:

"*Article 60*

Termination or Suspension of the Operation of a Treaty as a Consequence of Its Breach

1. A material breach of a bilateral treaty by one of the parties entitles the other to invoke the breach as a ground for terminating the treaty or suspending its operation in whole or in part.

2. A material breach of a multilateral treaty by one of the parties entitles:

(a) the other parties by unanimous agreement to suspend the operation of the treaty in whole or in part or to terminate it either:

(i) in the relations between themselves and the defaulting State, or

(ii) as between all the parties;

(b) a party specially affected by the breach to invoke it as a ground for suspending the operation of the treaty in whole or in part in the relations between itself and the defaulting State;

(c) any party other than the defaulting State to invoke the breach as a ground for suspending the operation of the treaty in whole or in part with respect to itself if the treaty is of such a character that a material breach of its provisions by one party radically changes the position of every party with respect to the further performance of its obligations under the treaty.

3. A material breach of a treaty, for the purposes of this article, consists in:

(a) a repudiation of the treaty not sanctioned by the present Convention; or

(b) the violation of a provision essential to the accomplishment of the object or purpose of the treaty.

4. The foregoing paragraphs are without prejudice to any provision in the treaty applicable in the event of a breach.

5. Paragraphs 1 to 3 do not apply to provisions relating to the protection of the human person contained in treaties of a humanitarian character, in particular to provisions prohibiting any form of reprisals against persons protected by such treaties."

Hungary claimed in particular that Czechoslovakia violated the 1977 Treaty by proceeding to the construction and putting into operation of Variant C, as well as failing to comply with its obligations under Articles 15 and 19 of the Treaty. Hungary further maintained that Czechoslovakia had breached other international conventions (among them the Convention of 31 May 1976 on the Regulation of Water Management Issues of Boundary Waters) and general international law.

« *Article 60*

Extinction d'un traité ou suspension de son application comme conséquence de sa violation

1. Une violation substantielle d'un traité bilatéral par l'une des parties autorise l'autre partie à invoquer la violation comme motif pour mettre fin au traité ou suspendre son application en totalité ou en partie.

2. Une violation substantielle d'un traité multilatéral par l'une des parties autorise:

a) les autres parties, agissant par accord unanime, à suspendre l'application du traité en totalité ou en partie ou à mettre fin à celui-ci:

i) soit dans les relations entre elles-mêmes et l'Etat auteur de la violation,

ii) soit entre toutes les parties;

b) une partie spécialement atteinte par la violation à invoquer celle-ci comme motif de suspension de l'application du traité en totalité ou en partie dans les relations entre elle-même et l'Etat auteur de la violation;

c) toute partie autre que l'Etat auteur de la violation à invoquer la violation comme motif pour suspendre l'application du traité en totalité ou en partie en ce qui la concerne si ce traité est d'une nature telle qu'une violation substantielle de ses dispositions par une partie modifie radicalement la situation de chacune des parties quant à l'exécution ultérieure de ses obligations en vertu du traité.

3. Aux fins du présent article, une violation substantielle d'un traité est constituée par:

a) un rejet du traité non autorisé par la présente convention; ou

b) la violation d'une disposition essentielle pour la réalisation de l'objet ou du but du traité.

4. Les paragraphes qui précèdent ne portent atteinte à aucune disposition du traité applicable en cas de violation.

5. Les paragraphes 1 à 3 ne s'appliquent pas aux dispositions relatives à la protection de la personne humaine contenues dans des traités de caractère humanitaire, notamment aux dispositions excluant toute forme de représailles à l'égard des personnes protégées par lesdits traités.»

La Hongrie a prétendu en particulier que la Tchécoslovaquie avait violé le traité de 1977 en procédant à la construction et à la mise en service de la variante C, et en manquant à ses obligations au titre des articles 15 et 19 du traité. La Hongrie a par ailleurs soutenu que la Tchécoslovaquie avait méconnu d'autres conventions internationales (dont la convention sur la réglementation en matière d'eaux frontières du 31 mai 1976) et le droit international général.

Slovakia denied that there had been, on the part of Czechoslovakia or on its part, any material breach of the obligations to protect water quality and nature, and claimed that Variant C, far from being a breach, was devised as "the best possible approximate application" of the Treaty. It furthermore denied that Czechoslovakia had acted in breach of other international conventions or general international law.

97. Finally, Hungary argued that subsequently imposed requirements of international law in relation to the protection of the environment precluded performance of the Treaty. The previously existing obligation not to cause substantive damage to the territory of another State had, Hungary claimed, evolved into an *erga omnes* obligation of prevention of damage pursuant to the "precautionary principle". On this basis, Hungary argued, its termination was "forced by the other party's refusal to suspend work on Variant C".

Slovakia argued, in reply, that none of the intervening developments in environmental law gave rise to norms of *jus cogens* that would override the Treaty. Further, it contended that the claim by Hungary to be entitled to take action could not in any event serve as legal justification for termination of the Treaty under the law of treaties, but belonged rather "to the language of self-help or reprisals".

* *

98. The question, as formulated in Article 2, paragraph 1 *(c)*, of the Special Agreement, deals with treaty law since the Court is asked to determine what the legal effects are of the notification of termination of the Treaty. The question is whether Hungary's notification of 19 May 1992 brought the 1977 Treaty to an end, or whether it did not meet the requirements of international law, with the consequence that it did not terminate the Treaty.

99. The Court has referred earlier to the question of the applicability to the present case of the Vienna Convention of 1969 on the Law of Treaties. The Vienna Convention is not directly applicable to the 1977 Treaty inasmuch as both States ratified that Convention only after the Treaty's conclusion. Consequently only those rules which are declaratory of customary law are applicable to the 1977 Treaty. As the Court has already stated above (see paragraph 46), this is the case, in many respects, with Articles 60 to 62 of the Vienna Convention, relating to termination or suspension of the operation of a treaty. On this, the Parties, too, were broadly in agreement.

100. The 1977 Treaty does not contain any provision regarding its termination. Nor is there any indication that the parties intended to admit the possibility of denunciation or withdrawal. On the contrary, the Treaty establishes a long-standing and durable régime of joint investment

La Slovaquie a nié qu'il y ait eu, de la part de la Tchécoslovaquie ou de sa propre part, une violation substantielle des obligations de protéger la qualité de l'eau et la nature, et a affirmé que la variante C, loin d'être une violation du traité, constituait en fait «la meilleure application possible [du traité] par approximation». Elle a en outre nié que la Tchécoslovaquie ait méconnu d'autres conventions internationales ou le droit international général.

97. La Hongrie a enfin soutenu que les normes du droit international qui se sont imposées par la suite en matière de protection de l'environnement rendaient impossible l'exécution du traité. L'obligation qui existait préalablement de ne pas causer de dommage substantiel au territoire d'un autre Etat était devenue avec le temps, au dire de la Hongrie, une obligation *erga omnes* de prévention des dommages conformément au «principe de précaution». Sur cette base, la Hongrie a fait valoir qu'elle avait été contrainte de mettre fin au traité «en raison du refus de l'autre partie de suspendre les travaux relatifs à la variante C».

La Slovaquie a exposé, en réponse, qu'aucun des nouveaux développements du droit international de l'environnement n'avait engendré de normes de *jus cogens* qui prévaudraient sur le traité. Elle a soutenu en outre que le droit à agir dont la Hongrie entend se prévaloir n'aurait pu en tout état de cause justifier légalement la terminaison du traité en vertu du droit des traités, mais relevait bien davantage «du vocabulaire de l'autoprotection ou des représailles».

* *

98. Telle qu'elle est formulée à l'article 2, paragraphe 1, alinéa *c)*, du compromis, la question posée relève du droit des traités puisque la Cour est priée de dire quels sont les effets juridiques de la notification de terminaison du traité. Il s'agit de savoir si la notification hongroise du 19 mai 1992 a mis fin au traité de 1977 ou n'a pas eu cet effet, faute d'être conforme aux exigences du droit international.

99. La Cour a déjà évoqué la question de l'applicabilité à la présente espèce de la convention de Vienne de 1969 sur le droit des traités. La convention de Vienne n'est pas directement applicable au traité de 1977 dans la mesure où les deux Etats n'ont ratifié cette convention qu'après avoir conclu le traité. En conséquence, seules les règles de la convention qui sont déclaratoires du droit coutumier sont applicables au traité de 1977. Comme la Cour l'a indiqué ci-dessus (voir paragraphe 46), tel est le cas, à bien des égards, des articles 60 à 62 de la convention de Vienne relatifs à l'extinction et à la suspension de l'application des traités. Les Parties en ont aussi largement convenu.

100. Le traité de 1977 ne contient pas de disposition concernant sa terminaison. Rien n'indique non plus que les parties entendaient admettre la possibilité de dénoncer le traité ou de s'en retirer. Au contraire, le traité établit un système durable d'investissement conjoint et d'exploitation

and joint operation. Consequently, the parties not having agreed otherwise, the Treaty could be terminated only on the limited grounds enumerated in the Vienna Convention.

*

101. The Court will now turn to the first ground advanced by Hungary, that of the state of necessity. In this respect, the Court will merely observe that, even if a state of necessity is found to exist, it is not a ground for the termination of a treaty. It may only be invoked to exonerate from its responsibility a State which has failed to implement a treaty. Even if found justified, it does not terminate a Treaty; the Treaty may be ineffective as long as the condition of necessity continues to exist; it may in fact be dormant, but — unless the parties by mutual agreement terminate the Treaty — it continues to exist. As soon as the state of necessity ceases to exist, the duty to comply with treaty obligations revives.

*

102. Hungary also relied on the principle of the impossibility of performance as reflected in Article 61 of the Vienna Convention on the Law of Treaties. Hungary's interpretation of the wording of Article 61 is, however, not in conformity with the terms of that Article, nor with the intentions of the Diplomatic Conference which adopted the Convention. Article 61, paragraph 1, requires the "permanent disappearance or destruction of an object indispensable for the execution" of the treaty to justify the termination of a treaty on grounds of impossibility of performance. During the conference, a proposal was made to extend the scope of the article by including in it cases such as the impossibility to make certain payments because of serious financial difficulties (*Official Records of the United Nations Conference on the Law of Treaties, First Session, Vienna, 26 March-24 May 1968*, doc. A/CONF.39/11, Summary records of the plenary meetings and of the meetings of the Committee of the Whole, 62nd Meeting of the Committee of the Whole, pp. 361-365). Although it was recognized that such situations could lead to a preclusion of the wrongfulness of non-performance by a party of its treaty obligations, the participating States were not prepared to consider such situations to be a ground for terminating or suspending a treaty, and preferred to limit themselves to a narrower concept.

103. Hungary contended that the essential object of the Treaty — an economic joint investment which was consistent with environmental protection and which was operated by the two contracting parties jointly — had permanently disappeared and that the Treaty had thus become impossible to perform. It is not necessary for the Court to determine whether the term "object" in Article 61 can also be understood to embrace a legal régime as in any event, even if that were the case, it

conjointe. Par conséquent, les parties n'en ayant pas convenu autrement, le traité ne pouvait prendre fin que pour les motifs énumérés limitativement dans la convention de Vienne.

*

101. La Cour examinera maintenant le premier motif invoqué par la Hongrie, à savoir celui tiré de l'état de nécessité. A cet égard, la Cour se bornera à observer que même si l'existence d'un état de nécessité est établie, il ne peut être mis fin à un traité sur cette base. L'état de nécessité ne peut être invoqué que pour exonérer de sa responsabilité un Etat qui n'a pas exécuté un traité. Même si l'on considère que l'invocation de ce motif est justifiée, le traité ne prend pas fin pour autant; il peut être privé d'effet tant que l'état de nécessité persiste; il peut être inopérant en fait, mais il reste en vigueur, à moins que les parties n'y mettent fin d'un commun accord. Dès que l'état de nécessité disparaît, le devoir de s'acquitter des obligations découlant du traité renaît.

*

102. La Hongrie invoque aussi le principe de l'impossibilité d'exécution tel que traduit à l'article 61 de la convention de Vienne sur le droit des traités. Toutefois elle semble interpréter cette disposition d'une façon qui n'est conforme ni à son libellé ni aux intentions exprimées lors de la conférence diplomatique qui a adopté la convention. Le paragraphe 1 de l'article 61 exige qu'il y ait eu «disparition ou destruction définitives d'un objet indispensable à l'exécution» d'un traité, pour que l'impossibilité d'exécution puisse justifier la terminaison dudit traité. Au cours de la conférence, il a été proposé d'élargir la portée de cet article jusqu'à inclure des cas tels que l'impossibilité d'effectuer certains paiements en raison de difficultés financières graves (*Documents officiels de la conférence des Nations Unies sur le droit des traités, première session, Vienne, 26 mars-24 mai 1968*, doc. A/CONF.39/11, comptes rendus analytiques des séances plénières et des séances de la commission plénière, 62e séance de la commission plénière, p. 393-397). Bien qu'il ait été admis que de telles situations pourraient exclure l'illicéité de l'inexécution, par une partie, de ses obligations conventionnelles, les Etats participants n'ont pas été disposés à en faire un motif d'extinction ou de suspension d'un traité et ont préféré s'en tenir à une conception plus étroite.

103. La Hongrie a soutenu que l'objet essentiel du traité — un investissement économique conjoint compatible avec la protection de l'environnement et exploité conjointement par les deux parties contractantes — avait définitivement disparu, et que l'exécution du traité était ainsi devenue impossible. La Cour n'a pas à déterminer si le mot «objet» figurant à l'article 61 peut aussi être interprété comme visant un régime juridique car en tout état de cause, même si tel était le cas, elle aurait à

would have to conclude that in this instance that régime had not definitively ceased to exist. The 1977 Treaty — and in particular its Articles 15, 19 and 20 — actually made available to the parties the necessary means to proceed at any time, by negotiation, to the required readjustments between economic imperatives and ecological imperatives. The Court would add that, if the joint exploitation of the investment was no longer possible, this was originally because Hungary did not carry out most of the works for which it was responsible under the 1977 Treaty; Article 61, paragraph 2, of the Vienna Convention expressly provides that impossibility of performance may not be invoked for the termination of a treaty by a party to that treaty when it results from that party's own breach of an obligation flowing from that treaty.

*

104. Hungary further argued that it was entitled to invoke a number of events which, cumulatively, would have constituted a fundamental change of circumstances. In this respect it specified profound changes of a political nature, the Project's diminishing economic viability, the progress of environmental knowledge and the development of new norms and prescriptions of international environmental law (see paragraph 95 above).

The Court recalls that, in the *Fisheries Jurisdiction* case, it stated that

> "Article 62 of the Vienna Convention on the Law of Treaties, . . . may in many respects be considered as a codification of existing customary law on the subject of the termination of a treaty relationship on account of change of circumstances" (*I.C.J. Reports 1973*, p. 63, para. 36).

The prevailing political situation was certainly relevant for the conclusion of the 1977 Treaty. But the Court will recall that the Treaty provided for a joint investment programme for the production of energy, the control of floods and the improvement of navigation on the Danube. In the Court's view, the prevalent political conditions were thus not so closely linked to the object and purpose of the Treaty that they constituted an essential basis of the consent of the parties and, in changing, radically altered the extent of the obligations still to be performed. The same holds good for the economic system in force at the time of the conclusion of the 1977 Treaty. Besides, even though the estimated profitability of the Project might have appeared less in 1992 than in 1977, it does not appear from the record before the Court that it was bound to diminish to such an extent that the treaty obligations of the parties would have been radically transformed as a result.

The Court does not consider that new developments in the state of

conclure qu'en l'espèce ce régime n'avait pas définitivement disparu. Le traité de 1977 — et en particulier ses articles 15, 19 et 20 — offrait en effet aux parties les moyens nécessaires pour procéder à tout moment, par voie de négociation, aux réajustements requis entre impératifs économiques et impératifs écologiques. La Cour ajoutera que, si l'exploitation conjointe de l'investissement n'a plus été possible, c'est, à l'origine, parce que la Hongrie n'a pas exécuté la plupart des travaux qui lui incombaient aux termes du traité de 1977; or le paragraphe 2 de l'article 61 de la convention de Vienne prévoit expressément que l'impossibilité d'exécution ne peut être invoquée pour la terminaison d'un traité par une partie à ce traité lorsque cette impossibilité résulte de la violation par la même partie d'une obligation découlant dudit traité.

*

104. La Hongrie soutient en outre qu'elle était en droit d'invoquer divers événements qui, en se cumulant, auraient constitué un changement fondamental de circonstances. A cet effet, elle a plus particulièrement mentionné des changements profonds de nature politique, le fait que le projet devenait de moins en moins rentable, les progrès des connaissances en matière d'environnement et le développement de nouvelles normes et prescriptions du droit international de l'environnement (voir paragraphe 95 ci-dessus).

La Cour rappellera que, dans l'affaire de la *Compétence en matière de pêcheries*, elle a dit que

> «l'article 62 de la convention de Vienne sur le droit des traités ... peut, à bien des égards, être considéré comme une codification du droit coutumier existant en ce qui concerne la cessation des relations conventionnelles en raison d'un changement de circonstances» (*C.I.J. Recueil 1973*, p. 63, par. 36).

Certes, la situation politique qui prévalait alors a certainement été pertinente au regard de la conclusion du traité de 1977. Mais la Cour rappellera que ce traité prévoyait un programme d'investissement conjoint pour la production d'énergie, la maîtrise des inondations et l'amélioration des conditions de navigation sur le Danube. De l'avis de la Cour, les conditions politiques de l'époque n'étaient donc pas liées à l'objet et au but du traité au point de constituer une base essentielle du consentement des parties et, en se modifiant, de transformer radicalement la portée des obligations qui restaient à exécuter. Il en va de même du système économique en vigueur au moment de la conclusion du traité de 1977. Par ailleurs, même si la rentabilité estimée du projet pouvait apparaître moins élevée en 1992 qu'en 1977, il ne ressort pas du dossier soumis à la Cour qu'elle était condamnée à chuter dans une proportion telle que les obligations conventionnelles des parties s'en fussent trouvées radicalement transformées.

La Cour ne saurait considérer que les nouvelles connaissances acquises

environmental knowledge and of environmental law can be said to have been completely unforeseen. What is more, the formulation of Articles 15, 19 and 20, designed to accommodate change, made it possible for the parties to take account of such developments and to apply them when implementing those treaty provisions.

The changed circumstances advanced by Hungary are, in the Court's view, not of such a nature, either individually or collectively, that their effect would radically transform the extent of the obligations still to be performed in order to accomplish the Project. A fundamental change of circumstances must have been unforeseen; the existence of the circumstances at the time of the Treaty's conclusion must have constituted an essential basis of the consent of the parties to be bound by the Treaty. The negative and conditional wording of Article 62 of the Vienna Convention on the Law of Treaties is a clear indication moreover that the stability of treaty relations requires that the plea of fundamental change of circumstances be applied only in exceptional cases.

*

105. The Court will now examine Hungary's argument that it was entitled to terminate the 1977 Treaty on the ground that Czechoslovakia had violated its Articles 15, 19 and 20 (as well as a number of other conventions and rules of general international law); and that the planning, construction and putting into operation of Variant C also amounted to a material breach of the 1977 Treaty.

106. As to that part of Hungary's argument which was based on other treaties and general rules of international law, the Court is of the view that it is only a material breach of the treaty itself, by a State party to that treaty, which entitles the other party to rely on it as a ground for terminating the treaty. The violation of other treaty rules or of rules of general international law may justify the taking of certain measures, including countermeasures, by the injured State, but it does not constitute a ground for termination under the law of treaties.

107. Hungary contended that Czechoslovakia had violated Articles 15, 19 and 20 of the Treaty by refusing to enter into negotiations with Hungary in order to adapt the Joint Contractual Plan to new scientific and legal developments regarding the environment. Articles 15, 19 and 20 oblige the parties jointly to take, on a continuous basis, appropriate measures necessary for the protection of water quality, of nature and of fishing interests.

Articles 15 and 19 expressly provide that the obligations they contain shall be implemented by the means specified in the Joint Contractual Plan. The failure of the parties to agree on those means cannot, on the basis of the record before the Court, be attributed solely to one party.

en matière d'environnement et les progrès du droit de l'environnement aient présenté un caractère complètement imprévu. Bien plus, le libellé des articles 15, 19 et 20, conçu dans une perspective d'évolution, a mis les parties en mesure de tenir compte de ces développements et de les appliquer lorsqu'elles exécuteraient ces dispositions conventionnelles.

De l'avis de la Cour, les changements de circonstances que la Hongrie invoque ne sont pas, pris séparément ou conjointement, d'une nature telle qu'ils aient pour effet de transformer radicalement la portée des obligations qui restent à exécuter pour réaliser le projet. Un changement fondamental de circonstances doit être imprévu; les circonstances existant à l'époque où le traité a été conclu doivent avoir constitué une base essentielle du consentement des parties à être liées par le traité. Le fait que l'article 62 de la convention de Vienne sur le droit des traités soit libellé en termes négatifs et conditionnels indique d'ailleurs clairement que la stabilité des relations conventionnelles exige que le moyen tiré d'un changement fondamental de circonstances ne trouve à s'appliquer que dans des cas exceptionnels.

*

105. La Cour examinera maintenant l'argument de la Hongrie selon lequel cet Etat était en droit de mettre fin au traité de 1977 au motif que la Tchécoslovaquie en avait violé les articles 15, 19 et 20 (ainsi que plusieurs autres conventions et règles du droit international général), et que la planification, la construction et la mise en service de la variante C constituaient aussi une violation substantielle du traité de 1977.

106. Pour ce qui est de la branche de l'argumentation de la Hongrie concernant d'autres conventions et règles générales du droit international, la Cour estime que seule une violation substantielle du traité lui-même par un Etat partie audit traité peut mettre l'autre partie en droit de s'en prévaloir pour mettre fin au traité. La violation d'autres règles conventionnelles ou d'autres règles du droit international général peut justifier l'adoption par l'Etat lésé de certaines mesures, y compris des contre-mesures, mais elle ne saurait justifier qu'il soit mis fin au traité sur la base du droit des traités.

107. La Hongrie a soutenu que la Tchécoslovaquie avait violé les articles 15, 19 et 20 du traité en refusant d'engager avec elle des négociations en vue d'adapter le plan contractuel conjoint pour tenir compte des nouveaux progrès scientifiques et juridiques en matière d'environnement. Les articles 15, 19 et 20 mettent à la charge des parties l'obligation de prendre conjointement et de façon continue des mesures appropriées pour assurer la protection de la qualité des eaux, de la nature et des intérêts en matière de pêcheries.

Les articles 15 et 19 prévoient expressément que les obligations qu'ils contiennent seront mises en œuvre selon les modalités prévues au plan contractuel conjoint. Que les parties n'aient pu se mettre d'accord sur ces modalités ne saurait, sur la base du dossier soumis à la Cour, être

The Court has not found sufficient evidence to conclude that Czechoslovakia had consistently refused to consult with Hungary about the desirability or necessity of measures for the preservation of the environment. The record rather shows that, while both parties indicated, in principle, a willingness to undertake further studies, in practice Czechoslovakia refused to countenance a suspension of the works at Dunakiliti and, later, on Variant C, while Hungary required suspension as a prior condition of environmental investigation because it claimed continuation of the work would prejudice the outcome of negotiations. In this regard it cannot be left out of consideration that Hungary itself, by suspending the works at Nagymaros and Dunakiliti, contributed to the creation of a situation which was not conducive to the conduct of fruitful negotiations.

108. Hungary's main argument for invoking a material breach of the Treaty was the construction and putting into operation of Variant C. As the Court has found in paragraph 79 above, Czechoslovakia violated the Treaty only when it diverted the waters of the Danube into the bypass canal in October 1992. In constructing the works which would lead to the putting into operation of Variant C, Czechoslovakia did not act unlawfully.

In the Court's view, therefore, the notification of termination by Hungary on 19 May 1992 was premature. No breach of the Treaty by Czechoslovakia had yet taken place and consequently Hungary was not entitled to invoke any such breach of the Treaty as a ground for terminating it when it did.

109. In this regard, it should be noted that, according to Hungary's Declaration of 19 May 1992, the termination of the 1977 Treaty was to take effect as from 25 May 1992, that is only six days later. Both Parties agree that Articles 65 to 67 of the Vienna Convention on the Law of Treaties, if not codifying customary law, at least generally reflect customary international law and contain certain procedural principles which are based on an obligation to act in good faith. As the Court stated in its Advisory Opinion on the *Interpretation of the Agreement of 25 March 1951 between the WHO and Egypt* (in which case the Vienna Convention did not apply):

> "Precisely what periods of time may be involved in the observance of the duties to consult and negotiate, and what period of notice of termination should be given, are matters which necessarily vary according to the requirements of the particular case. In principle, therefore, it is for the parties in each case to determine the length of those periods by consultation and negotiation in good faith." (*I.C.J. Reports 1980*, p. 96, para. 49.)

The termination of the Treaty by Hungary was to take effect six days

attribué uniquement à une seule des parties. De l'avis de la Cour, il n'existe pas d'éléments de preuve suffisants pour conclure que la Tchécoslovaquie aurait constamment refusé de se concerter avec la Hongrie sur l'opportunité ou la nécessité de prendre des mesures de protection de l'environnement. Ce que le dossier fait apparaître, c'est qu'alors que les deux parties se montraient en principe disposées à entreprendre de nouvelles études, en pratique, la Tchécoslovaquie refusait d'envisager que les travaux à Dunakiliti et, plus tard, ceux relatifs à la variante C soient suspendus, cependant que la Hongrie demandait leur suspension comme condition préalable à des recherches sur l'environnement, en expliquant que la poursuite des travaux compromettrait l'issue des négociations. A cet égard, la Cour ne saurait perdre de vue que la Hongrie elle-même, en suspendant les travaux à Nagymaros et Dunakiliti, a contribué à la survenance d'une situation qui ne pouvait être favorable à la conduite de négociations fructueuses.

108. L'argument principal de la Hongrie lorsqu'elle invoque une violation substantielle du traité est la construction et la mise en service de la variante C. Comme la Cour l'a dit au paragraphe 79 ci-dessus, la Tchécoslovaquie n'a violé le traité que lorsqu'elle a détourné les eaux du Danube dans le canal de dérivation en octobre 1992. En construisant les ouvrages qui devaient conduire à la mise en service de la variante C, la Tchécoslovaquie n'a pas agi de façon illicite.

En conséquence, la Cour est d'avis que la notification par la Hongrie, le 19 mai 1992, de la terminaison du traité était prématurée. Il n'y avait pas encore eu de violation du traité par la Tchécoslovaquie; la Hongrie n'était donc pas en droit d'invoquer semblable violation du traité comme motif pour y mettre fin au moment où elle l'a fait.

109. A cet égard, il y a lieu de relever que, d'après la déclaration que la Hongrie a faite le 19 mai 1992, la terminaison du traité de 1977 devait prendre effet à compter du 25 mai 1992, soit six jours plus tard seulement. Les deux Parties s'accordent à reconnaître que les articles 65 à 67 de la convention de Vienne sur le droit des traités, s'ils ne codifient pas le droit coutumier, le reflètent du moins généralement et contiennent certains principes de procédure qui ont pour fondement l'obligation d'agir de bonne foi. Ainsi que la Cour l'a dit dans l'avis consultatif qu'elle a donné sur l'*Interprétation de l'accord du 25 mars 1951 entre l'OMS et l'Egypte* (affaire dans laquelle la convention de Vienne ne s'appliquait pas):

> « Les délais précis qui peuvent être nécessaires pour s'acquitter des obligations de consultation et de négociation et le préavis de dénonciation exact qui doit être donné varient forcément en fonction des nécessités de l'espèce. En principe, c'est donc aux parties qu'il appartient de déterminer dans chaque cas la durée de ces délais en procédant de bonne foi à des consultations et à des négociations. » (*C.I.J. Recueil 1980*, p. 96, par. 49.)

La terminaison du traité par la Hongrie devait prendre effet six jours

after its notification. On neither of these dates had Hungary suffered injury resulting from acts of Czechoslovakia. The Court must therefore confirm its conclusion that Hungary's termination of the Treaty was premature.

110. Nor can the Court overlook that Czechoslovakia committed the internationally wrongful act of putting into operation Variant C as a result of Hungary's own prior wrongful conduct. As was stated by the Permanent Court of International Justice:

> "It is, moreover, a principle generally accepted in the jurisprudence of international arbitration, as well as by municipal courts, that one Party cannot avail himself of the fact that the other has not fulfilled some obligation or has not had recourse to some means of redress, if the former Party has, by some illegal act, prevented the latter from fulfilling the obligation in question, or from having recourse to the tribunal which would have been open to him." (*Factory at Chorzów, Jurisdiction, Judgment No. 8, 1927, P.C.I.J., Series A, No. 9*, p. 31.)

Hungary, by its own conduct, had prejudiced its right to terminate the Treaty; this would still have been the case even if Czechoslovakia, by the time of the purported termination, had violated a provision essential to the accomplishment of the object or purpose of the Treaty.

*

111. Finally, the Court will address Hungary's claim that it was entitled to terminate the 1977 Treaty because new requirements of international law for the protection of the environment precluded performance of the Treaty.

112. Neither of the Parties contended that new peremptory norms of environmental law had emerged since the conclusion of the 1977 Treaty, and the Court will consequently not be required to examine the scope of Article 64 of the Vienna Convention on the Law of Treaties. On the other hand, the Court wishes to point out that newly developed norms of environmental law are relevant for the implementation of the Treaty and that the parties could, by agreement, incorporate them through the application of Articles 15, 19 and 20 of the Treaty. These articles do not contain specific obligations of performance but require the parties, in carrying out their obligations to ensure that the quality of water in the Danube is not impaired and that nature is protected, to take new environmental norms into consideration when agreeing upon the means to be specified in the Joint Contractual Plan.

By inserting these evolving provisions in the Treaty, the parties recognized the potential necessity to adapt the Project. Consequently, the

après sa notification. Or, à aucune de ces deux dates, la Hongrie n'avait subi de préjudice du fait d'actes de la Tchécoslovaquie. La Cour est donc amenée à confirmer sa conclusion selon laquelle la terminaison du traité par la Hongrie était prématurée.

110. La Cour ne saurait pas non plus perdre de vue que la Tchécoslovaquie a commis l'acte internationalement illicite consistant à mettre en service la variante C, à la suite du comportement illicite préalable de la Hongrie elle-même. Comme l'a dit la Cour permanente de Justice internationale:

> «C'est, du reste, un principe généralement reconnu par la jurisprudence arbitrale internationale, aussi bien que par les juridictions nationales, qu'une Partie ne saurait opposer à l'autre le fait de ne pas avoir rempli une obligation ou de ne pas s'être servi d'un moyen de recours, si la première, par un acte contraire au droit, a empêché la seconde de remplir l'obligation en question, ou d'avoir recours à la juridiction qui lui aurait été ouverte.» (*Usine de Chorzów, compétence, arrêt n° 8, 1927, C.P.J.I. série A n° 9*, p. 31.)

La Hongrie, par son comportement, avait porté atteinte à son droit de mettre fin au traité; il en serait demeuré ainsi même si la Tchécoslovaquie avait, au moment de la prétendue terminaison du traité, violé une disposition essentielle pour la réalisation de l'objet ou du but du traité.

*

111. La Cour examinera enfin la prétention de la Hongrie selon laquelle cette dernière était en droit de mettre fin au traité de 1977, parce que les nouvelles exigences du droit international relatif à la protection de l'environnement s'opposaient à l'exécution du traité.

112. Aucune des Parties n'a prétendu que des normes impératives du droit de l'environnement soient nées depuis la conclusion du traité de 1977 et la Cour n'aura par suite pas à s'interroger sur la portée de l'article 64 de la convention de Vienne sur le droit des traités. En revanche, la Cour tient à relever que de nouvelles normes du droit de l'environnement, récemment apparues, sont pertinentes pour l'exécution du traité et que les parties pouvaient, d'un commun accord, en tenir compte en appliquant les articles 15, 19 et 20 du traité. Ces articles ne contiennent pas d'obligations spécifiques de faire, mais ils imposent aux parties, en s'acquittant de leurs obligations de veiller à ce que la qualité des eaux du Danube ne soit pas compromise et à ce que la protection de la nature soit assurée, de tenir compte des nouvelles normes en matière d'environnement lorsque ces parties conviennent des moyens à préciser dans le plan contractuel conjoint.

En insérant dans le traité ces dispositions évolutives, les parties ont reconnu la nécessité d'adapter éventuellement le projet. En conséquence,

Treaty is not static, and is open to adapt to emerging norms of international law. By means of Articles 15 and 19, new environmental norms can be incorporated in the Joint Contractual Plan.

The responsibility to do this was a joint responsibility. The obligations contained in Articles 15, 19 and 20 are, by definition, general and have to be transformed into specific obligations of performance through a process of consultation and negotiation. Their implementation thus requires a mutual willingness to discuss in good faith actual and potential environmental risks.

It is all the more important to do this because as the Court recalled in its Advisory Opinion on the *Legality of the Threat or Use of Nuclear Weapons*, "the environment is not an abstraction but represents the living space, the quality of life and the very health of human beings, including generations unborn" (*I.C.J. Reports 1996*, p. 241, para. 29; see also paragraph 53 above).

The awareness of the vulnerability of the environment and the recognition that environmental risks have to be assessed on a continuous basis have become much stronger in the years since the Treaty's conclusion. These new concerns have enhanced the relevance of Articles 15, 19 and 20.

113. The Court recognizes that both Parties agree on the need to take environmental concerns seriously and to take the required precautionary measures, but they fundamentally disagree on the consequences this has for the joint Project. In such a case, third-party involvement may be helpful and instrumental in finding a solution, provided each of the Parties is flexible in its position.

114. Finally, Hungary maintained that by their conduct both parties had repudiated the Treaty and that a bilateral treaty repudiated by both parties cannot survive. The Court is of the view, however, that although it has found that both Hungary and Czechoslovakia failed to comply with their obligations under the 1977 Treaty, this reciprocal wrongful conduct did not bring the Treaty to an end nor justify its termination. The Court would set a precedent with disturbing implications for treaty relations and the integrity of the rule *pacta sunt servanda* if it were to conclude that a treaty in force between States, which the parties have implemented in considerable measure and at great cost over a period of years, might be unilaterally set aside on grounds of reciprocal non-compliance. It would be otherwise, of course, if the parties decided to terminate the Treaty by mutual consent. But in this case, while Hungary purported to terminate the Treaty, Czechoslovakia consistently resisted this act and declared it to be without legal effect.

* *

le traité n'est pas un instrument figé et est susceptible de s'adapter à de nouvelles normes du droit international. Au moyen des articles 15 et 19, de nouvelles normes en matière d'environnement peuvent être incorporées dans le plan contractuel conjoint.

La responsabilité d'agir de la sorte était une responsabilité conjointe. Les obligations énoncées aux articles 15, 19 et 20 sont, par définition, d'ordre général, et doivent être transformées en obligations spécifiques de faire, à l'issue d'un processus de consultation et de négociation. De ce fait leur mise en œuvre exige une disposition réciproque à discuter de bonne foi des risques réels et potentiels pour l'environnement.

Agir de la sorte est d'autant plus important que la Cour, dans son avis consultatif sur la *Licéité de la menace ou de l'emploi d'armes nucléaires*, a rappelé que «l'environnement n'est pas une abstraction, mais bien l'espace où vivent les êtres humains et dont dépendent la qualité de leur vie et leur santé, y compris pour les générations à venir» (*C.I.J. Recueil 1996*, p. 241, par. 29; voir aussi le paragraphe 53 ci-dessus).

La conscience que l'environnement est vulnérable et la reconnaissance de ce qu'il faut continuellement évaluer les risques écologiques se sont affirmées de plus en plus dans les années qui ont suivi la conclusion du traité. Ces nouvelles préoccupations ont rendu les articles 15, 19 et 20 du traité d'autant plus pertinents.

113. La Cour reconnaît que les Parties s'accordent sur la nécessité de se soucier sérieusement de l'environnement et de prendre les mesures de précaution qui s'imposent, mais elles sont fondamentalement en désaccord sur les conséquences qui en découlent pour le projet conjoint. Dans ces conditions, le recours à une tierce partie pourrait se révéler utile et permettre de trouver une solution, à condition que chacune des Parties fasse preuve de souplesse dans ses positions.

114. Enfin, la Hongrie a soutenu que par leur comportement les deux parties avaient rejeté le traité et qu'un traité bilatéral ne saurait survivre à son rejet par les deux parties. Bien qu'elle ait constaté que tant la Hongrie que la Tchécoslovaquie avaient manqué à leurs obligations découlant du traité de 1977, la Cour estime que ces comportements illicites réciproques n'ont pas mis fin au traité ni justifié qu'il y fût mis fin. La Cour établirait un précédent aux effets perturbateurs pour les relations conventionnelles et l'intégrité de la règle *pacta sunt servanda* si elle devait conclure qu'il peut être unilatéralement mis fin, au motif de manquements réciproques, à un traité en vigueur entre Etats, que les parties ont exécuté dans une très large mesure et à un coût considérable pendant des années. Il en serait à l'évidence autrement si les parties décidaient de mettre fin au traité d'un commun accord. Mais, en l'espèce, si la Hongrie a prétendu mettre fin au traité, la Tchécoslovaquie s'est constamment opposée à cette terminaison, déclarant qu'un tel acte serait dénué de tout effet juridique.

* *

115. In the light of the conclusions it has reached above, the Court, in reply to the question put to it in Article 2, paragraph 1 *(c)*, of the Special Agreement (see paragraph 89), finds that the notification of termination by Hungary of 19 May 1992 did not have the legal effect of terminating the 1977 Treaty and related instruments.

* * *

116. In Article 2, paragraph 2, of the Special Agreement, the Court is requested to determine the legal consequences, including the rights and obligations for the Parties, arising from its Judgment on the questions formulated in paragraph 1. In Article 5 of the Special Agreement the Parties agreed to enter into negotiations on the modalities for the execution of the Judgment immediately after the Court has rendered it.

117. The Court must first turn to the question whether Slovakia became a party to the 1977 Treaty as successor to Czechoslovakia. As an alternative argument, Hungary contended that, even if the Treaty survived the notification of termination, in any event it ceased to be in force as a treaty on 31 December 1992, as a result of the "disappearance of one of the parties". On that date Czechoslovakia ceased to exist as a legal entity, and on 1 January 1993 the Czech Republic and the Slovak Republic came into existence.

118. According to Hungary, "There is no rule of international law which provides for automatic succession to bilateral treaties on the disappearance of a party" and such a treaty will not survive unless another State succeeds to it by express agreement between that State and the remaining party. While the second paragraph of the Preamble to the Special Agreement recites that

> "the Slovak Republic is one of the two successor States of the Czech and Slovak Federal Republic and the sole successor State in respect of rights and obligations relating to the Gabčíkovo-Nagymaros Project",

Hungary sought to distinguish between, on the one hand, rights and obligations such as "continuing property rights" under the 1977 Treaty, and, on the other hand, the treaty itself. It argued that, during the negotiations leading to signature of the Special Agreement, Slovakia had proposed a text in which it would have been expressly recognized "as the successor to the Government of the CSFR" with regard to the 1977 Treaty, but that Hungary had rejected that formulation. It contended that it had never agreed to accept Slovakia as successor to the 1977 Treaty. Hungary referred to diplomatic exchanges in which the two Parties had each submitted to the other lists of those bilateral treaties which they respectively wished should continue in force between them, for negotiation on a case-

115. Au vu des conclusions auxquelles elle est parvenue ci-dessus, la Cour répond à la question qui lui a été posée à l'article 2, paragraphe 1, alinéa *c)*, du compromis (voir paragraphe 89) que la notification de terminaison faite par la Hongrie le 19 mai 1992 n'a pas eu pour effet juridique de mettre fin au traité de 1977 et aux instruments y afférents.

* * *

116. Au paragraphe 2 de l'article 2 du compromis, la Cour a été priée de déterminer les conséquences juridiques, y compris les droits et obligations pour les Parties, de l'arrêt qu'elle rendra sur les questions énoncées au paragraphe 1. A l'article 5 du compromis, les Parties sont convenues d'engager des négociations sur les modalités d'exécution de l'arrêt, dès que la Cour l'aura rendu.

117. La Cour doit tout d'abord examiner la question de savoir si la Slovaquie est devenue partie au traité de 1977 en tant qu'Etat successeur de la Tchécoslovaquie. A titre d'argument subsidiaire, la Hongrie a en effet soutenu que, même s'il avait survécu à la notification de terminaison, le traité aurait en tout état de cause cessé d'être en vigueur en tant que traité le 31 décembre 1992, à la suite de la «disparition de l'une des parties». A cette date, la Tchécoslovaquie a cessé d'exister comme entité juridique et, le 1er janvier 1993, la République tchèque et la République slovaque ont vu le jour.

118. De l'avis de la Hongrie: «Aucune règle de droit international ne prévoit la succession automatique à un traité bilatéral après disparition de l'une des parties»; un tel traité ne saurait survivre que si un autre Etat y succède par accord exprès entre ledit Etat et la partie qui s'est maintenue. Or, bien qu'il soit affirmé au deuxième paragraphe du préambule du compromis que

> «la République slovaque est l'un des deux Etats successeurs de la République fédérative tchèque et slovaque et l'unique Etat successeur en ce qui concerne les droits et obligations relatifs au projet Gabčíkovo-Nagymaros»,

la Hongrie a entendu distinguer entre, d'une part, les droits et obligations établis par le traité de 1977 qui, tels «les droits de propriété ..., perdurent» et, d'autre part, le traité lui-même. Elle a soutenu qu'au cours des négociations qui ont abouti à la signature du compromis la Slovaquie avait proposé un texte dans lequel elle aurait été expressément reconnue comme «Etat successeur de la République fédérative tchèque et slovaque» au regard du traité de 1977, mais que la Hongrie avait rejeté un tel libellé. Elle a fait observer qu'elle n'avait jamais accepté la Slovaquie comme successeur au traité de 1977. La Hongrie s'est référée à des échanges diplomatiques dans lesquels les deux Parties s'étaient mutuellement soumis, en vue d'une négociation au cas par cas, les listes des traités bilaté-

by-case basis; and Hungary emphasized that no agreement was ever reached with regard to the 1977 Treaty.

119. Hungary claimed that there was no rule of succession which could operate in the present case to override the absence of consent.

Referring to Article 34 of the Vienna Convention of 23 August 1978 on Succession of States in respect of Treaties, in which "a rule of automatic succession to all treaties is provided for", based on the principle of continuity, Hungary argued not only that it never signed or ratified the Convention, but that the "concept of automatic succession" contained in that Article was not and is not, and has never been accepted as, a statement of general international law.

Hungary further submitted that the 1977 Treaty did not create "obligations and rights . . . relating to the régime of a boundary" within the meaning of Article 11 of that Convention, and noted that the existing course of the boundary was unaffected by the Treaty. It also denied that the Treaty was a "localized" treaty, or that it created rights "considered as attaching to [the] territory" within the meaning of Article 12 of the 1978 Convention, which would, as such, be unaffected by a succession of States. The 1977 Treaty was, Hungary insisted, simply a joint investment. Hungary's conclusion was that there is no basis on which the Treaty could have survived the disappearance of Czechoslovakia so as to be binding as between itself and Slovakia.

120. According to Slovakia, the 1977 Treaty, which was not lawfully terminated by Hungary's notification in May 1992, remains in force between itself, as successor State, and Hungary.

Slovakia acknowledged that there was no agreement on succession to the Treaty between itself and Hungary. It relied instead, in the first place, on the "general rule of continuity which applies in the case of dissolution"; it argued, secondly, that the Treaty is one "attaching to [the] territory" within the meaning of Article 12 of the 1978 Vienna Convention, and that it contains provisions relating to a boundary.

121. In support of its first argument Slovakia cited Article 34 of the 1978 Vienna Convention, which it claimed is a statement of customary international law, and which imposes the principle of automatic succession as the rule applicable in the case of dissolution of a State where the predecessor State has ceased to exist. Slovakia maintained that State practice in cases of dissolution tends to support continuity as the rule to be followed with regard to bilateral treaties. Slovakia having succeeded to part of the territory of the former Czechoslovakia, this would be the rule applicable in the present case.

122. Slovakia's second argument rests on "the principle of *ipso jure* continuity of treaties of a territorial or localized character". This rule, Slovakia said, is embodied in Article 12 of the 1978 Convention, which in part provides as follows:

raux dont elles souhaitaient respectivement le maintien en vigueur entre elles; et la Hongrie de souligner qu'aucun accord n'était intervenu au sujet du traité de 1977.

119. La Hongrie a exposé qu'aucune règle de succession ne pouvait en l'espèce suppléer à ce défaut de consentement.

Se référant à l'article 34 de la convention de Vienne du 23 août 1978 sur la succession d'Etats en matière de traités qui prévoit «une règle de succession automatique à tous les traités» sur la base du principe de continuité, la Hongrie a fait valoir non seulement qu'elle n'avait jamais signé ou ratifié cette convention, mais aussi que «le principe de succession automatique» posé dans cet article n'était, ni alors ni aujourd'hui, l'énoncé du droit international général et qu'il n'avait jamais été reconnu comme tel.

La Hongrie a également soutenu que le traité de 1977 n'avait pas créé «[d']obligations et [de] droits ... se rapportant au régime d'une frontière» au sens de l'article 11 de cette convention et a relevé que le tracé actuel de la frontière n'a pas été modifié par le traité. Elle a aussi nié que le traité ait un caractère «local» ou qu'il crée des droits «considérés comme attachés [au] territoire», au sens de l'article 12 de la convention de 1978, et qui, en tant que tels, ne seraient pas affectés par une succession d'Etats. La Hongrie a soutenu que le traité de 1977 prévoyait simplement un investissement conjoint. Elle en a conclu qu'il n'existait aucune base sur laquelle le traité aurait pu survivre à la disparition de la Tchécoslovaquie et s'imposer ainsi dans les relations entre elle-même et la Slovaquie.

120. D'après la Slovaquie, le traité de 1977, qui n'a pas pris fin licitement avec la notification hongroise de mai 1992, demeure en vigueur entre elle-même, Etat successeur, et la Hongrie.

La Slovaquie a reconnu qu'aucun accord n'était intervenu entre elle et la Hongrie quant à la succession au traité. Mais elle a, en premier lieu, invoqué «la règle générale de continuité qui s'applique en cas de dissolution»; et elle a, en second lieu, prétendu que le traité était «attach[é] [au] territoire», au sens de l'article 12 de la convention de Vienne de 1978, et qu'il contenait des dispositions relatives à une frontière.

121. A l'appui de son premier argument, la Slovaquie a cité l'article 34 de la convention de Vienne de 1978, qui, d'après elle, est l'énoncé du droit international coutumier et fait de la succession automatique la règle applicable en cas de dissolution d'un Etat lorsque l'Etat prédécesseur a cessé d'exister. La Slovaquie a fait valoir que la pratique des Etats en cas de dissolution tendait à confirmer que la continuité était la règle à suivre en ce qui concerne les traités bilatéraux. La Slovaquie ayant succédé à une partie du territoire de l'ancienne Tchécoslovaquie, telle serait la règle applicable en l'espèce.

122. Le deuxième argument de la Slovaquie repose sur «le principe de la continuité *ipso jure* des traités de caractère territorial ou local». Selon la Slovaquie, cette règle est consacrée à l'article 12 de la convention de 1978 qui dispose notamment ce qui suit:

"*Article 12*
Other Territorial Regimes

. . . . . .

2. A succession of States does not as such affect:

(a) obligations relating to the use of any territory, or to restrictions upon its use, established by a treaty for the benefit of a group of States or of all States and considered as attaching to that territory;

(b) rights established by a treaty for the benefit of a group of States or of all States and relating to the use of any territory, or to restrictions upon its use, and considered as attaching to that territory."

According to Slovakia, "[this] article [too] can be considered to be one of those provisions of the Vienna Convention that represent the codification of customary international law". The 1977 Treaty is said to fall within its scope because of its "specific characteristics . . . which place it in the category of treaties of a localized or territorial character". Slovakia also described the Treaty as one "which contains boundary provisions and lays down a specific territorial régime" which operates in the interest of all Danube riparian States, and as "a dispositive treaty, creating rights *in rem*, independently of the legal personality of its original signatories". Here, Slovakia relied on the recognition by the International Law Commission of the existence of a "special rule" whereby treaties "intended to establish an objective régime" must be considered as binding on a successor State (*Official Records of the United Nations Conference on the Succession of States in respect of Treaties*, Vol. III, doc. A/CONF.80/16/Add.2, p. 34). Thus, in Slovakia's view, the 1977 Treaty was not one which could have been terminated through the disappearance of one of the original parties.

*

123. The Court does not find it necessary for the purposes of the present case to enter into a discussion of whether or not Article 34 of the 1978 Convention reflects the state of customary international law. More relevant to its present analysis is the particular nature and character of the 1977 Treaty. An examination of this Treaty confirms that, aside from its undoubted nature as a joint investment, its major elements were the proposed construction and joint operation of a large, integrated and indivisible complex of structures and installations on specific parts of the respective territories of Hungary and Czechoslovakia along the Danube. The Treaty also established the navigational régime for an important sector of an international waterway, in particular the relocation of the main international shipping lane to the bypass canal. In so doing, it inescapably created a situation in which the interests of other users of the Dan-

«*Article 12*
Autres régimes territoriaux

. . . . . .

2. Une succession d'Etats n'affecte pas en tant que telle:

a) les obligations se rapportant à l'usage de tout territoire, ou aux restrictions à son usage, établies par un traité au bénéfice d'un groupe d'Etats ou de tous les Etats et considérées comme attachées à ce territoire;

b) les droits établis par un traité au bénéfice d'un groupe d'Etats ou de tous les Etats et se rapportant à l'usage de tout territoire, ou aux restrictions à son usage, et considérés comme attachés à ce territoire.»

Pour la Slovaquie: «On peut voir dans [cet] article [aussi] l'une de ces dispositions de la convention de Vienne qui codifient le droit international coutumier.» Le traité de 1977 entrerait dans le champ d'application de cette règle en raison de ses «caractéristiques particulières ..., qui le placent dans la catégorie des traités de caractère local ou territorial». La Slovaquie a également affirmé que le traité «cont[enait] des dispositions établissant une frontière et ... établi[ssai]t un régime territorial particulier» dans l'intérêt de tous les Etats riverains du Danube; il s'agirait d'un «traité dispositif créant des droits réels, indépendamment de la personnalité juridique des Etats qui l'ont signé à l'origine». A cet égard, la Slovaquie s'est fondée sur la reconnaissance, par la Commission du droit international, de l'existence d'une «règle spéciale», en vertu de laquelle les traités «qui visent à créer des régimes objectifs» devaient être considérés comme liant l'Etat successeur (*Documents officiels de la Conférence des Nations Unies sur la succession d'Etats en matière de traités*, vol. III, doc. A/CONF.80/16/Add.2, p. 35). Ainsi, de l'avis de la Slovaquie, le traité de 1977 n'était pas de ceux qui auraient pu prendre fin du fait de la disparition de l'une des parties d'origine.

*

123. La Cour ne juge pas nécessaire, aux fins de l'espèce, de discuter du point de savoir si l'article 34 de la convention de 1978 reflète ou non l'état du droit international coutumier. Pour son analyse actuelle, la nature et le caractère particuliers du traité de 1977 présentent davantage de pertinence. Un examen de ce traité confirme que ce dernier, outre qu'il prévoit incontestablement un investissement conjoint, porte principalement sur un projet de construction et d'exploitation conjointe d'un vaste complexe intégré et indivisible d'ouvrages et d'installations sur des parties bien définies des territoires respectifs de la Hongrie et de la Tchécoslovaquie, le long du Danube. Le traité a aussi établi le régime de navigation applicable à un tronçon important d'un cours d'eau international, notamment en faisant désormais passer le chenal principal de navigation internationale par le canal de dérivation. Ce faisant, il a inévitablement créé

ube were affected. Furthermore, the interests of third States were expressly acknowledged in Article 18, whereby the parties undertook to ensure "uninterrupted and safe navigation on the international fairway" in accordance with their obligations under the Convention of 18 August 1948 concerning the Régime of Navigation on the Danube.

In its Commentary on the Draft Articles on Succession of States in respect of Treaties, adopted at its twenty-sixth session, the International Law Commission identified "treaties of a territorial character" as having been regarded both in traditional doctrine and in modern opinion as unaffected by a succession of States (*Official Records of the United Nations Conference on the Succession of States in respect of Treaties*, Vol. III, doc. A/CONF.80/16/Add.2, p. 27, para. 2). The draft text of Article 12, which reflects this principle, was subsequently adopted unchanged in the 1978 Vienna Convention. The Court considers that Article 12 reflects a rule of customary international law; it notes that neither of the Parties disputed this. Moreover, the Commission indicated that "treaties concerning water rights or navigation on rivers are commonly regarded as candidates for inclusion in the category of territorial treaties" (*ibid.*, p. 33, para. 26). The Court observes that Article 12, in providing only, without reference to the treaty itself, that rights and obligations of a territorial character established by a treaty are unaffected by a succession of States, appears to lend support to the position of Hungary rather than of Slovakia. However the Court concludes that this formulation was devised rather to take account of the fact that, in many cases, treaties which had established boundaries or territorial régimes were no longer in force (*ibid.*, pp. 26-37). Those that remained in force would nonetheless bind a successor State.

Taking all these factors into account, the Court finds that the content of the 1977 Treaty indicates that it must be regarded as establishing a territorial régime within the meaning of Article 12 of the 1978 Vienna Convention. It created rights and obligations "attaching to" the parts of the Danube to which it relates; thus the Treaty itself cannot be affected by a succession of States. The Court therefore concludes that the 1977 Treaty became binding upon Slovakia on 1 January 1993.

124. It might be added that Slovakia also contended that, while still a constituent part of Czechoslovakia, it played a role in the development of the Project, as it did later, in the most critical phase of negotiations with Hungary about the fate of the Project. The evidence shows that the Slovak Government passed resolutions prior to the signing of the 1977 Treaty in preparation for its implementation; and again, after signature, expressing its support for the Treaty. It was the Slovak Prime Minister who attended the meeting held in Budapest on 22 April 1991 as the Plenipotentiary of the Federal Government to discuss questions arising out of the Project. It was his successor as Prime Minister who notified his Hun-

une situation qui a une incidence sur les intérêts des autres utilisateurs du Danube. De plus, les intérêts d'Etats tiers ont été expressément reconnus à son article 18, aux termes duquel les parties se sont engagées à veiller à ce que «la navigation puisse se poursuivre de façon ininterrompue et dans des conditions de sécurité dans le chenal international», conformément aux obligations qui sont les leurs en vertu de la convention relative au régime de la navigation sur le Danube du 18 août 1948.

Dans son commentaire sur le projet d'articles relatifs à la succession d'Etats en matière de traités, adopté à sa vingt-sixième session, la Commission du droit international a précisé que tant la doctrine traditionnelle que les auteurs modernes considéraient qu'une succession d'Etats était sans effet sur «les traités territoriaux» (*Documents officiels de la Conférence des Nations Unies sur la succession d'Etats en matière de traités*, vol. III, doc. A/CONF.80/16/Add.2, p. 30, par. 2). Le projet d'article 12, qui reflète ce principe, a par la suite été repris tel quel dans la convention de Vienne de 1978. La Cour considère que l'article 12 traduit une règle de droit international coutumier; elle prend note de ce qu'aucune des Parties ne le conteste. En outre, la Commission a indiqué que «les traités concernant les droits sur les eaux ou la navigation fluviale sont généralement considérés comme pouvant être compris dans la catégorie des traités territoriaux» (*ibid.*, p. 37, par. 26). La Cour fait observer que l'article 12, en prévoyant seulement, sans se référer au traité lui-même, que les droits et obligations de caractère territorial établis par un traité ne sont pas affectés par une succession d'Etats, pourrait sembler aller dans le sens de la position de la Hongrie plutôt que dans celui de la position slovaque. Néanmoins, la Cour conclut que ce libellé a en fait été retenu pour tenir compte de ce que, en de nombreux cas, les traités qui avaient établi des frontières ou des régimes territoriaux n'étaient plus en vigueur (*ibid.*, p. 29-42). Ceux qui demeuraient en vigueur n'en devaient pas moins lier l'Etat successeur.

Compte tenu de tous ces éléments, la Cour estime qu'au vu de son contenu le traité de 1977 doit être considéré comme établissant un régime territorial au sens de l'article 12 de la convention de Vienne de 1978. Il a créé des droits et obligations «attachés» aux secteurs du Danube auxquels il se rapporte; ainsi, une succession d'Etats ne saurait avoir d'incidence sur le traité lui-même. La Cour en conclut que le traité de 1977 lie la Slovaquie depuis le 1er janvier 1993.

124. Il peut être ajouté que la Slovaquie a également fait valoir que, étant encore une partie constituante de la Tchécoslovaquie, elle a joué un rôle aussi bien dans la mise au point du projet qu'ultérieurement dans la phase la plus critique des négociations avec la Hongrie sur le sort de celui-ci. Il résulte du dossier que le Gouvernement slovaque a adopté des résolutions avant la signature du traité de 1977, pour en préparer l'application, puis, après la signature, pour exprimer son attachement à celui-ci. C'est le premier ministre slovaque qui a pris part à la réunion tenue à Budapest le 22 avril 1991 en tant que plénipotentiaire du gouvernement fédéral pour discuter des questions afférentes au projet. C'est son successeur au poste de

garian counterpart by letter on 30 July 1991 of the decision of the Government of the Slovak Republic, as well as of the Government of the Czech and Slovak Federal Republic, to proceed with the "provisional solution" (see paragraph 63 above); and who wrote again on 18 December 1991 to the Hungarian Minister without Portfolio, renewing an earlier suggestion that a joint commission be set up under the auspices of the European Communities to consider possible solutions. The Slovak Prime Minister also wrote to the Hungarian Prime Minister in May 1992 on the subject of the decision taken by the Hungarian Government to terminate the Treaty, informing him of resolutions passed by the Slovak Government in response.

It is not necessary, in the light of the conclusions reached in paragraph 123 above, for the Court to determine whether there are legal consequences to be drawn from the prominent part thus played by the Slovak Republic. Its role does, however, deserve mention.

* * *

125. The Court now turns to the other legal consequences arising from its Judgment.

As to this, Hungary argued that future relations between the Parties, as far as Variant C is concerned, are not governed by the 1977 Treaty. It claims that it is entitled, pursuant to the Convention of 1976 on the Regulation of Water Management Issues of Boundary Waters, to "50% of the natural flow of the Danube at the point at which it crosses the boundary below Čunovo" and considers that the Parties

> "are obliged to enter into negotiations in order to produce the result that the water conditions along the area from below Čunovo to below the confluence at Sap become jointly defined water conditions as required by Article 3 *(a)* of the 1976 Convention".

Hungary moreover indicated that any mutually accepted long-term discharge régime must be "capable of avoiding damage, including especially damage to biodiversity prohibited by the [1992 Rio Convention on Biological Diversity]". It added that "a joint environmental impact assessment of the region and of the future of Variant C structures in the context of the sustainable development of the region" should be carried out.

126. Hungary also raised the question of financial accountability for the failure of the original project and stated that both Parties accept the fact that the other has "proprietary and financial interests in the residues of the original Project and that an accounting has to be carried out". Furthermore, it noted that:

> "Other elements of damage associated with Variant C on Hungarian territory also have to be brought into the accounting . . ., as well as electricity production since the diversion",

premier ministre qui a notifié à son homologue hongrois, par lettre du 30 juillet 1991, la décision du Gouvernement de la République slovaque et celle du Gouvernement de la République fédérative tchèque et slovaque de recourir à la «solution provisoire» (voir le paragraphe 63 ci-dessus); et c'est lui qui a de nouveau écrit, le 18 décembre 1991, au ministre hongrois sans portefeuille, pour réitérer la proposition de constituer, sous les auspices des Communautés européennes, un comité mixte chargé d'examiner les solutions possibles. Le premier ministre slovaque a également écrit au premier ministre hongrois en mai 1992 au sujet de la décision du Gouvernement hongrois de mettre fin au traité, l'informant des résolutions que le Gouvernement slovaque avait adoptées en réaction à cette décision.

Au vu des conclusions dégagées au paragraphe 123 ci-dessus, point n'est besoin pour la Cour de déterminer s'il y a lieu de tirer des conséquences juridiques du rôle marquant ainsi joué par la République slovaque. Il convenait toutefois de rappeler ce rôle.

* * *

125. La Cour en vient maintenant aux autres conséquences juridiques de son arrêt.

A cet égard, la Hongrie a fait valoir que les relations futures entre les Parties, en ce qui concerne la variante C, ne sont pas régies par le traité de 1977. Elle prétend avoir droit, en vertu de la convention de 1976 sur la réglementation en matière d'eaux frontières, à «cinquante pour cent du débit naturel du Danube au point où il traverse la frontière en aval de Čunovo» et considère que les Parties

> «sont tenues d'engager des négociations de façon à parvenir au résultat que les conditions concernant le régime des eaux de la zone en aval de Čunovo jusqu'à l'aval du confluent à Sap deviennent des conditions conjointement définies, comme le prescrit l'article 3 *a)* de la convention de 1976».

La Hongrie a en outre précisé qu'un régime de débit à long terme accepté d'un commun accord devait être «capable d'éviter des dommages, y compris en particulier des dommages à la biodiversité qu'interdit la [convention de Rio de 1992 sur la diversité biologique]». Elle a ajouté qu'une «évaluation conjointe de l'impact sur l'environnement ainsi que de l'avenir des ouvrages de la variante C dans le cadre du développement durable de la région» devrait être effectuée.

126. La Hongrie a également soulevé la question des responsabilités financières pour l'échec du projet initial et a indiqué que les deux Parties acceptent le fait que chacune a des «intérêts patrimoniaux et financiers dans ce qui reste du projet initial, et qu'il faudra procéder à une évaluation comptable». Elle a observé par ailleurs que:

> «D'autres éléments des dommages associés à la variante C en territoire hongrois devront également être pris en compte ..., de même que la production d'électricité depuis le détournement du fleuve»,

and that: "The overall situation is a complex one, and it may be most easily resolved by some form of lump sum settlement."

127. Hungary stated that Slovakia had incurred international responsibility and should make reparation for the damage caused to Hungary by the operation of Variant C. In that connection, it referred, in the context of reparation of the damage to the environment, to the rule of *restitutio in integrum*, and called for the re-establishment of "joint control by the two States over the installations maintained as they are now", and the "re-establishment of the flow of [the] waters to the level at which it stood prior to the unlawful diversion of the river". It also referred to reparation of the damage to the fauna, the flora, the soil, the sub-soil, the groundwater and the aquifer, the damages suffered by the Hungarian population on account of the increase in the uncertainties weighing on its future *(pretium doloris)*, and the damage arising from the unlawful use, in order to divert the Danube, of installations over which the two Parties exercised joint ownership.

Lastly, Hungary called for the "cessation of the continuous unlawful acts" and a "guarantee that the same actions will not be repeated", and asked the Court to order "the permanent suspension of the operation of Variant C".

128. Slovakia argued for its part that Hungary should put an end to its unlawful conduct and cease to impede the application of the 1977 Treaty, taking account of its "flexibility and of the important possibilities of development for which it provides, or even of such amendments as might be made to it by agreement between the Parties, further to future negotiations". It stated that joint operations could resume on a basis jointly agreed upon and emphasized the following:

> "whether Nagymaros is built as originally planned, or built elsewhere in a different form, or, indeed, not built at all, is a question to be decided by the Parties some time in the future.
>
> . . . . . .
>
> Provided the bypass canal and the Gabčíkovo Power-station and Locks — both part of the original Treaty, and not part of Variant C — remain operational and economically viable and efficient, Slovakia is prepared to negotiate over the future roles of Dunakiliti and Čunovo, bearing Nagymaros in mind."

It indicated that the Gabčíkovo power plant would not operate in peak mode "if the evidence of environmental damage [was] clear and accepted by both Parties". Slovakia noted that the Parties appeared to agree that an accounting should be undertaken "so that, guided by the Court's findings on responsibility, the Parties can try to reach a global settlement". It

et que: «La situation générale est une situation complexe, et la façon la plus simple d'y apporter une solution serait par le règlement d'une somme forfaitaire.»

127. La Hongrie a indiqué que la Slovaquie avait engagé sa responsabilité internationale et devait réparer les dommages subis par la Hongrie du fait de la mise en œuvre de la variante C. Elle s'est référée à cet égard, dans le contexte de la réparation du dommage à l'environnement, à la règle de la *restitutio in integrum*, et a demandé que soient rétablis le «contrôle conjoint des deux Etats sur les installations conservées», ainsi que le «débit des eaux au niveau qui était le sien avant le détournement illicite du fleuve». Elle a également évoqué la réparation des dommages causés à la faune, à la flore, aux sols, aux sous-sols, à la nappe phréatique et à l'aquifère, des dommages subis par la population hongroise du fait de l'accroissement des incertitudes pesant sur son avenir *(pretium doloris)*, ainsi que des dommages engendrés par l'utilisation illégale, aux fins de détournement du Danube, des installations sur lesquelles les deux Parties exerçaient une propriété conjointe.

La Hongrie a enfin demandé la «cessation des faits illicites continus» et la «garantie de non-répétition des mêmes faits», la Cour étant ainsi appelée à ordonner «l'interruption définitive du fonctionnement de la variante C».

128. La Slovaquie a fait valoir pour sa part que la Hongrie devait mettre un terme à son comportement illicite et cesser de faire obstacle à l'application du traité de 1977, compte tenu de la «flexibilité [du traité] et des importantes possibilités d'évolution qu'il ménage, voire des modifications qui pourraient lui être apportées par accord entre les Parties à la suite de négociations futures». Elle a indiqué que des opérations conjointes pourraient redémarrer sur une base convenue d'un commun accord et souligné ce qui suit:
